The conspiracy, it may be held with some degree of justification, is a late product of a régime in Egypt that, happily, has been superseded by saner counsels. Ingrained sympathy with weaker races is a valuable asset in the administration of protected States; but it is also apt to lead to the premature application of theories which, however suited to Western political life, are by no means infallible in the East as a remedy for all the ills inseparable from a condition of national dependence. Thus in the case of Egypt it was hoped a few years ago that a gradual devolution of British responsibility would supply the necessary safety valve for all Nationalist aspirations. We admitted the reasonableness of the desire of the Egyptians to be independent, and we were even prepared to offer them a short cut to their goal. Such a policy required that we should be a little blind to preliminary shortcomings, in the belief that sound common sense must in the end prevail. Unfortunately this view entirely ignored the fact that the Western form of government predicates a national sense of community of interests and a considerable degree of self-control. The Nationalist Party, which speedily monopolised attention, soon showed that it possessed neither the one nor the other. Its efforts were directed towards its own advancement and not to the amelioration of the conditions of the Egyptian people; while, satisfied with its own capacity for looking after itself, it would brook no hint of its limitations as a possible trustee for the nation. A stage was quickly reached when the shortcomings of the extremists could no longer be ignored, and it became necessary to admit that our sympathies had overrun our discretion. The murder of Boutros Pasha and the intentions, fortunately frustrated, of Wakid and his accomplices are expressive of the inability of the Nationalists to adjust their views to the new order. How completely they failed to interpret the real attitude of the bulk of the Egyptian people is revealed by the readiness with which the country as a whole at the earliest opportunity—which coincided with Lord Kitchener's arrival as British Agent—abandoned political agitation for the consideration of practical reforms. It is not suggested that the last has been heard of the aspirations of the extremists among the Nationalist Party; but there is ground for hoping that the determination shown in suppressing incitements to agitation and in punishing the crime of which Wakid was guilty will help to convince the Nationalists that a substitute for the British occupation is not to be attained by such means. Both the foreign policy of Great Britain and her relationship with Egypt have passed through many phases in the last thirty years. The latest phase, far from indicating that the British Government can afford to loosen its hold on the country, suggests that, however great our sympathy with the Egyptians in their equivocal position, the joint interests of the two peoples call for a strengthening rather than a weakening of the British position in Egypt.

An earnest of possible developments has been given in the decision to make Alexandria a base for torpedo-boats. A readjustment of our whole naval policy to meet altered conditions has been rendered necessary, and it is to be inferred that the subject is not one to be settled offhand on any hard and fast lines. For the moment it may suffice that a small station in Egypt should mark our appreciation of the fact that the Eastern Mediterranean is not the least important among the pivots of our world-Empire. Naval strategy is subject to modification, but if the principle that we must be prepared to meet with our own resources all likely emergencies in the Mediterranean be once accepted, the actual distribution of naval strength can be left for subsequent consideration. It is known that the Russian Government is anxious to secure the opening of the Dardanelles to its men-of-war, which introduces a further factor, and this question, with the fate of the Ægean Islands occupied by Italy, may come up for settlement at the close of the Turco-Italian War. Egypt, therefore, would seem to have been raised suddenly to a position of conspicuous importance in British Imperial strategy, and it would be idle to hold out any hopes to the Egyptians that it will recede to any large extent in the near future. Rather is it probable that an appreciation of its significance as a naval base will lead to a reconsideration of its potentialities from a military point of view. Hitherto the army of occupation has had to consider its sphere of usefulness as restricted to the limits of Egypt and the Sudan. It has played little or no part in the scheme of Imperial defence, and even recently so great an authority as Lord Cromer has propounded the dictum that the navy alone must defend Egypt, and if there is any chance of our naval forces being defeated, it will be better to keep the garrison in the country as small as possible to prevent any large number of troops from falling into the hands of the enemy. It is difficult to believe that such a theory of watertight compartments applied to our naval and military forces can represent for ever the studied policy of the British Empire. When it has been abandoned, there can be few more suitable places abroad for judicious co-operation between our primary and secondary arms than Egypt. This prospect may not fit in well with the ambitions of Nationalist extremists, but if they would realise how closely it is bound up with the perpetuation of even the present measure of administrative freedom allowed the Egyptians, they might be induced to adopt wiser methods than agitation and intrigue for qualifying themselves to direct the government of their country.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Another echo of the Bank of Egypt failure last year is to be found in the chairman's disappointing speech at the recent annual meeting of the United African Explorations. "The condition of Egypt," he said, "in the past year has been a serious one, because she has gone through a second crisis (?) One crisis is bad enough in the ordinary way, but when it is followed by another it makes the position in a country very difficult. The failure of the Bank of Egypt last year made business in Egypt extremely bad." The company's failure to make a show of profits cannot be attributed only to that "second crisis," the existence of which I have steadily denied. On the contrary, it is patent that its investments were not always fortunate. In the words of the chairman, "our Egyptian mining property, which did look extremely well, and in which not only ourselves but a good many other people believed, turned out, when we began actual working, to be of a very much lower grade than we had anticipated; in fact, it is of so low a grade that there is not much encouragement to go on with it, working, as one must work, at rather a high rate of expenditure in the desert of Egypt." Moreover, as Mr. Lomas, a shareholder, pointed out, the administrative expenses were "quite out of proportion to the capital involved." So that, when all is said and done, the company's losses are mainly the product of the company's own methods of procedure, and not of extraneous circumstances.

***

Administrative expenditures are apt to be high in the case of British companies operating abroad. This has been notoriously the case in Egypt, and is to a very large extent the cause of many of the repeated failures of British companies. Some British-run oil companies in Roumania suffer from the same disease. I have pointed this out before. It was only recently that, speaking with a mining engineer from Roumania, the fact was pointed out to me that foreign, non-British companies working in Roumania were doing on the whole better than British companies, the cause being the excessive administrative expenditures of the latter, coupled with the incompetence of many so-called managers sent out from London to look after the companies' interests in Roumania.

***

While on the subject of oil, reference might be made to the first interim report of the Petrol Commission, appointed under the auspices of the Royal Automobile Club to investigate the causes of the high prices obtaining on the petrol market. The Committee's findings were limited to the question of storage, to be followed in the autumn by those of supply, demand, and distribution. It is, therefore, premature to pass any criticism on the Committee's work, but it may be pointed out, *en passant*, that the oil companies deny the existence of an oil trust or monopoly. Nor can the contrary be proved. Referring to the increase in price, one witness contended that it was due to the fact that the demand had increased, but not so the sources of petrol. This is too manifestly inaccurate to need contradiction here.

***

I reproduce the following from the *Board of Trade Journal*:—"The Commercial Intelligence Branch of the Board of Trade desires to point out to British manufacturers and merchants who may wish to obtain information in regard to trade matters, including the names of importers and of possible agents, in foreign countries, that it is desirable that application should first be made to the Commercial Intelligence Branch (73, Basinghall Street, E.C.) before communications are addressed to H.M. Consular officers abroad. By the adoption of this course much delay would be avoided by the inquirer in those cases in which the Intelligence Branch is already in possession of the required information. Particular attention is drawn to the advisability, when communicating with British Consular officers, of addressing such officers by their official designation, and *not by their names*, in order to avoid possible delay. The adoption of the latter course is liable to involve considerable inconvenience and delay to inquirers, owing to possible changes in the Consular staff." Those interested should certainly make a note of these points, both for their own sakes and for the consuls'.

***

The troubles which seem to be brewing among the Anuaks, in the neighbourhood of the Abyssinian frontier, and which have given rise to plans for a renewal of the quite recent Sudanese punitive expedition, bring the condition of Abyssinia again before the public eye. It seems to me that Abyssinia is suffering from an entirely undeserved and unfortunate neglect at the present moment. As Major Doughty-Wylie, British Consul at Adis Ababa, stated in his last report:—"Abyssinia has great commercial possibilities for the future. The people, intensely conservative, and of small purchasing power at present, are quick to trade whenever they find opportunity. The chiefs will be further convinced of the importance of commerce to themselves by the pressure of its steady growth. Protection and encouragement necessarily follow. And the process has already begun. Though still utterly incommensurate with the size of the population (estimated at 8,000,000) and the natural richness of the country, trade shows increases in nearly all directions, by Jibuti, by Massawah, and by the Sudan. By these three avenues the volume of trade in 1910 was about £2,000,000." The enlightened and wise policy of the Abyssinian Government, and the establishment of the Bank of Abyssinia, have done and are doing everything possible to encourage and develop the undoubtedly great economic resources of the country, and I would be glad to see a great deal more interest displayed in it by our commercial houses.

***

"Bernie," in the *Egyptian Morning News*, strikes an original note in an article on "British Trade in Egypt." He acknowledges the fact that Germany's trade is increasing, whereas ours is stationary. He points out what, in his opinion, are some of the causes of this. The first is ignorance on the part of British exporters of the cash-on-delivery (C.O.D.) system, the second the refusal on their part to grant long credit, and the third a lack of reliable information to be obtained from the large banking establishments. This last is a new point in the controversy, and one deserving of some attention.

***

Of course, it is true that German exporters labour under the same disadvantage, which is no reason, however, why the banking establishments should not attempt to improve their intelligence bureaux and place their information at the disposal of the Chambers of Commerce. If the information were satisfactory, the British exporter could trust himself to forward goods on the C.O.D. payment system. As regards the granting of long credit, I doubt whether it is a wise method in the long run in Eastern countries, and should prefer to see German exporters dispense with it. We see Germany's trade go up with leaps and bounds, but we have no information concerning the Fatherland's "bad debts."

***

The Kaiser visited Corfu this spring, and the result of his cordial reception of the King of Greece and M. Venezelos, who paid him a visit at Achilleion and enjoyed his hospitality, has, it is strange to say, resulted in the Greek orders for battleships to be placed in the Vulcan yard. Far be it from me to wish to add two and two together, and detect cause and effect in the above anecdote, but I cannot help admiring the final touch of humour—namely, the Kaiser's wire to the Vulcan Company congratulating it on its success. It reminds me of nothing so much as a man admiring himself in a mirror.

***

On September 10 the autumnal meeting of the Association of Chambers of Commerce of the United Kingdom will be held at Newcastle-upon-Tyne, Sir Algernon F. Firth presiding. I see that on the agenda are two resolutions affecting the Consular Service. The first is "that in view of the growing activity and vitality of the Consular Services of the principal foreign countries competing with the United Kingdom in the markets of the world, the British Consular Service should be strengthened and improved in a manner commensurate with the requirements of British traders, and that this association assures his Majesty's Government of its full support in any measures, financial or otherwise, which will conduce to that end."

***

The second provides that "in the opinion of this association the utility of the British Consular Service would be materially enhanced if Consular officials were authorised to communicate direct on application available information sought by accredited British inquirers in foreign countries, instead of being compelled, as at present, to supply such information only through the medium of the Commercial Intelligence Branch of the Board of Trade."

COMMENTATOR.

NATIONAL BANK OF TURKEY

ESTABLISHED 1909 BY IMPERIAL FIRMAN.

CAPITAL - - £1,000,000 Sterling.

BOARD OF DIRECTORS.

CONSTANTINOPLE.

SIR HENRY BABINGTON SMITH, K.C.B., C.S.I., Chairman.
SIR ADAM BLOCK, K.C.M.G.
F. EDWIN WHITTALL.
H.E. AHMED DJEMAL BEY.
HUSSEIN DJAHID BEY.
RECHID SADI BEY.

LONDON.

HON. SIDNEY PEEL, Chairman of London Committee.
HON. HUGO BARING.
HENRY BIRCHENOUGH, C.M.G.
C. S. GULBENKIAN.
R. H. MACAULAY.
E. N. MEYER.

Head Office: CONSTANTINOPLE (KENADJIAN HAN, STAMBOUL).
MANAGER - - H. P. KINGHAM.

London Agency: 50, CORNHILL, E.C.
MANAGER - - - R. HECHT.

The National Bank of Turkey undertakes every description of Banking business. It opens current accounts according to the custom of Bankers. Customers have the facility of discounting approved bills and of obtaining advances upon negotiable securities. The Bank will undertake the purchase and sale of bonds, shares, etc., on the London Stock Exchange, on the local and on all Continental Bourses, the safe custody of customers' securities and valuables, and the collection of drawn bonds and coupons when due. The Bank issues drafts and telegraphic transfers payable in all principal towns in the world. Letters of credit for the use of travellers are also issued. Advances made on merchandise. The purchase and sale of coupons, foreign bank notes, coin and bullion are undertaken. Bills negotiated or sent for collection. Mercantile credits opened.

Deposits received for fixed periods at rates of interest which can be ascertained on application.

BANK OF ROUMANIA, Ltd.

Head Office: 7, GREAT WINCHESTER STREET, LONDON, E.C.
Branch: 94, STRADA LIPSCANI, BUCHAREST.

CAPITAL (fully paid), £300,000. RESERVE FUNDS, £169,688.

DIRECTORS:

THE EARL OF BESSBOROUGH, C.V.O., C.B.
SIR R. HAMILTON LANG, K.C.M.G.
THE VISCOUNT GOSCHEN
E. W. H. BARRY, ESQ.
P. NAVILLE, ESQ.

The Bank was originally incorporated in 1869 under Roumanian law, but in 1903 was transformed into an English Company under the Companies Acts. It is the oldest bank in Roumania, and the only one with a London office.

A general banking business is carried on. Correspondence is invited from those doing business with Roumania, and should be addressed to THE MANAGER in LONDON or BUCHAREST.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, PARIS, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, and PORT-SAID.

Subscribed Capital - - £1,500,000.
Paid up Capital - - 500,000.
Reserve - - - - - 640,000.

The Bank undertakes every description of Banking Business on most favourable conditions.

BANK OF ATHENS.

(Incorporated in Greece.)
CAPITAL FULLY PAID - - Dr60,000,000
RESERVE FUNDS - - Dr10,480,000
Head Office: ATHENS.
London Office: 22, Fenchurch Street, E.C.
Branches:

GREECE: Pirœus, Patras, Syra, Calamata, Tripolitza, Volo, Larissa, Agrinion and Carditza.
CRETE: Canea, Candia and Rethymo.
TURKEY: Constantinople (Galata, with Agency at Stamboul), Samsoun, Trebizonde, Kerassunde, Bafra, Mersina, Smyrna, Adana, Tarsus, Salonica, Serres, Cavalla, Xanthi, Janina, and Chio.
EGYPT: Alexandria (with agency in the quarter of Midan), Cairo (with agency in the quarter of Mousky), Zagazig, Mansourah, Mit Ghamr, Tantah and Beni Souef.
SUDAN: Khartum & Port Sudan. CYPRUS: Limassol.
HAMBURG: Domhof, Mönckebergstrasse 18.

Special facilities for Banking, Exchange and Commercial Business of every description with Greece, Egypt, Turkey, Crete, Cyprus and the Levant generally. Most favourable rates for Deposits, Collections, Cable Transfers, &c., on application.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £650 000
RESERVE - - - - - £210,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Tabriz and Yezd.

The Bank is prepared to transact Banking business of every description in and connected with Persia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia.

IONIAN BANK, LIMITED.

INCORPORATED 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - 65,000

Head Office—LONDON.

BRANCHES—

Athens, Patras, Corfu, Cephalonia, Zante, Pirœus, Tripolitza, and Nauplia, in Greece; and at Alexandria, Tantah, Fayoum, Minieh, and Mansourah, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

NATIONAL BANK OF EGYPT.

Paid-up Capital - £3,000,000 (in 300,000 Shares of £10 each, fully paid). **Reserve Fund - £1,500,000**

Governor—F. T. ROWLATT, ESQ. **Head Office**—CAIRO.

London Committee—HON. HUGO BARING, SIR CARL MEYER, HON. ALGERNON MILLS, HON. SIDNEY PEEL.

London Agency—4 and 5, KING WILLIAM STREET, E.C.

Manager—J. T. BEATY-POWNALL, ESQ.
Asst.-Manager.—A. F. GILLBEE, ESQ.

Branches in all Principal Towns in Egypt and the Soudan.

Deposits received for a fixed term. Current Accounts opened. The Purchase and Sale of every kind of Stock and Shares undertaken. Bills discounted. Every kind of Banking Business transacted. Full information can be obtained at any of the Offices of the Bank.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, August 10.

Concession for Mines.

The Ministry of Commerce and Agriculture notifies that in the absence of any objections within a period of two months, in accordance with Art. 36 and 37 of the Mining Law, it will grant the following concessions: For a period of 99 years, for a copper and sulphur mine covering an area of 426 hectares, in the village of Inekeuy, in the Province of Trebizond; for a period of 99 years, for a mine of arsenic mixed with gold covering an area of 253 hectares, in the village of Tchiftdji-Guedighi, in the Province of Aïdin (Smyrna); for a period of 60 years, for an emery mine covering an area of 408 hectares, in the villages of Benikeuy and Tash Kessighi, in the Province of Aïdin (Smyrna); for a period of 99 years, for a copper and zinc mine covering an area of 231½ hectares, in the village of Mursel, in the Province of Trebizond; for a period of 99 years, for a copper mine covering an area of 767 hectares, in the village of Hendek, in the sub-Province of Ismidt.

The same Ministry also invites sealed tenders for a chrome mine in the village of Homkos, in the Province of Salonika; an argentiferous lead mine in the villages of Hazinè and Kirk-Pavil, in the Province of Trebizond; a sulphur mine at Sart, in the Province of Aïdin (Smyrna); a chrome mine in the village of Anilouclja, in the Province of Aïdin (Smyrna); and an emery mine in the village of Kekrè, in the Province of Aïdin (Smyrna). For further particulars and conditions application to be made to the Direction des Mines, at the Ministry of Commerce and Agriculture, or to the local authorities.

New Mining Law.

The local Press announces that the Council of State is at present examining the new mining law. It may be not without interest to mention that a projected new law was elaborated by a Commission appointed by the Ministry of Agriculture, Mines, and Forests as far back as 1910. This project was submitted to the Mining Syndicate Chamber, which also prepared a counter project, and a report on the subject. It was thought that project, counter project, and report had been studied by the competent Parliamentary Commission, and would have come before the late Chamber for discussion during the session which has just been closed; and that it should still be under consideration by the Council of State now comes somewhat as a surprise.

The new law had for object the simplification of the formalities for the obtaining of research permits and concessions, and also the remedying of certain recognised deficiencies in the existing law. The greatest obstacle to the development of the mining industry in Turkey would seem to be the heavy taxation of such industry, even before any results, which are always more or less of a speculative character, are obtainable from the successful working of a mine, and without taking into consideration the lack of communication, transport, and shipping facilities, which weigh so heavily upon the development of the mineral wealth of the country, and ought to be compensated for by the granting of every facility and especially advantageous conditions.

New Companies.

The formation of a company at Brussels, with a capital of 2,500,000 frs., entitled La Société de Transports Fluviaux en Orient, is announced. The objects of the company are the transport by water in the region of the Euphrates and Tigris of all kinds of merchandise, but particularly material for railway construction and the working of the same; to enter into negotiations with the Ottoman Government for the formation of an Anglo-German-Ottoman Company to take over the assets and liabilities of the present company, as well as the contracts for the fulfilment of which it was formed. Half the capital has been subscribed by the Deutsche Bank, and the other half by The Euphrates and Tigris Steam Navigation Company, Ltd., of London. The formation of this company and its objects will call to mind the statement made in the Chamber on July 9 last by the late Minister of Finance ad int. on the subject of the transport of the material for the Baghdad railway, and the likelihood of an "arrangement à trois."

The registration in London of The Samos Wine Co., Ltd., with a capital of £210,000, is announced. The objects of the company are to become vine owners, to produce grapes and wines of all kinds, to deal in wines in cask and bottle, and to take over the affairs in Samos and elsewhere of Messrs. L. J. Missir and Co., J. and H. Nicolareizes, and Charles Fidao, Junr.

Local Industries.

The Government is studying the question of establishing distilleries in the Province of Broussa, where in the district of Atranous some 7/8,000 tons of grapes are produced; and it has addressed the Ottoman Chamber of Commerce on the subject of interesting local capital in the enterprise.

Local capitalists have made propositions to the Ministry of Agriculture for the establishment of a sugar refinery at Constantinople.

Advertising in the Levant.

"Commentator" remarked in your issue of August 2 on the advisability of British firms advertising in the Levant. This is a subject on which much might be written. Advertising is as necessary to developing and retaining business in this country as in any other, and yet, with a few solitary exceptions, British manufacturers do insufficient newspaper or poster advertising. Notwithstanding our preponderant share of Turkey's trade, one sees less than one poster in ten of British-made goods, and perhaps even a lesser percentage of advertisements in the local Press. In a local daily (Anglo-French) I find a group of twenty-three German firms advertising, evidently through advertising agents. I do not remember having seen this method adopted by British firms. Finally, it should be remembered that illustrated advertisements appeal more to the Oriental than whole pages of letterpress.

Did You Feel ze "Air-Squeak"?

This is the question I am being asked on all sides. We have been visited by three shocks in less than thirty-six hours. The first series occurred at 3.25 a.m. yesterday, and were too severe to be otherwise than disagreeable. This morning, between 11.30 and mid-day, two further shocks occurred. No serious damage is reported beyond the cracking of walls. It would seem as if to Turkey's many troubles are now to be added those of seismic disturbances.

SPANISH ENTERPRISE AND TURKEY.

A prominent Spanish journal comments on the Turkish trade as follows:—So favourable an opportunity to gain the oriental markets will never occur again; this is the opportune moment to make the products of our soil and industry known in Turkey, and an excellent occasion to give an outlet to our over-production in the markets situated so near to the Peninsula as those of the Near East. The most practical plan is to visit the Near East with full lines of samples, to study the tastes and necessities of the market. Wherever a Spanish manufacturer goes in Turkey, he will be enthusiastically received, and the Turkish merchants will do everything to obtain exact particulars for him and make favourable contracts.

We have received from Messrs. Curtis's and Harvey, Limited, the well-known manufacturers of sporting powders, a little book—"The Shooter's Year Book"—which sportsmen of all countries and climates will find useful. Within its small, even diminutive, compass are to be found all sorts of information, from details regarding the bores of guns to names of Grand Prix winners at Monte Carlo for the last forty years. Shooters may obtain a copy of this handy compilation gratis by applying to Messrs. Curtis's and Harvey, Limited, Cannon Street House, London, E.C.

BUILDING ACTIVITY IN HAIFA.

Haifa, July 31.

(From Our Own Correspondent.)

The introduction of concrete blocks into this locality has met with striking success and approval. The only factory which had started the business last year was a Jewish one, but at present there are three factories carrying on the business—all foreign. The inhabitants have apparently found the artificial material both cheaper and better than ordinary quarry stones for constructional purposes, and consequently the majority of local builders are adopting it.

A German ship arrived here last week with a cargo of 20,000 roofing slates for use on the Jewish University, work on which has already been begun.

SYRIAN MINING SYNDICATE.

(From Our Own Correspondent.)

Haifa, August 4.

The Syrian Mining and Agricultural Syndicate has recently appointed Suliman Bey Nassif, one of the shareholders, as their legal representative to negotiate with other companies or individuals in regard to the mining licences in their possession. These licences authorise them to make researches for iron ore and petroleum in the Hauran districts within the vilayet of Damascus. The syndicate is apparently having successful results in the works of prospecting and surveying that its agents are now engaged upon. The only feature subject to criticism with respect to the manner these surveys are made seems to be the lack of efficient machines. This lack, it is said, will be made good upon the completion of negotiations which the syndicate is now conducting with another company with a view to mutual co-operation.

COAL IN TURKEY.

In a recent report Mr. E. I. Nathan, U.S. Consul in Mersina, states that there are some soft-coal deposits in the Taurus Mountains, but owing to its inferior quality and the difficulties of transportation there have been no mining operations. The only Turkish coal used in the district comes from the mines at Heraclea, near the Black Sea; 1,500 tons of this coal were recently imported. It is a soft coal, which ordinarily sells at about $5.85 per ton.

Most of the coal imported is the so-called patent fuel or bricks of compressed coal dust; 15,000 tons of such bricks were imported in 1911 from England and 8,500 tons from Germany, and cost $5.35 to $5.83 per ton. To this must be added about $1.50 to cover the 11 per cent. duty and lighterage charges. There were also about 2,000 tons of anthracite imported at Mersina from Great Britain.

AUTOMOBILES IN ADEN.

The following cutting from the report of Mr. Consul Schulz (U.S.A.) in Aden may be useful to British automobile engineers:—

The Aden-Steamer Point automobile passenger service will shortly test a steam car that has been rebuilt into a gasoline car. The intention is to revive the passenger service between those two points. It cost 1,360 dols. to convert the car, which originally cost 2,916 dols. A chauffeur has been brought from England to make the tests. The owners declare that if the car is a success they will have five others placed in service.

The distance between Aden and Steamer Point is five miles. There is one very steep grade, and the gravelly and flinty roads have proved very destructive to the solid rubber tyres. It is claimed that a tyre is useless after it has covered 3,000 miles. The promoters are determined to experiment with different cars until the right one is found.

A skin exporter has recently brought a 3½-ton, 22-h.p. French truck to Aden, and according to the owner it is doing excellent work in spite of the bad roads. It cost 4,000 dols., and consumes five gallons of motor spirit per 60 miles, the cost of which is 1.62 dols. It has a capacity of fifteen bales of skins, and can make six round trips daily between Aden and Steamer Point, whereas the camel carts formerly used could make but two trips.

Engineering Notes.

The New Greek Warships.

The whole of the new Greek warships will be built in Germany. There are one cruiser, two destroyers, and six torpedo boats. The contracts between the Greek Government and the Vulcan Works of Stettin have been signed, and marked satisfaction is displayed in German industrial circles on the occasion, for there were eleven other firms—English, French, Italian, Austrian, and American, besides the Germans—that submitted tenders for the construction of these ships. The cruiser is 14,000 tons. Length, 465.76 ft., width 72.16 ft. Armour plate, 9 ins. thick. Two protected decks. Six 14-in. guns, Bethlehem, on three turrets, eight 6-in., and eight 3-in. Two submerged torpedo tubes. Turbine engines of 23,500 horse-power, with ten multitubular boilers. Speed, 22 knots. The contract price of this cruiser is 27,871,200 francs (£1,112,448), and time of delivery two years. The "Averoff," which is the newest vessel in the Greek Navy, is 10,000 tons, and carries four 9-in. guns, Armstrong, on two turrets, eight 7½-in. on four side turrets, sixteen 6-in. quick-firers, and three torpedo tubes. The engines are 20,000 horse-power, with a speed of 24 knots. The six torpedo boats are of 120 tons each; length, 147.60 ft.; width, 16.40 ft.; two 2½-in. quick-firing guns, Bethlehen; two torpedo tubes; engines, 2,200 horse-power, with a speed of 25 knots.

Oil Engines for Baghdad.

There is a good demand for oil engines in Baghdad, especially for petroleum motors, for irrigation purposes, driving mills, wool presses, etc. As soon as the produce of the large petroleum wells in Mohammerah comes on the market, raw petroleum will doubtless be used as the chief driving fuel, especially as this article has also been discovered in several other places, and can be easily worked on a large scale.

Agricultural Machinery in Russia.

Arrangements with Canada are being made in Russia for the importation of Canadian tools and machinery with a view to their taking the place of the tools and agricultural machinery hitherto imported from the United States. At a meeting of farmers in Moscow it was decided to buy no more American machinery, and to have recourse to such Russian and foreign firms as are in a position to supply similar articles on the best terms. In the meantime, the Swedish Consuls have made proposals to the provincial authorities to replace American agricultural tools and machinery by similar productions of Swedish manufacture.

Alexandria Harbour.

Mr. Vice-Consul Edward H. Mulock, in his report on the trade and commerce of Alexandria during the year 1911, makes the following references to the Alexandria Harbour, work on which is proceeding satisfactorily: "The repairs to the outer breakwater of approximately 80 metres in length, owing to accidents caused by an exceptionally severe storm on February 10 and 11 last, have been completed, the first by rebuilding and considerably strengthening the original section, and the second by means of a ferro-concrete caisson and tower made on a new model. With regard to the quays, the seventh berth at the coal quays has now been handed over to the trade, thus completing the scheme of seven berths commenced in 1904. The paving and construction of roads on the timber quays and one quay in Kamarich Harbour for the use of floating timber have been finished. Ships are now using the wood quays. The artificial blocks at Quay L, which subsided in the course of construction, have been raised, the foundations strengthened, and the quay successfully rebuilt on a length of 123 metres. At Quay E the various works of dredging and filling with sand have been executed with a view to compress the mud of the subsoil. It being necessary, owing to the continual increase in length of shipping, to complete Quay E as soon as possible, it is intended to press forward the work at this place, and it is hoped to complete the quay walls and filling in by the end of 1912, leaving the construction of sheds and laying of railway lines, etc., for the following year.

Safes for Turkey.

A prehistoric kind of safe is still manufactured and used in Turkey. It is made of wood, covered with strong iron hoops and nails. The importation of these hoops indicates that the manufacture of these safes is of some importance. The local manufacture has little influence, however, on the import trade, which is gradually growing in importance. England furnishes the largest number of safes, which can be purchased from about £4 12s. upwards. French safes range in price from £8 to £228. Austrian and German are sold at lower prices. It is stated that some merchants in Turkey have safes made in Austria and Germany to imitate English models, but these amount to a very small number. The majority of the public, however, have a preference for English safes.

Silk-working Machines.

Greece, Turkey, Asia Minor, and Cyprus produce large quantities of silk. Nevertheless, with very few exceptions, there is no machinery of any kind in use, and from the time of spreading the eggs on the leaves until the cocoons are spun into thread, every process of the work has to be carried on by hand. Silkworm rearers are for the most part opulent and intelligent, and would be really glad to avail themselves of any expeditious labour-saving appliances.

Motor Cars for Greece.

French and German automobiles are becoming more and more used in the streets of Athens and Piræus, but British makes are rarely seen, though one would suppose there would be a good opening for them. The invitation for tenders for motor services referred to in our last issue would seem to afford English makers an excellent opportunity of securing a foothold in the Greek market.

Knitting Machines.

Stocking and flannel-knitting machines, hand and power driven, are imported to an increasing extent in all countries of the Near East. Germany is the principal supplier, and a few are imported from England, although British-made machines are preferred, and much admired by the people.

Massowah Harbour Improvements.

According to the *Canal de Suez* (Paris), the Italian Government have passed a Bill sanctioning the expenditure of 1,700,000 lire (£68,000) for the purpose of bringing the harbour of Massowah up to date, and making it accessible to large vessels passing through the Suez Canal. A period of 26 months is allowed for carrying out the work. The improvements will include connecting the docks with the railway which runs to Asmara.

ROUMANIAN WATERWAYS.

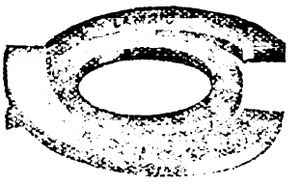
(From Our Own Correspondent.)

Bucharest, August 10.

There has been much discussion lately as to the question of diverting some of the railway traffic, already overloaded, to the waterways of this country. In connection therewith the possibility of making the rivers Sereth and Olt navigable for a certain distance has been canvassed, and the construction of a canal connecting the capital with the Danube is also being talked of again.

As to the river Pruth, the improvement of the navigation has been considered by the commission of the delegates from Austria-Hungary, Roumania, and Russia. The advisability of deepening the bed of the river was brought forward, but the idea was abandoned on account of strong objections on the part of the Russian delegate. It was decided that the question could be well met by the construction and use of specially built light draught tugs and the increase of the fleet of shallow draught lighters already plying there, and which even to-day grapple with a large part of the grain transport of Moldavia and Bessarabia.

As regards the two rivers first mentioned, the question has already been carefully studied, and the only objection is the heavy cost of the work. This is the case also with regard to the Bucharest-Danube canal, the country to be cut through being extremely flat. The Government will take the two questions into serious consideration in the autumn, when a Commission is to be appointed and a decision taken.



"NORWEGIAN BOILERS."

The *United Service Magazine* states that the Roumanian War Department has adopted a cooking model of the type called "Norwegian boiler," made by the Weiss firm at Budapest. It includes a boiler with grate, a chest for retaining the heat and accessories. The boiler, holding from 32 to 33 litres, is of nickel plate. The lid is provided with a safety hole to allow for the escape of steam during boiling. The chest for the retention of heat is of wood lined with aluminium strengthened with zinc bands. When the contents of the boiler have reached boiling point the safety hole is closed, the boiler is placed in the chest, and the whole on a wagon.

ON ADMIRALTY LISTS.

The "Lamrig" Washer.

An Absolutely Reliable Washer.

MECHANICALLY SOUND.
SELF FIXING. CHEAP.

Oil Topics.

We have previously alluded to the Galician Oil Lands and Royalties Trust, when we severely criticised the circular that has been issued by Messrs. Hatton, Morris and Company. But it is absolutely necessary to continually call attention to the persistent offers of shares that are being made by these so-called "bankers," who state that they have offices in London, Paris, Brussels, and Lemburg, Galicia. Perhaps some of our Galician friends will let us know what sort of offices these bankers have in Lemburg. The London address is merely a single office in Regent Street, and the Paris address is an equally insignificant abode in the Rue Le Peletier. The London firm do not appear to have been doing business for any length of time, and in Paris the office was only started in April, 1911. According to circulars issued, the firm offers 100,000 shares for nothing. These shares are income certificates, and those who write for one of these shares are afterwards pestered to take up a portion of the participating preference shares, of which there are £75,000. In none of the prospectuses that we have seen does it say whether the company is registered or not, and there is no trace at Somerset House of any such company, and no prospectus has been filed. This appears to be a breach of the companies law. *Truth* and many other papers have had a great deal to say against the concern. But, unfortunately, these "bankers" prey upon ignorant and uneducated folks, who are caught by the claptrap advertisements. It is within our knowledge that poor working men have been induced to "invest" £5 in this ridiculous oil company. We are very much surprised to find a gentleman who for many years conducted an oil paper in London with conspicuous success should have lent his name to such a company. The *Financial Times* has again and again exposed these people, and, in our opinion, the continuous attacks are likely to bring Galicia, which is a great oil-producing country, into disrepute. In a paper like this, dealing with affairs of the Near East, it is of importance that we should protest in the strongest possible manner against the proceedings of Messrs. Hatton, Morris and Company, and we again warn our readers to have nothing whatever to do with the firm, or with the shares that they are offering.

Maikop Production.

British Maikop announce that their production for the week ending 11th inst. was 38,028 poods, or 613 tons. Well No. 12 was stopped for a day and Well No. 14 only baled five days. It is a great pity that the British Maikop cannot get some more wells sunk on its plot. Its production for the week ending the 4th was only 427 tons, and the telegram announcing that production told us that there was a good deal of sand in the well, and that the best results could not be expected for ten days. Maikop Victory, who are pumping on the adjoining plot, produced 37,955 poods, or 612 tons. This company at the end of June was producing nearly 800 tons of oil a week, and it is quite clear that British Maikop is interfering severely with the Victory production, for both companies are pumping on the same horizon.

Maikop Spies production for the week ending 11th inst. was 14,477 poods, or 233 tons. This is a little better than usual and is almost as good as the June production.

Black Sea Oilfields, which is the largest producer on the field, baled 60,633 poods, or 978 tons. Here there is a considerable falling off which may be easily explained by the flood to which we alluded last week. It turns out that the damage done was not considerable and was confined to this company, which will lose about £1,200 through the cloudburst. A cable received from this company tells us that the price of crude oil in Ekaterinodar was 42 copecks, which compares with 37¼ copecks at Baku.

Maikop properties have the chance of their life, and one wonders why companies that have producing plots do not start drilling half a dozen wells on each plot and suck out all the oil whilst it is at its present fabulous price. There is an enormous profit on oil at 42 copecks, and the Black Sea Company must be coining money. The Spies' production, which has been falling away of recent weeks, has now risen to 5,295 tons, which is a better output than the company has had for some time.

Prospecting in Tunis.

A little company with a capital of £30,000 has been formed to prospect for oil in Tunis. It has rights over 1,800 hectares on an oil field situated about fifty miles from the port. We all knew that there was oil in Algeria, but very few people were aware that there were oil fields in Tunis. However, oil has actually been struck in a well sunk last year, and a sample of this oil was sent to London and received a satisfactory report. The London Oil Company, which is the name of the syndicate that is prospecting in Tunis, will require a considerable increase in capital if it is to sink wells over the whole of its area. We presume that the present intention is merely to prospect.

British Austrian Oil.

The British Austrian Oil Investments held its first annual meeting at the Ritz Hotel on August 9. Lord Arthur Cecil, who was in the chair, told the shareholders that one of their wells, the Tsuschima, had serious water trouble, so much so that at the present moment the well was not being baled. However, another of the British Austrian wells, the Rockefeller, is now turning out 130 tons of oil a day and making a clear profit of £40,000 a year. The arrangement under which the well was purchased was that the company took one-half of the production until February 29, and two-thirds from that date until May 31, after which date the whole of the income goes to the British Austrian. This well caught fire last May, but although a good deal of damage was done it was baling again in three weeks. Apparently the company only had the Rockefeller well to depend upon, and it has therefore acquired rights over other oil lands in Galicia. Mr. Bedworth made a long speech to the shareholders, in which he suggested that the promoters had made a profit of about £85,000 out of the Tsuschima, and he put a resolution to the meeting that the directors should be censured. But he did not get any seconder.

Roumanian Consolidated.

The Roumanian Consolidated has been in trouble. A fire broke out on the Astra ground at Bana, when No. 6 well was burnt and five workmen killed. The fire spread to No. 9 well on the Astra ground and afterwards destroyed the derrick of the Roumanian Consolidated well No. 6. Nos. 7 and 9 also caught fire. Happily there was no loss of life. Well No. 9 was a flowing well, and the oil caught fire. However, Mr. Van Sickle or his assistants seem to have acted with great promptitude, for they drew off the oil from below whilst the gas was still burning, and actually succeeded in getting 250 tons a day. The fire was got under control last Saturday, and the oil is now flowing through the pipes direct into the tanks. The latest news from Ploesti states that the fire was extinguished on the 12th inst. Fortunately the Roumanian Consolidated loss is covered by insurance.

Anglo-Hungarian in Luck.

It will be remembered that some time ago the British and Foreign General Securities and Investment Trust took over the management of the Anglo-Hungarian Petroleum, and the new management seems to have brought luck, for in well No. 4 strong gas has been struck at a depth of 642 metres. During the sinking of this well three oil horizons were proved, of which the second and third horizons gave from 60 to 120 barrels a day. As the Anglo-Hungarian is now well supplied with cash, it should soon come to the producing stage.

Standard Oil Co. in Bulgaria.

Our Varna correspondent writes, under date of the 9th inst.:—A few days ago one of the managers of this big oil company in Constantinople, namely, Mr. Oscar Tunule, accompanied by Mr. P. T. Petrovitch, the president of the Varna Commercial and Industrial Chamber, made a tour of this country, investigating the possibility of opening up work in Bulgaria also.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, August 10.

During the last ten days several of the petroleum companies have "struck oil" in both senses of the term. At No. 1 boring of the Columbia Company at Proreni-Tzuicani 2,000 waggons were being obtained daily, when the flow was interfered with by sand. This being cleared away, 180 waggons daily is yielded. The Steana-Romana boring at Filipesti-de-Padure had been giving eighty waggons per day, when sand similarly interrupted the flow, but it is now again continuing with sixty-five waggons. It is intended to deepen the boring, as it is believed that lower down a much greater quantity of oil can be obtained. The No. 6 boring, Bana, of the Roumanian Consolidated Oil Fields, Limited (formery van Sickle), having reached 284 metres depth, is giving 100 waggons daily.

Astra-Romana Fire.

On Thursday morning the boring No. 7 of the Astra-Romana Company caught fire, burning with terrible force, the flames quickly spreading to the No. 9 Van Sickle boring, which latter was giving 80 waggons daily, and to Nos. 6 and 9 of the Astra-Romana, No. 7 Van Sickle, and No. 6 of the Roumanian Oil Fields, Limited. Four men were burned to death, whilst one other is not expected to recover. The damages are no doubt very heavy; a quarter of a million of francs is spoken of, but it will probably prove to be more. One account states that the explosion was due to the engineer, who ordered work whilst the neighbourhood of the boring was strongly impregnated with gas. Whether this be so or not will be proved at the inquiry which the police authorities are instituting, in connection with which several arrests are expected to be made. Accidents of this description attended with loss of life have been of late but too frequent in Roumanian oil districts, and the authorities are determined to sift the particulars of the present one to the bottom. It is not many months ago when a similar accident at Bana cost the lives of six unfortunate workmen.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondent.)

Baghdad. July 10.

Wool this season is good and the quantity satisfactory. The price here is, however, hardening, although there is no sign of any improvement in the position of the article at home. Some of the shippers are actually paying the higher price.

Opium is reported on good authority to have gone up some 30 per cent. during the past week or so in Persia, but the reason is not yet known. Reports of the crops have been generally good, so that it is puzzling to guess at the cause of the sudden big rise. It seems that the local use of opium in Persia is rapidly increasing; the Persians smoke it and take it internally. At this rate, unless the cultivation is increased, most of the opium grown in Persia will shortly be required for domestic consumption.

The following information is compiled from the weekly bulletins received at the London Offices of the Imperial Ottoman Bank from its correspondents in the Near East :—

Mitylene. Aug. 3.

Oil.—The rise in oils continued during the week, and a large quantity has changed hands.

Export.—Rather active, especially to Syria and Salonika. About 900 barrels, value about £5,500. Soap, 500 sacks, value about £1,000.

Imports.—Limited. 50 sacks coffee, 50 sacks Rangoon rice (viâ Alexandria), 1½ wagons Russian alcohol.

Adrianople. Aug. 10.

The market has been gravely affected by the recent events in Albania, where tranquillity seems still lacking, in spite of the dissolution of the Chamber of Deputies, which was demanded by the rebels.

	Imports.		Exports.	
Wheat	15	wagons	3	wagons
Flour	10	,,	15	,,
Boards	10	,,	2	,,
Various	15	,,	10	,,
Eggs	2	,,	3	,,
Iron	2	,,	1	,,
Petroleum	2	,,	1	,,

Beyrout. Aug. 5.

Market.—This week shows a slight improvement in the local position.

Imports and Exports.—Movement very limited. The political situation on one side and the French strikes on the other have sensibly reduced the figures of both imports and exports. There is notably a stock of 300 bales of silks, spun in Syria, awaiting the cessation of the Messageries Maritimes strike in order to be exported to Marseilles.

Cereals.—Prices maintained, stationary. Anatolian wheat is quoted PB 320-350 per quintal; Syrian ditto, PB, 280-310. Barley is rising. Quotation : PB, 200-240 per quintal, according to quality.

Stamboul. Aug. 3.

Cereals.—Except for a slight rise of 1-1½ paras per oke in price of good tender wheat and extra hard there is no change.

Canary Grass.—Well maintained; a difference of about 2 paras per oke.

Opium.—A few sales effected at previous prices.

Mohair.—Market still active, with prices maintained.

Sugar.—The reserve shown by buyers has stopped speculative activities, which have been influencing prices.

Busreh. July 20.

Imports.—A certain degree of security having existed on the Persian roads, some Baghdad merchants despatched about 1,200 loads of cotton goods and produce, which are reported arrived safely. This news has given rise to a certain animation, accentuated by the shortage of sufficient stocks to supply the neighbouring country should permanently safe communication be established between Baghdad and the Persian centres.

Exports.—No change worthy of notice in the cereal market. Prices are firm, but in order to do business exporters are forced to comply with the sellers' demands. However, the arrivals from the interior continuing, a fall is anticipated.

The date market—Calm until now, has reassumed the expected activity. The approach of the season has induced pretentious sellers and hesitating buyers to make mutual concessions, which have given rise to quite considerable sales, especially for London. Quotations are :—13s. Hallawi, 12s. Khadrawi, and 10s. 9d. Sayer.

PRODUCE REPORT.

(From Our Own Correspondents.)

London, August 15.

The markets were rather quiet during the past week, and a holiday feeling was very much in evidence, but it is natural that there will be an early improvement in this respect.

Sugar.

The withdrawal of the British Government from the Brussels Convention has had no effect whatever on the market, for the reason that, apart from the fact that the Government has given notice of its intentions to withdraw in September, 1913, the position is otherwise unchanged. A new agreement for five years has been made between the interested Continental Powers, including Russia, so that we shall not be receiving from the latter any larger quantity than is fixed by that agreement; the talk about extra supplies in some newspapers is, to say the least, very misleading and incorrect.

The beet market has been through various changes, and although at the close of last week the price rapidly advanced to 12s. 6d. for August beet, it is now 11s. 6d. f.o.b. Refined sugar is fairly steady.

Coffee.

The usual holiday feeling has been apparent, the tone of the market being dull and inclined to be easier. East Indian, 76s. to 80s.; Costa Rica, 74s. to 80s.; Mexican, 75s. to 85s.; Brazil, 68s. to 84s.

Currants.

Recent reports from Greece speak of slight damage to crops which will, it is said, not reach earlier expectations as to quantity. The London stocks showed a shortage of 2,413 tons against last year, and as no more arrivals are expected this season, several weeks will elapse before new fruit is available, hence the market is showing an upward tendency. Bags, provincial kind, 25s. 3d.; ½ cases, 26s. to 26s. 6d.; Patras and Gulph, 27s. to 29s.; Vostizza, 30s. to 33s.

Sultanas.

The new crop is variously reported upon, but, from what one can gather, the impression is that the crop will reach only 38,000 to 40,000 tons, and it is hoped that fair to medium fruit may be obtainable at about 54s. Quotations are unaltered.

Dates.

Syar, 12s. 6d. to 13s.; Tunis cartons, 50s. 1d. per dozen; Egyptian, none.

Various.

Lentils, Egyptian, 100 lbs. bags, 10s. 9d. to 12s.; whole green, 18s. to 24s. Lentil flour, Egyptian, 112 lbs. bags, 17s. 6d. per cwt. Haricot beans, dearer on the spot, and new crop parcels will certainly be higher than last season. Cream of tartar, commercial, 92 per cent., 82s. to 83s.: casks, 83s. to 85s.; kegs, 98 per cent., 90s. to 92s. Pepper, white fine to finest, 10d. to 1s. 1d.; black, 6d. to 9d.

It is announced that a company has been recently formed in Antwerp under the name of "Crédit Pétrolifère Anglo-Belge" with a capital of 6,250,000 frs., by Belgian and English capitalists, for the purpose of obtaining concessions in Roumania, Russia, and other oil centres, and eventually for their direct working.

BULGARIA'S TOBACCO PRODUCTION.

(From Our Own Correspondent.)

Varna, August 3.

Generally speaking, our tobacco production and the trade dependent upon it are in a very satisfactory condition this year. The tobacco sowings vary considerably from year to year. From 1900 to 1912 the area under cultivation has ranged from 50,000 to 130,000 decars, and as the average yield of a decar may be put down at 70 kilograms, this equals a production of from 3,500,000 kilograms to 9,100,000 kilograms of tobacco leaf, worth from 3 to 7½ million francs.

Tobacco is cultivated all over Bulgaria, but the most important centres are Haskovo Kustendil, and Plovdir, which three districts produce between them about 56 per cent. of Bulgaria's tobacco. The number of decars cultivated in the different districts is as follows, Haskovo, 31,942; Kustendil, 23,669; Plovdir, 18,326; Siliska, 13,328; Rousseh, 10,295; Sofia, 9,210; Pazardjik, 7,314; Varna, 5,973; Stara Zagora, 4,916; Shomen, 3,798; Plevna, 1,634; and Tirnovo, 170.

OLIVES IN EGYPT.

The importation of olives into Egypt exceeds that of all other preserved vegetables, amounting in 1911 to £E46,000, whilst the value of the importation of other preserves represented only £E42,000.

The olives are supplied chiefly by Greece and Turkey, and by the islands of the Archipelago, especially by Chios and Thessaly. They are generally sold for cash by the exporters in Greece and Turkey, or sent to consignees with whom they have current accounts.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending August 2:—We regret to report that our principal holders continue to maintain their late high pretensions. Nevertheless, from some of our weak, needy dealers business to a limited extent is feasible, viz., 11 per cent. new or old mixed druggists at 16s. 3d., and 15s. for 10 per cent. For more uniform qualities and above percentage a buyer must, however, be prepared to pay fully 1s. per pound over and above the 15s. and 16s. 3d. bases. Prices on the producing markets are higher than here, and the dealers buy up all that offers, which is an indication that the outturn of the Anatolian crop will be short again this year. The arrivals are 700 cases, against 303 at same date last year.

PERSIA'S GROWING TRADE.

The *Manchester Guardian* reproduces figures of the trade of Persia for the year ending last March, from as yet unpublished reports of the Customs Administration, which have been transmitted to the *Novoe Vremya* by its Teheran correspondent. The total amounts to over 198,000,000 roubles (£20,000,000), and shows an increase of more than 28,000,000, or 15 per cent., over the figure of last year. The imports have increased by 15,000,000 roubles, or 17 per cent., to 114,000,000 roubles, and the exports by 9,000,000 roubles, or 12 per cent., to 84,000,000 roubles. The imports from Russia amount to 53,500,000 roubles, an increase of 9,600,000. The British imports amount to 44,000,000 roubles (£4,500,000), an increase of over 6,000,000 roubles, and those from Germany have increased by 500,000 roubles to 3,300,000. Of the exports, those to Russia, of course, take the first place with 56,800,000 roubles, or an increase of 4,400,000 roubles.

POTATOES FOR TURKEY.

The Turkish Consul-General in London has issued a notification that the Turkish Government have forbidden the importation into Turkey from certain countries, including England, of potatoes which are not accompanied by a certificate stating that the potatoes in question are free from scurvy. This certificate must be obtained from the competent Department or local Chamber of Commerce or Agriculture before the potatoes are exported from England, and must be legalised by a Turkish Consulate. Shipments unaccompanied or uncovered by such duly legalised certificates will, without examination, be refused admission into the Ottoman Empire.

Cotton and Cotton Goods.

EGYPTIAN COTTON MARKET.

(From Our Own Correspondent.)

Alexandria, August 9.

Prices receded slightly, but almost at once resumed their upward tendency. This accentuation of firmness on the eve of an exceptional crop does not seem justified, at the first blush, but the effect of unusual production seems to be neutralised by the present strong demand. Foreign spinners have already bought more than half our crop, and it is certain that we will easily sell the remainder, especially in view of the deficiency in the American supply.

The plants have suffered this week from a third attack of the worm, but as the leaves are already very cartilaginous and the plants are very advanced, the damage will probably be insignificant. The boll worms alone can now do much harm. Present conditions are, therefore, very satisfactory, and a crop of eight million cantars seems assured. Term business is very active, but purely speculative. The general opinion prevails among exporters that present prices are reasonable and not exaggerated.

Cotton seed is rising in consequence of the high price of olive oil, of which the approaching crop seems destined to be deficient.

Cotton merchants fear a money crisis at the beginning of the cotton season, for it is known that the fellah sells with precipitation, and will accept only coin in payment.

Manchester Report.

Messrs. Reynolds and Gibson telegraph:—Generally the decline in the price of cotton is viewed with satisfaction. Yarns, both American and Egyptian counts, are firm. Egyptian Spot is in only moderate request, and at one time, in sympathy with the drop in American prices, showed a falling-off in quotations of ¼d. per lb. for all grades of Brown and Upper. At close the tone was firm at a net reduction of 3-16d. per lb. for Brown. Quotations for Upper cotton show same reduction, but inquiries are small. Estimated sales, 1,900 bales.

Manchester Goods in Egypt, 1911.

In his report on the trade of Alexandria and district in 1911 H.M. Vice-Consul (Mr. E. H. Mulock) writes that, owing to the large amount of money put into circulation as a result of the excellent prices realised for the cotton crop in 1910, business in piece-goods was brisk, which induced importers to place large orders in Manchester in anticipation of another good season in 1911. These anticipations, however, were not realised. The off-take was only moderate, and at the end of the year stocks in the country were heavier than usual. Prices ruled high until about August, when they began to give way before the large estimates of the crop in America. Up to December 31 the value of stocks in the country steadily depreciated, causing a corresponding loss to the holders.

Egyptian Cotton in the U.S.A.

The *Manchester Guardian* says that although attempts are being made in the United States to cultivate the Egyptian variety of cotton it is thought to be certain that a large number of mills in America will continue to import from Egypt. Those spinners in the United States who have had an opportunity to sample the new Egyptian cotton, Assil, are much elated over the well-authenticated accounts that 35,000 to 40,000 bales (750 lbs.) will probably be available from the present crop. The comparative scarcity of 1 5-16 ins. and 1⅜ ins. American staple renders this news all the more important. Spinners who have thoroughly tested this Egyptian cotton say that it is equal in colour and length of staple to the Mit Affifi of fifteen years ago, the staple running 1 5-16 ins. to 1⅜ ins. in length. It has great strength, combs with little waste, is almost wholly free of nepps, and has a beautiful lustre.

The Egyptian Crop.

Although there is no definite news yet of the withdrawal of gold for Egypt to finance the cotton crop, it must come soon, says the "Morning Post." The reports of the state of the crop are very favourable. Recent private communications estimate the amount at 8,000,000 cantars. The price at present is at the high level of $18 per cantar; before the recent slump in American cotton it stood at $19. The prospects of this large crop are now almost secured; harvesting is already begun, and the first bales are arriving at Alexandria. A few anxious weeks, however, must yet pass before the bulk of the crop is safe. The end of August is a season of mists, and it is after mist that the boll-worm makes its dreaded appearance. The work of the harvest will also be interfered with by Ramadan.

EGYPTIAN COTTON FIGURES.

For 49th week, ending August 9.

Supplied by Reynolds and Gibson.

N.B.—The figures marked thus (?) are postulates.

The British Consul at St. Louis, U.S.A., reports that the manufacture of cotton seed oil in America was valued in 1911 at £25,000,000. A few years ago the cotton seed was a burden to the farmer, and it was used to fill up swamp holes or thrown into streams, where it was a nuisance.

In the town of Botosani, Roumania, a shirt and collar factory, with a capital of a quarter of a million francs, has been founded. The parties interested are the Ludwig Landeis Actien Gesellschaft, of Vienna; the Banca de Credit Roman, of Bucharest; and Marco Gross Söhne, Botosani. Work will be commenced in the autumn.

WOOLLEN YARNS IN SMYRNA.

The *Chamber of Commerce Journal* says that the growing importance of the carpet manufacturing industry of Smyrna since the Oriental Carpet Company was constituted gives rise to the belief that in the near future native spinners will find it impossible to meet the whole of the requirements of the carpet industry and that foreign manufacturers will be called upon to supply the woollen yarns required. The woollen yarns imported from Europe to Smyrna are used in the local manufacture of flannel shirts, drawers, socks, stockings, children's clothing, etc. The annual importation is 100,000 to 150,000 kilos. A kind which is very much in demand is a fine quality at 3s. 4d. to 4s. a kilo. c.i.f. Smyrna. These prices are for unbleached yarn, the price of coloured yarns being about 8 to 10 per cent. higher. Until recently Bradford has supplied almost all these yarns, but, the *Bulletin Commercial* states, as the English quality is suited mainly for the manufacture of articles of common quality, the consumers who for some time past have desired a more carefully prepared article have turned to Belgium, France, Germany, and Austria. The principal numbers are 10, 12, 18, 20, and 22, the first two numbers being the most important. The article is generally supplied on bobbins or cops of 55 to 60 grams of woollen yarn net (cardboard tube deducted). Some spinners, however, also sell gross for net—that is to say, they count the carton at the same price as the woollen yarn. The packing of the bobbins of yarns is in cases of 180 to 200 kilos., and the goods are covered with cloth and usually with waxed paper. When the yarns are required in hanks they are packed in bales of jute cloth. As regards modes of payment, English and French firms do not give credit, but require payment by cheque against bill of lading, with 2½ to 3 per cent. discount. German and Austrian firms readily give six months' credit to known buyers. Belgian firms not only give no credit, but require 20 per cent. in advance by cheque and the balance in cash against documents, with 4 per cent. discount.

It is to be noted that besides the woollen yarns imported from Europe, more than 1½ million kilos. of woollen yarns are used for the manufacture of Smyrna carpets. These woollen yarns are wholly manufactured in Turkey, in the following localities:—At Smyrna there are two mills for woollen carpet yarns, the older and the less important being that of M. L. Cousinery. The other, newly constructed by the Bacleir, Springles Co., Limited, is of considerable importance. At Panderma the Oriental Carpet Manufacturers, Limited, possess a very large mill for woollen yarns producing 600,000 to 700,000 kilos. a year, which is used exclusively in the carpet workshops of this important company. At Ouchak there are two large mills, at Afiun Karahissar there is a mill of secondary importance, and at Karamousalo there is a large mill. These four establishments, which belong to Turkish proprietors, also manufacture "schayak," a stuff made of carded wool, which is used in the country.

The Oriental Carpet Co. has just installed at Smyrna a large mechanical weaving factory for the manufacture of woollen cloths destined principally for the Ottoman Army. The wool produced in Turkey, which was formally exported in whole cargoes to America, is now entirely utilised in the country. The production is about 4,000,000 kilos. a year. This large development of local industry has taken place during the last four years, and especially since the formation of the Oriental Carpet Company. If the progressive development of the manufacture of woollen yarns continues on the scale of recent years it is believed that the wool produced in the country will be insufficient to cover the needs of the industry, and other countries will have to be drawn on for supplies of yarns for carpet manufacture. Yarn for carpets is sold at Smyrna at an average price of 20 to 21 gold piastres an oke, or about 2s. 10d. a kilo. From this must be deducted the cost of freight and insurance and 11 per cent. Customs import duty, which represent a deduction of about 5d. to 5½d. a kilo. The yarns are delivered in hanks and in bales.

BRAILA CANALISATION PROJECT.

(From Our Own Correspondent.)

Bucharest, August 9.

On September 24, at the Mayor's house, Braila, there will be held a most important adjudication for the canalisation of the town, at an estimated cost of 4,000,000 frs., which may, in case of necessity, be increased to any sum up to 10,000,000 frs. Would-be tenderers must deposit by September 20 at the latest documentary proof that they are contractors who have already executed work, or at least are well-known firms capable of carrying out such work. These papers will be examined and approved on the morning of the adjudication previous to the actual examination of offers. With the latter must be deposited a sum equal to 6 per cent. of the value of the work, and the firm whose offer is accepted must deposit a further 6 per cent. The time allowed for the completion of the work is three years from the date of signing the contract, which latter will be within a month of the definite adjudication.

The plans of the work required, specification, etc., can be obtained in printed form from the "Primarie," at the price of 20 frs. per copy. Offers must be made according to the plan and on the forms supplied by the "Primarie." Any further information can be obtained by applying (in French or German) to the "Primarie, Braila, Roumania."

PRESERVED VEGETABLES IN EGYPT.

The following information anent the importation of preserved vegetable products is extracted from the *Bulletin* of the Chambre française of Alexandria, viz. :—

European vegetables and fruits are much sought after in Egypt, and from 1908 to 1911 the value of the average annual consumption of imported vegetables was £42,800. This total is somewhat low if it is considered in its relation to the whole population of Egypt, which is estimated at 11,000,000 inhabitants, but the articles referred to are consumed almost solely by the foreign element, who prefer them to the fresh vegetables obtained in the country. Besides, the latter are very rare in summer, and, as a matter of fact, are far from possessing the relish and quality of those cultivated in Europe. The rich natives also seem to recognise this difference, because for some time it has been noticeable that there is a more marked tendency to purchase preserved vegetables by natives who are able to afford such luxuries.

The vegetables most in demand are peas, haricots, and mushrooms. Small peas and haricots are preferred. Articles in vinegar and oil sell fairly well, and the pushing of these should not be neglected. So far as bottled preserves are concerned, the shape mostly in demand is the half-bottle, packed in cases of 12, 24, and 36.

Pickles, as a rule, are delivered in cases of twelve bottles, called "Marseillais," the price of which varies between 4.75 frs. and 5.25 frs., or twelve bottles of one pint, valued at from 7 to 8 frs; everything per dozen and f.o.b. Alexandria. Gherkins, capers, and allspice are generally sold in barrels of 10 to 25 kilograms.

The terms granted are generally from 60 to 120 days; some houses agree to from 45 to 60 days with 3 per cent. The buyers are very often of the Greek element, and they attach great importance to good packing.

French alimentary products are much quoted on the Egyptian market, and, at equal prices, generally obtain the preference of buyers. Austria and Italy are well placed geographically for supplying the Egyptian market, and there has been a marked increase in Italian imports for some years. At present Italy is closely following France, but in 1909, and again last year, her import slightly exceeded the French.

Great Britain occupies the third place in this respect with an annual importation valued at about £8,000. Her prices, however, are much higher than the French, which causes her goods to be less in demand. They are mainly bought by English residents and by the Army of Occupation. Pickles from England are much inquired for, and appear to be greatly appreciated.

BAGHDAD IMPROVEMENTS.

Writing under date of July 10, a Baghdad correspondent informs us that work on the Baghdad Railway is being diligently pushed forward, and that, thanks partly to this fact and, even more, to the safer state of the Persian trade routes, business in the city is decidedly improving. "There are," he goes on to say, "some important projects for improvements under consideration. One is for an electric tramway, and another is for a system of electric lighting for the town. There is also considerable talk of the erection of an iron bridge. But," he adds, somewhat pessimistically as we believe, "it remains to be seen if the authorities will frustrate the carrying out of these and other improvements.

In all probability, the proposal for an iron bridge is not likely to materialise just yet; indeed, Baghdad will most likely have to be content with its present pontoon bridge until the railway is carried across the river. And whether the contract will go to a British firm or a German one when it is given out, will depend, of course, upon the arrangements made for the construction of the Baghdad-Persian Gulf (or Baghdad-Busreh) section of the line. But the tramways and the electric lighting scheme are probably not so far off realisation, and, in view of our position in the Baghdad district, it will be strange indeed if we do not manage to secure a large share of the work.

DAMASCUS REQUIREMENTS.

According to a communication from the French Consul at Damascus, there are signs of revival in the trade of that city and of Beyrout, which suffered such a serious setback by the damage wrought by the disastrous fire that broke out in the former place last April; and European imports would appear to be feeling the effects of this revival already. The following articles are said to be in increasing demand: Hardware, glassware, and earthenware; wool, cotton, and silk fabrics; and haberdashery of all kinds. Moreover, the rebuilding of the various structures is likely, according to the Consul, to cause a big demand for materials in the near future, and roofing materials especially will be in great request.

CORRUGATED IRON.

The monthly *Bulletin* of the Chambre des Négociants-Commissionaires et du Commerce Extérieur (Paris) states that there is a demand for corrugated iron in Bulgaria. Great Britain supplies the greater part of this article.

WINES IN CYPRUS.

At present the price of wines in Cyprus (says the *Moniteur Officiel du Commerce*, Paris) is continually on the increase in consequence of the small stock now held and incessant demand of Turkey and the Islands of the Archipelago. Wine of ordinary quality, the cost of which was 18 to 19 francs per hectolitre a short time ago, is now worth 20 francs.

TENDERS INVITED.

EGYPT.

Construction of a Tower and Reservoir in Armoured Concrete. Tenders invited by Municipalities and Local Commissions Section, Ministry of Interior, for construction of a tower and reservoir in armoured concrete at Menzaleh-Mattaria. Particulars as above. Offers on stamped paper of 30m. Date, September 14 (9 a.m.).

Construction of a Screw Pile Bridge.—Tenders will be received at the office of the Inspector of Irrigation, 4th Circle, Beni Suef, for the construction of a screw pile bridge over the Ibrahimia Canal to replace old ferry at Old Abâdia escape, about one kilometre south of Feshn Station, Minia Province. Material should be supplied at site by December 15th, 1912. Bridge must be built in January 1913. Specification, plan and estimate at the office of the Inspector of Irrigation, 4th Circle, Beni Suef. Tenders (on stamped paper) should be addressed to the Inspector of Irrigation, 4th Circle, Beni Suef, in a sealed envelope bearing the inscription: "Tender for the construction of a screw pile bridge over Ibrahimia Canal about one kilometre south of Feshn Station." Date, August 31 (10 a.m.).

Timber.—Tenders are invited for the supply of about 2,000 cubic feet of pitchpine, and a quantity of wood beams, laths, planks, etc., required by the Egyptian Coast Guard Administration. Tenders, made out on the proper forms, should be sent in sealed envelopes to the Director of Stores, Coast Guard Administration, Alexandria. A provisional deposit equal to 2 per cent. of the total value of the offer must accompany each tender. A copy of the specification, with specimen form of tender, may be seen by British timber merchants at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C. Date, September 16 (noon).

Camp Kettles.—The London Agent for the Egyptian War Office (Mr. A. L. Webb, C.M.G.) notifies that the Department named invite tenders for the supply of 12-quart oval camp kettles with dishes and strainers. Tender forms and all particulars may be obtained at Mr. Webb's offices, Queen Anne's Chambers, Broadway, Westminster, London, S.W., where tenders will be received. Firms who have not previously held a contract with the Egyptian War Office must enclose with their tender two references, one of which is to be a bank. Date, September 12. (Tenders to remain open for 30 days).

Supply of Paper and Cardboard.—Tenders invited by the Egyptian State Railways Administration for the supply of printing and miscellaneous papers and cardboard for the years 1913, 1914, and 1915. Tenders to be registered and sealed, and enclosed in two envelopes, the inner marked "Tender for the Supply of Paper," and the other addressed to the General Manager, Egyptian State Railways and Telegraphs, Cairo. Deposit of 5 per cent. of value of the offer. Samples of the papers proposed to be supplied should be sent to the Auditor, Printing and Stationery Section, Egyptian State Railways, Cairo. Copies of the specification, containing form of tender and samples of the paper, etc., required may be obtained at a cost of 4s. from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.—Date, September 9 (10 a.m.).

Installation of Filters.—Tenders invited by Municipalities and Local Commissions Section, Ministry of the Interior, for an installation of filters at Zagazig. Specification, etc., £1. Apply: M. le Directeur de la Section des Municipalités et Commission Local. Date, October 1 (9 a.m.).

Drugs, Medicines, Dressings, etc.—Tenders are invited by the Egyptian Ministry of the Interior for the supply of drugs, medicines, dressings, etc., required by the Department of Public Health during the year 1913. Sealed tenders will be received by the Director of Stores, Department of Public Health, Cairo, from whom specifications and forms of tender can be obtained. A deposit of 2 per cent. of the value of the offer is required with each tender. Legal "domicile" in Egypt is necessary. Date, September 25 (noon).

ROUMANIA.

Water Supply and Canalisation System.—Tenders invited at the Mairie, Turnu-Magurele, for works in providing a water supply, to be obtained from the Danube, and a system of canalisation for the town. Estimated cost 80,000 frs. Date, September 7.

GREECE.

Motor-car Services.—Tenders are invited at the Ministry of the Interior, Athens, for motor-car services for passengers and goods between Tripolitsa and Sparta, and Lamia and Karpenissi, respectively. Date, September 31.

CRETE.

Electric Tramway Construction; Water Supply Installation.—Tenders will be received at the "Bureau de la Mairie," Canea, for (1) a fifty years' concession to construct and work an overhead system of electric tramways in Canea and the neighbourhood; and (2) a fifty years' concession for the installation and maintenance of the water supply of Canea and suburbs. Copies of the Cretan *Official Gazette*, containing the conditions and further particulars regarding these concessions, may be seen by British contractors at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C. Date, October 21.

Shipping Intelligence.

BRAILA NOTES.

(From Our Own Correspondent.)

Braila. August 10.

Improved Prospects.

The open tonnage that had accumulated here since the strike, and had been exercising such an unfavourable influence upon our market, has at last been cleared away, and there is every prospect that with the beginning of next week a rise will set in which will bring spot rates of freight to the level of other markets. Owing to a shortage of trucks, there is no appreciable increase in the arrivals of grain by rail, but cargo is beginning to arrive in barges, which is giving a big impulse to our market.

There was to-day a very fair demand for Antwerp, and rates advanced from 10s. 3d., which was the utmost obtainable yesterday, to 11s., and this last rate, though freely offered, was refused for Monday loading. Of course, our market is still about 2s. below the level of that of London, but there is every prospect that much ground will be gained next week.

The Rotterdam berth was somewhat quieter at 10s. 6d. to 10s. 9d. for immediate loading; there was a better demand for next week's loading, but brokers were unwilling to commit themselves except at higher rates.

For Mediterranean destinations, Naples is still the most active berth, and 13.50 frs. is freely made. Business to other Italian ports is dull, and, owing to liner competition, the rate to Venice fell to 12.50 frs. There is a fair demand for Marseilles at 13.25 frs. to 13.50 frs.

The Sulina Market.

The Sulina Market is still inactive, owing to the lack of ready cargo; barges with grain from up-river stations were stopped at Braila owing to the comparatively low rates ruling; hence it did not pay to incur the extra expense of sending them down to Sulina.

The depth of water in the Danube remains unchanged, river draft being 23ft. 3in., and Sulina bar draft 23ft. fresh water.

There are at present 23 steamers at Braila, 11 at Galatz, and 7 at Sulina.

SUEZ CANAL DUES.

As from the commencement of 1913 the transit dues charged by the Suez Canal Company will be reduced by 50 centimes, bringing the figure down to 6.25 frs. per ton for loaded ships and to 3.75 frs. for vessels in ballast. This is the third year in succession that the directors have made a reduction of this nature, and as from January 1 next the sums payable by shipowners will be 20 per cent. lower than they were three years ago. This, says the *Financial Times*, would appear to be an adequate answer to those who maintain that the Canal Company exacts onerous charges from its customers; and, although there will probably always be some to complain, no matter what the tariff may be, it is impossible to deny that a great deal has been done by the company during recent years to meet the views of the shipping community. It is, of course, a fact that the directors have lost nothing by their concessions to shipowners, the prosperity of the Canal being greater to-day than ever before.

AMERICA-LEVANT LINE.

The *Levant Trade Review* for the June quarter, of which we have just received a copy, contains an article on the new America-Levant Line, from which we extract the following particulars:—The MacAndrews and Forbes Company, of New York, has decided to undertake this service, and the first two steamers are the "River Meander" and "River Hermes,' of 7,500 and 6,500 tons respectively. They are fitted with electric lighting and other modern equipments, and have accommodation for about a dozen first-class passengers on each vessel.

The line has been called the America-Levant Line, and will be operated for the time being under the British flag, the Eastern headquarters being at Smyrna (T. Bowen Rees and Company). As the trade increases additional steamers will be bought, and it is proposed to have an additional service of feeders, i.e., smaller vessels covering the smaller ports and serving the transatlantic boats. It is hoped that the service may be extended at a very early date so as to include Odessa, Batoum, Burgas, Salonika, Beyrout, and other centres of trade, as well as Alexandria, should the latter port not be included at the start, as was originally intended.

The MacAndrews and Forbes Company are large importers of Turkish and Caucasian licorice root and maintain offices, depots, hydraulic presses, etc., at Baghdad, Alexandretta, Smyrna and Batoum, and they have ample means to carry their present enterprise through successfully, which they are firmly determined to do.

The first steamers of the line will load at Smyrna for the United States and sail September 30 for New York. As soon as a regular schedule of sailings has been adopted, it will be given due publicity. As yet the matter is not fully developed. The establishment of a steamship line between the Levant and the United States is due in a large measure to the initiative and perseverance of the Hon G. Bie Ravndall, American Consul-General in Constantinople.

ALEXANDRIA AND THE WAR.

Mr. Vice-Consul Edward H. Mulock, referring, in the Consular Trade Report, recently published, to the effect of the war on shipping in Alexandria writes:—"The outstanding feature of 1911 is the abnormal decrease in Ottoman shipping owing to the Turco-Italian war, which is also reflected in a minor degree in Italian shipping. Otherwise, with the exception of Danish, Dutch, and Russian shipping, all nationalities showed increased figures in 1911 over 1910; but of the principal shipping countries only Austria-Hungary is above the average tonnage for the period 1906-10."

PERSIAN GULF SHIPPING.

In the *Manchester Gazette* we read that the steamer "Mashona" sailed from Manchester for the Persian Gulf last week, and will be followed by the "Avaristan," which closes for cargo on the 21st. This service, which is maintained by Messrs. Frank C. Strick and Co., Limited, is of considerable importance to the port, in view of the valuable nature of the shipments from Manchester to the Persian Gulf. On July 29 the steel screw steamer "Shahristan" was added to the fleet. Built by Messrs. William Gray and Co., Limited, of West Hartlepool, to Lloyd's highest class, some of her particulars are as follows:—Length over all, 412 ft. 6 ins.; breadth, 53 ft. 6 ins.; and depth, 29 ft. 7½ ins. She has a cellular double bottom and after-peak tank for water ballast, and, in addition, there is a deep tank or hold compartment fitted for water ballast abaft the engine-room, giving a total capacity for water ballast of about 2,200 tons. She is fitted with triple-expansion engines, having cylinders 28, 46, and 77-in. diameter, with a piston stroke of 48 ins., and three steel boilers working at a pressure of 180 lbs. per square inch. The engine-room auxiliaries are very complete. The performance of the vessel and machinery during the trial trip was highly satisfactory, a speed of thirteen knots being obtained.

STEAMSHIP MOVEMENTS.

Prince Line.

"Carib Prince."—Left Syra for Hull August 5. "Creole Prince."—Left Manchester for Alexandria August 10. "Egyptian Prince."—Left Malta August 8. 'Imperial Prince."—At Alexandria August 6. "Kaffir Prince."—Alexandria for Manchester. Left Malta August 8. "Sailor Prince."—Left Malta for Alexandria August 9. "Stuart Prince."—Left Alexandria for Black Sea August 3.

The s.s. "Merchant Prince," for Egypt and Syria, calling at Tunis and Malta, will close for cargo at Liverpool on August 19, and at Manchester on the following day.

Cunard Line.

"Caria."—Liverpool for Fiume. Left Swansea August 3. "Cypria."—At Naples en route for Bari August 7. "Ivernia."—At Gibraltar en route for New York, August 5. "Lycia."—Left Patras for Syra August 7. "Pannonia."—Left New York for Mediterranean August 8. "Pavia."—Left Alexandria for Batoum August 9. "Phrygia."—Left Venice for Poti August 5. "Saxonia."—New York for Mediterranean. Left Madeira August 10. "Tyria."—Batoum for Mostyn. Passed Gibraltar August 8.

The s.s. "Brescia," for Gibraltar, Malta, Corfu, Patras, Syra, Smyrna, Constantinople, Odessa, Batoum, Trebizonde, Samsoun, and Poti, will close for cargo at Liverpool on August 17.

Westcott and Laurance.

"Asturian."—At Odessa August 9. "Barcelona."—Left Malta August 3. "Bosnian."—At Smyrna August 8. "Egyptian."—Passed Gibraltar August 7. "Gulf of Suez."—At Malta August 6. "Orchis."—Left London for Alexandria August 2.

Anchor Line.

"Assyria."—Liverpool for Calcutta. Left Port Said July 31. "Castalia."—Bombay for Liverpool. Passed Perim August 11. "Elysia."—At Bombay August 4. "Media."—Left Liverpool for Calcutta August 9. "Massilia."—Liverpool for Bombay. Left Gibraltar August 9. "Perugia."—Palermo for New York. Passed Gibraltar August 5. "Scindia."—Bombay for Marseilles. Left Port Said August 7.

The s.s. "Circassia" for Bombay (viâ Gibraltar and Suez Canal) will close for cargo at Glasgow on August 23 and at Birkenhead on the 28th.

P. & O. Steam Navigation.

"Arabia."—London for Bombay. Left Marseilles August 9. "Delta."—Shanghai for Bombay. Left Singapore August 9. "Devanha."—At Bombay August 4. "Egypt."—Bombay for London. Left Marseilles August 12. "Himalaya." At Bombay August 9. "India."—At Bombay August 2. "Palawan." London for Calcutta. Left Malta August 5. "Persia."—Left Bombay for London August 10. "Salsette."—Left Aden for Bombay August 11. "Sicilia."—Calcutta for London. Left Suez August 13. "Sunda."—London for Calcutta. Left Malta August 12.

The s.s. "China" for Bombay and Karachi will close for cargo at Marseilles on August 23.

Strick Line.

"Afghanistan."—Left Algiers for Huelva August 9. "Arabistan."—Left Calcutta for London August 9. "Armanistan."—At Busrah August 8. "Avristan."—Karachi for Hull. Left Gibraltar August 3. "Baluchistan."—Karachi for Port Said. "Boukadra."—Left Shields for Marseilles August 3. "Djerissa."—At Algiers August 8. "Muristan."—At Bombay August 8. "Nigaristan."—London for Calcutta. Passed Gibraltar August 9. "Tangistan."—Left Bunder Abbas for Suez August 6. "Tabaristan."—Left Newport for Persian Gulf August 6. "Turkistan."—At Abadan August 8.

The s.s. "Griqua," for the Persian Gulf, will close for cargo in London on August 29.

British India Steam Navigation.

"Berbera."—London for Calcutta. Left Aden August 6. "Chyebassa."—Bombay for Antwerp. Left Algiers August 11. "Chupra." London for Bombay. Left Suez August 8. "Culna."—At Bombay August 2. "Jelunga."—At Calcutta July 9. "Matiana."—Calcutta for London. At Marseilles August 12. "Mombassa."—At Calcutta August 6.

The s.s. "Chanda," for Kurrachee, Bombay, and Persian Gulf, will leave London on August 29.

Moss Line.

"Busiris."—Cardiff for Alexandria. Passed Gibraltar August 6. "Esneh."—Liverpool for Batoum. Passed Pera August 6. "Karnak."—Bombay for Liverpool. Left Perim August 6. "Meneptah."—At Alexandria August 4. "Meroe."—At Alexandria August 3. "Siptah."—Liverpool for Pera. At Malta July 17.

The s.s. "Moeris," for Gibraltar, Algiers, Malta, Syra, Smyrna, Constantinople, Odessa, Samsoun, Trebizonde, Batoum, and Poti, will close for cargo at Liverpool on August 24.

TRADE OF ALEPPO, 1911.

In his report on the trade of the Aleppo vilayet for the year 1911, Mr. Consul Fontana reports that there was a fall in 1911 of £510,450, or about 20 per cent., in the trade of the port of Alexandretta as compared with the year 1910. The trade of the port was greatly affected by the opening of the Aleppo-Rayak-Beyrout line in 1908, which served to deflect to Beyrout a large part of the import and export trade of this vilayet. Alexandretta was still further affected by the construction of a line from Homs on the Aleppo-Beyrout Railway, to Tripoli, which was opened to traffic in June, 1911. The Aleppo-Beyrout line is 300 miles in length, the Aleppo-Tripoli line is only 195 miles. These two lines of railway seem now to have diverted from Alexandretta to Beyrout and Tripoli upwards of one-half of the foreign trade of the Aleppo Province. It could not be otherwise, as transport by mule or camel caravan or by cart cannot, as far as the southern region of the vilayet is concerned, compete with the economy in time and cost afforded by these railways. Alexandretta continues, nevertheless, to serve as port of transit for the northern zone of this vilayet.

The year 1911 was both commercially and economically a bad year for the Aleppo vilayet. The terrible winter of 1910-11 was without precedent in the memory of man. In January, 1911, severe frost set in, accompanied by repeated heavy falls of snow, which continued for nearly two months. Road and rail communication was cut off and the telegraph lines were broken down. Whole flocks of sheep, together with their shepherds, perished in the snow. The misery in the towns was extreme; fuel was scarce and the intense cold killed off many of the poor. About 80 per cent. of the sheep throughout the vilayet died of cold or hunger. Olive, orange, and pistachio plantations were in a great measure ruined by the frost. The winter was disastrous to the local markets, of which sheep, butter and wool form the mainstay. There were many bankruptcies in the spring, particularly among the Moslem sheep dealers, accompanied by a general financial crisis, and followed by refusal of credit. Towards the month of July the money market began to revive. The harvest was fairly good, and the commencement of the construction of the Baghdad Railway, and concomitant influx of German and Italian engineers, employees and workmen, gave employment to hundreds of the labouring class, and brought money into the country. The declaration of war, however, and invasion of Tripoli, followed by the fall of the Bank of Mitylene and crises in the Turkish and Egyptian financial centres, reacted upon the markets of the Aleppo Province and caused a great repulse in trade.

German cutlery continues to be sought after, in spite of its inferiority, owing to its cheapness. The natives, more especially the Arabs, are attracted by appearance and show rather than by quality or durability, especially when the price of the article is trifling. The Arabs in general do not dispose of much ready-money, though they may be owners of land and house property, hence, perhaps, their aversion from paying a good price for a good article.

Lamps, perfumery, sweetmeats and miscellaneous wares are imported largely from Austria-Hungary.

Continental firms facilitate trade operations with Syria at ordinary times by taking bills payable at from one to eight months after the date of the original invoice. British firms usually demand payment on shipment or delivery of goods.

The manufactured productions of the Aleppo district are tissues, half cotton, half silk, pure silk and pure cotton, destined for sale in various parts of Turkey; soap for local use and exportation is manufactured at Antioch; calico embroidery, exported to the United States and Egypt; linen embroidered handkerchiefs and lacework, exported to the United States; men's silk girdles, exported to Egypt.

The branch of the Deutsche-Orient Bank established at Aleppo in 1910 continues to compete, in some degree, with the Ottoman Bank. The much-talked-of model dairy has not yet been opened and no fresh industries have been started, nor are there business or financial changes of any importance.

During 1911 public security was satisfactory, but credit, for the reasons above set forth, was largely lacking.

ROUMANIAN TRADE IN 1911.

The foreign trade of Roumania last year (according to M. Séonblum, French Commercial Representative at Jassy) amounted to £40,000,000, of which £22,000,000 were for exports and £18,000,000 for imports. It is interesting to see how the four principal nations in Europe shared in this trade, viz. :—

	Exports. £	Imports. £
Germany	1,040,000	5,000,000
Austria-Hungary	1,600,000	3,400,000
Great Britain ..	1,400,000	2,320,000
France.....	1,080,000	920,000

M. Séonblum urges upon his countrymen to endeavour to increase their productions in a land whose inhabitants undoubtedly favour French manufacturers and where the French language is currently spoken. He advocates their following the example of their foreign competitors by establishing goods depots in Roumania for the conduct of business on wholesale lines. One of these warehouses, which was started in 1908, disposed of merchandise in that year to the value of £16,000, and in 1911 its sales represented £60,000.

Another means, he points out, of effecting good business in Roumania is to establish in Paris itself a committee exclusively composed of manufacturers who would take upon themselves the task of thoroughly investigating the needs of foreign countries. This having been accomplished, there could then be started a special depot, for example, for the putting out of French manufactured goods in Roumania. This depot could be placed under the direction of an agent who, through the medium of sub-agents resident in Roumania, and to whom a fixed commission would be granted, could sell the goods.

THE WAR AND ITALIAN TRADE.

In a report, just issued, on the trade of the Naples district, Mr. Consul-General Churchill says that the outbreak of the Turco-Italian War at once caused the closing of the Black Sea to Italy as a source of its grain supply. Tariff-protected industries, which had been started in various parts of Italy, and notably at Naples, with the additional benefit of exemption from taxation for twelve years and other advantages, were at once affected. Some of these, and especially textile factories, turning out more goods than the Italian market could absorb, had been finding an outlet in North Africa and the Near East. The textile industry had been in difficulties for some years. The war has added to its troubles, and even should it cease at once it will be some years before Italian industries can regain the ground now lost. On the other hand, the war has brought a considerable amount of trade to Southern Italy, which became the principal base for the Tripolitan campaign.

NEWS FROM ALL SOURCES.

Cyprus has put the new postage stamps containing the figure of George V. into circulation.

At the congress of agriculturists held at Moscow it was agreed that the bee owners of all the Slav countries should conduct experiments similar to those which have been carried on on the Grand Duke Michael Alexandrovitch's estates, and which have given most satisfactory results. M. Marschoula, a Servian delegate, proposed that an organ devoted to the interests of Slav bee owners should be established.

The Cairo Ministry of Public Works and the Department of Agriculture have decided to send the director of the entomological section of the latter department to India, in order to import such useful insects and parasites as will live on the cotton worm and other insects injurious to cultivation.

The Syndicate of Greek Employees in Cairo recently held a festival at Luna Park, under the auspices of the Greek Agency. The money collected has been sent to the Greek Prime Minister for the purchase of an aeroplane for the Greek Army.

Turkey and Egypt were two of Belgium's best customers for iron girders last year, and Turkey was also one of the four largest buyers of rails from the same source.

British imports into Turkey increased during the year ended last March by over £600,000.

A Decree has been issued authorising the importation into Greece, up to August 15th/28th, of sugar in pieces of irregular shape (lumps) in bags each containing not more than 106½ kilogrammes (net weight) of sugar.

H.M. Chargé d'Affaires at Constantinople reports that the Constantinople Board of Health have decided that the revised Turkish Pilgrim Regulations for the year 1911-12 are to remain in force until further notice.

An illustrated book, issued by Messrs. Thomas Cook and Son, Ludgate Circus, shows that a select, limited party for the Holy Land and Egypt will leave London on Monday, October 7, and proceed viâ Dover and Calais to Paris, then to Marseilles, and by North German Lloyd steamer to Alexandria. The journey will afterwards be continued to Cairo, Jaffa, Beyrout, Baalbek, Damascus, Tiberias, Jerusalem, Bethlehem, and Jericho, and every facility will be offered for seeing the chief places of interest in the countries visited, under the most advantageous and comfortable conditions.

Mr. John Gwynne, of Kenton Grange, Kenton, Harrow, Middlesex, and of 81, Cannon Street, E.C., engineer, chairman of the British Engineering Company of Egypt, Limited, and chairman and managing director of Gwynnes', Limited, who died on May 2 last, aged seventy-five years, left estate of the gross value of £40,652, with net personalty nil.

There has recently been erected at the Um Nabardi mines a complete installation of machinery for the cyanide treatment of the mine's reserves of the valuable quartz. It is expected that work with this plant will result in an immediate substantial increase in the gold yield of these mines.

HENRY'S CALCINED MAGNESIA Established 1772.
Continues to be prepared with scrupulous care, in the greatest chemical purity, by
Messrs. THOMAS & WILLIAM HENRY, 11, East Street, St. Peters, Manchester
And is sold in Bottles, authenticated by a Government Stamp, bearing their name. Trade Mark, "Henry's Calcined Magnesia."
Price 1s. 6d. or 2s. 9d.
NEW YORK: Messrs. SCHIEFFELIN & CO., William Street.
PARIS: Messrs. ROBERTS & CO., 5, Rue la de Paix.

Tues., Aug. 27.	Wed., Aug. 28.	Thurs., Aug. 29.
Wed., Sept. 11.	Thurs., Sept. 12.	Fri., Sept. 13.

LONDON, August 15.

Cheerful Markets.

The markets are cheerful. They are really almost busy. Kaffirs do not boom as the magnates would wish, but they do not slump. Home Rails, Americans, and Miscellaneous stocks look like going much better. Indeed, everyone is hopeful that in the autumn we shall get a raging, tearing boom.

Nothing has been offered in the way of prospectuses except a Rhodesian tobacco venture, which appears over capitalised.

Money is likely to become dearer, especially if the Stock Exchange is active. The crop demands will be large, trade is growing, and it is quite clear that we shall see a 4 per cent. Bank rate some time in October.

Foreigners Steady.

Foreigners have been steady. One of the features has been a rise in Chinese, which are being steadied with a view to a new loan. The Powers appear to have come to terms with the Chinaman. Bulgarians are quoted at 91, Egyptian Unified have improved to 100½, French Rentes, which carried over at 91, are now 92, German Threes show no change from the carry over, but are steady at 79. Greek Fours appear a little uneasy; they are 53½. Hungarians at 90¼ are steady. Italians carried over at 95½, and have improved to 96. Perus have been weak on the articles in the current issue of the *Stock-broker*. Tintos are gradually recovering; the Paris speculator has confidence in the future of copper; Russians are good, the French having absorbed 300,000,000 frs. of Russian Loans during the past month. Turkish Fours are unchanged at 89½.

Home and Foreign Rails.

Home Rails, having been strong for some days, look like going weaker. The pace was too strong. Why anyone should be so foolish as to sell Home Railway stocks which yield nearly 5 per cent., in order to put their money into railways in South America which yield only 4½ per cent., no one can explain. The traffic increases are good, Great Central being up £10,500 on the week.

Yankees are blazing; the banks in Wall Street are giving every encouragement to the gambler, and Chesapeakes and Unions are talked much higher. Canadian Pacifics look like going over 300, and Grand Trunks are also steady. The crop in Canada is said to be a record.

Oil and Rubber Quiet.

Little or nothing has been done in either oil or rubber, but a steady investment buying continues, and all the good rubber shares are very firm. Shells and Spies also look good.

Kaffirs tried to boom, but failed. However, the magnates are determined to start the market, and we shall see higher prices before Christmas. Planets are to be put up. Chartered are talked to £2, and Amalgamated Props to 10s.

Tin and Copper.

Tin is strong, and each week better news comes from Nigeria. Even Anglos have been put up on vague rumours of a good report from Mr. Rumbold. Naraguta, which was sold some five or six weeks back, because no returns had been made, is said to have done very well indeed, and 60 tons a month is prophesied.

Copper shares are gradually recovering from the set-back they experienced when the American producers' figures were published. These figures were really good when everything was taken into consideration, and the public is now appreciating that fact. Anaconda dividend is likely to be increased at the end of September to 75 cents, and Amalgamated will also increase their dividend. Messrs. Ryan and Guggenheim are determined to hold the copper market; for trade in the United States is splendid, and 300 miles of Southern Pacific Railway is to be electrified. Therefore, Utah, Miami, Calumet and Hecla, Anaconda, and Nevada Consolidated are all likely to see higher prices.

Marconi Rumours.

In the Miscellaneous market everyone is talking about the Marconi circular. The general opinion is that it is a sign of weakness to issue circulars denying impalpable rumours and stories. The dealers say that if the Marconi Company is not going to issue new capital it is because they have sold shares in some of their subsidiaries. There is very little doubt that the Marconi Company has done this and probably made a good profit on the transaction. The real reason why Marconis are flat is the large bull account that exists in Ireland. P. and O. deferred, Cunards, Royal Mail, and all other shipping shares have been rising. Evidently another deal is in contemplation.

Egyptians.

Egyptians have been steady all the week. Aboukirs are 1⅞. Agricultural Banks 5¾, Delta Light Railway prefs. 8¼, Sidi Salems have also been bid for, Union Fonciere are rising, and the whole of the Egyptian market looks strong, as, indeed, it should do when we remember that Lord St. Davids is one of the greatest financiers in England, and he has given us the definite tip to go into Egypt. Crop reports are splendid, and there is no doubt that all Egyptian shares will have a big rise within the next three months.

SERVIAN STATE MONOPOLIES.

The receipts of the Administration of the Servian State Monopolies during the month of June amounted to 4,772,877 francs., as compared with 4,880,174 francs in May. The details were made up as follows, the figures for May being given in parentheses:—Tobacco, 1,766,676 francs (1,727,248 francs); salt, 479,411 francs (583,624 francs); petroleum, 152,348 francs (134,339 francs); stamps, 668,537 francs (617,172 francs); matches, 99,936 francs (110,928 francs); cigarette papers, 129,214 francs (127,186 francs); Customs, 1,113,516 francs (1,202,363 francs); excise stamps, 363,236 francs (377,312 francs). The total receipts from these sources to the end of May amounted to 23,546,632 francs, and to the end of April to 18,666,457 francs.

SILVIERA AND CO., ALEXANDRIA.

The *Egyptian Gazette* says:—"The Alexandria Mixed Court has decided to call the creditors and clients of Messrs. Silviera and Company at a meeting to be held at the Bankruptcy office of the Court on August 22. There are 1,200 creditors. Silviera, it will be remembered, recently fled from the country, and he is still at large."

The system of payment by cheque is gaining ground in Servia, but until now there have been no legal provisions governing such payments. The Belgrade Chamber of Commerce has undertaken to draw up an outline Bill for the Government in order to secure legal regulation of the cheque system.

NOTES FROM ALEXANDRIA.

(FROM OUR OWN CORRESPONDENT.)
ALEXANDRIA, August 9.

The Market.

Prices have hardened and buyers are suddenly very active. Unfortunately absence of sellers hinders business. The volume of affairs is, nevertheless, considerable, and one might imagine that the active winter season had already arrived. It is no longer possible to buy at the low prices of even a week ago, and it is quite impossible to fill buying orders without provoking a sharp rise. Judicial sales seem to have ceased. All shares are looking up, with exception of the Cassa di Sconto, which fell to 35 frs. The recent decline in these securities is attributed to the sale of 7,000 shares belonging to the Tilche bankruptcy estate. The new shares of the Cassi di Sconto are now ready and the exchange will soon be effected, three of the new shares being issued for four of the old issue. At present prices, the new share should be worth 47 frs.

Resignation of Sir P. Harvey.

The Financial Adviser leaves the Egyptian Service in October next. It is believed that Lord Edward Cecil, Under-Secretary of State in the Ministry of Finance, will become Financial Adviser, and that Birch Pasha, Director of State Domains, will replace the latter. The resignation of Sir Paul Harvey is much regretted, for he was considered an excellent financier and possessed a profound knowledge of the economic conditions of the country. Egypt owes to him a more severe supervision of her finances, and the Adviser's name will always be associated with the projected renewal of the Suez Canal Concession, which, adthough rejected by the General Assembly, remains a master work of its kind.

Tax on Insurance Premiums.

The Municipality of Alexandria, some time ago, proposed to the Government a tax on insurance premiums and the imposition on insurance companies of an obligation to invest a part of their funds in Egypt as guarantee for their policyholders. These proposals were opposed by the Syndicat des Assureurs, and the Government has just declared that it considers such proposals incompatible with legal and financial expediency.

Municipal Loan.

The loan of £500,000, which was to have been raised by the Alexandria Municipality in London, has been postponed until a more propitious time. The National Bank of Egypt has, in the meanwhile, advanced £150,000 for the construction of breakwaters.

Petroleum Again.

The petroleum trust has reduced the price per can from PT. 13½ to PT. 13 for Roumanian petroleum, and has maintained the price of Russian at PT. 15. This is the greatest concession that the trust is disposed to grant Egyptian consumers. All attempts made by Lord Kitchener and the Egyptian Government to bring about a reduction have therefore failed, and the *Reforme*—the organ of the trust—has announced that all agitation is useless. The trust demands from the Egyptian consumer, not far distant from the centres of production, a price of 270 frs. per ton, while in London the price is 161 frs., and in Antwerp 165 frs. Moreover, petroleum worth in Roumania 60 frs. per ton with freight (40.50 frs.), costs about 100.50 frs. per ton delivered at Alexandria, and the trust, holding the monopoly, imposes a price of 270 frs. per ton. Is not this price out of all reason, and is not such profit illicit and scandalous? What holds the hands of the Egyptian Government from abolishing these abuses, so hardly felt by the people of Egypt?

COMPANY NOTES.

Caisse Auxiliaire Fonciere.

The first balance-sheet of this company, which was formed under the auspices of the Credit Foncier d'Orient, with a share capital of two million francs, is due shortly. During the nine months of its existence the company has done excellent business of a character which deserves particular notice. It is the only company in Egypt, we believe, which enables the beneficiaries of Wakfs estates to borrow money without resorting to the ubiquitous usurer. As is well known, Wakfs lands are inalienable, and thus are not ordinarily held to be a good security for a loan, but the Caisse Auxiliaire Foncière has adopted a system which allows it to lend money to the beneficiaries at ordinary rates of interest. It assures itself of the revenue for the lands on which the money is lent during the lifetime of the borrower, and insures the beneficiaire for the total amount in case of his death. So far the company has made advances of an aggregate of £30,000, and no doubt its operations will be considerably extended in the future.

Egyptian Investment and Agency, Limited.

An extraordinary and general meeting of the shareholders of the company was held last Friday (9th inst.) at Egypt House, 36, New Broad Street, E.C. The chair was occupied by Mr. R. C. Abdy, chairman of the company. The secretary having read the notice convening the meeting, the following resolutions were put to the meeting and carried unanimously :—(1) That the name of the company be changed to "Egyptian and Foreign Trust, Limited"; (2) That the provisions of the memorandum of association of the company with respect to the company's objects be altered by adding to paragraph (a) of Clause 3 of such memorandum of association the words following, that is to say :—"and also in any part or parts of the world in which it may be considered expedient to carry on such businesses, or any of them."

Compagnie Sucriere de Bulgarie.

With reference to the article of our Sofia correspondent, which appeared in our issue of August 9, it is of interest to note the constitution of a company under the above title. The object of the new company is the exploitation of a refinery at Philippopolis, in Southern Bulgaria. The company, whose head office is in Brussels, is constituted for a term of thirty years. The capital is six million francs, divided into 12,000 shares of 500 francs each. There are, moreover, 2,625 founders' shares without capital value. The financial year closes on July 31 of each year, and for the first time in 1914. The profits are divided in the following proportions :—Five per cent. to the legal reserve and a dividend of 6 per cent. to the ordinary shares; of the surplus, 10 per cent. goes to the board of directors, 60 per cent. to the ordinary shares, and 30 per cent. to the founders' shares. The following directors have been appointed :—MM. E. Avisse, D. Batzouroff, G. Gbineff, H. Henrotte, J.-P. Monod, A. Naville. J. Radine, F. Revol, G. de Timan, and D. Toutcheff.

Ottoman Cloth Company.

The annual ordinary general meeting of the company will be held at the offices of the company, The Quay, Smyrna, on Saturday, the 24th inst., at 10 a.m., for the purpose of receiving the directors' report and balance-sheet for the year ended February 29, 1912, electing directors in the place of those retiring by rotation, appointing auditors for the ensuing year and fixing their remuneration, and transacting the ordinary general business of the company.

Shareholders who hold share warrants to bearer and whose names are not on the share register of the company are reminded that if they wish to attend this general meeting of the company they must first deposit their bearer warrants at the offices of the Banque de Salonique, at Constantinople or Smyrna, five clear days before the date of the meeting.

Turkish Tobacco Growers (Ltd).

A new company with the above title was registered on July 31, with a capital of £5,000, in 4,950 Preference shares of £1 each and 1,000 Ordinary shares of 1s. each. The offices are at 1-2, Great Winchester Street, E.C.

Bank of Egypt.

Under the liquidation of the Bank of Egypt, Limited, Mr. H. Brougham, Senior Official Receiver and liquidator, notifies that he is about to make a further payment, in part redemption of the loan certificates, of 2s. in the £ on the amount of the original debt. This will make a total dividend to date of 16s. 6d. in the £ on the original debt and a redemption of the loan certificates to the extent of 13s. in the £.

The payment of 2s. in the £ will be made on Monday next, 19th inst., to the holders of the loan certificates.

The liabilities of the bank, which amounted at the date of suspension to £2,050,000, have now been reduced approximately to £375,000.

Rumoured Banking Amalgamation

It is rumoured with persistence that an amalgamation is to take place between the Bank of Salonika and the National Bank of Turkey. We have not been able to obtain confirmation or denial of these rumours.

THE FINANCES OF SERVIA.

A report upon the finances of Servia for 1912, prepared by Sir Ralph Paget, K.C.M.G., British Minister at Belgrade, has just been published. It shows that the public revenue of the kingdom is estimated at £5,230,590, as compared with £4,805,460 in 1911. The total estimated expenditure for the year amounts to £5,230,590, which, it will be remarked, has been made to balance exactly with the revenue. An increase of some £427,330 in expenditure in comparison with 1911 is shown, which includes sums required for expansion of already existing items, and to provide for fresh expenses which have arisen under recent legislation.

The Servian debt dates from the year 1876, when a loan of 3,750,000 r. was obtained from Russia to meet the necessities of the Turkish war. A series of other foreign loans followed between 1881-84, chiefly for the obligations in regard to railway construction which had been imposed upon Servia by the treaty of Berlin, and further loans were necessitated by the war with Bulgaria in 1885 and the subsequent re-armament. A number of these loans were converted in 1895, the rate being reduced from 5 to 4 per cent. in return for the greater security offered by the establishment of the Board of Administration of State Monopolies, which among its members includes a French and a German delegate. The amount required for the service of the debt during the current year (including interest, redemption and lottery prizes) amounts to £1,295,782.

EGYPT'S GOLD REQUIREMENTS.

"Egypt's demand for gold has not yet come, but it is near," says the *Morning Post* of Thursday, apropos of the favourable reports of the cotton crop. And the writer adds : "It seems inevitable that Egypt will require an exceptionally large amount of gold to finance this big crop. She would have required less but for the large shipments of gold which she has sent to India this year. Last year the total amount sent was about five millions. This year more than that has been sent already. London must make up the deficiency; except in so far as the need for gold may tempt it out of the hoards 'up country,' and in so far as Paris may be able to help. It is said that there has been an increase in Egypt's export of grain, fruit, etc., to France of late, which will tend to promote the flow of gold from France to Egypt. Altogether the rough estimates which alone are possible of the total amount of gold which Egypt will require vary between £7,000,000 and £10,000,000."

FINANCIAL NEWS IN BRIEF.

The Stock Exchange Committee has appointed August 29 as special settling day for the further issue of 70,750 shares of the Oriental Carpet Manufacturers, Limited, of £5 each, fully paid, Nos. 100,001 to 170,750 (bearer warrants).

Coupon No. 14 of the 4 per cent. debentures of the Damas-Hamah Railway (Baghdad Junction) may be encashed at any of the offices of the Imperial Ottoman Bank.

Coupon No. 39 of the Turkish Tombac 4 per Cent. Prior Lien Bonds is now payable by the Imperial Ottoman Bank, in Constantinople, London, and Paris.

Etablissements Orosdi-Back.—A final dividend for the year 1911-12, amounting to 8 francs, is payable at the offices of the company in Paris, Constantinople, and Stamboul.

The Greek Public Debt Régie has realised for the first half-yearly period of 1912 a profit of 1,161,242 dr. gross and 420,643 dr., against 1,192,798 dr. and 397,777 dr. for the second half-yearly period of 1911. The dividend has been declared at 10.50 francs, as compared with 10 francs and 9.50 francs respectively for the second and first half-yearly periods of 1911.

The receipts of the Salonika Tramways and Electric Lighting Company for July were 97,089 francs, against 92,817 francs for July last year; while for the period from January to July, 1912, the total was 689,326 francs, as compared with 622,477 francs for the similar period of last year.

The National Bank of Roumania shows net profits amounting to 3,035,011 francs for the first half-yearly period of 1912, as compared with 2,446,952 for the corresponding period of 1911.

Particulars of £10,000 Six per Cent. Debentures, created July 9, 1912, by the Ginning, Pressing, and Warehousing Company of Egypt, Ltd., have been filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

NOTES OF THE WEEK.

After a week of considerable anxiety caused by a section of extremists among the "insurgents," the situation in Albania has again assumed a more favourable aspect. Last week, it will be remembered, the acceptance by the Turkish Government of virtually all the reforms demanded by the Albanians justified the belief that the Albanian question was well on the road towards a settlement. Disputes among the leaders, however, led to a southward advance of some 4,000 Ghegs under certain of the more implacable *bairaktars*. A thousand of these entered Uskub, where they opened the prison, releasing a large number of malefactors as well as Albanian and Bulgar political prisoners, while a smaller force was detached to proceed to Kuprili. The latter party was reinforced on the following day by some 500 warriors, and of these about 150 actually entrained for Salonika. With the exception of the opening of the prison doors at Uskub, the conduct of the invading force is reported to have been exemplary; but there was no justification for their advance, and the moderates, who were negotiating terms of agreement at Prishtina with the Government, repudiated the action of the extremists and attempted to persuade them to return. While the Porte maintained its conciliatory attitude towards the Albanians, it took precautionary measures to deal with any attempt on their part to force a conflict or to advance in strength on Salonika. In the meantime the negotiations at Prishtina terminated in complete agreement between the Government and the more responsible leaders of the Albanians, on the basis, *inter alia*, of a general amnesty and restitution of arms, and the moderate "insurgents" began to return to their homes. Their example was soon followed by the invading force at Uskub, which is said to have accepted thankfully free railway tickets to Ferizovitch and Mitrovitza, and for the moment the Albanian question is in abeyance, pending the fulfilment of the Government's promise to introduce the required reforms.

On the Montenegrin frontier the situation is still unsatisfactory, and fighting continues. All the Montenegrin villagers in the neighbourhood of Berane and Kolachin have been armed and are never at a loss for picking a quarrel with the Turks, who, in turn, have not hesitated to wreak their vengeance on Montenegrins or their own non-Moslem fellow-countrymen. On August 17 a Turkish blockhouse near Berane was attacked, and four Turks were killed; in an earlier raid fifty-four Turkish soldiers had been taken prisoners and a quantity of arms, horses, and provisions were seized by the Montenegrins. On August 18 four blockhouses near Mukra were reported to be holding out against overwhelming odds. Their position was desperate, as the entire Christian population of the district was making common cause with the Montenegrins against them. In the face of this situation the Turks have been compelled to send troops to the disturbed region, and it is to be feared that the provocation to seek redress by a regular campaign against Montenegro has been excessive. The latter country can hardly count upon much support among the Powers, as the principle of an amicable adjustment of the frontier disputes had been previously accepted by both the Montenegrin and the Turkish Governments. On the other hand, there can be no desire in Europe to see a conflict between the two countries, and pressure will probably be put upon King Nicholas to keep his warlike subjects in order. The work of arranging a satisfactory delimitation of the frontier ought to be undertaken at once, with goodwill and determination on both sides.

On the initiative of Count Berchtold, the Austro-Hungarian Minister of Foreign Affairs, the great Powers have been invited to exchange views on the Balkan situation. The invitations were given verbally by the Austro-Hungarian representatives at the various capitals, and at present a considerable amount of uncertainty prevails regarding the precise scope and object of the "conversations." Count Berchtold has explained that his motive is "to co-ordinate the several efforts made by the Powers in the interest of Balkan peace and the *status quo*," while further semi-official interpretations hint at the desirability of strengthening the hand of the present Turkish Government by giving a combined assurance of European support in the work of reform that it has undertaken. Action on the part of the Powers is to be "organised," and not necessarily concerted, and there is to be "no question of proposing the adoption of special reforms by the Porte, or of marking out special spheres of interest for the Balkan races, or of any kind of intervention in the old sense of the term." Until more is known of the Austro-Hungarian proposal it is difficult to pass judgment upon it. If the invitation does not entail a round-table conference, it is hardly likely to carry us much farther than the existing practice of diplomacy, which doubtless provides for frequent exchanges of views on the Balkan question—at least among the members of the Triple

Digitized by Google

Alliance and among those of the Triple Entente. It is true that at the present crisis the Turkish Government stands in need of all the dispassionate advice that can be given it. The task of satisfying the demands of Albania and of the various nationalities in Macedonia without paving the way for the further dismemberment of the Ottoman Empire will tax the statesmanship of more experienced administrators than Mukhtar Pasha's Ministry, and the goodwill of the Powers, if it can be given disinterestedly, might prove of assistance, not only directly in Constantinople, but also indirectly by encouraging the Balkan States to accept whole-heartedly the new order in Macedonia. To make such goodwill effective, however, may entail a closer understanding between the Powers than Count Berchtold wishes to propose as an outcome of his vague and indefinite suggestion.

The Turkish Ministry remains subject to frequent changes, the portfolio of the Interior being particularly hard to fill. After the resignation of Zia Pasha the post was given to Damad Sherif Pasha, but within a few days he too had withdrawn. The office of Minister of Public Works, rendered vacant by the transfer of Damad Sherif Pasha, has been given to General Salih Pasha, a senator and former Minister of War. A further resignation is that of Hussein Hilmi Pasha from the Ministry of Justice. Although nothing definite is known as to the reasons for these changes, it is reported that differences of opinion have arisen in the Cabinet regarding the policy to be adopted towards the Committee of Union and Progress. The conciliatory attitude that certain Ministers seemed inclined to maintain is resented by others, who would endeavour to eliminate once and for all Committee influence from Turkish politics. We have already had occasion to express the doubt whether this latter course is possible, and the result of the struggle between the two camps in the Ministry will be watched with interest. A coalition at this period, however, might well be thought premature, as the better elements in the Committee party have not had time to throw off the evil influence of the extremists, while the new Cabinet has not been long enough in office to "find itself" or to evolve and test a policy that would offer a definite basis of co-operation with the moderate supporters of the Committee. A satisfactory feature of the situation is an announcement in the *Tanin*, which has resumed publication, to the effect that the Committee of Union and Progress has decided to adopt the attitude of a constitutional Opposition.

The announcement that a forward movement in Tripoli is now being prepared by the Italians coincides with another to the effect that the informal peace negotiations in Switzerland are about to bear fruit. No importance can yet be attached to the latter statement, but in the occupation of Regdaline by the troops under General Gario we are asked to see the beginning of a combined advance into the interior of Tripoli. The force in possession of Regdaline is able to control the caravan roads from the Tunisian frontier to Zuara and that town, and it will be necessary for the Arabs to deflect their supplies once more slightly further south. Meanwhile General Caneva is contemplating a return to Italy on short leave, with the probable object of communicating his plans for an advance to the Ministry of War. This forward movement on the part of the Italians, if undertaken on an adequate scale and successfully, will offer a far more effective ground for peace than many of the arguments that must have done duty in the negotiations at Lausanne.

On another page we publish a letter from the three delegates sent from Cyprus to represent to the British Government the case of the Greek inhabitants. In taking their leave MM. Constantinides, Theodotou, and Lanitis formulate once more the chief of the Greek demands. The subject has already been dealt with at length in these columns and hardly calls for further discussion. We could have wished that the mission had preceded many of the recent incidents that have disturbed the peace of Cyprus and the good relations between the Greek inhabitants and the British officials. As things were, the deputation set out in a spirit of hostility to and more or less in open defiance of British authority. Their cause, we cannot help thinking, has suffered from this circumstance. If the Greek population had been possessed of more wisdom it would have recognised in the new High Commissioner, Sir Hamilton Goold-Adams, its best friend, and would have co-operated with him in devising the surest means of realising as many of its ambitions as possible. Instead of this course, they elected to defy the High Commissioner, and, having prejudiced their case in Cyprus itself, chose to see whether they could present it in some new guise to the British Government. In spite of this mistake the visit might have proved not altogether without value to the three Cypriots, if they could have dispossessed themselves of bias and adopted a more receptive frame of mind. From the manner in which they recapitulate their demands it is to be feared that they have not profited much from their stay. It is true that the sentiment expressed in the opening words of their first communication to the new High Commissioner—the desire felt "in a strong and unsubduable manner" for annexation to Greece—has been replaced by the milder expression "mindful of Greek nationality," but the underlying thought is the same, and its repetition indicates that on this point the delegates have learnt nothing. Of the four wishes the first has already been answered by reference to statistics, which show that while the proportion of Christians to Moslems is greater than it was in 1881, it is not so great as to justify any revision of the composition of the unofficial element in the Council. On the other hand, we do hold that in regard to the question of the tribute and of the surplus revenues of the island the wishes of the islanders might with advantage be met, and we have little doubt that in due course this consummation will be achieved. It might even now have been achieved, if the Greek members of the Legislative Council had elected to co-operate with the new High Commissioner in a joint and friendly presentation of the island's case. They have chosen a different course, and it is possible that the remission of the tribute will be delayed in consequence.

An appeal to the Court of Cassation has been lodged against the conviction of the three men recently sentenced in connection with the Egyptian conspiracy case. The verdict must be held to have met with popular approval, if the welcome accorded to the Khedive on his return from Europe affords a criterion of the feeling of the country. In his letter this week our Cairo correspondent describes the enthusiasm with which His Highness was greeted at Alexandria as exceeding that of any previous demonstration on the part of the Egyptians in honour of their sovereign. The incident tends to confirm the belief that after a period of agitation the chief anxiety of the bulk of the populace is to be allowed to lead peaceful lives in furthering their individual prosperity.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)

Constantinople, August 16.

An Improved Situation.

The situation, although it has improved since the dissolution of Parliament, is still unsatisfactory. The Committee, it is true, has abstained from the revolutionary outbreak which its opponents professed to fear, and many of its more responsible members favour a policy of recognising the *fait accompli* and abstaining from anti-Governmental polemics. The declarations made by Hilmi Pasha to the *Jeune Turc's* representative and a semi-official communiqué published by the Agence Ottomane last night are certainly calculated to pacify the moderate elements in the Committee. Both enlarge on the essentially "neutral" character of the Government and its determination to abstain from interference in the elections and from any form of political persecution. Both lay stress on the necessity of weaning the civil as well as the military functionaries of the Empire from political propagandising, and Hilmi Pasha also emphasised the importance of settling the Albanian question with the minimum of delay, and of obtaining the confidence and support of the Great Powers by a "frank and honest" policy.

As far as the Albanians are concerned the new Government seems to have obtained their confidence, and, if no unforeseen incident occurs during the negotiations which are now being carried on between the Gheg delegates and the official Commission over which Ibrahim Pasha presides, we should have tidings of an arrangement within a week. But the Albanians are only one factor in a very difficult political problem. The grant of special privileges to the Shkipetar is likely to be followed by demands on the part of Serbs, Bulgars, and other Macedonian elements for somewhat similar concessions, and the very rumour of "Albanian autonomy" has fluttered the Balkan dovecotes and aroused the indignation of the Servian and Bulgar Press. Furthermore, if the bulk of the members of the Committee of Union and Progress are in favour of a pacific policy, Niazi Bey, of Resné, Djemal Bey, of Ochrida, and Dervish Bey, of Seres, have taken to the mountains at the head of armed bands as a sign of protest against the dissolution of the Chamber. There can, unfortunately, be no doubt that the leaders of the Committee were cognisant of their intentions, and that Niazi's and Dervish Bey's flight did not take place till after they had discussed the situation with some of the most important of their party chiefs. At Seres, indeed, there seems to have been danger of an outbreak. Kara Said Pasha, the Commandant of the Salonika Army Corps, however, was prepared for all emergencies, and a descent by his troopers on the telegraph office placed the Government in possession of a number of incriminating documents. Several telegraph clerks were arrested, and it is believed that further arrests are impending nearer the capital.

The Cabinet.

Meanwhile there have been signs that all is not harmony within the Cabinet. Zia Pasha's resignation of the portfolio of the Interior was due in part to ill-health, but partly to the ex-Minister's conviction that he was unfit for the terribly difficult task of restoring internal tranquillity in the face of Particularist discontent and the underground opposition of the Committee. Damad Sherif, who has succeeded him, is something of a nonentity; he is also Hussein Hilmi's man, and there are grounds for the statement that some of the most important members of the Cabinet are inclined to suspect that the Committee of Union and Progress has still a hold on Hilmi. The *Indépendant* of Salonika even asserts that Hilmi is the nominee of the Young Turks for the Grand Viziership when the Committee enjoys its own again. It is, moreover, rumoured that he is still in relations with the Salonika Committee, and the writer has been informed by Committee deputies that he recently suggested the appointment of Djavid Bey to be Minister of Finance. It is, however, possible that Hilmi, who is no mean diplomatist, wished to detach Djavid from his colleagues. In any case, there are grounds for believing that further Cabinet changes are possible.

Montenegro and Bulgaria.

The Montenegrin frontier troubles have begun again, and the Government of Montenegro has now mobilised a considerable force on the disputed section of the frontier. But as long as Austria and Russia deprecate Montenegrin aggression there should be little fear of an attack on Turkey from any Balkan State. As for the dispute with regard to the frontier, one thing is quite certain—viz., that in the present excited state of Albanian opinion it will be quite impossible for the Porte to make any concessions involving the surrender to Montenegro of land claimed or inhabited by a Moslem Albanian population. The official Commission is doing its utmost to shed light on the black business of Kotchana, and the Gueshoff Cabinet at Sofia seems perfectly willing to await the results of the inquiry. The agitation in South Bulgaria is, however, strong, and may, if there are further bomb explosions and outbreaks, eventually force the Bulgarian Government to assume an anti-Turkish attitude.

The Case of Mr. Montagu.

A painful impression has been caused here by the arrest of Mr. H. Montagu, the ex-special reserve officer whose name was struck off the British Army List on account of his having served for the Turkish Army against the Italians in Tripoli, on a charge of having caused the death of Mr. Dayan, who was found in Mr. Montagu's rooms shot through the head by Mr. Montagu's revolver. Deceased had been helping Mr. Montagu to obtain some monies from the Turkish Government. During the Consular inquiry Mr. Montagu stated that deceased came to his rooms late at night and drank coffee with him. A dispute ensued, in the course of which Dayan seized him by the throat, at the same time snatching his (Montagu's) revolver, which lay on a table near. Both men grappled and fell, and the revolver, going off, killed Dayan instantly. A witness who knew Dayan intimately asserted that the latter had told him that he had been helping Montagu, but that the latter had become something of a burden. In consequence of the evidence, Mr. Montagu was committed for trial on the charge of murder or manslaughter. Mr. Dayan was a British subject of Jewish origin, who was engaged in business here.

DARDANELLES EARTHQUAKE.

Mansion House Fund.

The Lord Mayor has opened a fund at the Mansion House for the relief of the sufferers by the terrible earthquake at the Dardanelles and the Sea of Marmora. As a result of the calamity 40,000 people were reduced to absolute penury, while the roll of killed and injured numbers 6,000, the distress being even more acute than was caused by the similar calamity at Messina three years ago. Subscriptions may be sent to the Mansion House and to the Bank of England.

ENGLISH BOYS' SCHOOL,
CONSTANTINOPLE.

The New School Building will be opened on September 15th. The School House has accommodation for forty boarders. Resident staff, six English masters and English matron.

Healthy situation on Nishantash Hill, facing open country; drainage sanitary fittings, baths and lavatories by English sanitary engineers Preparation for Commercial Education Examination of London Chamber of Commerce. French and Turkish visiting masters. SPECIAL ATTENTION TO FRENCH. Turkish and Latin optional. English games. Fees moderate.

PROSPECTUS can be had on application to the Chairman of the School Committee—

A. T. WAUGH, Esq., *British Consulate-General*, Constantinople.

ENGLISH SCHOOL,
NICOSIA, CYPRUS.

Preparation for Public Schools and for Commerce Modern Languages. Turkish and Arabic if desired

ENGLISH GAMES.

Complete charge taken. Very healthy climate. Boys remaining for the summer holidays are taken to the Mountains. Moderate Terms.

Apply REV. CANON F. D. NEWHAM, B.A.Cantab., Director.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, August 17.

The State of Siege.

Although there are many worse places, Salonika is hardly the town a stranger would voluntarily select to live in, but viewed in the light of a penal residence wherein to expiate the sins committed in one's youth it is not so bad. Two things go to make it endurable: its landlocked bay, with snow-capped Olympus in the distance, and the pleasant excitement of never knowing what may happen next, by which a little zest is given to an otherwise quiet existence. This necessary excitement has not been lacking during the last fortnight. First we had a state of siege sprung upon us, by which we came under martial law, and so liable to divers extra pains, penalties, and inconveniences. A Consular notice in the British Post Office warns us that we are not to hold any secret or public meetings, not to walk about armed, not to be out in the street after 11 p.m., and to give up any bombs we have in our possession—as though we kept them in our houses as ornaments or toys for the children. The military authorities first issued this notice to the general public; but how many confiding people have, in consequence, given up bombs has not yet been told us, and it is greatly to be doubted that the collection will become a very large one.

Earthquake and Bombs.

The next incident was a fairly long, but not very violent, earthquake about 3 a.m. on Friday, the 9th. Salonika, happily, escaped damage, and we did not in any way realise the appalling loss of life, devastation, and misery that were being brought about a little to the east of us. Then, on the evening of Saturday, the 10th, the required bombs began to be produced, although not quite in the way the authorities wanted. The first, which had evidently been placed under the settee near one of the windows of the Austrian Post Office, exploded about a quarter past nine, and almost completely wrecked the premises. It is marvellous how the staff of six persons escaped serious injury, only two of them being very slightly hurt, for the five large plate-glass windows were blown out, iron girders and shutters twisted, desks hurled up to the ceiling, a large hole made in the floor, walls cracked, etc. It speaks well for the staff that they stuck to their posts, gathered up and sorted the scattered letters, and were at their work as usual the next morning amidst all the wreckage. Owing to the explosion taking place in a confined space the report was somewhat muffled; nevertheless, it caused considerable alarm, and those living in the neighbourhood wisely kept to their houses, while those who were out, when they heard what had happened, thought it prudent to get home as soon as possible.

Less than an hour after this a most formidable explosion took place at the extreme south end of the town. People living in the immediate vicinity, what with the smashing of glass and the shaking of their houses, were for the moment stunned, not knowing whether it was a most violent earthquake or the last day. When, however, they gathered their wits together, found they were unhurt, and realised that it was a bomb explosion, many looked in the direction of the Villa Allatini, in the immediate neighbourhood, thinking an attempt had been made either to blow it up altogether or to liberate the late Sultan, who is said to be within. It was at once evident that all was normal there, but it was seen that smoke was rolling away from the tram terminus yard, and that the police were hurriedly gathering there. Later it became known that a bomb had been left under a tramcar seat, but had not exploded when the car went off service, and so was taken into the yard. The conductor, seeing a carefully tied-up parcel left behind, gave it to one of the staff, but this latter, noticing the ticking of clockwork within, had doubts as to its nature. Fortunately he retained sufficient presence of mind to carry it to a wide open place in the yard, and to warn everybody to clear out until he had reported to the foreman in charge. Hardly, however, had he got away from the spot when the bomb went off, smashing the glass and riddling some of the cars standing there, the windows of the manager's house, and doing other damage, but happily without hurting anybody. The explosion was heard everywhere, even at the batteries at the entrance to the bay, where the searchlights were at once turned on the town to see what was happening. This was the finishing touch, and there was at once a stampede from places of entertainment, open-air cinematographs, cafés, etc., all of which were full, it being Saturday evening and the Jewish Sabbath over.

As to who were the authors of the attempts opinions are divided, but, of course, the Bulgarians mostly get the blame, and it goes without saying that some were arrested on suspicion. At the same time the authorities have thought it advisable to officially publish a notice saying they have learned that "certain adherents of political parties are showing a tendency to wish to recruit partisans by extreme acts calculated to disturb the public tranquillity, and they warn the people that any help rendered for the realisation of illegal aspirations contrary to the public order will be severely punished, and persons acting in such manner, whoever they may be and to whatever party they may belong, will be tried by the court-martial now existing." In view of this official notice, so carefully worded, many think the authors of the attempts may not be Bulgarians, after all, and that it is better to suspend judgment until there is more proof forthcoming.

Djavid, Talaat, and Nazim Beys are now in Salonika, but are kept under observation by the authorities. It is supposed they will remain here for a meeting of the Union and Progress Party, which will probably be held before the end of the present month, although there is now some talk of the meeting taking place in Brussa. At first the military authorities, under the state of siege, fixed 11 o'clock as the time limit for being in the streets, but the hour was next changed to one, and now all restriction in this respect has been removed. This extra freedom is no doubt owing to Ramazan having begun, as there would have been great discontent among the Mohammedans (who during this month are accustomed to feast and pay visits throughout the night) had they been forced to remain in their own houses.

The Albanian Situation.

It is altogether past finding out what the real situation is in Albania. On the one hand we are assured things are quieter, and that many of the insurgents are returning to their homes. On the other it seems hundreds of armed Albanians have taken possession of Uskub, and are ruling the place, their object in occupying the town being as yet unknown. Moreover, refusing the request of the Special High Commissioners to go to Prishtina and discuss matters there, they insisted on the Commissioners going to them in Uskub—and they got their way. In fact, they do as they like, dismiss the regular Government officials when it so pleases them, and otherwise act as if they were the recognised masters of the country. As they are also using the railway to get to Uskub without paying, taking possession of it by force, it is quite possible they may next decide to come on here.

Hussein Kiazim Bey.

Our Governor-General is once more in the capital, and there are all sorts of rumours in consequence. Some say he went there to protest strongly against the proclaiming of a state of siege in this vilayet, and to urge upon Ministers the disastrous effect it would have upon the commerce of the district. Others, that he was called there to discuss the situation in Macedonia; that he has resigned; that he has been appointed Vali of Constantinople, and so on. Well may it be said, especially in this country, that truth "lies" at the bottom of a well.

The finding of bombs on the different railway lines is now of such frequent occurrence that these attempts are not worth recording.

THE MECCA PILGRIMAGE.

The Ministry of the Interior in Cairo has issued a circular laying down that intending pilgrims who desire to proceed to the Yemen by the Hedjaz railway should either pay a deposit of 250 piastres to cover the cost of their return passage to Suez or purchase from the Postal Administration a return ticket before their departure.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 14.

The Khedive's Return.

Never in my many years' residence in Egypt do I recollect having witnessed such enthusiasm on the return of the Khedive as has been displayed during the past two or three days. Even when His Highness came back from his memorable pilgrimage to Mecca in 1910, the excitement which the successful accomplishment of this religious duty aroused was in no way comparable with the present state of mind of the population. Alexandria kept holiday on Monday. The residents vied with one another in the matter of decoration, and, go where one would, one encountered a bright display of bunting at every turn. Green foliage—the true Eastern instrument of decoration and signifying welcome—was deftly twined round the portals of the houses or the flag-bearing poles, and the whole scene reminded one forcibly of some gala day at home. From an early hour the streets were thronged with crowds of natives, who had come into the town overnight from the outlying districts, and who gave the onlooker the impression that they were celebrating some popular festival. Of course, the imminence of Ramadan may have had something to do with this careless and joyous frame of mind, though fasting does not usually conduce to happiness, but the true motive undoubtedly resided in the fact that the population of Egypt, as a whole, cordially disapproved of the conspiracy against the life of their Sovereign, and wished to take the opportunity of his return from Europe in order to give public expression to their relief at the failure of the plot.

His Highness arrived by the Austrian Lloyd s.s. "Helouan" on Monday afternoon, and was immediately welcomed by the Ministers and Lord Edward Cecil, the Acting Financial Adviser, and other high officials. He then landed amid a salvo of guns from the port, and received the Grand Cadi, the members of the municipality, etc. His Highness then repaired to Ras-el-Tin Palace, where he received the provincial deputation and the notables, who had journeyed especially to Alexandria to greet him. At a little after nine the Khedive proceeded to a large tent, which had been erected near the Palace, where were assembled the Ministers, the ulema, the municipal councillors, and the provincial delegates. It was a memorable sight, and one that must have pleased His Highness in no mean measure. But an even greater surprise—for this foregathering of village notables must have conduced to such a feeling—awaited the Khedive when he left the tent and drove through the town on his way to his palace at Montaza. The streets were one blaze of light, for every house, every street corner, and every square had its quota of electric globes, in many cases lettering loyal greetings. From one end of the drive to the other His Highness was enthusiastically acclaimed by the crowds. Monday held out to the Khedive a cordial welcome home in every sense of the word.

The Ramadan Fast.

Once again the Moslem population has had its calculations upset. It was expected that the fast of Ramadan would start yesterday, but it cannot now commence until to-day. The reason of this change in the arrangements was the invisibility of the new moon. The religious authorities cannot authorise the beginning of the thirty days' fast unless some reliable person can swear to having seen the new moon. The ceremony of certifying the appearance of the moon—El Royaa as it is called—took place at the Mehkemeh Sharieh—the religious court-house—on Monday evening, but of course it had to be postponed to last night. A more enlightened spirit pervades the religious heads to-day than did some years ago, when the population was kept in suspense because the Grand Cadi refused to accept the evidence of an official telegram from Upper Egypt announcing the appearance of the new moon.

The New Nile Bridge.

On Thursday H.E. Ismail Sirri Pasha performed the ceremony of the inauguration of the new bridge which has been constructed across the Nile at Boulac. All official Cairo and the principal residents were present, and after a short address the Minister for Public Works declared the bridge open, and we all walked across it, halting for a few minutes whilst the swing barrier was opened and closed again. Having arrived at the Gezira side, we were driven to the new Zemalik Bridge, which has been thrown across the west arm of the Nile, known as the Bahr-el-Aama. Thence a drive was taken along the new road which has been constructed along the west bank, and the party returned to Cairo across the Kasr-el-Nil Bridge.

This ceremony marks a step onward in the city's history, and draws attention to the great development which it has undergone of late years. Up to four years ago Cairo boasted but one bridge across the Nile. Everyone who wanted to cross the river from east to west, or vice-versâ, had to make use of the Kasr-el-Nil Bridge, which at certain hours in the day had to be opened to permit river traffic to pass up and down stream. In 1908 H.H. the Khedive opened the Rodah Bridge, which gives direct access to the Pyramid Road from Old Cairo. That was not sufficient, however. Traffic had increased at such a rate that the Kasr-el-Nil Bridge became more congested than ever. It was obviously unfair to force transport traffic to and from Boulac Dacrour—the chief goods station after Cairo—to go a mile or so to the south and cross the Rodah Bridge; and so the Government decided to construct another bridge at Boulac itself.

Considerable difficulty was experienced in laying the foundations, for they had to be placed at the narrowest and deepest section of the river, but the Compagnie de Fives-Lille contrived to overcome all obstacles, and the construction, which now joins Boulac and Gezira, whilst perhaps it may not be considered to be a thing of beauty or to bear comparison with the majestic Rodah Bridge, is certainly a monument to that company's ingenuity and constructive genius. The Boulac Bridge is 257 metres long and 20 metres wide, whilst that across the Bahr-el-Aama has a length of 125 metres and a width of 16.5 metres. The total cost has been roughly £E375,000. The bridges constitute a tremendous boon to the city, for they will considerably relieve the congestion of transport traffic, and will leave the Kasr-el-Nil Bridge free for vehicular traffic. In addition their effect will be to bring about a removal of the various riverside buildings at Boulac, which have long been an eyesore, and to generally improve this native quarter of the town.

The Financial Adviser.

Dame Rumour has at last come into her own, and the retirement of Sir Paul Harvey from the post of Financial Adviser, which we have been told for the past eighteen months was imminent, is now *une chose décidée*. It is understood that he has accepted the post of Chief Auditor of the National Health Insurance, and that his resignation will take effect from next October, at which date he will have completed five years' service in Egypt. Sir Paul took up the Financial Advisership in 1907, after the retirement of Sir Vincent Corbett. He has in a way had a somewhat difficult task to carry out, and although many out here have not approved of his ideas, still I think it will be admitted that he has been more successful than his immediate predecessor. Whilst everyone is ready to acknowledge his financial abilities, the general consensus of opinion is, I think, that he was not a sufficiently practical man for Egypt.

Naturally there is much talk with regard to his successor. It is not the business of this correspondence to prognosticate, and therefore I shall refrain from doing so now. I will simply confine myself to the statement that it is currently said that Lord Edward Cecil, who is at present officiating as Adviser, will succeed him, and that Hunter Pasha will become Under-Secretary of State for Finance in his stead. Lord Edward has held his present post in the Ministry of Finance for several years now, and has been closely connected with Egyptian affairs ever since the Boer War, whilst Hunter Pasha is Director-General of Coastguards, and received the C.M.G. in the last Honours List for his services in preserving Egypt's neutrality. There are many other administrative changes on the *tapis*, and it is said that Lord Kitchener's return will herald a "bouleversement" in the Ministry of the Interior.

THE EGYPTIAN CONSPIRACY.

(From Our Own Correspondent.)

Cairo, August 13.

Trial of the Accused.

The trial of the three conspirators, Imam Wakid, Mahmoud Taher El Arabi, and Mohammed Abdel Salam, is now over, and they have received the treatment which their dastardly conspiracy merited. The trial started on Sunday, and lasted three days. Huge crowds of natives thronged the approaches of the court-house, but Harvey Pasha had made extensive arrangements. A considerable force of police reinforced the rope barricades, and no one, unless he was provided with a permit, was allowed to approach the court.

Each of the accused was defended by a barrister, Mr. Ibrahim Bey El Helbawi, the famous criminal lawyer, pleading for Wakid, the principal defendant. When asked by the President whether the accusation made by the Procureur-General was correct, Wakid replied that it was false. El Arabi admitted having been at the station in the afternoon of Lord Kitchener's return from Sakka; whilst Abdel Salam declared he knew nothing of a plot and proceeded to deliver an ultra-Nationalist oration. He repudiated his confession, which he said the Mamur Zapt had forced him to make, and he accused the latter of having placed the report on the plot, which was subsequently found on him, in his (Abdel Salam's) pocket.

The Prisoners' Past.

The Mamur Zapt, George Bey Philippides, then gave his evidence, which threw some highly interesting light on the affair and the events leading up to its discovery. It appeared that ever since the Ghali assassination the police had given their close attention to the numerous *exaltés* of the Wardani genus who had relations with the Nationalist Party. These young men founded religious and literary societies, which were nothing more nor less than political associations. Imam Wakid and Abdel Salam especially had distinguished themselves in this respect. The former had been a friend of Wardani, and had been watched by the police even before 1910. Abdel Salam came into prominence after the outbreak of the Italo-Turkish War, and a special dossier was devoted to him from the day when he had been expelled from the Fkesun Mosque for making an inflammatory speech. He was an active agent of an anarchist society which has many branches known to the police, and he founded a society called "Society for the Encouragement of Liberal Education," which was a revolutionary association with pronounced criminal aims. The Mamur Zapt related how during five weeks he and other secret officers had lain in a room adjoining the society's place of meeting in order to watch the members. Amongst the latter was a certain Ismail Farag, who had sent a threatening letter to Tewfik Bey Nessim, the late Chef du Parquet of the Native Court of Appeal.

Philippides Bey stated that Hassan Husni Kamel, who is still awaiting trial, threatened, after the condemnation of Ali Bey Kamel, Mohammed Bey Farid, and Ismail Effendi Hafez on April 30, to take the lives of two high personages, one of whom was more accessible than the other. He at once took precautions to protect the Khedive and Lord Kitchener, especially as Wakid and Abdel Salam frequently met Kamel at the offices of *El Lewa*. Later on, towards the end of June, he learnt that Kamel and a companion were about to leave for Europe in order to make an attempt on the Khedive. On June 27 Lord Kitchener advised the police that Wakid and El Arabi had left for Alexandria in order to attempt the Premier's life. The information had been conveyed to the British Agent from a private source, and was confirmed by the inquiries made by the police. Next came the information that El Arabi intended to make an attempt at the Cairo Station on Lord Kitchener on his return from Sakka. What took place after that and the manner in which the arrest was made are already known to your readers. Philippides Bey and the three Mamurs confirmed one another's evidence that the accused renewed their criminal intentions at the café at Shoubra, and that they clearly heard them decide to kill the Khedive, Lord Kitchener, Said Pasha, and Judges Dilberoglu and Magdi Pasha.

Motives for the Plot.

At the conclusion of his evidence the Mamur Zapt made a statement to the effect that he had every reason to believe that the accused, who were incited by other persons, wanted to kill the Khedive, so that he might be succeeded by his son, who has been brought up by his mother, the latter being known to have strong Nationalist tendencies. They desired to remove the Premier in order to bring about a modification in the Ministry's policy, and to prove to Europe by the assassination of a Moslem Minister that the murder of Boutros Pasha was not a fanatical act; and, finally, by killing Lord Kitchener they wanted to weaken the British domination by striking terror to the heart of England and making her realise the power of the Nationalists.

After the evidence of the police officers had been taken, the various civil witnesses for the prosecution were called. The first was Sheikh Mohammed Mustapha Risk, who had known Wakid at Montpellier, and who testified to having met him in Alexandria at the Zola Café on June 29. Wakid had told him that he was anxious about a friend of his, whom he had lost in the town, and who had no money on him, but wore a black badge. Hassan Noureddin, who had been present at this meeting, and who, the Sheikh said, had accompanied Wakid on his subsequent search, was next called. He and the following witness could remember nothing, not even the depositions made by them before the Procureur-General. Their attitude evoked a severe reprimand from the President. After them came three witnesses who bore testimony to El Arabi's excitable state of mind, and stated that he was subject to epileptic fits. El Arabi had set up mental derangement as his defence.

H.E. Abdel Khalek Pasha Sarwat, the Procureur-General, then made his speech for the prosecution. It lasted four hours, and was a most brilliant and able disquisition, constituting an irrefutable indictment of the accused. Item by item, he reviewed the evidence and the events which led up to the arrest, and skilfully he wove the threads into a fabric which furnished undeniable proof of the murderous intentions of the three conspirators in the dock. He concluded by making a passionate appeal to the judges to take this opportunity of making an example and to inflict such a punishment as will deter others from following in the footsteps of these misguided men and will stop the incitement which has been given to such criminal associations from certain quarters.

The Verdict.

The whole of the second day of the hearing and part of the third day was taken up by the lawyers for the defence. Helbawi Bey delivered a long speech in his usual strain—it occupied over three hours—but neither he nor his two colleagues could find a way out of the net which had been cast around their clients. This morning the pleadings were continued, and then the Procureur-General briefly replied. After an adjournment of about thirty-five minutes the court announced its verdict, sentencing Imam Wakid, as the chief conspirator and instigator of the plot, to fifteen years' imprisonment, with hard labour, and El Arabi and Abdel Salam to fifteen years' ordinary imprisonment each. Wakid received the heavier sentence because he had organised the plot and incited his companions. The court has awarded the maximum penalty in all three cases. The verdict seemed to come as a terrible shock to the accused. Wakid of a sudden lost his haughty and defiant air, and El Arabi for a moment swayed as if he were about to faint and had to be supported. No noticeable incidents occurred after the court had passed sentence, and the crowd in the hall filed out quite quietly. There is no appeal from this sentence, except to the Cour de Cassation on a point of law or procedure.

The ALIGARH INSTITUTE GAZETTE

A High-class Urdu-English Weekly Journal.

Founded by the Old Sage of Aligarh, the late Sir Syed Ahmad, in 1866 A.D.

It is now the leading and officially recognised Organ of the M. A. O. College, Aligarh, All-India Muhammadan Educational Conference, and All-India Moslem League, on politics, education, and society. An excellent medium of advertisement on account of its large circulation amongst educated and enlightened class of Muhammadans, gentry and nobility in all provinces of India and places beyond India. Annual subscription, 4s. Agents securing advertisements have good offers.

LETTRE D'ATHENES.

(De Notre Correspondant Particulier.)

Athenes, le 16 août 1912.

La revolution d'Icaria.

Les événements qui se sont accomplis dernièrement dans l'île d'Icaria (Nicaria) sont assez singuliers pour être rapportés en détails.

Profitant de l'immobilisation de la flotte turque et de la présence de la flotte italienne, qui excluait toute possibilité de débarquement de troupes turques dans leur île, les habitants de la petite île qui, avec l'îlot de Casteloriso, située tout près de la côte asiatique, sont les deux seules îles du Dodécanèse restées inoccupées par l'Italie, ont pris le parti de se débarrasser à leur tour de la domination turque afin de se créer aussi une situation analogue à celle des autres Sporades meridionales. A cet effet les Icariens ont organisé un mouvement révolutionnaire. Ils ont armé un grand nombre de villageois recrutés parmi les plus vigoureux et les plus braves d'entre eux et en ont formé deux bandes. L'une, parti dans la nuit du 28 au 29 juillet du chef-lieu de l'île, se porta sur le village d'Evdylos où se trouvait une petite garnison turque. Le lendemain elle cerna le village. Les Turcs, les prenant pour des brigands, firent feu sur les insurgés. Ceux-ci ripostèrent par une fusillade tirée en l'air et les sommèrent de se rendre, ce que les Turcs firent peu après.

L'autre bande, commandée par un prêtre, cerna le village de Raches où elle put facilement capturer les autorités turques. Un des insurgés s'étant éloigné, par mégarde, de ses camarades fut tué par les Turcs. D'autre part deux gendarmes turcs ayant pu s'échapper allèrent à la ville rapporter au Caïmakam tout ce qui s'était passé. Les deux bandes s'étant ensuite réuniés le 30 juillet marchèrent sur le chef-lieu où était le siège du Caïmakam Thucidide Effendi Dimitriadis, grec Chrétien, qui s'était fait le véritable tyrant de ses congénères, et à neuf heures du soir elles cernèrent sa résidence. Une délégation de six d'entre eux alla alors le sommer de se rendre avec les autres fonctionnaires subalternes. Thucidide Effendi, ne se doutant pas de la force numérique des assaillants, sortit au balcon et appela au secours en sifflant. A cet appel les insurgés seuls accoururent et, se précipitant vers sa maison en tirant des coups en l'air, l'obligèrent à se rendre avec tous les soldats et autres fonctionnaires.

Le matin du 31 toutes les autorités turques, au nombre de cinquante environ, tant militaires que civiles, étaient prisonnières entre les mains des insulaires, qui, après les avoir désarmés, les consignèrent et gardèrent militairement. Cela fait les Icariens proclamèrent la déchéance de la domination turque, formèrent un gouvernement provisoire composé des démogérontes ou notables des différentes communes de l'île et arborèrent sur tous les établissements publics le drapeau de l'autonomie. En même temps un service de police bien armé avait été organisé dans toute l'île.

Cinq jours plus tard les Icariens embarquèrent sous escorte leur prisonniers sur des bateaux de pêche et les expédièrent à Samos d'où ils furent réembarqués à bord de deux petits voiliers et déposés sur la côte de l'Asie Mineure. Le Caïmakam ayant obtenu des Icariens la permission de partir seul s'est rendu, croit-on, à Smyrne. Dix des soldats se sont joints à la gendarmerie turque de Samos.

Sur ces entrefaits la petite garnison de dix soldats turcs des deux îlots Fourni and Corsia, situés au sud entre Samos et Icaria, ayant appris les événements ci-dessus, se seraient évadés. D'après une autre version, ils auraient été capturés par les Icariens et expulsés aussi sur territoire ottoman.

Après s'être débarrassés des autorités turques les Icariens chargèrent un délégué, M. Moraïtis, de remettre aux légations des grandes puissances à Athènes un mémoire daté du 2 août. Ce document, qui a été remis aux légations mardi dernier dit: "que la population d'Icaria, composée exclusivement de Grecs, ne pouvant supporter plus longtemps la tyrannie des Turcs, qui, après avoir violé les privilèges octroyés par traité, ont établi dans l'île un gouvernement de malfaiteurs qui l'opprime et arrête tout progrès, a pris les armes et a capturé et expulsé les autorités turques sur le territoire de l'Asie Mineure. Le peuple d'Icaria, déclarant être fermement résolu à ne plus se soumettre à la domination ottomane, fait appel aux sentiments humanitaires des puissances et les prie de lui assurer la liberté qu'il a pu recouvrer, pour la seconde fois depuis 1821, et de ne pas le condamner à de nouvelles luttes sanglantes et désastreuses en le ramenant sous l'abominable joug ottoman. Que son unique désir est de s'unir avec ses frères de la Grèce libre. Mais que si les puissances ne peuvent y consentir pour le présent, la population d'Icaria les supplie de reconnaître du moins à leur île son autonomie en la délivrant d'un régime barbare et lui accordant la liberté dont jouissent tous les peuples d'Europe."

L'île d'Icaria avait en effet conquis son indépendance en 1821, mais plus tard, en 1830, les Turcs s'en étaient emparés de nouveau. Le premier Caïmakam envoyé alors dans l'île avait été tué par les insulaires dès son arrivée.

Dans les cercles compétents d'Athènes on a fini par se rendre bien compte que, comme je le disais ici dès le début de la guerre, les îles occupées par l'Italie seront, malgré les déclarations contraires qu'a pu faire le général Ameglio, rendues à la Turquie en échange de l'entier abandon de la Tripolitaine. Néanmoins on nourrit toujours l'espoir que l'Italie, aussi bien que les autres puissances ne manqueront pas de prendre en considération les justes réclamations formulées par les insulaires et qu'elles leur assureront et garantiront après la guerre le respect de leurs privilèges de façon à ce qu'ils n'aient plus à craindre les suites du retour de la domination ottomane.

En prévision de la prochaine conclusion de la paix les îles en question vont envoyer dans le continent une commission chargée de plaider leur cause auprès des gouvernements des grandes puissances.

Travaux publics projetes en Crete.

On annonce de la Canée que sur approbation du ministre des finances M. Coundouros, le gouvernement se propose de conclure un emprunt de trente-six millions de francs pour exécuter des travaux publics (ports et voies ferrées) qui, tout en développant les communications dans l'île, donneront du travail à ses habitants les plus nécessiteux et rallentiront le courant d'émigration, qui a pris dernièrement des proportions plus alarmantes qu'en Grèce. Le service de cet emprunt serait assuré: par le droit additionnel de 8% sur les importations de l'étranger que les puissances semblent disposées à maintenir à 11%; par un droit de port de 2% dont elles ont été également requises d'autoriser l'imposition; par les droits d'ancrage et par une allocation supplémentaire de 800.000 fr. qui sera prélevée sur le budget ordinaire de l'île, soit une affulation totale de deux millions environ. Il paraît que cette proposition du gouvernement crétois a trouvé un bon accueil auprès des puissances. Ce serait aussi, en effet, un moyen de détourner, du moins temporairement, les Crétois de leurs démarches aussi malavisées qu'intempestives tendant à accélérer l'union.

Le général Limbritis, membre du gouvernement crétois, est arrivé hier à Athènes pour des raisons de santé.

THE DARDANELLES RAID.

Signor Corrado Toli, the war correspondent of the *Secolo*, of Milan, who has recently returned from a visit to Constantinople and the Dardanelles, publishes an article criticising the somewhat bombastic official reports on Commander Millo's raid. Among other apt observations we find the following:—

In the report of Commander Millo there is one certainly involuntary inexactitude: his persuasion that he saw the Turkish Fleet and that he was fired on by it. If he did not pass the Kilid Bahr—Chanak line, he could not have seen the Turkish Fleet anchored in the Bay of Nagara, and most certainly he could not have been fired on by it. The Turkish Fleet did not fire a single cannon. But it is clear that Commander Millo was misled by the numerous steamships and by two or three Turkish torpedo-boats anchored in the Bay of Chanak; it was probably these vessels that, hidden in the darkness of the night and the shadows of the numerous searchlights, were mistaken for the opposing fleet; and he could easily have mistaken for the guns of this fleet the guns fired from Hamazieh and Chanak Kalessi. There is nothing strange or inadmissible in this explanation, given the conditions of time and the nervous tension produced on all. It is even more possible when we think that "a high personage of the Ministry of Marine" furnished one of the most important newspapers with a sketch map of the raid, in which the Bay of Chanak was confounded with Nagara, placing Chanak on the other side of the narrows and fixing the anchorage of the Turkish Fleet exactly in this Bay of Chanak where Commander Millo thought he saw them.

LETTER FROM MALTA.

(From Our Own Correspondent.)

Valletta, August 16.

The Contemplated Mediterranean Changes.

The Parliamentary recess, which is giving honourable Members a rest after a very busy session, has naturally affected the political barometer to a considerable degree. It is satisfactory to note, however, that the Mediterranean question has not been allowed to rest for solution until October. Public opinion in the United Kingdom and throughout the Empire has emerged triumphant from its struggle with the Cabinet, and by the time Parliament meets again Malta, *the* island fortress of the Mediterranean, will be eagerly and hourly expecting to welcome back to its shores a British fleet which, though by no means as strong as the abnormal one it had previous to the Anglo-French *entente*, is at all events considered adequate for present emergencies, and is indeed stronger than the one which was based upon it previous to the elaboration of that famous Churchill scheme which has just passed into the domains of history. It is indeed an ill wind which blows nobody good. The importance of Malta to the Empire is now far better realised than it has ever been before; and we may be sure that the last word on the Mediterranean question has not yet been uttered. Mr. Churchill's statement and the policy of the Triple Alliance in the Mediterranean lead us to anticipate further important developments in the near future.

Our Political Situation.

What might be called our local "Parliament," viz., the Council of Government, has been dissolved by a Proclamation of the Governor; and, according to the Letters Patent of June 3, 1903, governing the constitution of the government of the island, a general election will be held within three months. Public opinion is divided on several matters of detail; but there are at present two parties, which are at loggerheads with one another on a question of principle. The one, called the "Abstentionist" party, advocates abstention on the part of the people from all participation in the government of the island until the Constitution is reformed, so as to again give a majority to the elected over the official element. Its champions hold that, in the face of a permanent official majority, the presence of the people's representatives in the Council is useless, and would only serve the purpose of clothing with legality the acts of the Government; the "abstention" policy is therefore meant to be one of protest. The other party, though equally bent on securing a reform in the Constitution, sees things in a different light, and guided by experience, which has taught the inexpediency of an inactive policy, urges that the present Constitution should be made the most of with a view to obtaining greater political franchise, such as we enjoyed prior to 1903. As no candidates of either party have as yet come forward, and as public opinion is supposed to be pretty evenly divided, it is difficult to forecast the result; but the question is being hotly debated in the columns of the local Press.

Hands Across the Seas.

A party of Canadian teachers, comprising ninety-seven ladies and six gentlemen, arrived here on the 29th ult. on a two days' visit to this island, under the direction of the Honorary Organising Secretary of the "Hands Across the Seas" movement of the Dominion. The party were warmly welcomed by our education authorities, who did their utmost to enable our Canadian visitors to attain the aims of their visit to the important part of the Empire they are touring. The population generally also contribute to make our visitors feel thoroughly at home amongst us. Assurances of pleasure derived were freely given by the Canadians—a further witness that Malta needs only to be better known to be better appreciated.

The Emigration Question.

The emigration question—our question of questions—is again on the *tapis*. Dr. Richard Arthur, President of the Emigration League of Australasia, and General Sir Harry Barron, Governor of Tasmania, a former Acting-Governor of Malta, are strongly advocating the emigration of our surplus population to the Northern Territory of Australia, for which they consider the Maltese, on account of the climatic conditions of the island, to be far better suited than any white race of British subjects.

The Eucharistic Congress.

The date of the twenty-fourth annual International Eucharistic Congress, to be held in Malta next year, has now been definitely fixed for the last week of April. A feature of the celebration will probably be an All-Malta Exhibition, for which preparations are already proceeding. It is understood that several prominent English Catholics intend assisting at the Congress.

NOTES FROM SERVIA.

(From Our Own Correspondent.)

Belgrade, August 16.

The Alliance Rumours.

The news telegraphed by the *Times* correspondent at St. Petersburg that there exists a political alliance between Servia and Bulgaria has created excitement in Servia, and has drawn forth a semi-official denial in the Government organ, *Sam-uprova*. As this report emanates from a Russian source, it may be that a political union between Servia and Bulgaria would now accord even more than before with the wishes of Russian diplomacy, which desires consolidated strength and unity in the Balkan States. These two countries are so closely allied in religion and language that a union between them might at first sight appear to be the most natural thing in the world, but fruitless attempts have been frequently made, clearly demonstrating that a political union is far from being feasible, and that even a commercial union between them is difficult to realise.

That there are many advocates in both countries who unceasingly strive for the establishment of friendship and union between these kindred nations cannot be denied, but the great bar certainly has been the existing jealousies caused by the ardent desire of each to get possession of the Slav countries still under the dominion of Turkey.

Counter Interests in Macedonia.

That much money has been spent in propaganda, schools, etc., both by Bulgaria and Servia in Macedonia and Old Servia is no secret, and that much blood has been shed by antagonistic Servian and Bulgarian bands in these districts is also well known. Yet, in spite of all these jealousies and counter interests, the advocates of a union in both countries, and more particularly in Servia, have never ceased in their efforts to attain their aim, and at the head of them stands Nicola Pasitch, a former Servian Prime Minister, present President of the Senate and leader of the Government Party.

The present internal difficulties in Turkey, the war with Italy, the movements of the Albanians, and the threatening attitude of Servia's powerful neighbours, combined with the advice and warnings of Russia, may tend to draw Servia and Bulgaria much nearer together than was intended by the late Customs Union Congress. On the other hand, it is conceivable that Bulgaria's grave misunderstandings with the Porte do not render the present moment opportune for Servia to form a political alliance with that country.

But, whatever conclusions we may be inclined to draw, some credence ought to be given to the semi-official disavowal in the *Sam-uprova*, which gives us distinctly to understand that the report of the existence of a Serbo-Bulgarian political alliance is totally untrue, and accuses the Austrian and Hungarian Press of having launched imaginary versions with the object of throwing discredit on Russia and the small Balkan States, and states that the present outcry is only an attempt to dish up stale news, the truth of which was categorically denied before the death of Dr. Milovanovitch, the late Prime Minister.

Lastly, if we are to judge by the remarks that appear to-day in some of the Servian papers referring to the egotistical conduct of Bulgaria, who, they state, is now seeking to gain possession of several ancient Servian monasteries in Macedonia, to the detriment of Servia's interests, it is clear that the Servian people will not be well pleased. And such is certainly not the way in which a political ally is likely to act!

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, August 14.

Kotchana: A Protest Meeting.

Throughout Bulgaria the indignation aroused by the massacre at Kotchana has continued to grow as details of the crime have become known, and yesterday a great meeting of protest was held here. It is estimated that out of a population of 100,000 nearly 30,000 were present at this meeting—that is to say, nearly all the adult male population of the city. At the signal given by the church bells, shops, restaurants, cafés, and all public institutions were closed, black flags were displayed everywhere, and for two hours, while the meeting lasted, Sofia was in mourning. The people gathered quietly at the St. Kral Cathedral, and thence proceeded in procession to the monument of the Tsar Liberator Alexander II., opposite the Parliament House, and the Alexander Nevsky Church. The meeting was organised by a special committee representative of all political parties except the Socialists, to whom the honour of representation was denied on account of their lack of patriotism and their anti-military tendencies. Fiery speeches were delivered by speakers belonging to the four chief political parties, who urged the present Cabinet to abandon its Turcophil policy and adopt more vigorous measures, even to the declaration of war, in which case all parties would unite to help the Government to the utmost. Finally, a resolution was proposed and carried unanimously asking the Government to undertake the measures necessary to rescue Macedonia and the vilayet of Adrianople from direct Turkish rule, and assuring it of the united support of the nation. It is reported that this resolution has been already delivered to the Prime Minister, and that King Ferdinand will grant an audience to the Committee after his return from Tirnova.

The Tirnova Festivities. Tirnova, August 15.

This ancient capital prepared a brilliant reception for King Ferdinand and the guests invited to the Accession Day commemoration. The citizens seem bent on dissipating all traces of gloom caused by recent events, and on proving to their Tzar that there is a time for rejoicing as well as a time for mourning and a time for acting. And anyone looking on the splendid triumphal arch erected at Marno Polé and at the cheerful faces of the people, and comparing them with what was to be seen in Sofia yesterday, must feel that his Majesty cannot but find at Tirnova grateful consolation for his perplexities and troubles.

The arrival of his Majesty took the good people here somewhat by surprise, for he travelled from Sofia by night, by special train, and arrived here early yesterday morning. Alighting at the station of Samovodini, six miles distant, he rode on here, accompanied only by two aides-de-camp and a small mounted escort, and went direct to Marno Polé, where he made a detailed inspection of the arrangements. Then—contrary to all expectations—he did not go to the Preobrajensky Monastery, but took up his quarters at the house of M. Slavcoff, a former Minister and President of the Chamber in the days of M. Stambuloff.

Early this morning a special train brought H.M. the Queen and T.R.H. Prince Boris, Prince Cyril, Princess Eudoxie, and Princess Nadjeda, with the Royal suite, while other specials arrived at intervals conveying the members of the Diplomatic Corps, Ministers, and other distinguished guests. At 7.30 the firing of a salute of thirty-one guns and the pealing of bells announced that the King had left his quarters. Meanwhile the Queen and members of the Royal family, with the members of the Diplomatic Corps, Ministers, generals, and other privileged guests had taken up their places near the triumphal arch. The King, who drove in a State carriage and wore the uniform of the 6th Infantry Regiment (known as "the Tirnova Regiment of His Majesty"), was met at the boundary by the Mayor of Tirnova and the town councillors, who offered him the city's congratulations.

After a short service of thanksgiving, at which the Metropolitan Vassili, the religious instructor of Prince Boris, officiated, there was a parade of the troops of the Danubian division, consisting of the 2nd, 5th, 18th, and 20th infantry regiments. Prince Boris and Prince Cyril took part in this ceremony, marching at the head of the regiments of which they are the honorary chiefs. His Majesty then retired to a special pavilion, built and decorated in the old Bulgarian style, where he received congratulations from: the Italian Minister, Count Bosdari, the *doyen* of the *corps diplomatique*, on behalf of the diplomatists; from the Metropolitan Vassili, in the name of his Beatitude the Bulgarian Exarch, the Holy Synod and the National Church; the Prime Minister, M. Gueshoff, in the name of the Ministers and the Government; the President of the Chamber, Dr. Daneff, on behalf of the House of Representatives and the nation; the Minister of War, General Nikiphoroff, on behalf of the Army; M. Tortcheff, ex-President of the Great National Assembly which elected him Prince of Bulgaria on July 7, 1887, and the surviving members of the Commission that bore him the good tidings at the Palace of Ebenthal; and by representatives of local authorities. To all congratulations his Majesty replied in a few well-chosen words. After this ceremony he left the pavilion and employed the short time left him before the State banquet began in saluting the gallant veterans who during the Russo-Turkish war defended the Shipka Pass against the hordes of Suleiman Pasha. Nor were the dead forgotten on this memorable day for Bulgaria; for by his Majesty's special orders three magnificent wreaths were placed on the tombs of MM. Stambuloff, General Montcouroff, and M. Jiocoff, from whose hands he received the government of the Bulgarian principality in 1887.

The State banquet took place at one o'clock in the same hall in which the Great National Sobranje had unanimously decided to offer the crown of Bulgaria to Prince Ferdinand of Saxe-Coburg-Gotha. Loyal toasts were proposed by the Prime Minister, the President of the Chamber, and the Minister of War. In replying, his Majesty paid a glowing tribute to the energy and moral strength displayed by the Bulgarian people and the progress made by the nation during the past quarter of a century, modestly declaring that his own personal endeavours in the cause had been but a small matter. It was a pleasant duty to acknowledge with gratitude the great sacrifices Bulgaria had made for the organisation of her gallant army, in which her sons are trained in the spirit of mutual respect, affection, and patriotism so necessary to assure a brilliant future to the nation. The best years of his life had been passed among the Bulgarians, and there was no sacrifice that he was not ready to make for the country.

The banquet was over at five o'clock, and in the evening the Royal family and the guests returned to Sofia. Popular rejoicings, however, lasted till a late hour, and the town was brilliantly illuminated in the evening.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, August 17.

Count Berchtold's Visit.

The visit next week of Count Berchtold, with the Countess, to the King and Queen at Sinaia is anticipated with lively curiosity, not only in political circles, but by the Roumanian public in general, as important results are confidently expected from it. Confidently, because the cause of the Transylvanian Roumanians, "our brothers over there," as they are termed by Roumanians of this country, is believed to be one of the most important of the subjects of discussion.

The idea of the reunion with that part of Transylvania bordering on Roumania proper, which is peopled by the descendants of those who fled in days long gone from the various marauders—Huns and others—who successively overran and devastated this country, is, of course, like Zionism, a chimeric one. But, like Zionism, it has many thousand followers in this country who delight in imagining that they are following a reality when—as they do from time to time—they work up an agitation on the wrongs and oppressions of their brothers of "dincolo." There is no doubt that certain concessions in the direction of religious and educational

Digitized by Google

liberty would be advantageous to the "Romun" of Transylvania; but there is also no doubt that he would be far happier and more contented—I speak of the lower class man—were his brain not filled with ridiculous ideas as to his national rights by the most injudicious, if well-meaning, agitator on this side.

The *Budapesti Hirlap* publishes a leading article from the pen of no less an authority than Vice-Prefect Andor Lovassy, which no doubt is inspired by the approaching visit of Count Berchtold. In this article the writer says that in days gone by the Roumanians and Hungarians had to suffer the same wrongs, and that therefore the two nations should be on a footing of better understanding. In the past Hungary made great sacrifices for Occidental States, and after the expulsion of the Turks from Mid-Europe, got as her reward only persecution for three centuries. What has Roumania received for supporting Slavism? In return for fruitful Bessarabia she has received only the wild and uncultivated Dobrugea. There were times gone by in which Roumanians and Hungarians lived in perfect peace. Later, when the interests of the European Powers needed it, Roumania was set against Hungary and Hungary against Roumania. Both countries should see that they have great interests in common, in view of the steady increase of Slavism in the Near East, and should work for a closer understanding and a friendship which can only benefit both nations.

Carol Park Improvements.

From the surplus of the present Budget the sum of £8,000 is to be applied to the improvement of the Carol Park. This is a step in the right direction; for it is a pity indeed that more has not been made of these splendid and picturesque grounds, which, for want of a little expenditure, have remained in an unfinished state since they served for the Jubilee Exhibition.

LETTERS TO THE EDITOR.

THE FUTURE OF TURKEY.

To the Editor of THE NEAR EAST.

Sir,—Will you kindly permit me to reply to many correspondents who have done me the honour of noticing a letter which appeared in your issue of the 9th inst., that it was not my intention to apportion blame in respect of the unhappy divisions which have distracted Turkey during the past four years. It is enough for my purpose to point out that the truest and most sincere friends of all races and creeds in the Ottoman Empire were Mr. Gladstone and the late Marquis of Salisbury, and they clearly foretold in their public utterances and dispatches the inevitable doom which awaited those who are blind to the warnings of history, and obstinate in their disregard of exhortations to unity, conciliation, and mutual respect for the beliefs and claims of others.—Yours obediently, EDWARD ATKIN.

6, Adelphi Terrace, W.C., August 21, 1912.

THE CYPRUS DELEGATES.

To the Editor of THE NEAR EAST.

Sir,—Before leaving London we feel it our duty to express our warmest thanks to all those friends of Cyprus who have extended to us so general a welcome, and who have lent so attentive an ear to our representations.

We return to our country and people—a people which, in accordance with Hellenic traditions and mindful of Greek nationality, knows well how to preserve in grateful memory its friends and champions. Permit us, on the eve of our departure, once more briefly to formulate our wishes and to appeal to the sentiments of justice of the English people. These wishes are as follows:—

(*a*) Proportionate representation in the Legislative Council, in accordance with the principles of the existing Constitution, of the Greeks and Turks, the two main races on the island.

(*b*) Constitutional reforms, enabling the people to participate in a more extended manner in the administration of their domestic affairs.

(*c*) Application of the island revenues to Cyprist interests, and consequent annulment of the obligation to pay the tribute guaranteed to the Sublime Porte by England herself, in accordance with the letter and spirit of the Anglo-Turkish Convention of 1878.

(*d*) Application of the surplus revenues of the island to the construction of public works, educational and agricultural grants, in consideration of the fact that in respect of these matters the island has hitherto been absolutely neglected.

We beg that the British people, so rightly famed for their generosity and liberality, will attentively inquire into these, our just wishes, and we confidently rely on the sympathy and support of all friends of justice and freedom in this country. In thus commending our cause, it would be well to point out, that not only would such an examination be of immense benefit to Cyprus, but it would establish British prestige in the Near East, the honour of which we feel as keenly as Englishmen themselves—for from our earliest school days we Greeks are taught to respect and honour a nation which has so greatly laboured on behalf of the liberty and civilisation of the world.

We have, etc.,

PASCAL CONSTANTINIDES,
TH. THEODOTOU,
NIC. KL. LANITIS,

Hotel Russell, London, W.C., *M.L.C. of Cyprus.*

GERMANY IN PALESTINE.

To the Editor of THE NEAR EAST.

Sir,—Yes, indeed, why *should* you "sneer at philanthropy and five per cent."? Really, the animus against Germany, as manifested throughout the English Press and even in the columns of THE NEAR EAST, is a little bit *de trop*. If the day shall ever come when England and her allies shall fight it out with Germany and her allies, then may the best side win! In the meantime, the German ambitions for a "pénétration nationale" in Palestine seem just as legitimate and proper as England's penetration into various corners and crannies of the globe. The "downrightness" and "frankness" of the German newspaper from which you quote on page 414 of THE NEAR EAST (August 9, 1912) does not compare unfavourably with the *official* appeals for contributions to the recently established and now well-subsidised British High School for Boys in Constantinople. Not to mention appeals posted in the British post offices in Turkey begging for funds for the school, the London *Times* last March, congratulating itself on the success of the school, and of the British Ambassador's appeal for £10,000 two years previously, said: "And we ourselves pointed out in a leading article the importance of the school to British interests in the Levant." Whether England desires a "pénétration nationale" of her own or only desires to keep other people out should be little matter for British smugness.

I bespeak for German downrightness and frankness (at least as manifested in the article you quote), fair play rather than "sanctimonious sneering."—Yours truly,

THERON J. DAMON.

British Post Office, Constantinople,
August 12, 1912.

[It is not clear from our correspondent's letter whether or not he is taking us to task over the few words appended by us to an extract from the *Nouvelles Egyptiennes*. However, presuming this to be the case, we wish to assure him that he need search for no irony or sneer in our words. They are sincerely meant. THE NEAR EAST has no animus against Germany, but rather a sincere admiration for her tenacious, never-resting, pervasive energy.—Editor, NEAR EAST.]

BALKAN AFFAIRS.

To the Editor of THE NEAR EAST.

Sir,—Some months ago I called attention in your columns to an article in the *Spectator* on the subject of the break-up of the Turkish Empire in Europe, which suggested as a commencement of the division of the spoil that Austria should annex Servia and Montenegro. The Bulgarians, it was said, hated and despised the Serbs, and would be only too ready to throw them to the Austrian wolf. Britain was counselled to look on at this suggested brigandage with acquiescence if not approval.

We now see Bulgaria, with the approval of Russia, negotiating an alliance with these hated and despised Serbs, while the *Spectator*, in chastened mood, confines itself to suggesting truces between Italy and Turkey, and wisely appeals to THE NEAR EAST for its facts.

Now, sir, may I draw attention to some words of Sir E. Pears, which might seem to be strangely prophetic of the actual position in the Balkan peninsula at the present time:—

"Should the happy consummation be realised of a federation of all the Balkan States, Albania might obtain a form of self-government in such federation which would greatly advance its civilisation and allow the Albanian people to develop on their own natural and national lines."

It has been said that the Albanians are as much unconquered and unconquerable as the Swiss and the Montenegrins, and surely to encourage and help them to grow into a nation is an aim to which such great and enlightened peoples as those of England, France, and Italy may fitly direct their efforts, more especially when Russia herself is lending a hand?—I am, yours, etc.,

"CYPRIOT."

Authors' Club, August 15, 1912.

THE PRESS ON THE NEAR EAST.

A Policy for Persia.

The Teheran correspondent of the *Times*, in a recent remarkable dispatch, drew attention to the urgent need for a British policy in regard to Persian affairs. Mr. Lovat Fraser, in the *Daily Mail* (August 16), writes on this matter as follows:—

There are two courses open to Sir Edward Grey. He may leave Russia to work her will in Northern Persia and announce that he intends to abstain from intervention in the south. In that event the whole of Persia will lie at Russia's mercy, the Anglo-Russian Convention will become a dead letter, and the danger of a breach in the Triple Entente will be very real. The alternative is to continue to work in conjunction with Russia, which means British intervention in the south. To be of any use, Great Britain must intervene not in the small British sphere, but in the large neutral sphere, which includes the road from Bushire to Shiraz and Ispahan. The first necessity of such British action will be an amendment of the Convention. The next will be some form of British administration, for no available Persians could undertake the task. British administrators will require troops to protect them and to enforce their orders. That will involve a further derangement of the Indian military system. Already we have nearly 9,000 troops in China, and unwise people with a limited horizon are urging us into new and wild adventures in Somaliland.

There can be little doubt about the course the British Government will adopt. It is less risky to take action in Southern Persia than to imperil the Entente. But we shall not go to Southern Persia very willingly, and shall do as little as we can there. The step will in any case produce a new wave of indignation among the Mahomedans of India. It will also almost certainly result in organised revolt in the Radical wing of the Ministerialists.

Jews in the Balkans.

Under the above title the *Jewish World* (August 16) has an article on the position of the Jews in the conflict of races in the Balkans, from which we take the following extract:—

Nevertheless, we need not despair. The Turks, who for practical purposes are still masters of the situation, will not allow the Jews to go to the wall, for they are not only a most loyal and law-abiding part of the otherwise restless population, but also economically indispensable. The trade of Salonika is in Jewish hands, and if it were allowed to slip from them it would only pass to the Greeks. Nor have we any necessity for adjudicating on the legitimate national aspirations of either the Greeks or Bulgarians. The Jews in Greece are few in numbers, but it is only fair to say that they have been immune from such hostilities as those which the temper of the Greeks and their historic attitude towards the Jews have led us to expect, and of which the fierce anti-Jewish outbreak in Corfu seemed to afford additional confirmation. In Bulgaria the Jewish population enjoys a freedom of movement and an enlightened protection from Tsar Ferdinand which stands out as a grateful contrast to the mediæval treatment to which the Jews are subjected in neighbouring Roumania. Behind them all stands Austria-Hungary, which, as in the case of Bosnia-Herzegovina, has shown that it means to win Jewish support by fairness and justice to Jewish claims and susceptibilities. As friends of all and enemies of none, we can only hope that the troubles in the Balkans will find a peaceful solution, from which our own people, as well as others, will benefit.

Exploration in the Sudan.

The *Field* (August 17) contains the following paragraph regarding exploration in the Sudan. It will be seen that the projected new expedition against the Anuaks is expected to solve many problems besides those of a military and police nature:—

If missionary enterprise often leads to the filling up of blanks in the maps and to a knowledge of primitive peoples, the same claim can justly be made on behalf of many military expeditions. The "little wars" in the Anglo-Egyptian Sudan are an instance in point. Imperfectly known as is the country lying between the Bahr-el-Jebel (Mountain Nile) and the frontiers of Southern Abyssinia, it was still less known before the Sirdar found it needful to send an expedition against the Anuaks and Nuers, pagan tribes found in the valley of the Pibor branch of the Sobat, and up to the foothills of the Abyssinian plateau. In the rainy season the whole country is liable to flooding, and large areas are in any case inundated. And, by a strange perversity as it would seem, in the dry season water is very scarce, and travel almost as difficult as in the rains. These things have made both the exploration and pacification of the district difficult, while its remoteness from Khartum also led to its being less considered than more easily accessible regions. Two problems that await solution are the tracing of the upper courses of the Pibor and the Khor Filus. The new expedition against the Anuaks, which, under Lewa Asser Pasha, is to start in October, may help to solve these problems. The task of pacifying the country, which contains much sylvan richness, is not wholly in the hands of the Sudan authorities. Part of it lies within the northern provinces of the Uganda Protectorate, though the frontier between the Anglo-Egyptian Sudan and Uganda has as yet not even been surveyed.

The Austrian Proposals.

In the *Figaro* of August 17, M. Raymond Recouly, a well-known French publicist, has a noteworthy article on the Austrian proposals, from which we quote the following:—

Mais ce qui est beaucoup plus difficile encore, c'est de réclamer un programme sérieux de réformes, sans trop porter atteinte à la souveraineté du gouvernement ottoman. La presse officieuse de Vienne, qui sait où se trouve en cette affaire le point véritablement délicat, prend grand soin de faire remarquer que le gouvernement austro-hongrois ne cherche d'aucune manière à intervenir dans la politique intérieure de la Turquie.

Seulement, il est parfois assez difficile de déterminer où commence et où finit l'intervention.

Il faut se garder aussi d'exciter, sous prétexte de réformes, voire de décentralisation, les furieux appétits des petits états balkaniques. Tel de ces états n'est que trop porté déjà à chercher les occasions d'un conflit.

On voit combien tout cela est compliqué et embrouillé.

Ce n'est pas une raison pour empêcher les grandes puissances d'accorder leur attention aux affaires balkaniques et d'étudier, avec tout le soin qu'elle mérite, la très intéressante proposition du comte Berchtold.

Il est à noter, et la remarque mérite d'être faite, que cette proposition ne dit rien, absolument rien de la guerre italo-turque. Elle ignore purement et simplement cette guerre. Le fait est d'autant plus curieux que le cabinet de Vienne cherche avant tout, d'après ce qu'il déclare, à ramener la paix dans la péninsule balkanique. Cela étant, comment se désintéresse-t-il à un tel degré de l'état de guerre, qui n'est pourtant pas sans influer grandement sur la situation interieure de la Turquie?

"Cosmopolitan London—The Greek Community," in the *Morning Post* (August 16).

"Our Persian Policy," in the *Manchester Guardian* (August 17).

"The Trans-Persian Railway," letters to the *Times* (August 19 and 20) from Colonel A. C. Yate and Professor Vambéry.

"La Presse en Turquie," in *Questions Diplomatiques et Coloniales* (August 16).

"Wie das Komitee abwirtschaftete," in the *Berliner Morgenpost* (August 13).

"Trans-Persian Railway Project: The Coast Route Alternative," by the Military Correspondent of the *Morning Post* (Aug. 22).

NEAR EAST BOOKSHELF.

MR. SHUSTER ON PERSIA.*

PRELIMINARY NOTICE.

In a volume that was written within three months after his return to America, Mr. Morgan Shuster has given to the world his version of the circumstances in which his appointment as Treasurer-General of Persia was terminated so suddenly. His writing is forcible and his phraseology direct. The book will be read with the closest attention by all who are interested in the fate of Persia. *L'affaire Shuster* naturally dominates the narrative, but the contemporary history of Persia is told at length, and it proves of extraordinary interest. Although we may hold that some of the author's strictures are just and well deserved, few students of history will fail to regret that Mr. Shuster did not strive to write more dispassionately. His provocation may have been strong, but he made little attempt to hear the other side. The book, which is copiously illustrated, will be reviewed in a later issue.

BOOKS RECEIVED.

It Happened in Smyrna. By Thomas Edgelow. (Methuen and Co. 6s.)

By Desert Ways to Baghdad. By Mrs. Wilkins (Louisa Jebb). Illustrations and Map. (Nelson. 1s. net.)

Législation Ottomane depuis le Rétablissement de la Constitution. Tome I. By A. Biliotti and Ahmed Sedad. (Paris: Jouve et Cie., 15, Rue Racine. 20 frs.)

The Red Oasis. By Charles Rosher. With illustrations and a map. (The Century Press, Fulham.)

La Guerre Italo-Turque devant l'Europe. By Paul de Lauribar; with preface by M. Ch. Leboucq. (Publications de l'Informateur Parlementaire, Paris. (1 fr.)

* "The Strangling of Persia." By W. Morgan Shuster, ex-Treasurer-General Persia. (T. Fisher Unwin, London, 12s. 6d. net.).

CURRENT COMMENTS.

The fact of Mr. Johns' survey for the coming railway to India having resulted in the discovery of a practicable route from Karachi to Gwadur seems to prove that Mr. Johns has succeeded where Alexander the Great failed. It will be remembered that the Macedonian conqueror, on his return from India, endeavoured to push along westward, hugging the coast line so as to keep in touch with the galleys commanded by Nearchus, but that on finding his progress blocked by the Malan range he (presumably) ascended the Hingol River till he found the first available pass to the west. As Sir T. Holdich and other comparative geographers have pointed out, nothing has altered since those days, and the identification of several names of tribes and rivers seems to prove beyond doubt that Alexander turned westward along the stream flowing north of the Taloi range, and regained the coast at Pasni, a distance of under 200 miles. Along this route the Macedonians experienced great suffering through want of water, and it will be very interesting to ascertain how Mr. Johns has succeeded in keeping clear of this forbidding route, which, even to the constructors of the modern telegraph line, presented some forty years ago the greatest difficulties.

***

From Gwadur the *Pioneer Mail* anticipates that the coming railway, taking it from east to west, will pass through Bam and Kerman, and this we consider highly probable. Whether the further prolongation of the line will be westward, so as to cross Mesopotamia and Northern Arabia, and so close on to the Mediterranean entrance of the Suez Canal, or whether it will content itself with a simple connection with the so-called trans-Persian line, coming down from Tabriz and the Russian Caucasus, it is as yet too soon to predict. We should imagine that both railways are, in the end, likely to materialize, for we hear that in India the staff are struck with the possibilities of a trans-Arabian connection of the Egyptian system with the line from Karachi, and are collecting all requisite information for such an eventuality.

***

The story of Rogers, the "elephant poacher" of the Sudan, has been brought into prominence again by the action of Mr. Norris, who, in the House of Representatives on Tuesday, brought forward a resolution calling on President Taft to submit to the House all the information in the possession of the United States Government with regard to the death of Rogers. It is a thrilling story indeed. First told—and remarkably well told, too—by a Khartoum correspondent of the *Morning Post* in an article to which we directed attention at the time, it is now probably destined to figure in most papers of the world. In course of time it will almost certainly be seized upon by some writer of fiction as the nucleus of a novel of the "adventure" type. And, unless we misjudge the enterprise of the American publishers, there will be at least one "life story" of Rogers out in book form ere long.

***

And a deeply interesting volume such a biography should make—if only the biographer will avoid embellishments. For Rogers appears to have been a typical soldier of fortune, serving the fickle dame amidst the ice and snows of Klondyke as cheerfully as he served her amidst the jungles and swamps of the Sudan, and facing his death when it overtook him with a reckless, devil-may-care gallantry that cannot fail to appeal to most of us.

***

But when the tale is told it is to be hoped that full justice will be done to Captain C. V. Fox, "Inspector, Mongalla District," who, in fulfilling his duty, showed pluck no whit inferior to that of the man he was pursuing—and in a very much better cause; and who, having run his man to earth, after incredible exertions, only to find him desperately wounded, turned surgeon and nurse to him at once and did all that mortal man could do to make the dying outlaw's last hours easier. In this sloppily sentimental age of ours the picturesque criminal is always certain of finding plenty of admirers, even when he is far less deserving of their admiration than was the "elephant poacher." The man who does his duty is not quite so sure of his due meed of praise. If in executing that duty he happens to have crossed a frontier—however ill-defined—he may possibly have reason to fear censure from armchair critics, official and otherwise. But, as the *Morning Post* remarked, "If Fox crossed a boundary line, among other obstacles, that takes nothing from the heroism of his exploit. The Empire needs the kind of man who, under such circumstances, would turn a blind eye to a boundary line." The Empire should keep its eye—and not its blind eye—on Captain Fox. His countrymen may well feel pride, quite unmixed with any other sentiment, in his fine exploit.

***

From Cairo comes the news that a committee of Egyptian notables has been formed in order to encourage the people in the love of music—that is to say, music which is harmonious to ears accustomed to the strains of the West. The attempt has been greeted with loud applause by a certain Anglo-Egyptian newspaper, which waxes merry over the idea of the ordinary man-in-the-street ever becoming musical in Cairo. There is certainly much which is unmelodious to be heard in the streets of the East; the "Mind your feet" of the cabby, for instance, is harsh, and could be by no means termed sympathetic, but—there is music, real music, in the lilt of a pure Arab song. Let anyone who doubts this pay a visit to the Arab Theatre in the Atbara-el-Khadra, and if he has music in his soul it shall be satisfied.

***

It is not many months since the writer paid his first visit to this centre of Eastern harmony, and the only regret which assails him now is the thought of his wasted years. The entrance to the theatre is not attractive; from a desolate-looking box at the end of a passage still more desolate in appearance a dingy Arab doles out tiddledewinks in exchange for a piastre, the one and only price of admission. Another dingy-looking Arab re-collects the tiddledewinks at the door of the hall; you plunge into an atmosphere of tobacco, and there you are. At the extreme end of the hall an orchestra, consisting of about a dozen more or less clean natives sits on a stage playing in a desultory sort of way between puffs at their cigarettes and sips of Turkish coffee. But in the centre is a woman clothed in gorgeous raiment, a pearl in a somewhat tawdry setting; it is Tauhëla, the Queen of Eastern Song.

***

Suddenly a man who has been wandering about selling cigarettes and coffee, raises a stentorian voice, "Listen, my masters, O listen; silence for Tauhëla," and upon the mixed and chattering assembly a silence falls, heavy and charged with expectation. Soft and low, but rich and full, come the first notes of a song which is to take an hour in its singing—"Love—love is beautiful." The members of the orchestra work themselves into a frenzy of movement as the singer sinks back into her seat, and an old man in the audience, with some rage-chord of passion stirred, rises in his seat and shouts the singer's name. Then he in his turn sinks back to his chair, and looks about him, half-ashamed and half-defiant. A youth looks round impatiently at the creaking of a chair, and then returns his gaze to the platform. He, too, utters the singer's name, but it is almost inaudible, though the pronunciation of each syllable is a caress. And so the evening wears on; long intervals of orchestral accompaniment, then a phrase or two of song. They grow upon you like a drug, these phrases—they are all much the same, "Love, O love is beautiful, Love is beautiful and cruel"; but Tauhëla is singing for *you*, the individual, and the rest of the audience do not count. She has dwelt upon your life, she has caught the one responsive chord in your breast, and she soothes and caresses you with a voice that is almost a religion. And it is all to the phrases of pure Arab music; you must hear it for many days before you can discover the hidden cadence at all. But it is there, and while singers like Tauhëla live to interpret it, why strive to change it for indifferent music of the West?

***

Our Malta correspondent writes:—"The news of the exceptionally severe weather now being experienced in England sounds almost incredible in Malta, where the heat is at its height. The 10th of August—the Feast of St. Lawrence—is by tradition credited with being the hottest day here. An old saying in Italian reminds us that on St. Lawrence's Day the heat is great, but lasts little—a no mean consolation. (*San Lorenzo gran caldura, ma poco dura.*) At this time of the year visitors leave the island in search of cooler climes, as do many of the inhabitants, although this year the latter have mostly preferred a stay at their own delightful seaside resort to a trip abroad. The return of winter is eagerly looked forward to, the more so as there are already fine prospects of a splendid 'season' in store." Not a few of our readers will doubtless be ready to tell those islanders who are "eagerly looking forward" to the return of winter that they need only come to England just now to find ideal wintry conditions!

***

Major-General the Hon. J. H. G. Byng, who, as we anticipated some time ago, is to succeed Lieutenant-General Sir J. G. Maxwell in command of the British troops in Egypt, is no stranger to that country, for he took part in the battles of El Teb and Tamai in the Egyptian Expedition of 1884. In South Africa he shared in the relief of Ladysmith, and later commanded the S.A. Light Horse, and he is regarded as one of our very best cavalry officers. He joined the 10th Hussars nearly thirty years ago, and was given command of the regiment in 1902. He has been commandant of the Cavalry School and of the 2nd Cavalry Brigade in the Eastern Command and of the 1st at Aldershot, and for nearly two years has been at the head of the East Anglian Territorial Division.

The annual meeting of the British Association for the Advancement of Science is to be held in Dundee from September 4 to 11. In the Section of Anthropology, of which Professor G. Elliot Smith, F.R.S., of Manchester Victoria University, is president, papers will be read by Professor G. A. Reisner, of Harvard, upon his excavations at the Giza Pyramids; by Professor Bosanquet, Mr. T. E. Peet, and others, upon the archæology and megalithical monuments of the Mediterranean; by Mr. A. J. B. Wace and Mr. N. T. Thompson upon excavations conducted in Halos, North Greece, by the British School at Athens; by Professor Flinders Petrie, on early dynastical discoveries in Egypt during the past season; and by Mr. A. H. Gardiner on Theban tombs.

PERSONAL & SOCIAL.

Viscount and Viscountess Errington arrived at Strathpeffer Spa last week.

Sir Alexander Baird has arrived at the Hyde Park Hotel.

The Turkish Heir Apparent, travelling privately, left Constantinople on Tuesday for Switzerland, where he will stay for some time.

General Sir John Maxwell left Egypt for Cyprus to inspect the island garrison a fortnight ago.

Prince Antoine Bibesco, First Secretary of the Roumanian Legation in London, has been appointed to St. Petersburg, where he will be going shortly.

The Turkish Ambassador, one of the few diplomatists remaining on duty at this holiday season, was a visitor to the Foreign Office on both Monday and Tuesday.

The Right Honourable Syed Ameer Ali is staying at the Hotel Schweizerhof, Vulpera-Tarasp.

According to a Constantinople journal it is reported that a son has just been born to Abdul Hamid, the ex-Sultan of Turkey.

It is rumoured in Constantinople that Prince Sabaheddine Effendi will be a candidate in the approaching Parliamentary elections.

Dr. Cook, of the American Mission, who has been staying in London, has proceeded viâ Odessa and the Black Sea to Baku, whence he intends gaining Persia.

Dr. B. V. D. Post and family, of Constantinople, are now at Samokoff, Bulgaria, on a month's visit.

Mr. and Mrs. H. Poynter have left town for the Continent on their way to Constantinople, where they are due on September 2.

The new King's Advocate in Cyprus, Mr. Russell, has arrived in the island and taken up his duties.

Admiral Robinson, Director-General of the Egyptian Ports and Lights Administration, who is now in England on leave, is expected back in Alexandria early next month.

At the invitation of the Emperor William, a Sofia telegram states, King Ferdinand's two sons will attend the German manœuvres.

Lewa Bernard Pasha, Financial Secretary to the Sudan Government, who is now on leave, is staying at Eastbourne.

Crookshank Pasha and Mrs. Crookshank are reported to be amongst recent arrivals at Vittel.

Captain Ronald Winter Hutton has been seconded for service with the Egyptian Army.

Lewa Wilkinson Pasha, of the Sudan Government, has had his leave extended from August 2 to 31.

Lewa Crawford Pasha, Commandant of Artillery and Director of the Ordnance Department of the Egyptian Army, has been granted leave of absence to November 3, and Kaimakam Wise Bey, commanding the Arab battalion, to October 9.

Mr. F. J. Atterbury, of the Slave Trade Repression Department of the Sudan Government, has arrived in London on leave.

Our Odessa correspondent, writing under date of the 19th inst., says:—From St. Petersburg it is to-day stated that M. Sazonoff goes to his country estate for a fortnight's rest and recuperation, and about the middle of September will proceed on his triple visit to Paris, London, and Berlin. The greatest importance is attached by the semi-official Russian Press to the meeting of M. Sazonoff and Sir Edward Grey. The Russian Foreign Minister will remain, it is understood, a week in London, and will have a series of consultations both with Mr. Asquith and Sir Edward Grey, and, according to the *Novoye Vremya*, his Excellency will be received in audience by King George.

Baron von Heemstra left Tangier last week for home on the Rotterdam Lloyd s.s. "Wilis."

Prince Mohammed Ali Pasha, brother of H.H. the Khedive, who has been on a tour in Europe, is expected to arrive in Egypt on Sunday.

Khalid Pasha Loutfi, permanent member of the Egyptian Legislative Council, has left Carlsbad for Bad Nauheim.

Mr. C. S. Meimarachi has arrived in Paris from Cairo.

Ismail Pasha Assam, of Cairo, has arrived at the Savoy West-end Hotel, Carlsbad.

Mr. John Ross, of Alexandria, has left London for Scotland.

The post of Assistant Colonial Chaplain (Church of Scotland) at Alexandria is shortly to become vacant.

Mr. and Mrs. A. M. Papazian Bey are now on a visit to the United States, having crossed by the R.M.S. "Caronia" from Liverpool last week.

Mr. Trelawney, Director of the Egyptian Government Printing Office, has returned to Cairo, off leave.

Mr. Alfred B. Singleton has been appointed provisionally as Assistant Engineer to the Mechanical Service of the Public Works Department in Cairo.

Mr. Hyacinth L. Rabino, late H.M.'s Vice-Consul of Resht, Persia, has been transferred to the Vice-Consulate of Mogador, to replace Mr. Henry Beresford Johnstone, who has been appointed H.M.'s Vice-Consul in Tangier.

Al-Garida is responsible for a rumour to the effect that Mr. Currie, Director of Education in the Sudan, will succeed Mr. Dunlop, who intends to retire from his position as Adviser to the Egyptian Ministry of Education at the close of the coming school year.

The *Ahram* states that Dr. Nolan is about to leave the service of the Egyptian Government. As he has not served long enough for a pension he will receive the sum of £E2,500 in consideration of his services.

Mr. Hazzopulo, the Hellenic and Persian Consul in Manchester, has received the following reply to the telegram which he addressed to the King of the Bulgarians congratulating him on the anniversary of his accession:—"Accept my sincere thanks for your kind wishes on behalf of my twenty-fifth anniversary.—Ferdinand R."

Last Friday, on the occasion of King Ferdinand's Jubilee, a service of thanksgiving was held at the Bulgarian Legation in London, and was attended by the Bulgarian Minister and Madame Madjaroff, the staff of the Legation, and members of the Bulgarian Colony. Afterwards a reception was held, and messages of congratulation were despatched to King Ferdinand on behalf of the Bulgarian Colony in London.

A marriage is arranged between Major Herbert Valentine Ravenscroft, late the Manchester Regiment, Sudan Government Service, eldest son of the late E. V. Ravenscroft, of Far Forest, Worcestershire, and Helen, eldest daughter of James McLean, of New York.

The engagement is announced of Miss Edith Barbara, elder daughter of Mr. R. L. N. Johnston, of Mogador, to Monsieur Alexandre M. Sempé, acting manager of the radio-telegraphic service at that port.

The silver Leibnitz medal of the Prussian Academy of Science has been awarded to Mr. N. de Garis Davies, in recognition of his work in reproducing and describing the monuments of ancient Egypt, mostly in the publications of the Egypt Exploration Fund.

We regret to announce the death, which occurred suddenly, at Alexandria, on the 14th inst., of Mr. Ambrose Ralli. Mr. Ralli, who was the last surviving son of the late Antonio Ralli, of Clapham Park, was a conspicuous figure in the public life of Alexandria. He was for many years vice-president of the local municipality, and had large business interests in the town. He was sixty-two years of age.

The death occurred on Wednesday of last week, at Goring-on-Thames, of Captain Arthur William Stiffe. In February, 1849, Captain Stiffe obtained a commission in the Indian Navy, in which he served till the abolition of the navy in 1862. He was engaged in the Persian War of 1856-7, being present at the capture of Bushire and Mohammerah, and received the medal for the campaign. In 1862 he was employed on special survey duty for the laying of telegraph cables in the Persian Gulf. The following year he was on special duty in Turkish Arabia, and in October was appointed engineer of the Persian Gulf Telegraphs, and to the command of the cable boat "Amberwitch." He accomplished his task so rapidly that the Indo-European route to this country by way of Turkey was opened for traffic in 1865, the route through Teheran being opened five years later. He was officiating Director of Persian Gulf Telegraphs on various occasions, but his substantive appointment after the cable had been laid was that of Engineer and Electrician. He left the Persian Gulf in 1879 to become Port Officer at Calcutta, and retired from the Royal Indian Marine in 1888.

The *Gazette* notifies that the King has granted to John Somerville Birch Pasha, British Commissioner of the Egyptian State Domains, authority to accept the Grand Cordon of the Imperial Ottoman Order of the Medjidieh, conferred upon him by the Khedive.

Mr. M. Aminur Rahman, a Bengali Moslem of good family, who has been studying at Edinburgh University, has been appointed on probation Indian Assistant to the London Adviser for Indian Students, in succession to Dr. P. K. Ray.

Boinet Pasha, Secretary to the Minister of Public Works, Egypt, will retire at the end of the year, when he will have completed thirty years' service.

In the autumn the 2nd Royal Warwickshires will move from Portland to Malta, and the 1st Worcestershires from Parkhurst to Alexandria.

PERSIA'S PLIGHT.

Six years have now passed since the Nationalist movement in Persia resulted in the granting of a constitution, and throughout this period the country has experienced a succession of crises. Three years ago the Shah Mohammed Ali was deposed. His son, aged thirteen years, was appointed to succeed him, but it was not until July, 1910, that with the formation of a new Cabinet a new era in Persian affairs was promised. The disorders in the provinces, however, continued, and last year the ex-Shah invaded the country from Russian territory, in an attempt to regain the throne. After he had been driven out by the Government forces, he undertook to resign his pretensions in return for a pension. His followers, notably his half-brother, Salar-ed-Dowleh, continued the struggle, partly on his behalf, but mainly fighting in their own interests. With the final defeat of Salar-ed-Dowleh a few months ago the Teheran Government seemed to be freed from its gravest peril. The general condition of the country, however, could hardly have been less satisfactory, and has since only changed for the worse. So long as the ex-Shah or his proxy pretenders threatened the position of the new régime there was some ground for the contention that the Government had its hands too full to pay adequate attention to the question of reforms. Three months' respite from serious military operations has only shown that the failure of the Administration is not due to extraneous circumstances, but to inherent defects in the Persian character. Under a despotic Shah the country possessed at least a recognised guiding power. His methods of government may have left much to be desired, and Persia may have had good reason to anticipate material improvement from the substitution of a constitutional régime. In effect, however, the change has been from the rule of one to the rule of none. It would seem as if the despotic theory of government were so ingrained in the Eastern mind that the attempt to introduce constitutionalism resolves itself into the licensing of many despots, with the consequent clash of interests and negation of actual government. In Persia to the lack of administrative capacity is added a complete absence of the sinews of administration. The campaign against the ex-Shah and Salar-ed-Dowleh, together with the financial arrangements for buying off the hostility of the former, drained an already impoverished Treasury, and the authorities are powerless to cope with the general lawlessness that still survives the more definite operations of the recent campaigns.

Bankrupt alike in funds and ability, the Teheran Government appears to be engaged in the listless contemplation of confusion becoming worse and worse confounded. Left to its own devices, it might possibly cope with the situation in its own way, but in the face of the two interested Powers it maintains an attitude of utter helplessness. When all the circumstances are considered, Persia's dilemma is not altogether inexplicable. She is confronted by the application of two seemingly irreconcilable policies, both unfavourable to herself, which are ostensibly combined to produce beneficent results for the country. From the North she has to reckon with Russian influence, admittedly hostile to Persian independence and straining continually to establish a firmer hold. In the South she sees British policy timorously concerned for British interests, but not daring to offer either forcible intervention or practical advice. Translated into action in the capital, these two policies mean for the Government that the encroachment on its independence acquires a double force, while the advantages of friendly guidance are halved. But for the Anglo-Russian Convention of 1907 the country might have hoped for some relief by playing one Power off against the other, or at least in obtaining the advice of one when hard pressed by the other. Of the compromise between the Russian and British attitudes that the Convention was supposed to bring about the Government sees few concrete results. The Northern province may still be nominally Persian, but the pressure upon it has not been relaxed; in the South Great Britain offers a platonic friendship, but does not lend a helping hand. Persia's most urgent need is money. The British Government proposes an advance of £400,000, to be followed by a loan on a large scale. When Russia demurs, the advance is reduced by half; the greater portion is already expended or earmarked, and the grant is hedged in by restrictions and stipulations. No large loan follows, but after two or three months a further advance of £200,000 is suggested by Great Britain, only to be reduced to £50,000. These efforts at assistance bear no relation to Persia's actual needs. On the contrary, they are calculated to cause the maximum of financial embarrassment with the minimum of material relief, and they provide no basis for the introduction of a programme of ordered government.

In these circumstances it is impossible to divest the British and Russian Governments of responsibility for the chaotic state of Persian affairs. Even with the best intentions they would have to work with the worst possible material; but when to the latter they add uncertainty of purpose and questionable designs the result is a foregone conclusion. In criticising the action of the two Governments in Persia there is no need to challenge the Anglo-Russian Convention. That agreement looked beyond Persia, but it also proved in some measure beneficial to that country as well. Nor is there any need to inveigh bitterly against Russia or accuse her of a breach of faith. If we expected more from the Convention of 1907, our hopes must have been based on ignorance of Persia's history and Russian relations with that State. Instead of supposing that from that moment Russia's attitude towards Persia would fall into line with the traditional policy of Great Britain towards countries under her protection, the British Government ought to have realised that Russia would seek in Persia compensation for the surrender of ambitions elsewhere. Sir Edward Grey appears to have acted on the presumption that he had done all that was required for the Persians in obtaining Russia's undertaking to respect the integrity and independence of their country. In his anxiety to be loyal to the Convention, the Foreign Secretary has laid more stress on giving unswerving support to Russia than on examining Russian action and motives. The result has been that the condition of Persia has gone from bad to worse, and that it is now difficult to dissociate Great Britain from actual participation in bringing about this state of affairs. Very few months have elapsed since the British Government was aroused to adequate appreciation of the real facts. We had already been committed to a policy that was no policy at all, and the difficulty now is to extricate ourselves from a false position without undue strain to the Anglo-Russian entente. The process of extrication may have to be gradual both in our own interests and in those of Persia. Whether it can be achieved without an occupation of Southern Persia, with a possible modification of the terms of the Convention, must be considered doubtful. One fact stands out, that our timidity in grappling with the Persian problem has been as injurious to Persia's welfare as it has been to our own prestige. It is therefore the duty of those who are capable of taking the least interest in foreign affairs to insist that the Government should lose as little time as possible in adopting a constructive policy for dealing with Persia and in carrying it out when adopted.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Apropos of the note upon "Oil Engines for Baghdad" in our last week's issue, I am pleased to learn from an Englishman who knows that city well, and had a good deal to do with the introduction of the first oil engines used there in connection with milling, that English-made engines are considered by far the most satisfactory, and that their use is steadily extending. The native landowners soon found out the advantages of the oil engine as compared with the old-time *churd* for raising water for the purposes of irrigation. The "machina" enabled him to carry the water and the cultivation dependent on it much farther back from the river, and though he was inclined at first to boggle a bit over the initial outlay, he, like a wise man, took his courage in his hands and is now, in many instances, reaping a rich reward and blessing the name of Hornsby. The firm referred to must, indeed, be regarded as worthy successors of the *Jann* by the people of Baghdad, for their engines have enabled the more enterprising agriculturists to convert many an arid acre into fertile corn, or vegetable, land.

***

In connection with his milling experiences in Baghdad, my informant mentioned a point of interest. Owing, he said, to the quantity of grit that seems to be inseparable from grain produced in the country, steel rollers were found to be most unsatisfactory. They speedily became worn out, and as it was impossible to get them repaired in Baghdad they had to be returned to this country, thereby, of course, greatly increasing the expense of running the mill. Moreover, the flour produced by their use was not as popular with the natives as stone-ground flour, being, in fact, too fine. The English firm running the mill, therefore, experimented with what my informant referred to as "local stones," by which, I presume, he meant stones brought from up-river, or from the Persian frontier; for the entire Baghdad district is simply an alluvial plain and absolutely without stone. At all events, the "local stones" proved quite satisfactory. They produced the coarse flour dear to the native palate and digestive organs; and when they required re-dressing it could be done by local labour. So they were adopted, and, I understand, have held their own against all rivals so far, thus affording another instance of the "linking of East and West" of ancient and modern—and, incidentally, of the triumph of British adaptability.

***

From what my informant told me, I gather that the establishment of the mill referred to and the work of making it a success was a somewhat heartbreaking job at first, calling for almost as much grit as the local grain appears to possess; and as I listened to the tale of difficulties overcome, of native prejudices and native obstinacy combated, and of the outlay of time and patience—to say nothing of capital—involved in the experiment, I was glad to think that British enterprise was still worthily represented in Baghdad.

Mr. William Rees, a part owner of the "French Market" at Alexandria, writes to us taking exception to the remarks made in a recent issue by our Alexandria correspondent in regard to this market. Our correspondent had stated that in consequence of the approaching opening of a new market in that city it was to be hoped that the French Market and the Ratib Pasha Market would be closed, as they "constituted a danger to the public health." While admitting that our correspondent's stricture is somewhat severe, there can be no gainsaying that these two markets, especially the latter, have not in the past enjoyed an altogether enviable reputation from the sanitary standpoint. I am pleased to learn, however—and I gladly give publicity to the fact—that within recent times the French Market, as it is popularly known, has undergone considerable improvements. A new system of drainage has been installed on the property, and its sanitary arrangements are, Mr. Rees says, perfect and up-to-date.

***

The agricultural, technical, and commercial education department of the Egyptian Ministry of Education requires an assistant master to teach business methods and commercial practice in the Cairo School of Accountancy and Commerce. Intending candidates for the post may obtain full particulars by applying, in writing, to the Director, Egyptian Educational Mission, 36, Victoria Street, Westminster, and as applications should be received as early as possible—September 7 is the latest date—they should lose no time in making such application.

***

I should advise those interested in trade with Turkey to obtain a copy of the report by the U.S. Consul-General at Constantinople, Mr. G. Bie Ravndal, and published in the *Daily Consular and Trade Reports* on July 3. It is an able and informative exposé of the situation, with special hints to American exporters. In the majority of cases these hints could be advantageously read by our own exporters. The tone of the article is optimistic, and the writer reminds his countrymen that "The Turkish Government is a heavy buyer of goods which they manufacture, and pays its bills promptly on delivery."

***

But the "business cannot be obtained by correspondence." American manufacturers must seek it through Government contractors in Constantinople or through their own accredited expert representatives on the spot. The latter alternative is preferable by far, as the professional contractors usually have too many interests to properly look after each, and rarely possess the required technical knowledge.

***

At the recent international exhibition of internal-combustion motors, held at Baku, on the Caspian Sea, 50 per cent. of the motors exhibited were of British manufacture, says an American Consular report. It seems, therefore, that we are still able to hold our own—if we go about it in the right way.

***

"The machinery," continues the same report on "Oil and Gas Motors in Southern Russia," "and repair shops at Baku are excellently equipped. Most of the lathes and other machines are made in Russia, Germany, and other European countries. English machines have lost much of their former market, as the Germans now have the lathe beds and other heavy parts manufactured in Russia to save duty and transportation charges."

***

There are apparently excellent opportunities for the motor engine in the Baku district. "Many firms have been slow to discard their expensive steam plants, but are now doing so. Nobel Brothers, for instance, one of the largest oil producers in the region, have just purchased their first oil motor. For their various mills Nobel Brothers could use about 600 motors, should they decide to substitute gas and oil motors for their steam equipment. The present tendency is to use motors of high horse-power"—that is, from 20 to 150 horse-power, or, to be precise, from 35 to 150 horse-power for gas, and from 24 to 66 horse-power for oil motors.

***

The same report goes on to state that "from 300 to 400 cotton-ginning machines have been sold at Baku for use in the Caucasus and Trans-Caspian, and all were of American manufacture. A member of an English firm who has been trying to sell cotton machinery of English manufacture in the Caspian countries says that cotton growers refuse to buy any but American gins." There must be, I should think, a reason for this. What is it? It might be worth while to go into this question in order to remove the handicap. Perhaps the trade journal most directly interested in this matter will help to thrash it out.

***

Among the more conspicuous British exhibitors at the Baku exhibition were Messrs. Crossley Brothers, of Manchester, the Tangye Company, of Birmingham, and John Robson, of Yorkshire. One American firm of agricultural machinery made use of the cinematograph in order to show their tractors and farm machinery in operation. There is no doubt that the picture film has already entered the arena as one of the most powerful means of publicity, and British exporters will do well to take advantage of an advertising medium successfully exploited in America.

***

The increase in the price of oil and petrol in Egypt may have serious consequences. It is possible that it is merely the result of a corresponding increase in prices throughout the world, but, on the other hand, I think it is more likely to be the result of a combine, as pointed out by our Alexandria correspondent. The formation of a trust in Egypt would be disastrous to the country's interests. It is bad enough in England, but, after all, we have our coalfields. Egypt has nothing indigenous in the way of fuel, and to control the price of oil fuel would be tantamount to retarding the development of motor traction in Egypt by a decade or two. The Government ought most decidedly to legislate in such a manner as to prevent the creation of a trust. It is a subject to which I shall have occasion to return shortly.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Great Britain's Trade with Turkey.

Constantinople, August 17.

The total exchanges of enumerated articles between the two countries, according to the Board of Trade Returns for the month of July, 1912, show an increase of exactly a quarter of a million compared with the same month in 1911, and are £150,000 greater than during the month of July, 1910.

The enumerated exports to Turkey during July, 1912, were more by £150,000 than during the same month in 1911, and by £130,000 than during the corresponding month in 1910. The principal increases were in cotton piece goods, which amounted to £564,050, as compared with £439,579 in 1911 and £395,877 in 1910, and in cotton yarns, which amounted to £65,814, as compared with £22,426 in 1911 and £38,451 in 1910. There was also a slight increase in coal.

Turkey's enumerated exports to Great Britain during July, 1912, are greater by £100,000 than during the corresponding month in 1911, and by £20,000 than in 1910, the increase in this instance being almost entirely in the shipments of mohair, which amounted to £117,120 in 1912, as compared with £14,006 during the corresponding month in 1911 and £82,115 in 1910.

The total enumerated exports to Turkey during July, 1912, were £740,831, which is considerably above the average, as compared with £588,694, and £608,661 during the corresponding months of 1911 and 1910 respectively. The total enumerated imports from Turkey were, during the same month, £178,068, as compared with £80,732 and £157,979 in 1911 and 1910 respectively.

For the seven months ended July, 1912, the total enumerated exports from Great Britain to Turkey were £3,613,915, as compared with £4,112,137 during the corresponding period in 1911 and £3,612,490 in 1910. In a survey of the seven months' trade, there are slight decreases in most articles—for instance, in coal, copper, tin, and woollen and worsted tissues. In cotton piece goods the decrease, which I have explained in previous letters as being due to market conditions, is just half a million as compared with the corresponding period in 1911, although some of this may yet be recovered before the end of the present year. On the other hand, the increase in cotton yarns is, for reasons also explained in earlier letters, quite considerable, the totals for the seven months ended July, 1912, being £379,674, as compared with £240,246 and £233,027 during the corresponding periods in 1911 and 1910 respectively.

The total enumerated imports from Turkey into Great Britain during the seven months ended July, 1912, were £1,144,632, as compared with £775,007 in 1911 and £746,153 in 1910. The noticeable increases were in wheat and barley, the imports of the latter article amounting to £610,102 in 1912, as compared with £265,000 in 1911 and £125,140 in 1910. Mohair is also more than £100,000 in excess of the same period of 1911, but is £70,000 less than in 1910, the actual figures being £288,200 in 1912, £173,541 in 1911, and £355,035 in 1910. Wool also falls short of 1911 by £60,000.

In the total exchanges of enumerated articles between the two countries there is only a shortage of £129,097 to date, as compared with 1911, and we are £400,000 in advance of 1910, both of which were record years. This is certainly not a bad showing, considering the state of war.

The exports from Great Britain to Turkey of gold coin and bullion for the seven months ended July, 1912, were £1,003,250, as compared with £1,010,000 in 1911 and £200,000 in 1910.

Reverting once more to the exports from Great Britain to Turkey, during the half-year ended June 30, 1912, the totals of all merchandise (enumerated and unenumerated), the produce and manufacture of the United Kingdom, are given as £3,884,281, as against £4,685,972 in 1911 and £3,969,316 in 1910. The total imports during the half-year from Turkey into Great Britain of all merchandise are given as £2,374,813 in 1912, as compared with £1,904,471 in 1911 and £1,778,452 in 1910.

Anatolian Railway.

On March 12 the subscription closed for the issue of the Anatolian Railway Company's 4½ per cent. debentures (Series III.) for 60,000,000 frs. This capital was required for the construction of the Ada Bazar-Bolu extension, the laying of a double track on the suburban line, and the strengthening work to be carried out on the entire line, Haidar Pasha-Angora, and Haidar Pasha-Eski Chehir-Konia, in accordance with Art. 37 of the Concession for the Baghdad Railway, which stipulates that express trains shall be run right through to the Persian Gulf. In compensation for the cost of doubling the track to Pendik and the strengthening of the line, the Government undertook to pay an annuity of 350,000 frs. for thirty years from the date the work was undertaken, and a further annuity of 350,000 frs. when the main line reached Aleppo. Owing to the dissolution of Parliament in January, the first instalment was not voted, and in the meanwhile the second instalment has fallen due, and with the closing of the session again without the voting of these annuities, they are likely to take the form of a supplementary credit authorised by an Imperial decree.

Concessions for Electricity.

A local group have made an application to the Ministry of Public Works for the concession for the electric lighting and the installation of electric traction at Samsun.

A similar application has been made for the electric lighting of the Princes' Islands and an electric tramway service for Prinkipo, the most important of these islands.

TURKISH RAILWAYS.

A very good example of international financing occurs, says the *Financial Times*, in the case of the Turkish railways, for which capital has been found by all the leading commercial nations of Europe. A personality well known in the French railway world, M. Alexis Rey, who is charged with the management of the railways in Turkey financed by French capital, has just published a study upon the Ottoman railways, summarised in M. Alfred Neymarck's paper, *Le Rentier*. The following table, taken from this summary, shows the results obtained by each nationality of investors during 1910 :—

Nationality of Capital.	Companies.	Kilomes. worked.	Gross Receipts.
			Francs.
Turkish ..	Chemin de fer du Hedjaz	1,468	5,358,000
German ..	Chemin de fer de Bagdad	200	514,366
,,	Mersina Adana	67	1,240,300
,,	Haidar-Pacha Angora	—	7,652,215
,,	Eski Chéir-Konia	1,033	3,690,201
,,	Aritlé-Ada-Bazar	—	145,582
,,	Salonique-Monastir	219	3,565,084
British	Aidin-Railway	552	8,979,472
Austrian ..	Orientaux	955	16,904,059
French	Jonction Salonique-Constantinople	510	4,314,027
,,	Smyrne-Cassaba anc. réseau	518	4,665,005
,,	Smyrne-Cassaba nouv. réseau		1,489,556
,,	Damas-Hamah anc. réseau	581	4,578,056
,,	Damas-Hamah Raja Alep		2,635,237
	Jaffa-Jérusalem	87	1,368,433
Various....	Moudania-Brousse	41	—
	Totals	6,232	67,576,432 £2,703,050

In 1909 the receipts only amounted to 55,908,000 frs. (£2,236,320), so that there is an increase this year of 11,668,000 frs. (£466,730). The kilometric guarantees paid by Turkey for 1910 amounted to 14,309,000 frs. (£572,360). The receipts for 1910 thus average only £433 per kilometre per annum, or £8 6s. per kilometre per week. The British railway from Smyrna to Aidin earns something better than the average—namely, £650 per kilometre per annum. These Turkish railway companies have the ingrained habit of never publishing their working expenditure account. When they break through this prudential reticence the interest will commence in earnest.

TRAVELLERS' SAMPLES IN TURKEY.

The following information anent the forwarding of travellers' samples is translated from the *Feuille officielle suisse de Commerce*, viz. :—

In Turkey, as in the majority of countries, foreign travellers' trade samples are admitted free when they are re-exported within a definite period, and when the amount of the taxes thereon have been deposited. This facility afforded to trade, however, has only been recently applied to articles of gold and silver. Now, owing to an understanding with the Ottoman Government, samples of all articles liable to Customs dues, including watches and gold and silver jewellery imported from Switzerland into Turkey by commercial travellers, will henceforth be admitted duty free, provided that the following formalities are observed :—

(a) The traveller must present a duplicate declaration certified accordingly by the Customs of the exporting country and indicating the quantity and the nature of the imported samples.

With this declaration the formalities at the Import Customs House will only consist in declaring that the samples are duly indicated. If the traveller does not present such a document, he will have to draw up one in duplicate, at the Import Customs House, after verification and detailed estimate of the samples by competent officials of that Customs. The declaration thus made must be signed by the Director of Customs.

(b) If the samples bear marks, lead-stamps, or regulation seals of the Customs of the exporting country, the Customs of the importing country will no longer have to submit them to lead-marking or to any other such formality to assure identification.

(c) The samples indicated on the declaration and furnished with marks of identity will be admitted against the depositing of the amount of the dues or of an act of guarantee certified by a credit establishment well known to the Customs.

(d) One of the copies of the declaration mentioned under the aforestated letter "a" will be signed, with indication of the date, by authorised agents of the Import Customs House, who will mention thereon : (1) Whence the samples have been imported; (2) the amount of the dues to which they are liable; (3) if the deposit was made in cash or by guarantee. This copy will be handed to the traveller with the receipt for the deposit, and the other will be kept by the Import Customs officials.

(e) If the samples are re-forwarded, the whole or in part, either to the country whence they came, or to another country, within a period of six months from the date of their entry into Turkey, the Customs will return the total amount of money deposited, on condition that the traveller presents the receipt of which he is the bearer, as also the copy of the declaration mentioned under the letter "d" aforestated, and that the officials of the Customs state the conformity of the samples with the indications of the declaration.

(f) The Customs officials will require a receipt from the traveller for the amount of the dues refunded, and will retain the declaration as also the deposit receipt. The receipt and the declaration will be transmitted, with the account of expenses relative thereto, to the Direction Generale des Contributions Indirectes.

The copy of the declaration retained by the Import Customs will also be transmitted to the Direction Generale, where there will also be a copy of that received from the issuing office of the Customs.

(g) Examples of the lead-stamps and official marks placed on the samples by the Swiss Customs will be sent to the Ottoman Customs in order to facilitate the carrying out of the above-mentioned formalities.

TURKEY AND THE ARGENTINE.

H.M. Legation at Buenos Aires report the ratification in Berlin on April 11 last of a Consular Convention, signed on June 11, 1910, between the Argentine Republic and Turkey, by which these countries grant to one another the right to appoint Consular officers in all commercial ports and localities in their respective countries and dependencies in which similar officials of another State might be admitted. It is expressly agreed that the Argentine Consular officers shall in no case enjoy the exceptional jurisdiction which the Consular officers of some Powers still hold in Turkey by reason of conventions.

THE TRADE OF PERSIA.

Mr. W. J. Garnett, Second Secretary of the British Legation at Teheran, reports that during the year ending March 20, 1911, the trade of Persia with foreign countries amounted to £17,198,691, as compared with £16,279,094 in the preceding year. Imports amounted to £9,690,153 and exports to £7,508,538. In the preceding year imports amounted to £8,848,565 and the exports to £7,430,519. Russia heads the list, Persia importing Russian goods to the value of £4,391,184 and exporting to the same country £5,244,523. The British Empire stands second with a total of £4,541,560, compared with £3,697,978 in the previous year. Exports from Persia to the British Empire amount only to £748,257. Turkey stands third on the combined list, France and Colonies (excluding Indo-China) fourth, whilst fifth, sixth, and seventh places are held by Germany, Austria-Hungary, and Belgium. Woven cotton goods continue to head the list of imports. The present rebellion, which has Kermanshah as its centre point, may prove serious to the import of cotton goods to that province, as also to Hamadan and Ispahan, where, hitherto, Russian competition has been very slight. The anarchy in the Province of Fars cannot but have a bad effect on the import trade in cotton, as indeed in all other, goods.

During the last three months of the year 1911-12 there was a still further great decrease in imports through Kermanshah owing to the disturbed state of the country. In the first two months of this period the imports only totalled £48.045 and £48,393 respectively, or less than half the usual monthly average. In the last month they amounted only to £5,348, owing to the steps taken by the Persian Government to stop imports while the province was in the hands of rebels. Most of the goods were deposited at Khanikin and Kasr-i-Shirin. During the last month trade was practically at a standstill, half the town having been plundered and goods estimated to the value of £200,000 carried off; this was followed by the exaction of heavy sums from the inhabitants. Many merchants who have purchased goods from the importers are unable to pay, and it is expected that it will take two years for the trade of Kermanshah to recover. As four-fifths of the imports are British, and in Kermanshah there is no serious competition with British-made goods, the loss is chiefly British.

According to reports by agents of the stocks of Manchester goods in hand at Hamadan, that centre should not be short. The check to imports will probably reduce the competition of Belgian with Russian loaf sugar which was beginning in Hamadan and Burujird.

The unsafe condition of the roads prevented the transport of specie, and intense scarcity of coin was in consequence felt in almost every province. The approximate gross Customs receipts were:—In 1909-10, £723,733; in 1910-11, £763,271; and in 1911-12, £861,043.

C.O.D. GOODS FOR EGYPT.

The British Vice-Consul at Alexandria (Mr. A. B. Geary) has forwarded a copy of a communication from the Egyptian Postal Administration urging that the attention of British firms be drawn to the advantages of the cash on delivery system as applied to parcels sent by post from the United Kingdom to Egypt. This system has long been extensively used by Continental firms in their commercial relations with Egypt, and when the system was inaugurated between the United Kingdom and Egypt in 1908 it was hoped that the facilities which it affords would appeal to business firms in the United Kingdom. Many instances, however, have lately been brought to the notice of the Egyptian Postal Administration, which tend to show that the existence of this service is still comparatively unknown to the bulk of British firms, who on this account frequently refuse to execute orders sent to them from would-be customers in Egypt. Full particulars regarding the service will be found in the quarterly Post Office Guide, or may be obtained from any post office in the United Kingdom.

MUSKAT ARMS TRAFFIC.

The Board of Trade have received, through the Foreign Office, the translation of a Proclamation issued by the Sultan of Muskat on July 12, which establishes a special magazine for arms to be called the "Arms Warehouse." On the completion of this warehouse, on or about September 1, all arms already stocked in the Sultanate or thereafter imported will be required to be stored in the warehouse, under the control of a superintendent, and will only be delivered therefrom under special licences to approved individual purchasers (not traders).

The attention of shipowners and others engaged in the Persian Gulf trade is specially directed to the fact that the rules issued in connection with this Proclamation prescribe (*inter alia*) that all arms, ammunition, or parts thereof which may hereafter be imported into Muskat territory will be taken direct to the Arms Warehouse and there deposited. To enforce observance of this rule the masters of steamers importing arms and ammunition, or parts thereof, will be required to produce on arrival and furnish to the representative of the Warehouse Superintendent, who will attend on board, copy of a separate manifest (in a prescribed form) showing all arms and ammunition and parts thereof destined for importation into the Sultan's territories and carried on board their vessels. All arms, ammunition, or parts thereof, destined for import into Muskat, but not detailed, or incorrectly or insufficiently described, in the separate manifest, especially with regard to the marks on the packages or the name of the consignee, shall, as soon as such arms, ammunition, or parts thereof have left the ship's tackles, become liable to confiscation.

A complete translation of the Proclamation and of the Rules issued thereunder, together with specimens of the prescribed forms, may be seen at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

FOREIGN TRADE OF BULGARIA, 1912.

The French Consul at Sofia, writing under date July 26, says:—The *Neue Freie Presse* has just published the foreign trade statistics of Bulgaria during the first three months of 1912, although the Bulgarian Minister of Trade may not have published them yet. During this period the exports have increased to 63.3 million francs, against 33.5 million francs in the corresponding period of 1911. This considerable increase bears principally on the export of corn and maize to Belgium, England, and Germany. The imports have grown to 50¼ million francs, as compared with 38 million francs in 1911.

Although these figures only refer to the first three months of the present year, they confirm the increasing economic prosperity of Bulgaria.

Nearly all the great European States have participated almost equally in the considerable increase of importation, as the following figures will show:—

	Jan.-April, 1911.	Jan.-April, 1912.
	—In millions of francs—	
Austria-Hungary	8·8	10·3
Germany	8·4	9·4
England	6·9	9·6
France	4·3	5·3
Italy	1·9	3·5

In publishing these results the *Neue Freie Presse* concludes that Bulgaria is daily becoming a more important market, and hopes that the recent trade agreement between Austria-Hungary and Bulgaria will assure the commercial supremacy of Austria-Hungary in the Bulgarian market, where it is now actively contending with German competition.

The Buda-Pesth journal *Az-Est* announces that the society for the exploitation of the timber industry in Roumania, formed some time ago by Count Armin Mikes, as also the limited company "Tisita," of Bucharest, have become the property of the Rothschild group. The Oesterreichhische Credit Anstalt will advance funds for the carrying on of the business, and are importantly interested in the new arrangement.

NEWS FROM ALL SOURCES.

Telephonic communication has been established between Sollum and Benghazi, and the establishment of a wireless telegraphic station at the former place is being talked of.

A message to the *D.O.K.* states that the troubles in Persia are reflected in the fair this year at Nijni-Novgorod. The usual large number of Persian buyers is almost entirely lacking, and the volume of Persian merchandise is very slight in comparison with that of former years.

From January to June, 1912, the export of cattle from Servia to Austria-Hungary attained the value of fourteen million francs. Turkish exports were also very considerable.

The Municipal Council of Athens has decided that the names of four new streets in the city shall be Georges Clemenceau, Henri Houssaye, Denis Cochin, and Charles Dilke.

The Hague Arbitration Courts to deal with the cases arising out of the seizure of the French steamers *Carthage* and *Manouba* by the Italians and the Russo-Turkish dispute regarding the interest on the 1878 war indemnity will meet in October.

The Egyptian Ports and Lighthouses Administration gives notice that on Wednesday, September 18 next, at 10 a.m., the Administration will sell, by public auction, at the Central Stores, Arsenal, Alexandria, old materials such as wood, uniforms, zinc, iron pontoons, etc., which can be examined with the conditions of sale during any forenoon, holidays excepted, at the Stores Department, Alexandria.

Between January 7 and August 1 709,093 tons of coal were imported to Alexandria, of which 310,580 tons were Welsh, 107,887 tons Newcastle, 51,029 tons Scotch, 85,921 tons Yorkshire, and 152,776 tons other qualities. During the corresponding period of last year the imports amounted to 778,390 tons.

Cholera has broken out amongst the Indian and Javanese pilgrims at Camaran, Red Sea.

Messrs. S. S. Capato and Co., of Khartum, have taken Mr. John Dionisiou into partnership. The business will be continued under the same style.

On Saturday last Messrs. Lobnitz and Co., Ltd., Renfrew, launched the direct geared bucket dredger, "Drague No. 4," the second of two similar dredgers built by them for the Suez Canal Co.

U.S. Consul Walter H. Schulz reports that the freight rate on ivory from Aden to London via the British India Steam Navigation Company has been reduced from five-eighths of 1 per cent. to one-half of 1 per cent. of the value of the ivory shipped. The rate between Aden and the United States, however, remains at 1 per cent.

The *Manchester Guardian* of Monday's date says:—Heavy-sized drills are in somewhat more request, the Levant houses who are usually the principal buyers of these goods being now in the market for their spring trade. Stocks of all classes of drills are low in Constantinople and Smyrna, and remittances from the Levant ports are now more satisfactory.

DELICIOUS COFFEE.

Engineering Notes.

New Engineering Association.

A British engineering association has recently been formed for the promotion on the broadest lines of the overseas interests of the British engineering industry. Its intention is to employ the great collective influence vested in the engineering industry to encourage the British Government, financial organisations, shipping companies, merchants and others to further the interests of British engineering throughout the world in the same manner as the interests of our foreign competitors are furthered by their Governments and other bodies. By a similar association some twenty years ago German firms succeeded in securing the markets of the Near East, and even now representatives and depôts of that association are in Alexandria, Athens, Constantinople, Smyrna, etc. We hope that this new British association will not neglect the Near East, especially now that British influence is evident in all directions.

Baghdad Railway.

The British Consul at Alexandretta, reporting on the trade of the Aleppo vilayet—chief province of Syria—for the year 1911, states that work on the Baghdad Railway in the Aleppo district was begun at Aleppo in April, 1911. No rails were laid down during the year, but from Aleppo eastwards, through Muslemieh, 24 miles of embankment, and from Muslemieh westwards, 6¼ miles of embankment, were constructed by the end of December. The plans for the construction of a port at Alexandretta and those of the railway line destined to connect that port with the main Baghdad line, have been approved by the Ministry of Public Works, and it was expected that the work would begin this summer. It is thought that the port may be practically finished by the end of 1914, by which time the Bagtché tunnel, which will open up the branch line to Alexandretta, should also be completed. The work of draining the Alexandretta marshes, suspended for nearly two years by order of the Ministry of Public Works, has not been resumed. It seems probable that the Government may grant a concession for this work to some private company.

Motor Boats for Smyrna.

There are only about a dozen motor-boats in Smyrna, although the large and beautiful harbour is almost always quiet and safe in summer, and affords a pleasant refuge from the heat. Excursions to several shore and island resorts near the town are also very popular. A small English motor-boat has made the round trip to Mitylene, which is eight hours from Smyrna by steamer, and others are now following its example. Steel boats are not suitable for Smyrna's harbour, the dory whaleboat being the style which should be used. Such boats should be at least 23 ft. long. Some frail lake boats have been sent to Smyrna, only to lie around useless.

Textile Machinery for Russia.

Most of the machinery for the Russian flax industry is still imported. England is by far the chief market for spinning machines, but in looms and, above all, in bleaching, dyeing, and finishing machines the German, and especially the Saxon, trade has made vast progress on the Moscow market during the last five years, although a considerable portion of the looms come from England. The development of the flax trade, and with it the demand for machinery, will presumably continue to increase, as hitherto, within the next few years.

Threshing Machines for Angora and Konia.

In the Angora and Konia districts there are a great number of small holders, and threshing is done on their farms by hand, or by bullocks treading out the grain, and the winnowing is done by hand. Both processes are slow and wasteful. Threshing and winnowing machines adapted for that country, capable of being moved from place to place—as farms are small—would prove very successful; but very seldom, if ever, does a traveller of a British engineering firm visit these important agricultural districts. American manufacturers have recently sent experts there to study the situation, and several orders for small sets, it is reported, are already booked by them. If economy in harvesting were introduced, much larger crops could be raised and saved.

Irrigation and Milling.

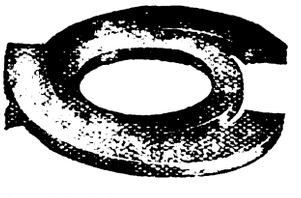
There is no doubt that American manufacturers are doing their best, working smartly and surely, to secure the markets of Asia Minor. American reapers have passed the experimental stage, and American petroleum engines for pumping and irrigation purposes and grist mills are so well known to the natives that with difficulty can they be persuaded to adopt other machines which they have never seen. In the Hauran Mountains (Jebel, Druze), south-east of Damascus, more than ten American oil-motor grist mills are now working, and they are a perfect blessing to that region, owing to the scarcity of water power.

New Vehicle for the Desert.

The *Times* states that the recent successful application of a propeller working in the air as a means of propulsion both for a road vehicle and for a canal barge has been followed by some interesting experiments by French officers in Algiers with a kind of sledge mounted on six wheels, driven by a 50-h.p. motor and similarly equipped with a propeller. This vehicle, which carries three persons, travels easily over the rolling sand at a speed of from 12 to 18 miles an hour, and is said to be able to climb gradients of one in five. It is believed that this new means of transport will solve many of the difficulties of communication in the Sahara, and it is hoped by fitting it with wings, not only to facilitate its progress, but to enable it on occasion to leap over obstacles in its path. Such a vehicle, if perfected, would no doubt prove of considerable value in certain parts of Turkey-in-Asia and Persia, as well as in North Africa.

Sun Power Engine.

An interesting report concerning irrigation by sun power is made by the British Consul at Alexandria, who comments on the arrival from Philadelphia of the Shuman sun-heat absorber, which, he says, was tested and found to be satisfactory. The plant is being erected at Meadi, near Cairo, and will be used to pump water from the Nile to irrigate the surrounding land. Several improvements have been added to reduce the cost of working. In Egypt both coal and other kinds of fuel are expensive, says the Consul, but plenty of sunshine can be relied upon at all times of the year, so that the experiments with this practical sun-power plant will be of much interest to agricultural enterprise.



Oil Fuel and Engines.

Some remarks upon the increasing use of oil fuel made by the British Consul-General for the Düsseldorf district in his recently issued annual report will be of interest in many parts of the Near East, notably in Egypt, where fuel is such an expensive item. The Consul-General (Mr. F. P. Koenig) writes:—"In many industrial works requiring a large amount of coal, steam engines have of late years been partly replaced by engines worked with benzol and oils of various kinds. As coals become more expensive, technical improvements in oil engines are being made, which will in time cause the use of coal to decrease. Oils of all kinds, particularly petroleum, suggest themselves as substitutes for coal. Doubtless important developments have taken place, particularly in the use of coal-tar oils as fuel. Where petroleum is produced in large quantities and is cheap enough, it would naturally be used on a large scale. Of late the Diesel engine has attracted a great amount of attention, and in connection therewith the improvements in the process of obtaining oils from coal. It is only quite recently that the difficulties experienced with these oils have been overcome. They consisted chiefly of muddy deposits of solid hydrocarbons, which made the working of the fuel pumps difficult. Furthermore, the composition and quality of the unclean tar oils made their use difficult. Chemical industries, however, have improved methods of refining and selecting material, and can now supply coal-tar oils of excellent quality. It is stated that there will be a revolution in the present system of generating power through the development of oil fuel. Engines built on the Diesel principle effect great economies in cost and require less room for plant and storage of fuel. The day is not far ahead when there will be a great saving of coal and a larger use of oil. The oil may be solidified, pure, or in combination with coal dust. Oil may be used in a liquid state under a boiler to produce steam. It can also be used, as in the case of the Diesel engines, where it is ignited under pressure and by exploding produces power. When burnt in a liquid state under a boiler the oil is sprayed through a burner beneath the boiler, with or without red-hot coals to assist combustion. This method is applied to furnaces and boilers, as well as to locomotives. Since the last coal strike many firms have turned to oil, in order to lessen the danger of running short of coal. Many firms have made slight alterations in portions of their furnaces, in order to be able to burn the oil fuel in case they run short of coal. Coal-tar oil promises to have a great future as a general fuel."

Oil Topics.

Baku Russian Petroleum.

The Baku Russian Petroleum are promised that a meeting shall be called early in October in order that they may receive the report of Mr. Adiassewich. It will be remembered that this gentleman was sent out last March in order to find out why the company had not got the production that had been promised, and he was also asked to report on the lands at Bina. He has now returned to England, after having been four months on the field, and the preliminary report that he has made to the directors states that the properties at present being worked are capable of producing for many years to come. The really important question of the freehold areas round Baku is also carefully gone into, and we are now told that they are of a highly petroliferous nature. There is no doubt that there is oil in the land all round Baku. But whether it pays to bale or not is another matter. Nobel and various other firms have been working round Baku for many years, but we are not aware that they have ever obtained any important production. However, if the Baku Russian can find the money to prospect their lands they may possibly be more lucky than the other firms. But it takes a long time to sink an oil well in these outside territories, and the boring is not cheap. Therefore, we do not attach much importance to the properties. It is much better news to hear that nearly all the old liabilities of the Baku Russian have now been discharged. The debtors have taken debentures. The output of the Baku Russian is gradually being increased, and as oil is 37½ kopecks a pood the recent circular promises a substantial margin of profit.

Premier Oil and Pipeline.

Mr. Boxall, the chairman of the Premier Oil and Pipeline, is now returning from Galicia, where he has been presumably arranging the details of the big amalgamation. The company's output is now about 25,000 tons a month, but there is a war on between the Hungarian and the Austrian refineries. The Cartel was dissolved some months ago, and the two countries have been cutting prices. This seems a great pity, considering the immense demand there is for oil at the present moment. It will be remembered that the Premier Oil and Pipeline stated in their circular that they did not intend to continue in the combine, as they believed that they could make more money by selling outside. But if the price is to be cut, it is very doubtful whether their profits will be increased.

Roumanian Consolidated.

The Roumanian Consolidated appears to be in luck. It has several wells capped at Moreni, which will be opened as soon as the arrangements are completed for handling 10,000 tons a week. The first well down on the Campina field is in oil, and the Chicuira wells expect to strike oil every day. Some of the newspapers have been asking why the Moreni Pipeline was not included in the combine. We understand that it was impossible to put it in because all the profits of this company that were available for distribution go to the holders of the deferred ordinary shares until they have received 24s. a share. Thereafter, all the shares rank equally, both for dividend and distribution of assets. It was, therefore, impossible to arrive on a fair valuation of the property without a year's working to guide, and it was also thought that a transport company which was ready to carry oil for other producers ought to possess an independent status. These arguments seem quite sound.

Coming Taman Boom.

Taman, as we have mentioned before, is going to have an oil boom in the autumn, and all promoters are getting their prospectuses ready. The Krukoff Taman Oilfields, of which Messrs. Boustead Bros. are the secretaries, will soon make its appearance, with a capital of £300,000, of which £50,000 has been set aside for working capital. The company will acquire ten claims on the peninsula of Taman, or in all, about 80 acres, and out of this they will be allowed to select 26 acres in which to sink wells. The grant has been reported upon by Dr. W. B. Newton. The land is within a few miles of the Black Sea, and 2½ miles from the Kuban River. Mr. Krukoff has been in the oil trade all his life, and his father, General Krukoff, built the first refinery. Taman oil is supposed to be the richest in benzine of all the Russian oils, and it should fetch a very high price. The company proposes to sink thirty wells, and the prospectus estimates that it could get 15 tons a day from each well, or 135,000 tons a year, which should give a net income of £235,406, or enough to pay 75 per cent. on the nominal capital of the company. There are many other Taman properties now being offered.

Maikop Oil Outputs.

The Maikop oil outputs are now announced. British Maikop, which last week produced 613 tons, has jumped to 748 tons. This is very good, and shows a steady improvement, for the best week in July was only 492 tons, and the first week in August was only 427. So that the two wells are now baling nearly double as much as the single well baled, which is somewhat unusual on an oilfield.

Maikop Victory, which last week produced 612 tons, is slightly better at 643, and a good deal better than August 3, when only 598 tons were baled, but nothing like so good as the earlier production, for in July 6, 794 tons were produced. Maikop New Producers returned 226 tons, and it is reported that well No. 2 is still giving trouble through the flood. The Maikop Premier has sunk 33 ft. during the week, and its well No. 2 has gone down another 23 ft., and shows gas. Maikop Spies production for the week was 260 tons. This shows a considerable increase over recent weeks, and is due to the fact that in well No. 3 on plot 448, oil was struck, and in eleven hours the well gave 2,850 poods. The Anglo-Maikop Corporation are at work on the same plot, and have only about 100 ft. to sink before striking the same oil level. It will be interesting to watch whether the Anglo-Maikop decrease the Maikop Spies production, or whether Maikop Spies is able to continue pumping in spite of the fact that two other wells are baling on the same plot. It must be remembered that these oil sands are not inexhaustible, and the more wells go down, the smaller the production from each well. The Black Sea production for the week was 1,087 tons, which is a shade better than the last two weeks, but not as good as it was a couple of months ago. On the whole, the production from Maikop shows very little signs of improvement, and really the only company that is increasing is British Maikop, which should now be making a very fair profit.

North Caucasian's New Well.

We are promised a new well on the North Caucasian property within the next few weeks. At the present time, this company is turning out under 600 tons a week. The production has improved slightly, but it will require to jump up very considerably if Mr. McGervy's prophecy of a three million pood production for the year is to be fulfilled. There is a fairly good market in the shares of the North Caucasian, and it is said that they are now being bought for the Continent. We are promised a higher quotation, but we are not likely to get it unless some new wells come into production very quickly.

New Roumanian Company.

The Eastern Oil Wells and Minerals, Limited, of Copthall House, has secured some oil properties in Roumania, and some of these properties will shortly be offered to the public. It is stated that they are producing, and have made definite profits. Early in September an issue is to be made simultaneously in London and Paris. There is no doubt that a company that can show a definite profit from a Roumanian property will be greedily applied for by the British public, for Roumania as an oilfield is very popular. The Eastern Oil Wells and Minerals, Limited, claim that Roumania has not been duly appreciated, and they point out that its position is unique, London being a little more than forty-eight hours from the centre of the fields. Roumanian oil can be baled at a profit of about 25s. a ton, and, of course, there is a good local demand for the oil. The increase in the production of Roumania is considerable, and as soon as the pipeline is finished, or the railway can give facilities, sanguine people consider production of Roumania might easily be doubled.

The Moreni Oilfield.

Some time ago Mr. Stefanescu sent us a very interesting monograph on the Roumanian Oilfields, and as Moreni is now prominent we may mention that Mr. Stefanescu writes us that this field came into prominence in 1906, when the "Regatul Romana struck oil in its No. 1 well. This created great excitement, for the well was exceptionally rich, and at the end of 1911 the company had sixty-nine wells producing and forty-two drilling. No. 1 well has given 120,000 tons of oil; No. 14 well, in the same company, has given 80,000 tons; No. 25, 80,000 tons; No. 26, 80,000 tons all these being the property of the Regatul. No. 2 Astra Romana well has given 80,000 tons, and No. 6 of the Romana Americana 80,000 tons. The Concordia, a well-known Roumanian company, in the Drader well, made a record by actually catching 6,000 tons of oil in twenty-four hours, and enormous quantities were lost through lack of reservoirs. This well provided its lucky owners with 30,000 tons of oil in a week, and its proprietor, Mr. Drader, sold it to the Concordia for 1,500,000 frs. and a royalty of 10 per cent. on its future production. The Moreni oilfield is to-day the most important oilfield in Roumania, with a monthly production of 60,000 tons." Another field that is likely to be of great importance in the near future is Filipesti. "Filipesti lies between Moreni to the south-west and Baicoi to the north-east. It was only last year that Filipesti came into prominence through the brilliant success obtained at the No. 4 well of the Astra Romana, which from a depth of about 1,060 metres produced from 4,500 to 6,000 tons of oil a day. This well created the greatest excitement. But the Astra Romana has not proceeded actively with the development of its Filipesti land, and does not intend to do so until the Roumanian Government has built the necessary pipe-lines to Constantza. As far as is known at present there are three horizons in Filipesti, the first one containing gas and a heavy oil, which has been struck at as shallow a depth as 495 metres; the second one struck at 1,020 metres; and the third, and apparently most prolific, struck at a depth of 1,060 metres. The Astra well spouted for four months without stopping. At the present time there are only four wells of this company at Filipesti, two of which have reached the first horizon, whilst No. 3, owing to an accident, has only gone down 320 metres. Moreni (Roumania) Oilfields is drilling its No. 1 well on the very apex of the anticline, where the prolific oil source is expected to be met with at a depth of 900 metres. This well has been drilled during the past two months to a depth of 375 metres, and is still making rapid progress. Good judges consider that Filipesti is going to become a great oil-producing centre. Fortunately there is no water trouble here, and a boring society that was working for the Steaua Romana sank over 1,000 metres in less than seven months, or 5 metres a day. In other parts of Roumania the average rate of boring in twenty-four hours is hardly better than 1.5 metres."

Roumanian Production.

According to the *Moniteur du Petrole Roumain*, nine of the smaller oil-producing companies experienced a decrease in the output in the first half of the present year, whereas seventeen companies raised a larger tonnage. The final result of all the oil undertakings is an increase from 637,096 tons in the first six months of 1911 to 810,358 tons in the corresponding period this year. The figures show a gain of 173,262 tons, of which the Romana-Americana and the Concordia Company alone were responsible for approximately 90,000 tons, the Astra Romana for 30,000 tons, and the Steaua Romana for nearly 29,000 tons.

Near East Markets.

SPECIAL REPORTS.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

Larnaca. Aug. 9.

Locust Beans.—The market is dull, as exporters are not disposed to effect further sales before the months of September and October. It is hoped by them that after the beans for forward sales have been shipped local prices will be easier. The price at present is about 17s. per cantar, ex store. The date fixed for the gathering of the beans is the 21st inst. It is estimated that this year's crop will be from 60,000-65,000 tons—that is, if the weather conditions continue favourable.

Cereals.—It is probable that the greater portion of Cyprus barley will be sold to Egypt this year, unless, of course, England makes exceptionally good offers. Most of the wheat will be for local consumption.

Smyrna. Aug. 14.

Opium.—In accordance with our estimates, the crop will amount to about 6,500 couffes. Holders of stocks are exacting; a further rise is expected.

Olive Oil.—Prices are well maintained; the demand is very active, and the price, P.ct. 10¼ to P.ct. 10½ per oke, shows a strong tendency to rise. In view of the drought, the approaching crop seems to be about 60 per cent. below normal. Sellers are making good profits.

Wool.—No business.

Cotton.—Prices very firm. P.ch. 440/445 per quintal for extra strong—that is, second quality. Small sales have taken place. The new crop is estimated at 40 per cent. below the last one.

Barley.—Good qualities fetch high prices, even 22½ piastres per kg. of 17 okes, against 21 piastres last year. For inferior qualities dealings are relatively small. The greater part of the crop is of good quality.

Beans.—This week has shown slackness. Buyers have cornered large quantities at high prices, and there is scarcely anything on the market.

Figs.—The crop is estimated at 350,000 quintals—5 per cent. to 10 per cent. in excess of last year—and, consequent on favourable temperature, the arrivals will commence towards the 18th inst.—that is, about ten days earlier than usual.

In general, local produce finds an easy market at good prices.

Beyrout. Aug. 12.

Market.—At the commencement of the week the market for English manufactures showed a certain degree of animation, which, however, slackened later. The produce market was heavy.

Imports and Exports.—Arrivals of English manufactures have been very satisfactory this week. On the other hand, exports have been limited. About 400 bales of spun silk and 300 bales of dry Syrian cocoons are awaiting the end of the French strike for export to Lyons.

Cereals.—No change.

Produce.—Sugar and coffee have suffered a slight fall.

Salonika. Aug. 17.

The position is unchanged and still difficult. The stocks of Manchester imports have diminished somewhat, and new imports are necessary.

News concerning new crops commences to be a little unsatisfactory on account of the prolonged drought.

Mitylene. Aug. 10.

Exports.—In consequence of the high prices asked by local dealers export is somewhat limited. 507 barrels of oil have been dispatched to Salonika and Constantinople, value about £3,600; and 500 sacks of soap, value about £1,000.

Imports.—About £600 worth of coffee and some small lots of Trieste sugar.

CONSULAR AND OTHER REPORTS.

Smyrna Sultanas.

H.M. Consul-General at Smyrna (Mr. H. D. Barnham, C.M.G.) reports, under date July 29, that there is some uncertainty about the extent of the growing crops of sultanas. The weather still continues dry and warm, but latterly no loss of fruit is mentioned, and the damage done by locusts is insignificant. Estimates of the yield vary between 30,000 and 37,000 tons. The grapes are in an advanced state of maturity, and the crop will probably be gathered ten days earlier than in last season. There are no stocks remaining in the country.

Flour for Egypt.

The Monthly Journal of the British Chamber of Commerce of Egypt states that there is very little to report about the flour market during July. The amount of new business done was only small owing to the fact that buyers were drawing on stocks in town. Stocks in bond are becoming somewhat low, and, consequently, buyers will be compelled to come into the market very soon. Even when this movement does take place it is to be feared that merchants will restrict their purchases at first as much as possible, as they anticipate a fall in prices later on.

The principal French qualities sold during July ran from 21 frs. to 29 frs. the 100 kilos f.o.b. Marseilles, whilst the English varieties were done from 22s. 6d. to 27s. 6d. per 280 lbs. c.i.f. Alexandria.

The up-country demand was not very good, owing to the competition of the local wheat.

From January 1 to June 30, 1912, the arrivals of flour amounted to 67 million kilos, valued at L.E. 705,000. France was credited with 30½ millions, England 6 millions, Russia 3¾ millions, U.S.A. 2¼ millions, and Italy 1 million. For the corresponding half-year of 1911 the figures were as follows:—France, 32½ millions, England 8 millions, Russia 6 millions, U.S.A. 3¼ millions, and Italy 10¾ millions.

MALTA'S POTATO GROWING.

The U.S. Consul at Malta (Mr. J. O. Laing) states that the island raises an excellent quality of potatoes. The seed potatoes are imported usually from the north of Ireland, and two crops are raised annually. Seed potatoes are imported in sacks, while the crop is exported in casks that contain a little more than 300 pounds each. Orders are usually given for 65 casks. The market price fluctuates, but is usually between $5.34 and $5.83 per 100 kilos (220 pounds). The custom of the trade is to quote prices for the Continent by telegram subject to reply in 24 hours, but more time is allowed countries more distant.

The principal exports of potatoes during the fiscal year 1910-11 were valued as follows: To Austria-Hungary, $192,796; Belgium, $5,139; France, $3,742; Germany, $20,965; Netherlands, $74,257; Italy, $10,969; Tunis, $5,158; Turkey, $14,475. The total exports to all countries were valued at $329,131.

FRENCH ENTERPRISE IN BULGARIA.

With a view to developing the commercial relations between France and Bulgaria, the proprietors of the French College at Philippopolis have commenced the installation of a commercial museum, which will be open to all visitors, and will at the same time serve for the professional instruction of the pupils of the High School of Commerce attached to that college.

The proprietors of the French College offer to French houses the permanent exhibition of samples of their products, catalogues, price-lists, posters, etc., French reviews, and trade journals. They will also put the French houses in touch with buyers, consumers, or agents; their services are also at the disposal of merchants for translations, Customs work, forwarding, and for the instruction of travellers or agents.

PRODUCE REPORT.

London, August 22.

The markets have been fairly active this past week, but prices were, in some instances, irregular, with a tendency in favour of buyers.

Sugar.

The unseasonable weather, not only here but on the Continent, is creating a little feeling of uneasiness as to the effect on the growing crop, and should it continue, it goes without saying a considerable upward movement is possible. Current prices for the new crop are very low and below the cost of production. The present moment, therefore, should be favourable for purchases. Beet is quoted 11s. 6d. to 11s. 4¾d.; October-December, 9s. 10¾d.; Tate's No. 1 cubes, 21s. 9d. to 22s.; No. 2 cubes, 21s. 3d. to 21s. 6d.; Lyle's granulated, 18s. 3d.; German cubes, f.o.b., November-December, 14s. 3¾d.; Dutch, August, 17s. 9d., f.o.b., Amsterdam; French, 18s. 9d. f.o.b. Paris.

Coffee.

Speculative markets have been perturbed, and close at about 2s. decline. Values have moved sharply up and down, opinions changing rapidly in conjunction with an undefined future; but this refers solely to the term or speculative markets. Santos, September, 60s. 3d., firm; December, 60s. 3d.; March, 58s. 7½d.; East India, 76s. to 110s.; Mocha, fair to finest, 82s. to 120s.

Currants.

New fruit for early shipment is quoted about 6d. cheaper on the week. In spite of this, only a small business has been done, as the hope is entertained generally that there will be lower prices yet. Sales of fruit on the spot have been very encouraging, and the selection remaining now is extremely restricted.

Sultanas.

No further developments have occurred during the past week concerning new crop fruit. As regards values, there is no doubt but that spot goods are very tempting when compared with offers to arrive. Persian is quoted 45s., and in 1½ cwt. bags, 42s; bold Smyrna, 55s.

Linseed.

Calcutta, per 410 lbs., August-September, 61s.

Linseed Oil.

Pipes, per cwt., 53s. 6d.; barrels (landed), 34s.

Wheat.

Russian, 40s. 6d., upwards, firm; Indian, 39s. 3d.

Seeds.

There is little change to note in the market for seeds, but quotations remain firm. Turkish canary seed, per quarter, 61s. to 62s.; Spanish, 85s. to 92s.; haricot beans, per 504 lbs., Danubian, 65s. to 68s.; Italian, small 67s. to 70s.; split lentils, per 100 lbs., 11s. to 13s.

Gum.

Animi, Zanzibar, washed, £12 3s. to £14 6s.; Arabic, £1 15s. to £2 5s.; Gamboge, £1 12s., upwards; Kowrie, common, 50s. to 75s.; Olibanum, drop, 35s. to 50s.

Oil Cake.

Linseed, London made, £9 5s. to £9 10s. per ton; Russian, £8 15s. 6d. to £9; cotton, London made, £5 17s. 6d. to £6 10s.; Soya, London made, £6 17s. 6d. to £7 5s.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending August 9:—We have to report a rather active week in opium, the sales amounting to ninety-eight cases, twenty-eight of which are for account of interior and local speculators and the balance bought by the regular buyers for the consuming markets. The last prices paid are as follows:—For Yerli selected old or new, 20s. 3d. per lb. c.i.f.; Carahissar extra 1910-1911 crop, 19s. 3d. per lb. c.i.f.; Carahissar, this season's yield, 18s. 9d. per lb. c.i.f.; mixed common grades, 15s. 6d. to 17s. per lb. c.i.f. Our market, however, closes firm at above quotations, with buyers, but very few willing sellers. The arrivals amount to 798 cases, against 383 at same date last year.

Cotton and Cotton Goods.

EGYPTIAN COTTON MARKET.

(From Our Own Correspondent.)

Alexandria, August 16.

Prices have receded, in view of the brilliant prospects of the crop. The first picking will take place this year a fortnight earlier than usual, and in Lower Egypt the bolls have already commenced to open. In Upper Egypt pickings have begun in some places. Here speculation is bearish and commercial interests are seeking to maintain prices. Demand from abroad is still brisk.

Cotton seed is down in price, but the whole supply will probably meet with easy sale this year, judging by orders already received.

Manchester Report.

Messrs. Reynolds and Gibson, Manchester, telegraph that the production has by no means been disposed of, but the under-current is good, and it is very evident that the check is only temporary. Cloth.—There is a smaller market in the Near East. Traders, while watching every move in prices, do not buy in any weight. Yarn.—Egyptian counts are quiet, but prices show no signs of giving way, Egyptian spot being of a disappointing nature. During the past week there has been a fair inquiry, resulting in small business. Quotations of brown cotton are reduced ¼ and Upper 5-16. Estimated sales, 13,000 bales.

Crop's Favourable Prospects.

The Central News Alexandria correspondent telegraphs that the latest reports, both private and official, regarding cotton crop prospects are of the most favourable nature, and it is generally anticipated that a record will be established. It is probable that the crop will reach eight million cantars, worth £E35,000,000. The attacks of the August worm have been slight, though the danger from this source is not yet past, the satisfactory position having been attained largely through Viscount Kitchener's energetic campaign against the pest.

Lancashire's Needs.

A consular report issued last week says Mr. J. A. Todd, who has been inquiring into the conditions affecting the cotton industry in Lancashire on behalf of the Khedivial Agricultural Society, concludes "that the Egyptian low-grade cottons are now little better than the American Upland, and are, practically speaking, not worth growing in Egypt," and "that the inflated prices of the last few years have given the Egyptian grower altogether mistaken notions of the value of his crop. What Lancashire wants from Egypt, above all things, is a good new medium cotton, at a reasonable price, to take the place of the deteriorated Afifi." Mr. J. L. Craig has worked out the correlation between the average prices of Egyptian and American cotton for the last twenty years, and finds that the price of Egyptian is ruled almost entirely by that of American. The cultivators' apathy is being met by severe penalties against the fellaheen who fail to pick the cotton worm, which last year did considerable damage to the crops in some parts of the country.

New Egyptian Markets.

New cotton markets are to be created at Tantah, Kafr-el-Zayat, Mehalla-el-Kobra, Dessouk, Fonah, Cherbin, Belcas, Nebrouh, Kafr-el-Sheikh, Zifta, Santa, and Bassioud, and will commence working on September 1. The Ministry of Finance has decided to devote a sum of £1,400 to the purchase of weighing machines necessary for these markets.

Cotton in Cyprus.

Cotton culture in Cyprus is receiving increasing attention. This year about 5,000 bales of 200 kgs. have been exported as against a previous average of 2,000 bales. The destination of this export is Marseilles, Trieste, and Piræus, to which places the freights are respectively 25 frs., 30 frs., and 20 frs. per ton. The freights to England being between 40s. and 42s., an almost prohibitive rate, there is no export to this country.

EGYPTIAN COTTON FIGURES.

For 50th week, ending August 16.

Supplied by Reynolds and Gibson.

COTTON GOODS AND RED SEA PORTS.

Since the commencement of the Turko-Italian War (says a writer in *Suffern's Quarterly and Foreign Trade Journal*) a state of stagnation has prevailed in the cotton markets of the Red Sea. At Jeddah no business to speak of has been done in cotton goods for the past six or seven months, and the native merchants are in a difficult position to pay for goods which are lying piled up in their warehouses, and which they cannot sell. At Port Sudan and Suakin all the available stores are crammed full of goods, principally for the Sudan markets, as well as for transhipment to other Red Sea Ports. Hodeida is in a state of blockade.

At Massowah only has there been a little demand lately for bleached tanjibs and coloured scarves, but nothing like the usual business done at this time of the year. Aden, the principal centre for the Jibuti and Abyssinia markets, shows a very depressed state of affairs. Little or no business is possible, and on account of the prevalent unrest everywhere in the Red Sea district, merchants have not the confidence to buy in any considerable quantities.

This state of affairs will naturally lead to large business for cloth when the present political difficulties have been adjusted, and it is possible that there will be a fair demand for cotton goods in October or November this year.

BULGARIAN CROPS FOR 1912.

According to the French Consul at Bourgas, the harvesting of crops was almost complete at the end of July in the four provinces of Bourgas, Stara-Zagora, Philippopolis, and Sofia. Although threshing had hardly commenced (this work in many cases being prolonged till the end of the year), it can hardly be said that the crops for 1912, especially as regards corn, may be classed as a very good average.

The sowings of hard grain have given excellent yields both from the point of view of quantity and quality. The corn has ripened and been gathered in under the best conditions of weather, and neither disease nor parasite appears to have damped the ears at the time of formation and maturity. The best produce is to be found in the neighbourhood of Stara-Zagora.

In respect to soft corn, the news which comes from the interior is a little less optimistic; the results, although satisfactory in general, are very variable. In many districts the exceptional cold which prevailed in April and May interfered with, if it did not arrest, the normal growth of the newly-opened corn. The quality of the product has certainly suffered by this state of things, and the wheat will undoubtedly not have the good appearance nor the weight of that of the preceding harvest.

Rye, representing about 25 per cent. of the sown area, and which is principally cultivated in the Maritza Valley and in the department of Bourgas, is in general of excellent quality, but the result is somewhat inferior to that of last year in consequence of unfavourable atmospheric conditions.

The barley crop, like that of the rye, has been affected by the same cause. If the products are excellent from the point of view of quantity, they leave much to be desired so far as quality is concerned—i.e., when compared with 1911.

The maize crop has suffered owing to the drought, but it is not yet possible to give a definite opinion. If the weather and temperature this month (August), however, remain normal an average crop may be expected.

Finally, crops south of the Balkans are, in general, of a good average. The yield of hard corn will be almost identical with that of 1911, which was excellent. Soft corn will have a deficit of 15 per cent. or 20 per cent. compared with the preceding crop, and its quality will also be a little inferior. The quality of the rye will be good, but the produce will not equal that of last year; barley will be as abundant as the 1911 crop, but its quality will leave a little to be desired.

Corn merchants on the spot, not yet having in hand definite samples of the new crops, are continuing to do business with the 1911 crops, the stocks of which are becoming depleted; about 1.600 tons at Bourgas and 30,000 tons in the interior.

Prices are all fairly low. The present quotations at Bourgas are.—Hard corn, 20 frs. 40 per 100 kilog., f.o.b.; soft corn, 19 frs. 10 per 100 kilog., f.o.b.; rye, 14 frs. per 100 kilog., f.o.b.; barley, 16 frs. per 100 kilog., f.o.b.

The limited shipments which are now taking place are composed of small lots which are going forward to Greece.

FOREST FIRES IN GREECE.

Under date of August 15, the Athens correspondent of the *Times* writes:—There have recently been numerous devastating forest fires in Greece. A few days ago a fine pine forest was destroyed by fire in the Island of Eubœa, and to-day the burning of a forest near Marathon is announced. This fire is unfortunately extending in the direction of the Royal Demesne at Tatoï. It is lamentable that no effective measures have yet been devised to cope with this scourge, which is devastating the plantations in the vicinity of Athens.

A high Russian official recently returned from a journey of investigation in Russian Central Asia reports that those provinces should without difficulty be able to grow all the cotton necessary for Russian consumption. Not only this, but there should be a considerable quantity available for export to foreign countries. An obstacle seems for the present to lie in lack of labour. Nothing is said regarding the quality of cotton produced, and this is an all-important factor.

Openings for Business.

AUTOMOBILES IN THE NEAR EAST.

H.B.M.'s. Consul at Alexandretta reports that the Société Française de l'Enterprise des Routes et Chaussées dans l'Empire Ottoman repaired, during 1911, 27½ miles of the Aleppo-Alexandretta road, starting from Aleppo. It was hoped that the whole of this high-road, which is 94 miles in length, together with the Aleppo-Antioch road, would be repaired or reconstructed by the end of 1911, but it now seems improbable that the work will be terminated by the end of 1912, as the part of the road already repaired needs constant keeping up. When completed the Aleppo-Alexandretta road would render practicable a motor-car service to supplant traffic by carriage, cart and caravan. We have previously drawn attention to the openings for British automobiles which are presenting themselves in the Near East. As the systems of roads in Turkey and elsewhere develop, this demand for motor vehicles will certainly increase, and it would be well that our manufacturers should establish themselves early in the market. Local conditions and requirements should be carefuly studied before attempting to do business.

HIDES AND SKINS FOR ROUMANIA.

Regulations have been drawn up by the Sanitary Department of the Roumanian Ministry of the Interior and came into force on July 14, 1912. They provide that hides and skins may only be imported in a dry state; salted hides and skins are not allowed to be imported unless they are of transatlantic (American) origin; skins and hides, either dry or salted, may only be imported through the following frontier stations: Braila, Burdujani, Calafat, Constantza, Calarasi, Caineni, Cernavoda, Galatz, Giurgiu, Oltenitza, Palanca, Predeal, Sulina, Tulcea, Turnu-Magurele, Ungheni, and Verciorova, and must be accompanied by sanitary certificates emanating from the Sanitary Department of the place of origin, stating that the hides and skins are of healthy animals, and that the locality whence the hides and skins come is not infected with epizootic diseases, such as cattle plague or contagious pleuropneumonia. Salted hides and skins of transatlantic origin coming from a port of transhipment in Europe will be allowed under the following conditions: They must be accompanied by a veterinary certificate from their place of origin or a veterinary certificate from the port of transhipment, stating that the hides and skins come from a transatlantic shipment, and that they have been accompanied by a veterinary certificate from their place of origin. The sanitary certificates must be accompanied by a translation into the Roumanian or French language, authenticated by an authority. Hides and skins on arriving at one of the above-mentioned frontier stations will be examined by the local Government veterinary surgeons, and will not be allowed to be imported if found to be in an unfit condition or failing to comply with the above regulations. They will also be refused if the importer will not bind himself to transport them without delay to their respective destination.

MANURES IN CRETE.

The use of chemical manures (says the *Handelsmuseum*, Vienna) is developing more and more in Crete. During the years 1910-1911, shipments were made regularly from Holland and Belgium. Moreover, a manufactory installed in the Piræus has established depots in the principal centres of the island, and imports manures suitable for the Cretan soil. Numerous brochures, printed in Greek, have been circulated, and this mode of advertising has been the means of making known the advantages of chemical manures amongst the agricultural population, who are now commencing to appreciate their use. It is believed that the importation of this product will steadily increase, especially considering that Crete is lacking in natural manure.

A sample of the binding cloth required for the Egyptian Government contract, of which particulars were given in our issue of July 26, may now be seen at the Sample Room of Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, E.C.

METAL GOODS IN PERSIA.

The United States Consular Agent at Teheran (Mr. R. H. Baden), states that black and white galvanised flat sheets are imported from Hashterkhan, Russia. These sheets are 28 inches wide and 56 inches long, and are bought and sold by weight. The price obtained for the black sheets is £8 per box of 650 pounds. The white sheets sell for £12 per box. These sheets are used for roofing, ceiling, and the lining of baths. Formed roofing and siding are made from the flat sheets. Eaves troughs and conductor pipes would be too expensive if imported, on account of their bulky nature, so they are made locally. Metal shingles and ornamental metal ceilings are made by colouring the white sheets.

There is very little demand for wrought iron. Metal for making cornices, skylights, and ventilators is generally imported from Russia, and is in boxes weighing 650 pounds, which are sold for £6.

There seems to be considerable demand for white tin for making boxes, etc. This kind of tin is usually imported from India in boxes containing 120 sheets (sheets being 23 inches long and 16 inches broad), which are sold for £4.

A prospective exporter to Persia should bear in mind that all goods passing through Russia are subject to a transit duty. It is, therefore, often advisable to ship by way of the Persian Gulf, or through Turkey from Trebizond. Since there are no railroads in Persia, camels and mules are generally used for transporting goods. All goods should be well packed in strong boxes of convenient size. The boxes intended for transportation by mules should not weigh more than 225 pounds, and those for camels not more than 325 pounds.

TENDERS INVITED.

EGYPT.

Photocopic Papers.—Tenders are invited by the Egyptian State Railways Administration for the supply of 3,000 rolls of ordinary ferro gallate paper (heliographic), 1,500 rolls of cloth ferro gallate paper, and 1,500 rolls of ordinary ferro prussiate paper, the rolls to be 10 metres long and 1 metre wide. Tenders to be made out on the proper form, and enclosed in two envelopes, the inner marked "Tender for the supply of photocopic papers," and the outer addressed to the General Manager, Egyptian State Railways and Telegraphs, Cairo. A sample roll of about 5 metres of each paper, sensitised, must be forwarded to reach the Chief Engineer (Way and Works), Egyptian State Railways, Cairo, not later than September 28. A deposit of 5 per cent. of the value of the offer is required with each tender. Domicile (legal) in Egypt is necessary. Copies of the specification, containing form of tender and samples, may be obtained at a cost of 2s. from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, S.W. Date, September 28 (10 a.m.).

Galvanised Ends for Water Tanks.—The London Agent for the Egyptian War Office (Mr. A. L. Webb, C.M.G.) notifies that the Department named invite tenders for the supply of galvanised ends for water tanks. Tender forms and all particulars may be obtained, and samples seen, at Mr. Webb's offices, Queen Anne's Chambers, Broadway, Westminster, London, S.W., where tenders will be received. Firms who have not previously held a contract with the Egyptian War Office must enclose with their tender two references, one of which is to be a bank. Date, September 25 (to remain open for seven days from that date).

Supply of Coal.—The Administration of State Railways and Telegraphs invites tenders for the supply of 300,000 metric tons of Welsh coal, to be delivered between December 1, 1912, and July 31, 1913. Specification (100 millièmes=2s. 1d.) from the bureaux of the Administration at Bulac or Gabbary Depot, Alexandria, or from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, S.W. Offers, on form attached to conditions, to be forwarded to the Director-General, Cairo. Date, October 22 (10 a.m.).

Supply of Portland Cement.—The Administration of State Railways and Telegraphs invites tenders for the supply of 7,500 tons (metric) of Portland cement. Specification (200 millièmes=4s. 2d.) from the bureaux of the Department at Bulac and Alexandria, or from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster. Samples may be sent to the Chief Engineer of Ways and Works not later than October 5. Tenders, on form attached to specification, to be submitted to the Director-General, Cairo. Date, November 16 (10 a.m.).

Supply of Lubricating Oil.—Tenders invited by the Railways Administration (from firms on the official list of the Administration) for the supply of 1,476 metric tons of mineral lubricating oil, according to samples to be submitted by September 19 at latest. Specification from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, on payment of 2s. Tenders on form attached to specification. Date, October 3 (10 a.m.).

Supply of Clothing Required during the years 1913, 1914, and 1915.—Tenders will be received at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo, for the supply of clothing required by the Cairo City Inspectorate, during three years, commencing from January 1, 1913, and ending on December 31, 1915. Conditions of tender, specification, and conditions of contract, at the offices of the Cairo City Inspectorate. Samples shall be deposited at the Stores of the Cairo City Inspectorate, before noon, on September 1, 1912. Date, September 1 (noon).

Supply of Machines.—Tenders are invited by the Department of Agriculture, Technical and Commercial Education for the supply of machines to the Model Workshops at Assiut, as shown on the specifications with description of machines to be obtained at the office of the Department, 14, Sharia Abdine, on any day, Fridays and general holidays excepted, between 9 a.m. and noon. Tenders in accordance with the specifications, etc., will be received by the Director-General of the Department of Agriculture, Technical and Commercial Education. Date, September 1 (noon).

GREECE.

Blue Linen Cloth.—Tenders are invited at the "Ministère de la Guerre (Section du Matériel)," Athens, for the supply (in three lots) of 27,000 metres of dark blue linen cloth for working suits. Local representation is necessary. A deposit of 250 frs. (£10) is required with each lot. (Note.—The *Gazette*, containing the *cahier des charges* (in French), may be seen by British manufacturers at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.) Date, October 3 (10 a.m.).

CRETE.

Electric Lighting Concession.—H.M. Consul-General at Canea (Mr. A. C. Wratislaw, C.B., C.M.G.) reports that sealed tenders for a forty years' concession for the electric lighting of Canea will be received by the Municipal Council of that town. Tenders must be accompanied by certificates of competency. A deposit of 3,000 drachmae (£120) is required to qualify any tender. Conditions of tender (in French) may be seen by British contractors at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C. Date, September 10 (11 a.m.).

ROUMANIA.

Installation of Water Service.—Tenders invited by the municipality of Falticeni for the installation of a supply of water. Estimated cost, 385,000 frs. Provisional deposit, 19,000 frs. Particulars from the Mairie. Date, October 6.

BULGARIA.

Supply of Electric Cranes.—Tenders are invited for the supply of electric cranes for the Bulgarian State Railways. Estimated value, 30,000 frs. (£1,200). Deposit, £60. Tenders to the offices of the Administration des finances du district, Sophia. Particulars from Direction des Chemins de Fer Bulgares. Date, September 9.

Electric Light and Power Installation.—Tenders invited at the offices of the Administration des finances du district, Sophia, for installation of electric light and power at the Pernik collieries. Estimate, 350,000 frs. (£14,000). Particulars (10d.) from the Direction des Mines, Pernik. Date, October 17.

Shipping Intelligence.

EGYPT-CYPRUS MAILS.

(From Our Own Correspondent.)

Alexandria, August 14.

The Khedivial Mail Steamship Co. has obtained, for a period of seven years, the concession for transport of mails between Egypt and Cyprus, and will provide a fast passenger service between the two countries. Until the present the Limassol Steamship Co. held the concession for the mail service.

PORT OF ALEXANDRETTA.

The recently issued report of the H.B.M.'s. Consul for the vilayet of Aleppo states that during 1911 there was a decrease at Alexandretta of 60 steamers, with a total tonnage of 58,783 tons, and an increase of 80 sailing vessels (mostly native), with a total tonnage of 1,233 tons, in comparison with 1910. The continued decline in import and export traffic at Alexandretta and the suspension of the Italian liners since September, 1911, account for the falling off in steam shipping. In spite of the marked decrease in general traffic, 138 British steamships, of a total burden of 166,918 tons, touched at Alexandretta in 1911, against 141 steamships of a total burden of 156,206 tons in 1910. The Khedivial Mail Line, the Prince Line and the Asia Minor Steamship Company, Limited, continued to call at the port of Alexandretta during 1911, but the Prince Line less frequently than before.

There is no shipbuilding at Alexandretta. Ships anchor close in shore, landing and embarking are performed by boats, and there is an iron landing stage 100 metres in length, provided with a steam crane, for loading and unloading lighters. Freights for grain and for sheep and oxen shipped from Alexandretta ruled, during 1911, at about the same rates as during 1909. The only line offering direct opportunity for return freights to and from the United Kingdom was the Prince Line.

LOSS OF THE "WINGROVE."

Judgment in the Board of Trade inquiry into the disappearance of the steamship "Wingrove" was delivered on August 16. This vessel was owned by the Egypt and Levant Trading Company (Limited), was classed 100 A1, cost £19,000, and the hull was insured for £18,000. Her tonnage was 1,818 net. She left Newcastle on December 9 last, but owing to an accident to the second engineer in the course of his duty, she put into Plymouth to land him for surgical treatment. On December 18 she left Plymouth for Port Said and had not since been heard of. She carried a crew of 23, with 4,000 tons of coal.

In delivering judgment, Mr. Dickinson, the stipendiary magistrate, said there was no direct evidence, but the Court was of opinion that, whatever were the particular circumstances bringing about the loss, it was to be ascribed, in some shape, to the violence of the wind and sea known to have existed for some days over a considerable area through which her course would take the "Wingrove." Answering in detail the questions of the Board of Trade, he set out the insurances, which included freight (£2,156) and premiums, and found that when the "Wingrove" left the Tyne she was in good and seaworthy condition as to hull and equipments, that she was well stowed, in good trim, and had the required freeboard. The Court commended the master's humanity in landing the injured officer at Plymouth, and was gratified to find that the master could rely on his owners' approval. No cargo was landed at Plymouth, 86 tons of bunker coal were shipped there. The heavy weather which prevailed after December 18 was sufficient to explain the loss of the steamer, as it was undoubtedly the determining factor in the loss of the "Hughenden" and the "Guillemot" and other vessels. No blame was attached by the Court to any person named in the questions, nor was the loss due to bad loading.

Mr. A. A. Carver and Mr. A. A. Mortimer were passengers to Port Said by the City Line s.s. "City of Lahore," which left Liverpool on August 20.

PERSIAN SHIPPING.

In the Report for the year, 1910-1911 on the Trade of Persia, Mr. W. J. Garnett, Second Secretary of the British Legation at Teheran, states that on the Caspian Sea, where only the Russian flag may be flown, the number of vessels calling at Persian ports was 2,755, an increase of 213. There was an increase of 57 at the port of Enzeli alone.

The returns for the Persian Gulf are interesting:—1,056 steamers (an increase of 31 on last year), of 1,346,315 tons, and 3,436 sailing vessels (an increase of 625), of 97,523 tons, called at the ports in the Gulf; of these, 940 steamers, of 1,142,997 tons, and 156 sailing vessels, of 8,825 tons, were British; 58 steamers, of 148,297 tons, were German; 24 steamers, of 47,129 tons, Russian; and 7 steamers, of 4,769 tons, and 590 sailing vessels, of 17,908 tons, were Turkish.

The increase in the returns for Mohammerah are especially interesting, the increase being 376, while the returns for Bushire show a decrease of 176, and for Lingah a decrease of 59, for Bunder Abbas a decrease of 39. There was a total increase of 580 at other small ports.

86 British steamers (7,928 tons) visited Ahwaz, and 292 Persian steamers and 72 Persian sailing craft. The returns show an increase of 221 on those of the previous year. 40 British steamers (1,830 tons), 76 Persian steamers, and 59 Persian sailing craft visited Shuster; but the total shows a decrease of 5. The total returns for the Karun show thus an increase of 216.

LOWER DANUBE NAVIGATION.

The Board of Trade have received, through the Foreign Office, a copy of the English translation of the revised and amended Navigation and Police Regulations applicable to the Lower Danube, as enacted by the European Commission of the Danube on November 10, 1911.

These Regulations, which came into force on July 1 last, may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade.

Tues., Aug. 27.	Wed., Aug. 28.	Thurs., Aug. 29
Wed., Sept. 11.	Thurs., Sept. 12.	Fri., Sept. 13.

LONDON, August 22.

Still Cheerful!

Still the markets remain cheerful. There is not so much business, but there is almost as much confidence. We say "almost," because a certain number of people feel nervous about China, and the unexpected shipment of half a million of gold to Germany has sent a cold shudder through the money market. We must not exaggerate these incidents. They are not terrifying. Germany requires money to finance the Russian and home crops. As for China, all the best-informed people declare that the newspaper stories are exaggerated. Consols are gradually recovering. The big firms bought largely at the bottom, and practically cleared the market. The scare is dying down. In the Home Railway market traffics are good, and we hope that before the end of the year the whole of the losses of the first six months will have been wiped out, and the dividends will be maintained.

Foreigners Steady.

Foreigners are steady. The Chinese issues have been marked up as a sort of protest against the scare stories. Brazil bonds have risen, and Russians are also firm, but Japanese securities are weak. Bulgarians have not moved, and no trouble is expected in the Balkans. Egyptian Unified are a shade harder. Rentes are firm on stories that the French Government means to maintain the price. There is no business in German Threes, which are still quoted 79. They look cheap. Greek Fours are 53¼. Tintos are much stronger. The public has at last realised that the Copper position is absolutely unassailable. Turkish Unified are steady at 89½, peace being now almost a certainty before October. Americans are good all round, and there has been large buying by the best people. All American rails must rise before the end of the year. Crops are magnificent, and if the companies could only raise their rates dividends would be increased. Illinois Central have been purchased, the view being taken that this company will benefit enormously by the opening of the Panama Canal.

Rubber and Oil.

The price of rubber is now being put up by the dealers, and all rubber shares are harder. The public does not come in, but the insiders are buying. Probably the Lampard Trust is leading the bull movement, for it has big blocks of shares to sell. Oil shares are firm but dull. Chelekens have been bid up, the output having increased 2,823 tons. The group have another company ready to float. Russian General Oils are weak, and Urals have also been sold. An attempt was made to mark up Egyptians, but it did not succeed. A good many sellers came in.

The Mining Market.

Kaffirs were supported. It is clear that the big houses are doing their best to keep the market firm. City Deeps were bought, and Modders and Modder B were good. This market is likely to improve before the end of the year. Rhodesians showed very little change, but Shamvas are recovering their heavy fall. Good news has been received regarding developments at depth. Chartered seem incapable of getting over 30s. There are always sellers at this price. The copper market has been the strongest in the House, almost every share having been bid up. Anacondas at 9⅜ are a very firm market. Mount Elliots were as high as 6¼. Great Cobars have also touched 4½. The price of the metal is certain to remain between £80 and £85 right up to the end of the year, and all copper mines will, therefore, do well. The rise has not yet ended. Tin shares are moderately good, Anglos, Rayfields, and Bisichi having been bid for. The Rayfield Cornish subsidiary is also talked about and looks like going higher.

Coming Rise in Egyptians.

The Egyptian market does not show many signs of improvement, but all the dealers are confident that a boom is coming. We pointed out many weeks ago that the advent of Lord St. Davids into this market meant an enormous influence for good. It is an open secret that his group have been quietly absorbing very large blocks of shares. Dealers have been clearing the market of the United Lands, which are now 3s. 6d., and look like going much higher. The company is selling its Rodah Island blocks, not perhaps at a profit, but at a better price than they expected to get, and this is a reassuring sign. There has been also a certain amount of buying of Khedivial Mail ordinary, which look cheap at 9s. If the war ends this company will begin to get its profitable pilgrim traffic. Aboukirs have also been steady and cannot be bought under 1¾. Agricultural Banks are now 6, and Beheras are much harder, no shares being procurable under 14¼. Delta Lands rose to 16s. Salt and Sodas, one of the cheapest purchases in the market, are firm at 16s. Abdy's are inquired for at 9s. Delta Light Railways are 8¼. National Banks have risen and are now firm. Some people have been taking their profit in Sidi Salems. Union Foncière are good, and the whole market looks cheerful.

Gharbieh Land Company.

A Cairo correspondent writes to us with regard to a statement of our Alexandria correspondent in our issue of July 12 :—"His statement regarding the unsaleability in Egypt of land company shares is, you will admit, too sweeping a generality; for it certainly does not apply to the shares of the Gharbieh Land Company, which are quoted and dealt in on the Cairo Bourse at about 2½, or over 60 per cent. of their nominal value. Moreover, whatever effect the proposed legislation may have on loan transactions in Egypt, no prejudice will be caused to land sales, as the vendor retains his privilege, even against the small holder, until full payment of the purchase price. As you are aware, the company is now engaged in reclaiming land for private landowners, and it is anticipated that the financial results of this new undertaking, which may eventually become the main business of the company, will, in the near future, be reflected in a higher price for its shares."

Miscellaneous Dull.

In the Miscellaneous market, business is very dull. Shipping shares are weak, but Marconis continue to droop. This market has not been improved by the article in the current issue of the *Stockbroker*. Brewery stocks, however, are hard, and there are more buyers than sellers.

BANK OF CRETE.

The Bank of Crete, Canea, announces gross profits 337,821 frs., and net 152,941 frs., for the past half-year, the gross and net for the preceding half-year being 313,244 frs. and 141,176 frs. respectively. The dividend is raised from 3 frs. to 3.25 frs. per 125 frs. share. The bank's capital stands at 5,000,000 frs., and its reserves at 513,406 frs.

NOTES FROM ALEXANDRIA.

(FROM OUR OWN CORRESPONDENT.)

ALEXANDRIA, August 16.

The Bourses Better.

The situation here is decidedly better, and the tone is certainly optimistic. Buyers are very numerous, and the volume of transactions is already very considerable. This improvement is a good augury, especially as it coincides with the opening of the cotton season. The Egyptian market on the London and Paris Exchanges remains, nevertheless, in a state of stagnation, and it seems as if a feeling of disfavour was reigning there with regard to Egypt. As we have amply demonstrated, this disfavour is in nowise justified, either by the political situation or by the economic conditions of the country. A severe crisis has oppressed the country during the last four years, but still its vital forces remain intact. Moreover, the opinions expressed in the reports of Lord Kitchener, Sir P. Harvey, Lord Milner, Sir W. Garstin, and others suffice to reassure the most doubting minds.

The Cotton Hallakas.

On the initiative of Lord Kitchener, the Government has decided on the establishment of markets in the provinces at which the fellah may sell his cotton. The official prices of cotton will be posted daily in these markets, and the weighing of the cotton will be controlled by the State. This is an excellent measure, and the fellah will escape fraud by the public weighers, who formerly were often accomplices of the small cotton merchants. It remains to be seen whether the fellah will know how to profit by the facilities and guarantees afforded by the "hallakas," or whether he will prefer to continue to be cheated.

International Spinners' Delegation.

The cotton exporters and the Egyptian Government are preparing a worthy welcome for the members of the delegation from the International Cotton Spinners' Association. The market at Minet-el-Bassal, the shoonahs, the ginning factories and presses will be visited, and it will certainly be found that the system followed in baling Egyptian cotton is the finest in the world, and that all the arrangements for handling and baling are as near perfection as possible. One practical result of this visit will be the decision as to whether we should continue to plant Mit Afifi, seeing that three-quarters of Lancashire's demand is for this type, or whether we should also plant large quantities of Joanovich and Sakellaridis, which are now used only by spinners of extra fine cotton.

The Mariout Region.

The landowners of this region, who have paid taxes for more than twelve years in the hope of receiving water from the Nubarieh Canal, have in despair formed a committee for the defence of their interests. The irrigable district of Mariout is one of the most fertile of Egypt, and has an area of about 100,000 feddans. Cereals and fruits grow there to perfection, and it is to be hoped that the Government will prolong the canal at least 15 kilometres, in order to permit adequate culture of this rich tract. In consequence of the raising of the Assouan Dam, the Irrigation Department will control sufficient water to irrigate the Mariout district, which was so prosperous under the Roman domination.

In carrying out the operation of the sinking fund of the Montenegro Five Per Cent. Loan the undermentioned bonds have been purchased in the open market by Messrs. Boulton Brothers and Co., on behalf of the Government, at a price below par, and, together with the coupons belonging to the bonds from January 1, 1913, to July 1, 1947, have been cancelled :—2,125—63, 2,174—97, 2,216—19, 3,150—74, and 3,375—3,417.

NEW COMPANIES.

Zenith Brewery Company, Ltd.

Registered August 14, by R. E. F. Lander, 8, Serjeant's Inn, E.C. Capital, £73,500, in 70,000 ordinary shares of £1 each and 70,000 founders' shares of 1s. each. Objects: To carry on the business of brewers, maltsters, extractors, and manufacturers of alcohol, etc., in Constantinople or elsewhere. The signatories are:—A. Baker, 370, Grande Rue de Pera, Constantinople, merchant; F. G. Crawford, 54, Grande Rue de Pera, Constantinople, clerk; F. W. Smith, 370, Grande Rue de Pera, Constantinople, clerk; T. A. Swan, Bebek, Constantinople, accountant; T. Ivrakis, 396, Grande Rue de Pera, Constantinople, restaurant proprietor; N. Zarcalis, Omer Abid Han, Galata, Constantinople, merchant; J. Cahan, 10, Rue Mertlebany, Constantinople, advocate. Minimum cash subscription, 10 per cent. of the share capital other than that issued otherwise than for cash. The first directors (to number not less than six nor more than nine) are: L. Zarifi, A. Calvocarressi, N. Zarcalis, T. Ivrakis, and S. Ivrakis. Qualification, 200 ordinary shares. Registered offices 1, Serjeant's Inn, Fleet Street, E.C.

Abyssinian Trading Company.

The Abyssinian Trading Company, with an initial capital of £20,000, has been formed in Hamburg to do export and import business. It has to have a house in Adis-Abeba and branches in other parts of the country. Profits of 30 per cent. on exports and 8 per cent. on imports are being calculated upon, and the concern is said to hold important trading concessions and to have prospects of more.

London and Galician Oil Corporation, Limited.

A company with the above title was registered on August 14 by Douglas Norman and Co., 65, London Wall, E.C., with a capital of £500, in £1 shares. The objects are to acquire, deal with and turn to account oil-bearing lands, mines, mineral and other properties, concessions, options and rights, etc., in Galicia and elsewhere. The company is registered without articles of association. The first directors are: J. W. S. Leask, A. Goodwin, W. E. Lake, J. E. Robinson, E. Goodwin, C. G. Barrett and M. Hill (provisional directors), and the registered office is at Broad Street Avenue, E.C.

TURKEY'S FINANCIAL POLICY

The Paris *Information* contains the following important statement made by Hussein Hilmi Pasha, the retiring Minister of Justice, regarding the financial policy of the Turkish Government:—

"It is a secret to none that the state of our finances is far from being flourishing. We shall only enter upon a period of fair weather when we are able without having recourse to loans to defray our ordinary expenditure by means of our ordinary revenue, reserving loans exclusively to works and enterprises of public utility, particularly the latter. The Government will make every effort to arrive at that stage. We are adopting two means to that end, very simple ones, which constitute our financial programme. The first is to economise unceasingly. There must be no squandering on any pretext. The second is to endeavour to attain to Budgetary equilibrium by increasing our revenue. We have certain projects in hand with a view to this which have not yet taken definite shape. But it cannot be regarded as a particularly provident policy to pay interest at the rate of 7 and even 8 per cent. to obtain money to pay the salaries of officials, for instance. And it is a pleasure to state that, since the pacification has taken place, our financial credit is once more on the rise, and to such an extent that it should not be difficult for us to-day to find money on advantageous terms."

Our contemporary is informed by its Constantinople correspondent that an agreement on the subject of the war supertax has been come to between the Council of Administration of the Ottoman Public Debt and the Finance Ministry on the basis that 25 per cent. of the product of the supertax is to go to the Debt Administration, and 75 per cent. to the Government. The latter has decided to make a renewed application to the Powers for authority to raise the Customs by 4 per cent. The Treasury receipts for June from direct taxation showed a falling off of 7,479,955 piastres as compared with June, 1911, while those from indirect taxation showed a falling off of 1,186,649 piastres. The monopolies yielded 3,462,094 piastres less, and the State undertakings 317,000 piastres less. Direct receipts, however, show an increase of 6,890,494 piastres. Total receipts for June from all sources amount to 217,034,693 piastres, which, compared with the receipts of June, 1911, show a decrease of 5,006,737 piastres.

BULGARIAN FINANCE.

A writer in the *Manchester Guardian* states that among the factors which contribute to the difficult task of maintaining the *status quo* in the Balkans at the present moment, a rather important one is the financial position of Bulgaria. It is believed that the Bulgarian Government is in great need of money, and is bound to come on the international financial market some time in October or November for a loan of some £7,500,000, partly needed for the conversion of the 6 per cent. loan of 1892, and partly wanted for military and railway purposes. It is stated that the loan has been provisionally taken up by the Banque de Paris and the Deutsche Bank, and negotiations are proceeding for placing a portion of the sum in London. It is obvious that in case of further complications in the Balkans, Bulgaria would not be able to obtain a single penny—this the more as she in her new dignity as a kingdom insists on refusing to give any special security. It is true that she succeeded in floating on such terms a small loan at 4½ per cent. in 1909 at Hamburg, but the experience she then had has taught her that she cannot hope to repeat the operation on a larger scale unless she can offer at least the security of peace and order both within and without her frontiers.

FINANCIAL NEWS IN BRIEF.

The receipts of the Egyptian Delta Light Railways for the eleven days ended July 31 amounted to £E7,703, an increase of £E151 over the corresponding period of last year. A decrease in passenger receipts (£E299) is said to be due to the Mouled of El-Sayed-el-Badaoui, Tantah, having been held in this period last year, which augmented receipts then, cattle plague restrictions, and to people being busy in the fields picking the cotton worm. The increase in the goods traffic (£E450) is due to a freer movement of melon and manure traffic.

The directors of the Ionian Bank, Ltd., have declared an interim dividend of 2s. 6d. per share, free of income-tax, or at the rate of 5 per cent. per annum for the half-year ended July 13 last.

The necessary resolutions of the North Caspian Syndicate have now been passed, whereby that undertaking and the whole of its assets are acquired by the Russian and Eastern Agency, Ltd.

The dividends on the Egyptian Guaranteed Three per Cent. Loan, due on September 1, will be paid by Messrs. N. M. Rothschild and Sons on the following Monday.

The directors of the National Bank of Egypt have declared an interim dividend of 6s. per share on account of the profits for 1912.

It is anticipated that the dividend of the Steaua Romana Company, of Bucharest, will this year be increased from 8 per cent. to 9 per cent.

On the 15th inst. three special postage stamps were issued in Bulgaria to commemorate the twenty-fifth anniversary of the accession of King Ferdinand in 1887. These stamps consist of the denominations of 5, 10, and 25 stotinki, equivalent to ½d., 1d., and 2½d. respectively, these being the values most in use. The numbers printed are as follow: 200,000 of 5 st., 150,000 of 10 st., and 100,000 of 25 st., and they are to be available only up to September 1, old style. They may be obtained from Messrs. Whitfield, King, and Co., Ipswich.

Applications have been made to the Stock Exchange Committee (1) to appoint a special settling day in and to grant a quotation to Spies Petroleum Company, Limited—Further issue of 200,000 shares of 10s. each, fully paid (Nos. 1,250,001 to 1,450,000). (2) To appoint a special settling day in Sudd Fuel (Suddite), Limited—Further issue of 4,600 seven per cent. cumulative participating convertible preference shares of £1 each, 15s. paid (Nos. 75,401 to 80,000). And (3) to allow the following securities to be quoted in the Official List: Société Anonyme du Béhéra—50,000 ordinary shares of £5 each, fully paid (Nos. 1 to 50,000) (bearer warrants).

The receipts of the Egyptian markets for the week ending August 15 were £540 (decrease £230), while the aggregate from January 1 amounted to £34,005 (decrease £2,618).

THE EASTERN BANK, LIMITED.

Head Office: 4, CROSBY SQUARE, LONDON, E.C.

Subscribed Capital, £1,000,000. Paid up, £400,000. Reserved Liability of Shareholders, £600,000.

Branches:

BAGDAD. BOMBAY. CALCUTTA.

Board of Directors.

The Right Hon. LORD BALFOUR OF BURLEIGH, K.T. (*Chairman*).

Sir JACOB E. SASSOON, Bart. EMILE FRANCQUI, Esq.

NOTES OF THE WEEK.

A semi-official status is now claimed for the informal conversations that have been held in Switzerland between Italian and Turkish spokesmen on the subject of the termination of hostilities. The initiative is said to have been taken by an Italian financier, who visited Constantinople in June and persuaded the Grand Vizier, Said Pasha, to send a delegate to Switzerland for the provisional discussion of terms of peace. Negotiations, according to a Turkish organ, were so far advanced that a "provisional protocol" was about to be initialled when the Said Cabinet fell. The Italian version, however, is that the Turkish representative submitted the following proposals:—(1) Recognition by Turkey of Italian sovereignty over Tripoli and an Italian protectorate over Cyrenaica; or (2) recognition of Italian sovereignty over the coast oases and an Italian protectorate over the hinterland—an indemnity in each case to be paid to Turkey. These proposals are said to have been categorically refused by the Italian spokesman, and the "conversations" were interrupted for a short time. Immediately after his appointment the new Grand Vizier agreed to send another representative to pick up the threads of the negotiations; but this promise has only recently been redeemed, and nothing is known of the course of the renewed pourparlers. The terms said to have been put forward by the Turkish delegate can hardly be very far removed from the basis of the ultimate compromise, although it is quite possible that a semi-official or informal negotiator would stipulate for a much higher sum as monetary compensation than Turkey is likely to receive when peace is ratified.

Much has happened during the last few weeks to make both the belligerents more anxious for the termination of hostilities. With the domestic situation in Turkey, as well as the excitement along the northern frontier, the Porte has its hands more than full; in the case of Italy, the financial drain of the war continues; while to both Governments the Austro-Hungarian invitation to the Powers to exchange views on the position in the Near East conjures up all manner of possibilities, in dealing with which the war may prove a handicap on their freedom of action. For these reasons it is held that but little is required to convert the informal peace conversations into official negotiations. One effect of the meetings in Switzerland may be to convince Turkey and Italy equally that they can dispense with the help of intermediaries in adjusting their differences. Unless there is a closer understanding between Austria-Hungary and Italy in regard to Balkan affairs than is generally believed, the Italian Government, as well as the Turkish, must feel more confident in their own ability than in that of a European conference to keep the terms of peace within the limits of the original quarrel. The more sincere the new Turkish Cabinet is in its determination to introduce better administration into Albania and Macedonia, the more eager it will be to avoid the submission of its domestic affairs to a consultation of the Powers. The Ægean Islands introduce a further complication, for the longer the ratification of peace is deferred the more difficult it will be for Italy to regard her occupation of the islands as a mere hostage for the amenability of the Porte in the peace negotiations. The Porte must realise this point, and the end of the war would presumably be close at hand, if it were not for the necessity of fresh elections in Turkey. No Government in the position of the present Cabinet could risk the publication of the terms of peace on the eve of the elections, and further developments in this direction can hardly be expected for a few weeks.

The prospect of peace between Italy and Turkey has prompted the inhabitants of the islands seized by the Italians to send a deputation to Rome. A memorial is to be presented to the Italian Government containing a declaration that the islanders will on no account accept the restoration of Ottoman rule, as they believe that no guarantee given by the Powers will be able to prevent the Turks from carrying out reprisals. In the interests of an early ratification of peace, it is to be hoped that the Italian Government will not commit itself to any ill-considered statement that would render the position of the Turkish Cabinet still more embarrassing in regard to a termination of hostilities. In the meantime the Cretans have hit upon a novel method of advancing, as they imagine, their interests. The work of the Italians in the Ægean Sea is to be rounded off by the annexation by Crete of Samos. Filibustering parties have been organised, and were to be sent to Samos to overpower the Turkish garrison, depose the Prince, and declare a provisional Government under the Greek flag. News of the intended expedition leaked out; the Consuls vetoed the undertaking; and British and French men-of-war have been sent to Samian waters to prevent the landing of any parties from the Cretan Armada.

The vacancies in the Turkish Cabinet have been filled by the appointment of Ali Danish Bey as Minister of the Interior, Halim Bey as Minister for Justice, and of Sadri Bey to the portfolio of Posts and Telegraphs. It is stated that the differences of opinion in the Cabinet before the changes turned on the attitude to be adopted towards the Committee of Union and Progress, with special reference to the general election. The concilia-

Digitized by Google

tory policy towards their political opponents advocated by some of the Ministers would have prompted them to retain the services of certain officials who were known to have been guilty of grave electoral offences. It was felt by others that it would be neither right nor expedient to overlook the crimes of these officials, and this view carried the day. It will be hoped, however, that the decision does not mean that any attempt will be made to conduct the approaching elections according to the methods of the Committee. The party of Union and Progress, which is to meet in congress in Constantinople next week, has announced its resolve to conduct the conflict on strictly constitutional lines, and it will be the duty of the Government to ensure that no undue influence is exercised on the electors in the interest of either party.

In spite of the agreement arrived at between the Turkish Government and the Albanian leaders, several disturbances have taken place during the week in Albania. An attack was made on the town of Durazzo by 400 Malissori, led by priests, but they were defeated with the loss of a hundred killed or wounded. An equally unsuccessful attack was subsequently made on Scutari. The insurgents have left Uskub, but several bands are encamped in various districts, and the pillaging and burning of villages continue. The special mission, presided over by Marshal Ibrahim Pasha, was reported to be on its way to Scutari; its presence will serve as an indication of the anxiety of the Turkish Government to conciliate the Albanians. Orders have meanwhile been given to the Valis to apply at once the concessions agreed upon, but it would appear that much time must elapse before the Province settles down to a more ordered existence. Tayar Bey, who headed the mutiny at Monastir, has availed himself of the Imperial pardon and surrendered at Dibra. As a result of the representations of the Powers at Cettinje, the situation on the Montenegrin frontier was held to have improved; but the destruction of Christian villages and the removal of the inhabitants to Montenegro led to further reprisals in the form of an attack on Berane. This town is now reported to be in ruins. The Christian inhabitants have resolved that the only terms on which they can return is that equal rights to Christians and Moslems should be guaranteed; that damage to property should be made good at the expense of the State; and that the innocence of the Serbs should be recognised and their religion protected.

A new phase of the Nationalist propaganda in Egypt has recently been disclosed in the posting of seditious placards in the streets of Cairo. Almost at the same time the Customs authorities in Alexandria discovered in the baggage of an Egyptian arriving from Constantinople other placards of an offensive nature. Although the coincidence is significant, there is at present no proof that the placards posted in Cairo have any connection with those discovered at Alexandria. The Egyptian Government, however, has asked the Porte to search the domiciles of Sheikh Shawish and Farid Bey, who, as leaders of the Nationalist Party, now in voluntary exile at the Turkish capital, are suspected of being responsible for this new form of propaganda. It is possible, moreover, that the papers seized in connection with the recent conspiracy justify the suspicion now attached to the Nationalists in Constantinople.

The question of the allocation of the expense connected with the establishment of a torpedo station at Alexandria is now engaging public attention in Egypt. It was only natural that, as the base was created as part of a new disposition of the British naval forces, it should be taken for granted at first that the whole cost would fall on the British taxpayer. But the readjustment of Imperial strategy is rendered necessary by the importance of safeguarding the individual component parts of the Empire or those countries for whose safety Great Britain is held responsible. In the case of Egypt the establishment of a naval station at Alexandria is directly associated with the work of protecting the Egyptians, and so long as the Egyptian Exchequer is in a position to pay for the security that enables the country to increase its material prosperity, it is fair that the cost, as a whole or in part, should fall on Egypt. At present the country pays to Great Britain an annual contribution of £150,000 towards the extra cost of keeping the Army of Occupation. A dispassionate examination of the benefits derived by Egypt from the Occupation would show that, with merely this small payment to set against them, there is a big balance in favour of the Egyptians. Owing to the diplomatic fiction that represents our presence in Egypt as a temporary expedient, there must always be some opposition to every contribution from the country to what can be styled the British Exchequer. In the present instance, although the Nationalist Press has protested against the alleged intention of the British Government to make Egypt pecuniarily responsible, in part or wholly, for the naval base at Alexandria, we can await with complete equanimity the verdict of the country when the actual decision of the Government is made known.

The news from Persia remains as consistently bad as the weather during the past month. A policy of drift appears to commend itself to both the British and Russian Governments, and there is no man in Persia capable of lifting the country out of the mire. According to the latest telegrams, a portion of the expedition that Prince Firman Firma, the Governor of Kermanshah, was leading to Senna mutinied, and, returning to Kermanshah, occupied that town. Salar-ed-Dowleh, whose whereabouts remain uncertain, is said to have put himself into communication with the mutineers and to be endeavouring to secure their support with a promise to restore the Constitution. Prince Firman Firma's followers are reported to have made the continued suppression of the Mejliss at Teheran the main peg on which to hang their mutiny. Hence the offer of Salar-ed-Dowleh.

ENGLISH BOYS' SCHOOL,
CONSTANTINOPLE.

The New School Building will be opened on September 15th. The School House has accommodation for forty boarders. Resident staff, six English masters and English matron.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)
Constantinople, August 23.

Hilmi Pasha's Resignation.

The situation, though a trifle clearer since Hilmi Pasha's resignation, is still obscure, and well-informed Turks predict another Cabinet crisis in the near future. In a recent letter I hinted at the possibility of divergences of opinion arising out of the application of the Government's programme. These divergences have led to the resignation of Hilmi, whose colleagues, with certain exceptions, accused him of having a foot in the Committee camp. After the resignation of Zia Pasha, Damad Sherif became Minister of the Interior. He followed Zia's example in demanding a free hand in the appointment or dismissal of valis, mutessarifs, and other important provincial officials. This the Grand Vizier refused to give him, mainly in consequence of Hilmi's opposition to any such changes as Sherif had suggested. Hilmi then gave an interview, not to any official organ, but to the *Jeune Turc*, in which he declared that the Cabinet intended to make no changes of the nature suggested, and had only accepted the resignation of certain valis who had absolutely refused to obey orders. The ex-Opposition, now Government, Press next took up the cudgels for Damad Sherif, who had in the meantime resigned, and remarked with great unanimity that it would be folly to leave the conduct of the next elections in the hands of the Committee officials, who had "gerrymandered" the last. The fact that these officials had for the most part taken the oath to forswear politics counted for little with the Government organs, nor is this surprising in a country where mutual confidence between politicians or statesmen is excessively rare, and where, as the proverb runs, "official promises are written upon ice." The distrust of the members of the Union and Liberal Party for Hilmi was also based upon the fact that their preparations for the next elections were still incomplete. For a time the Minister of Justice paid no attention to these attacks or to the remonstrances of some of his colleagues. Then "something happened" and he incontinently resigned. What this something was nobody seems to know, but there are those who declare that all the officers of the army have not yet taken the oath to abstain from political manifestations.

Whatever the cause of his resignation, it seems fairly clear that it marked an evolution in the character of the Government, which, from a neutral Ministry placed above mere party politics, is apparently becoming a party Cabinet. I write "becoming," since the transformation is not complete and may be indefinitely retarded —owing to the influence of Mahmud Mukhtar, who was ready to accept the portfolio of War in the last days of Said Pasha's Cabinet is believed to favour a conciliatory policy, and to have impressed his views upon his father, the Ghazi. But, however this may be, Hilmi's resignation was followed by the appointment to the vacant Ministry of the Interior of a distinctly partisan Minister in the shape of Ali Danish Bey, ex-Vali of Salonika, an Albanian of noble family, who is one of the Reform Commissioners in Albania. Halim Bey, a fairly neutral Senator, was made Minister of Justice, and the ex-Vali of Aleppo and ex-editor of the defunct *Shehrah*, one of the fiercest anti-Committee organs that was ever suppressed by the Court Martial, was appointed Vali of Smyrna.

To sum up the situation, the policy of neutrality is clearly breaking down. Hilmi has been discarded because he was trusted by the C.U.P. as a friend in the hostile camp. As for the oaths sworn by officials and others, they will only be kept if the Government is strong enough to see that they shall be kept. The Committee's latest manifesto to its provincial branches threatens "a reckoning for all that has been done," and under these circumstances the members of the Cabinet who are under the ban of Salonika can hardly be blamed for refusing to put their trust in Committee valis and mutessarifs. They naturally wish to remain in office, and some of them fear for their necks if ever the extremists return to power.

Albania.

The Albanian adventure has been the chief internal event of last week. Hassan of Prishtina and the other moderate chiefs had practically agreed to the Government's proposals, when Isa Boletin, Riza Bey, and many other lesser chiefs, with that notable outlaw, Bairam Tsur, marched south on Uskub. They entered the town, let the prisoners out of gaol, received the thanks of the Bulgarians, occupied most of the public buildings, and sent advanced guards to Köprülü and even to Salonika. The panic was great in all these towns, and the members of the Committee began to fear the Government had decided to let the Albanian extremists have their way. Had Bairam Tsur, Boletin, and the rest got into Salonika the Committee leaders' lives would have been worth little. Fortunately the authorities showed neither fear nor favour, and by a judicious combination of threats and coaxing succeeded in sending the "Highland Host" back to the North. The terms of the Albanians were for the most part accepted, the Albanian language made obligatory in the schools, exiles amnestied, indemnities promised for burnt houses, and other concessions, of which you will have read by now, granted, and Ibrahim Pasha on Monday night wired to the Palace that all was over—the Albanian insurrection had ceased.

Montenegro.

Meanwhile a series of combats had been taking place on the Montenegrin frontier. The evidence as to their origin is conflicting. The Turks assert that Montenegrin troops crossed the border, besieged Berana and provoked a rising among the Serbs of the south-west portion of the Sandjak of Novi-Bazar. The Montenegrins retort that not a single soldier crossed into Turkey after the Moikovatz affair, that their own mobilisation was intended as a precautionary measure, and that Turks and Moslem Albanians massacred many of the Berana Serbs. They also pressed the Turks to settle the boundary dispute which has caused much friction since 1908. To the unbiassed observer it would seem strange that the Berana Serbs, a community which was distinctly less troubled by Turks and Albanians than the Serbs of Old Servia, should have suddenly risen in revolt, and still stranger that they should have been well enough armed to inflict considerable losses on the Turks and to capture a number of blockhouses. One cannot help suspecting that these unlucky people, who will doubtless be severely chastised for their rebellion, have been pawns in one of King Nikita's ingenious combinations.

THE EARTHQUAKE IN TURKEY.

In a letter sent to the Press, Sir John Knill, the Acting Lord Mayor, writes:—"In the absence, but with the cordial approval, of the Lord Mayor, I have opened a relief fund at the Mansion House for the sufferers by the terrible earthquake which occurred in Turkey on the 9th instant. That calamity is one of the most destructive of its kind on record—as bad as or worse even than that at Messina three years ago—but people in England have, so far, taken only slight notice of it owing, no doubt, to the political occurrences in the Levant, the importance of which has overshadowed the widespread destruction and the untold horrors of the disaster."

After briefly recounting some of the details of the disaster, in which it is computed that 3,000 people perished, and over 40,000 were rendered homeless—some 6,000 of whom are injured—the letter concludes:—"'The appeal,' says a correspondent at Constantinople, 'deserves a sympathetic response from British charity. The condition of the survivors of the disaster is pitiable in the extreme. At a moderate computation, 40,000 villagers are homeless, half-clad, and living on water-melons, eked out by such rations as the Government is able to send to the more accessible villages. Practically all have lost all their effects and their plight must grow more serious as winter approaches.' The Turkish Government, situated as it is at present, can do little, if anything. Foreign nations have come to the rescue, the Emperor Francis Joseph and the German Emperor having headed the contributions in their respective countries with large donations. British prestige in Turkey is great. It should not be allowed to be questioned on this occasion of dire need. I feel certain that this appeal will elicit the practical sympathy and generous aid of the people of this country."

We most earnestly commend this appeal to the sympathetic consideration of our readers. It is most strongly supported by the Archbishop of Canterbury; and though the British public has many calls upon its purse at the present moment, we trust that it will mark—and act upon—what Sir John Knill writes. Donations may be sent to the Mansion House or to the Bank of England.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 21.

The Conspiracy Verdict.

Considerable satisfaction is everywhere expressed at the sentence passed on the three conspirators. The Nationalist organ, *El Alam*, made a futile and feeble protest, but the rest of the Press is unanimous in its approval of the verdict. It is admitted that the sentence is an exceedingly severe one, but it is felt that the circumstances demanded drastic measures, and that the infliction of the full penalty ought to have, as no doubt the Court intended their verdict to have, a strong salutary and deterrent effect on those misguided and weak-brained youths whom a mild sentence would merely have encouraged to emulate the example of these three conspirators. I am afraid, however, that it is idle to hope that the result of this trial will definitely stop all sedition and conspiracy. Whilst there is no shadow of doubt that the irresponsible and inflammatory vapourings of the Nationalist Press have largely conduced to the present state of mind of Young Egypt, it is also fairly certain that youths like Ibrahim El Wardani, Imam Wakid, Mahmoud Taher El Arabi, and Mohammed Abdel Salam have been but the tools of other stronger minds, who, without actually devising the seditious and criminal acts complained of, have contrived to bring them about by insinuation and incitant phraseology, and by exerting their influence in soil which they recognise is eminently suited for the fructification of unhealthy theories and suggestions. Not until the law succeeds in laying its hands on these men, who are too clever or have not the courage to themselves carry into effect their own evil desires, will it be possible to clear the political horizon of its disturbing elements. The latter, it is true, are confined to a very circumscribed circle, but it is the difficulty of obtaining any conclusive proofs of complicity in any particular illegal act that renders the task of the authorities so hard. All the same, in view of the firm attitude of the Government, the uncertainty of knowing exactly what information is in its hands, and the absence from Egypt of Mohammed Bey Farid and his firebrand henchman, Sheikh Abdel Aziz Shawish, there is every reason for us to hope and believe that a lull will set in in so far as the activities of the seditious element are concerned.

It is understood that the lawyers for the defence are preparing an appeal to the Cour de Cassation, though what benefit they really expect to obtain from such a step it is difficult to understand. Appeals to that court can only lie on a point of procedure or law. The case was dealt with before the Assize Court in a most regular and careful manner, and as the Cour de Cassation has an even stronger composition than the one which tried this case, there can be little question as to the result of such an appeal. In the meantime Imam Wakid has been removed to Tourah prison, and his two accomplices have been placed in the Manchia prison in Cairo. On Saturday the Procureur-General authorised the release on bail of Hassan Kamel. It will be recollected that he was arrested during the inquiry, and that the case against him was held over pending the arrival of further evidence from Italy, the witness, M. Mosseri, having left Egypt before his testimony could be secured. The Italian Courts have so far not succeeded in obtaining this evidence, and the Procureur-Général did not consider it expedient to maintain Hassan Kamel in prison for an indefinite period, especially as this evidence is the sole conclusive proof against him. He is being kept under observation, and as soon as the reply is received from Italy the case against him can be taken up once more.

Important Speeches by the Khedive.

Both at the Ramadan reception and at that at which he received the congratulatory addresses of the provincial delegations, H.H. the Khedive made important speeches. The conspiracy and the indirect causes which led up to it, and have had such an unfortunate effect on the present generation, were evidently in his mind, and he took for his theme the opposition set up by certain sections of the population and the education of the youth of Egypt. His Highness administered a stern reprimand to those who posed as loyal subjects, and at the same time helped to spread evil influences throughout the nation, and he strongly deprecated the habit, which was steadily growing, of breaking into criticism without discussion of the questions at issue or without any foresight. Turning to the question of education, the Khedive said he considered it important that the present generation should be sent to study in Europe, so that it might acquire knowledge which would be of use to Egypt. But he expressed his deep regret that parents did not take more interest in their children's education, and once they had sent their sons off to Europe, did not appear to care how or what they studied or in what manner they occupied their spare time. His Highness pointed out that parents had a great responsibility *vis-à-vis* their country, and that their present attitude was calculated to do harm to Egypt. It is to be hoped that these important utterances of the Khedive will be taken to heart, for there is no doubt that they are well-founded. His Highness had several opportunities this summer of watching the various students who are studying in England, France, and Switzerland, and of judging of their progress and their tendencies. It is evident, therefore, that he ascertained facts which aroused his keen disapproval and his anxiety, and which prompted him to give expression to his feelings at the earliest opportunity, which presented itself in a unique manner last week, seeing that his audiences were so fully representative of all classes.

The Torpedo Station at Alexandria.

The statement made by the *Daily Telegraph*, that the Egyptian Government would be called upon to defray the expenses incidental to the creation and maintenance of the torpedo station at Alexandria, has not passed without comment out here. The Nationalist Press, of course, protests against this arrangement, which, it says, is highly injurious to the country, and the *Ahram*, a Syrian journal, expresses the hope that Lord Kitchener, who, according to it, has the final word in such matters, will have pity on Egypt's finances, and will not increase her burden unnecessarily. In the foreign Press, mention is made of the news, published by the *Telegraph* and *L'Echo de Paris*, but no adverse criticism has been indulged in. Of course, we must still await official confirmation, but the accuracy of the statement in principle appears to a great many to be beyond dispute, especially as such a financial arrangement was anticipated from the outset. It will be interesting to know whether Egypt will be called upon to bear the entire cost or only a part of the expense.

After all, one cannot really say that it is unfair to make Egypt participate wholly or partially in the initial cost and the annual expense for maintenance. This country will most certainly benefit from the presence of even a torpedo flotilla in its waters. Whilst it may, of course, be true that Great Britain is availing herself of her position in Egypt to tighten the links connecting up the outposts of her Empire, it is equally true that it is Egypt's peculiar position in the new situation in the Mediterranean that has provoked, to a certain extent, the establishment of a naval base in her waters. This country's rights will be adequately safeguarded, her trade will be protected—and incidents of recent date show how much it requires protection—and the danger of invasion by land or by sea, which has been one of the points of discussion in the recent Mediterranean controversy, will be minimised. I do not say "eliminated," for only one factor can effect that—a permanent and substantial increase in the British garrison. It must be fairly patent to anyone that Egypt nowadays requires to protect herself or seek protection, and it is certainly cheaper for her to contribute an annuity in return for protection than to construct a fleet of her own, which is the sole alternative to the acceptance of such protection that lies open to her. No amount of international treaties will safeguard her rights when the day of reckoning comes. But it is just as difficult to persuade certain classes of the population of the justice of the arrangement which is said to have been made as it is to convince them that the annual contribution to the Sudan Budget and the expenditure of Egyptian capital on public works

Digitized by Google

in that territory are but a fair return for the control of the waters of the Upper Nile and the peace on her borders which the Occupation of the Sudan assures to her.

The British Adviserships.

Considerable amusement has been caused out here by the statement made by a Home contemporary that all the Adviserships were to be abolished with the exception of those attached to the Ministries of War and Foreign Affairs. For some time there has been much talk of the possible disappearance of these at one time most necessary figures in the Egyptian Administration; and in certain quarters it has been asserted that Lord Kitchener had expressed his disapproval of the Adviserships, and his intention to replace these officials by British Under Secretaries with wider powers than the present incumbents of these posts possess. Whilst there is nothing to prove that such an administrative reform is imminent, it is, of course, quite possible that it is under consideration; the accuracy of the information of your contemporary is, however, somewhat discounted by the fact that the Ministries of War and Foreign Affairs are the only ones to which a British Adviser has never been attached!

The Alleged Violation of Neutrality.

It would appear that somewhat undue importance has been attached in Europe to what is known as the "Imperatul Trajan" incident. No official statement has been made, but the Agent of the Royal Roumanian Line, to which that vessel belonged, stated in an interview that the captain had lodged no complaint and had merely reported the fact that his steamer had been stopped and searched by an Italian cruiser. From information that has come to hand, it seems that the "Imperatul Trajan" was ordered to stop when she was seven miles, and not, as stated, four miles from Alexandria.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, August 25.

Count Berchtold's Visit.

The much-discussed visit of the Austro-Hungarian Minister of Foreign Affairs to the King and Queen has taken place. Count Berchtold, with the Countess and the Councillor of Legation, Count Hoyos, arrived at Sinaia station yesterday morning. The visitors were met by one of the King's adjutants, and conducted in State to Castle Pelesh, where they were received by the King and Queen. In the evening an official banquet was given, to which the Foreign Ministers, Ministers of State, and other guests, to the number of forty, were invited. This was followed by a musical evening, invitations to the various Secretaries of Missions, etc., being issued. To-day Mr. Titus Maioresco, the Prime Minister, gave a banquet at the Palace Hotel in honour of his Austrian colleague, and at 8 p.m. the guests left for Vienna.

Press Opinions.

Undoubtedly the visit has great significance in Near Eastern politics, and the journals of both countries devote much space to discussion and surmise. The special correspondent of the Bucharest *Universal* says:—

This visit is a fresh proof of the strong political intimacy between the two countries which is the result of the friendship of the two Courts for each other, as well as the conditions of life in both States.

For years there has been talk of a military convention concluded at the time of the Emperor Francis Joseph's visit to Bucharest. This has been denied times without number, and there is no need for any such Convention where such a strong natural friendship exists. The political needs of the two countries are similar: Austria-Hungary wishes for the maintenance of the *status quo* in Turkey, and Roumania has every interest in the integrity of Turkish territory in Europe.

The *Neue Freie Presse* says:—

Count Berchtold will see on his journey a flourishing country, whose wonderful progress commenced only when King Carol (whose friendship for Austria is well known) ascended the throne. . . Count Berchtold is the first Minister of Foreign Affairs who has by his journey cemented in such a way the friendship of Austria for Roumania and introduced into the latter's political ceremonials that of alliance. The visit is of double importance when it is remembered that Count Berchtold only lately visited the German capital.

The "Convention" Rumour.

That the visit is not regarded favourably in all quarters is shown by a sensational article published on the first mention of the subject by the *Odessky Wiedomosti*, which, under the heading "Secret Austro-Roumanian Convention," says:—

A great surprise awaits us. Russia must take the most energetic measures to defeat the danger which threatens us in the secret convention existing between the two States. The two countries concerned have signed a Convention threatening most seriously the vital interests of Russia. This convention was formed at the recent visit of the Roumanian Prime Minister and Minister for Foreign Affairs to Vienna, following the visit of the Chief of the Austrian General Staff to Sinaia. In close connection with the above is the visit of the Austrian Minister of Foreign Affairs to Sinaia.

It is absolutely certain that Austria-Hungary has taken up a position hostile to Russia. On the strength of the above-mentioned Convention, Austria has assured Roumania of her eventually regaining Bessarabia. Roumania will fortify Constantza, increasing her fleet so that she can face with confidence the Russian Black Sea Fleet. When this is accomplished Austria will seize on Russian Poland, whilst Roumania occupies Bessarabia.

As to this much-talked-of Convention, it is difficult to say anything certain. The answers of "those who know" in this country, when questioned on the subject, are delightfully and diplomatically vague. In any case, whatever understanding, formal or informal, may exist between the two countries, it will only be for the maintenance of peace and good of Europe.

Count Berchtold had long interviews, "under the four eyes," with His Majesty and Mr. Maioresco, but as to what formed the subject of discussion and what was resolved it is impossible to say. This will only be known in time, and in what it brings forth.

The British Minister.

Sir George Barclay, K.C.M.G., H.B.M.'s Minister to the Roumanian Court, will arrive at Sinaia on Monday, the 26th inst.

Prince Yussuf Izzedin.

On the 22nd Prince Izzedin, the heir to the Turkish throne, arrived at Constanza, where he took the Orient express. He was received there by Sefa Bey, the Turkish Minister to Roumania, who accompanied him to Bucharest. H.R.H. was travelling in strict incognito.

The "Imperatul Trajan" Incident.

Soon after leaving the port of Alexandria a few days ago the Roumanian State passenger steamer "Imperatul Trajan" was stopped by the Italian man-o'-war, the "Ducci del Abruzzi." Her papers were gone through, her cargo was overhauled, and three Turkish subjects found among the passengers were made prisoners, and carried on board the Italian vessel. The Roumanian Government and Press are very indignant at this high-handed act on the part of the Italians, this being the third time that steamers flying the Roumanian tricolour have been held up. One newspaper calls for energetic diplomatic intervention, quoting a similar case with a French steamer, where the persons seized were quickly liberated when representations were made on the subject.

"Liga Culturale" Fete.

The "Liga Culturale" is arranging another great *fête*, which, it is hoped, will eclipse that of last year. These festivities are to take place from September 8 to 12. As was the case last year, a special feature is to be made of exhibitions of national dress, and deputations from Transylvania, the Bucovina, and even from far Macedonia, are expected to take part. Those lucky enough to be in the Roumanian capital during the *fête* will see such a collection of curious and elaborate costumes as it will be perhaps impossible to find elsewhere for a long time to come.

EXPORT OF ANTIQUITIES FROM CYPRUS.

The *Cyprus Gazette* of July 19 contains certain regulations, dated June 27, 1912, which have been published for general information regarding the exportation of antiquities from Cyprus. It is notified in these regulations that the present prohibition of all exportation of antiquities is withdrawn. Any person wishing to export antiquities from the island must apply to the museum keeper for permission to do so and submit the said antiquities for inspection. All antiquities permitted to be exported must be put in a box in the presence of the keeper and sealed by him with the Cyprus Museum seal. No antiquities, unless so packed and sealed up, will be permitted to be exported.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, August 22.

The Army Manœuvres.

The minor manœuvres of the Bulgarian Army will begin this year at the end of the month, and will continue for ten days. According to the programme already elaborated every division will undertake minor manœuvres in the boundaries of its territory. The general manœuvres will come afterwards, and will take place in the North-Eastern part of Bulgaria, having as a centre the fortress of Shumla. They promise to be very interesting, and several new features will be introduced in the form of the most recent appliances for besieging, attacking, and defending a fortress, such as aviation, heavy long-range artillery, heavy howitzers, the employment of bombs with the new explosives, the laying of Decauville railway lines, and the use of heavy motor-cars for the transport of ammunition, etc. The following troops will be engaged in the general manœuvres:—(1) Infantry: The 4th Infantry Division of Preslav, composed of the 7th, 8th, 19th, and 31st regiments, and the 5th Infantry Division of the Danube, composed of the 2nd, 5th, 18th, and 20th regiments. Each division will receive only one reserve brigade, composed of two regiments. All the regiments, active or reserve, will be brought to four battalions, and the battalion to four companies. Therefore, there will take part in the manœuvres forty-eight battalions, or 192 infantry companies (of 250 bayonets each company).

(2) Cavalry: Two brigades of cavalry, composed of the 2nd, 8th, 9th, and 10th regiments. These regiments will have an effective of four squadrons, each squadron of 150 sabres, making in all sixteen squadrons with 2,400 sabres.

(3) Artillery: Two regiments of field artillery (Nos. 1 and 5), and one regiment of mountain artillery (No. 1), each regiment consisting of three sections, and each section of three batteries. To the field artillery will be added two independent sections of field howitzers, 120 m.m., composed as above; three battalions of siege artillery, those of Vidin, Shumla, and Sofia. Each battalion will be composed of four companies, representing a section of field howitzers, 150 m.m., a section of heavy howitzers, 240 m.m., a section of long-range heavy artillery, 120 m.m., and a section of long-range heavy artillery, 150 m.m. To the siege artillery will be added a section of Grusan's movable steel towers, 60 m.m. quick-firer.

(4) Engineers: The 1st, 2nd, and 3rd engineer battalions, each composed of four companies, the company being 300 strong; the 1st railway battalion; the 1st telegraph battalion; one aviation section; and two automobilist sections.

Altogether nearly 60,000 men will take part in the manœuvres on both sides. The reservists have been already warned to be ready to join the colours for three weeks. For the active regiments, men who served during the years 1903, 1904, 1905, and 1906 will be called up; and for the reserve brigades, those who served during the years 1894, 1895, 1896, 1897. But the day for joining the colours has not been fixed yet.

The New Class of Officers.

One hundred and sixty-seven young officers from the Military School at Sofia passed into the army this year. It is the thirty-second graduating class, of 1912, which leaves the *alma mater* of the Bulgarian Army. It has always been the custom for the King to congratulate the young men personally upon their first promotion in the army, either after the manœuvres or on the eve of the New Year at the Military Club in Sofia. But this year His Majesty made an exception, and his congratulations arrived as a surprise to them while the young officers were on the parade ground in Sofia on August 15, Anniversary Day. After his return from Tirnova, His Majesty received them yesterday at his palace, and delivered to them a patriotic speech. Then, after shaking hands with each one, he inquired concerning the past record of each of them.

NOTES FROM SERVIA.

(From Our Own Correspondent.)

Belgrade, August 25.

The Reported Massacres.

The Servian Government received yesterday afternoon a telegram from Yavor, in the South of Servia, not far from Sienitza, a Turkish town ten kilometres distant from the frontier, stating that the Moslem population had taken forcible possession of rifles and ammunition stored in the military magazine at Sienitza; that great massacres of Servians had taken place in that town; and that the Prefect of Berane, who happened to be at Sienitza, had been assassinated because it was known that he was well disposed towards Servians and other Christian nationalities. The telegram further stated that the whole Servian population of that town was panic-stricken; that all who could manage to do so were fleeing for their lives; that numerous refugees had arrived at Yavor; and that twenty-seven peasants, who had fled from Sienitza and arrived at Yavor, were demanding to be supplied with weapons for their own defence and the defence of Servians left at Sienitza. The message adds that the state of affairs is worse at Belo Polie and at Novi Bazar, the Turks being furious against the Montenegrins, and wishing to take revenge on the Servian inhabitants.

Servian Opinion.

Meetings of protest are to take place in Servia, and the Servian Press generally is very bellicose, especially the *Stampa* and the *Politika*. The *Stampa* remarks that this is the way Austria seeks to carry out her projects, which, according to the proposals of Count Berchtold, should be favourable to Servians and other Balkan Christian nationalities. The *Stampa* sees nothing looming in the distance but extermination of all Servians in Old Servia and Macedonia. The *Politika* says that after the terrible doings at Kotchana, where forty Bulgarians were killed and several hundred wounded, after the onslaught at Berane, where the Montenegrins suffered terribly, comes the massacre of Servians at Sienitza, of which we do not yet know the full particulars.

Turkey is weak, says the *Politika*, and cannot put down anarchy; and what Servia wants to do is not to make war against Turkey, but to march to the aid of suffering brothers in Old Servia. "We are prepared," says the *Politika*, "never so well prepared, with men and with war material."

King Peter, who returned to Belgrade yesterday afternoon from his visit to the spa at Arangelovatz, was at once informed of the telegram received, and has desired that any further news arriving should be immediately conveyed to him.

BEDOUIN IN BAGHDAD.

Writing under date of July 31, our correspondent in Baghdad says:—"We celebrated the anniversary of the granting of the Constitution here on the 23rd inst., and all the Arab sheikhs in the Baghdad district were invited to be present, each with a certain number of his followers. They arrived to the number of about 3,000 horsemen, all fully armed, and were quartered outside the town, close to the barracks. The authorities were careful not to allow any large number of them to go through the town at the same time, and as soon as the ceremony was over the Sons of the Desert were granted leave to return to their own homes—or haunts. Their presence produced a mild excitement in the place."

RUSSIA IN PERSIA.

(From Our Own Correspondent.)

Odessa, August 25.

The *St. Petersburger Herold* is of opinion that the "storm centre" in the Balkans, disquieting as it is, is really less threatening than the acute situation in Persia. At any moment events may ensue that not only in form, but in fact, will bring to an end the integrity and independence of the Iranian Empire. The fate of Persia trembles in the balance, and yet Europe indifferently regards the position of affairs as if it were a passing phase of internal troubles, whereas it is, as a matter of fact, a question of extreme international importance. Persia is *in extremis*, and, with the impending national *débâcle*, the Anglo-Russian agreement will come to an abrupt end and not improbably the Triple Entente will collapse; and this will involve the political eclipse of Sir Edward Grey. The foreign policy of the present British Cabinet, which is more strenuously supported by the Opposition than by the Liberal Party, is faced with an ordeal through which it cannot possibly come unscathed. The nominal ruler of Persia is a mere helpless boy. The Regent, to whom the administrative government was entrusted, has, in fear of assassination, fled to Europe with the expressed intention of never returning. There is, it is true, still a Persian Cabinet, but it is absolutely incapable of any responsible action. Nominally, every Cabinet decision must have the sanction of the Mejliss, but there is now no Mejliss, and Russia will not permit the summoning of a new Parliament, whose chief object it would be to undermine and destroy this country's all-powerful influence in Persia. Mohammed Ali, the ex-Shah, is in unrestrained freedom, and it is not a far cry from Odessa to the Persian frontier should the Royal exile make another dash for the recovery of his lost throne. His eccentric brother, Salar-ed-Dowleh, has been beaten but not subdued, and is now intriguing in Luristan for another raid on Teheran. The richest magnate in Persia, the Sipahdar, is in collusion with the Bakhtiaris and aims at the vacant post of Regent. There is no money in the Persian Exchequer; the Treasury is empty, and only a mere tithe of the taxes are being collected. In the outlying provinces chaos reigns supreme. The Swedish gendarmerie is helpless to perform the task allotted to it. The southern tribes are at war with each other, but ever ready to combine against the foreigner. The supreme factor in modern Persia is, and must remain, Russia, who is already in possession of Northern Persia, and she is there to stay. The proclamation of the annexation of Azerbaijan is merely a question of time, and that policy will be consummated with or without the consent of Great Britain; therein lies the dilemma of Sir Edward Grey. It is, too, a possibility of the near future that Russia will replace her marionette, the ex-Shah Mohammed Ali, on the Persian throne. In February last Sir Edward Grey said that England would under no circumstances tolerate the restoration of the ex-Shah. What course will he take if Mohammed Ali's restoration be assisted by Russia? For the rest, England will probably acquiesce in Russia's incorporation of Northern Persia on condition that this country pledge itself not to interfere in Southern Persia. That will be the beginning of the end of Persia, and the Anglo-Russian agreement will thereafter become a dead letter. What, then, will be the fate of the Triple Entente? Meanwhile Sir Edward Grey holds by the agreement with Russia, but manifests a supine inactivity in Southern Persia, contenting himself with a small sphere of action instead of taking possession of the roads to Shiraz and Ispahan. Sooner or later England will be constrained to intervene in Southern Persia, however disagreeable the task may for the moment appear to her and in spite of her fear of the effect that the despatch of a large number of Indian troops into Persia may have upon her Mohammedan population. That will mean, incidentally, the revolt of the Radical wing of the British Ministry. The Anglo-Russian agreement with regard to Persia has committed England to eventual and complicated responsibilities in the Middle East which were beyond the vision of Sir Edward Grey when the covenant was made in 1908.

THE FESTIVAL OF THE NILE.

(By Our Cairo Correspondent.)

Cairo, August 20.

Time was when Egypt was the land of *fantasia*, of pomp, and of superstitious ceremonies. To-day the march of civilisation has swept almost all that away, and one finds in most cases that whatever *fantasia* or ceremonies are still in vogue exist solely because they are connected with the Moslem religion—for example, the Ceremony of the Holy Carpet, the Mouled-el-Nebi, etc. Practically speaking, beyond the religious ceremonies nothing remains of Egypt's former superstitions and pomp except the Khalig ceremony, which took place yesterday.

The Khalig ceremony, or "cutting the Khalig," as it is called, is of very ancient origin, and owes its survival to the fact that it is intimately connected with the Nile —that majestic old river on which the welfare of Egypt has ever depended in such a marked manner. It is what one might call the Festival of the Nile, and in idea it is akin to the Blessing of the Sea which takes place in parts of France, and to the mediæval custom that was in vogue in Venice, when the Doge annually "married" the town to the sea by casting a jewelled ring into the waves.

The cutting of the Khalig marks the completion of the Nile flood according to the ancient mode of reckoning. It is nowadays somewhat shorn of its brilliancy, but it still affords a unique occasion for observing the whole-hearted and childishly keen manner in which the fellaheen enjoy themselves, and the universality of the rejoicing. As has ever been its wont on this occasion, Cairo was *en fête* yesterday. The Government offices were all closed; gay bunting was displayed all over the town and along the Nile banks; crackers were fired at all odd moments of the day; and thousands of fellaheen poured in from the provinces in order to participate in the popular jollifications.

The site of the ceremony is at Foum-el-Khalig, in Old Cairo, at a spit just below the ruins of Saladin's fine aqueduct, which even in modern times was used to supply water to certain parts of the town. El Khalig was the canal into which the water was turned for the irrigation of the country as soon as the river had attained a certain height; and the ceremony of cutting the dam that was constructed across its head assumed great importance, because it was an intimation to the tax-gatherers that they could start collecting the taxes, there existing an ancient law which forbade the collection of the land-tax until the Nile had reached the sixteenth cubit on the Nilometer. Many were the tricks that in olden times were played on the natives in the more distant parts of the country in order to persuade them that the ceremony had taken place, and the notable to whom the land-tax in the district had been farmed had invariably collected the instalment from the taxpayers by the time the tax really became due and could be legally collected.

In olden times a very cruel custom was observed. Tradition had it that the Nile would not rise unless a virgin were sacrificed to it. The more beautiful the maiden, the higher would the flood be. So search was always made for the prettiest virgin—her family was supposed to receive untold blessings from the fact that one of its members had been chosen—and when the "sudd" had been cut through, the hapless maiden was cast into the incoming waters and was drowned before the eyes of the rejoicing populace, many of whom always perished in the fight that ensued for the honour of touching the dead body. To-day the canal no longer exists—it has been filled in for the laying of the Old Cairo and Giza tramlines—and a virgin is no longer sacrificed to appease the superstitious and barbarous instincts of the people. Even the casting into the water of a wooden puppet in the form of a girl is now done away with; but notwithstanding, the spirit of the old ceremony still remains, and the occasion is celebrated with unabated enthusiasm.

The proceedings started yesterday afternoon at three o'clock, when amid the booming of the guns from the Citadel, the "Akaba," a relic of the first Sudan campaign, left her moorings at Boulac Arsenal, with a

Digitized by Google

crowd of official guests on board, and proceeded up the river, followed by a procession of tugs, steamers, gyassahs, etc. Her progress was of the nature of a triumphal one; for the enthusiasm of the natives who lined the river banks was very great. In time the "Akaba" entered the arm of the river behind Rodah Island, and anchored with the rest of the fleet off the Foum-el-Khalig, amid much shouting, firing of crackers and booming of cannon. Over two hundred salutes were fired by the guns, and since the average native revels in a noise, this promiscuous explosion of gunpowder added greatly to the general excitement. On shore booths had been set up for the entertainment of the common plebs, and a series of Selamlik tents had been erected for the reception of the upper ten and the notables of various degrees. After the "Akaba" had reached her moorings, matters quietened down a bit, but as soon as dusk had set in, and the evening meal had been partaken of, the guests began to arrive, and took up their positions in their respective tents with that unerring instinct for precedence that characterises the native.

Punctually at 9.30 o'clock, Ismail Pasha Sidki, Under Secretary of State for the Interior, who was to represent the Khedive, drove up with his escort and took his seat in the upper tent. Presentations followed, the traditional cup of coffee and sweetmeats were duly partaken of, extracts from the Koran were read, addresses couched in typical Oriental language were delivered by various notables, and then the Grand Cadi proceeded to read out the quaint "Akt," which he forthwith signed, affirming the completion of the Nile flood and giving permission for the collection of the land-tax. The reading of this document was the signal for general acclamation. Bands struck up on all sides, more guns were fired, and magnificent set-pieces of fireworks, provided at Government expense, were ignited. The spectacle was picturesque in the extreme. Bengal lights were lit on both banks, and the delight of the populace, who swarmed up the trees or the tapering masts of the vessels in the river, was a most enjoyable sight. The revelries were kept up throughout the night, the fact that this is the month of Ramadan affording an excuse for making an all-night sitting.

In connection with the Nile flood, some quaint superstitions and customs are practised by the natives. Thus there is a fixed idea that the rise of the river is started by a drop from heaven—originally a tear from the goddess "Isis"—and on the night of the drop, "Leleteel-Nukta," as it is called, it is the custom for the natives to remain in the open in the hopes of seeing the drop; for the superstition has it that he, or she, who first sees it will become happy and rich. Amongst the Copts, it was the habit of the womenfolk—and it is still practised in certain parts—to prepare special dishes and cast them into the river on the night of the drop, and many of them at the same time place pieces of dough on the roof, one for each member of the household, with his or her particular mark on it. If next morning any piece has cracked, the owner will die before the year is out. If on the other hand any piece has risen, the owner will have very great luck, like the person who happens to witness the descent of the drop.

About the end of June the Nile criers—Munadi-en-Nil—start on their rounds. They announce to the people the progress of the flood from day to day, and are accompanied by little boys, with whom they carry on a loud conversation in quaint phraseology. This conversation consists in the main of compliments to the inmates of the house outside which it takes place, and of an invocation to Allah to shower blessings on them. This proceeding goes on for about six or seven weeks, and at length the Munadi appear bearing little flags. This conveys the intimation that the "Wefa-en-Nil" (completion of the Nile) has arrived, and the criers then proceed to collect their backsheesh from the villages included in their rounds. The office of Munadi is a very lucrative one, as the villagers keep the criers supplied with quantities of food all the time they are performing their daily rounds, and it is usually handed on from father to son. The day after the "Wefa-en-Nil," the cutting of the Khalig takes place, and thus concludes the series of superstitions connected with the Nile flood.

LETTERS TO THE EDITOR.

THE CYPRUS DEPUTATION.

To the Editor of THE NEAR EAST.

Sir,—There is no doubt that your criticism of the vagaries of Cypriot delegates is justified by the facts, and that their really sound case for inquiry has been damaged by the intemperate and fallacious methods employed by the dissentient members of the Legislative Council.

No doubt the British Commissioner at Constantinople in 1878 was deceived by fraudulent accounts, and the basis of the excessive tribute of £92,000 can easily be shown to rest upon false figures. But this could all have been accomplished without insulting the King's representative in the island or beating the "pan-Hellenic" drum beneath the windows of the Turkish electors, who are not clamouring to be robbed and dragooned by adventurers from Athens.

It is, however, a practical remedy which I desire to propound. Cyprus can easily be ceded to Egypt by negotiation with the Porte; all her economical troubles would disappear before the magic wand of Lord Kitchener. The skill and ability of the great Field-Marshal would settle the tribute difficulty, improve the island administration, and restore its prosperity. The Khedive would be proud of his colony, Cairene and Alexandria society would migrate in summer to the sanatoria of Troödos, an accelerated boat service would benefit commerce, and the whole population rejoice at a happy solution of thirty-four years' friction.—Yours truly,

R. G. CAVENDISH BENTINCK.

Wormilow Manor, Surrey, August 24.

PERSIA'S PLIGHT.

To the Editor of THE NEAR EAST.

Sir,—There is always a certain satisfaction in being able to say "I told you so." When the subject of one's consideration is of a grievous and painful nature, and the "warning voice" has been consistently and perversely ignored, the resulting satisfaction must of necessity be both grim and stern.

The article "Persia's Plight" and the extract from Mr. Lovat Fraser's communication to the *Daily Mail*, which appear in your issue of yesterday, as also the "remarkable dispatch" from the Teheran correspondent of the *Times* of the 14th inst., are but reiterations, in different words, of what the writer and others have been trying to instil into the minds of the British public for some considerable time, with more or less success.

Since the early days of 1909 we, who have lived our lives in Persia (twenty, thirty, and forty years), have seen and felt what you, Sir, and other journals are only now, and that somewhat apologetically, prepared to admit, *i.e.*, the end of an independent Persia, grievous though the thought is to us.

The despotism of the late Nauser-ud-Deen Shah, of which you make mention, was indeed a recognised and guiding power. His *methods* of government may not have been as *our* methods, but the *results* were the same: his subjects (who are not as we are) were *made to be law-abiding* and to "pay the piper," just as *we* are coerced and made to pay for "Ah Sin" legislation in this dear old "land of freedom" to-day. Till his death the country was, at any rate, in a state of admirable order and prosperity, but now—*voilà!* Chaos and disruption, with their concomitants, on every hand, and no hope of immediate betterment. He had capable Ministers and Governors, who knew their business and fulfilled their functions with strict regard to the *requirements and habits of the country*; but as you, Sir, truly observe, "the change has been from the rule of one to the rule of none," which has "resolved itself into the licensing of many despots," each despot seeking only to gain his own ends by any means—except fair ones. Previous statements that Persia lacked "administrative capacity" have been pooh-poohed, yet, unfortunately, none of the critics of these statements have been able to produce, or point to, any living testimony to the contrary. Nor are they able to do so now. All the men of calibre and capacity have died, or have been assassinated, with the appalling and ruinous results to the country which we see to-day.

The Teheran Government (*sic*) is composed *only* of Persians, after all. It cannot be expected that they will, collectively or individually, agree to any terms, in treating for a loan, which debars them from appropriating a large portion of the loan as "musau'eda"; they can scarcely be expected to assume all the responsibility and subsequent opprobium (and the risk of the assassin's knife) with no likelihood of reaping material personal benefit from the act, and with every possibility of others enjoying the benefit of peculations (because it is certain that a good deal of the money will stick to the fingers of whoever has the handling of it). Hence the deadlock and the allotment of "doles."

The "application of two seemingly irreconcilable poli-

Digitized by Google

cies" is not only injurious to Persia, but to us also. British policy is timorous to the verge of poltroonery, more especially in that she will not stretch out a material helping hand. "Platonic friendship" is but poor compensation for the ruined homes and dishonoured wives and girls of the poor unfortunate people, and it is indeed "difficult to dissociate Great Britain from actual participation in bringing about this state of affairs" and it is unquestionable that "our timidity in grappling with the Persian problem has been injurious to Persia's welfare, as it has been to our own prestige." If the British Government adopts the "less risky" course adumbrated by Mr. Fraser, with the result that the "organised revolt of the Radical wing" may hoist them with their own petard, they will have deserved well of their countrymen. The reference to the "new wave of indignation among the Muhammadans of India, in any case," seems to beg the question; it is conceivable that they are similarly constituted to their British prototype—never happy but when they have a grievance, and grumble at the cat whichever way she may happen to jump.

Professor Browne's castigatory reproof of the "Liberals and British Foreign Policy," appearing in the *Manchester Guardian* of the 13th inst., is amusing if nothing else. If the old adage, "When thieves fall out," etc., can be applied to politics, then it looks as if "honest men are to come by their own." The band of Liberal "ebullitionists" must be *very* angry with the "illiberal, immoral, and contemptible" present Government. The idea that the foreign policy of the Government had anything to do with the result of the Manchester election is a novel one and savours of "the last straw" in their arguments. Had Professor Browne and his congeners shown less misguided zeal and aggressive opposition to Russia, who was always confronted with fighting terms, it is possible to conceive that Persia would not now have been in her last throes.

Professor Browne's *apologia* in defence of "some of the bravest and most enlightened" of the rapscallions who met the doom for which they deliberately set forth is hardly likely to touch the tender susceptibilities of those who *knew* these people, and *know their type*. The Sikat-ul-Islam was on a moral level with Samad Khan, Shuja-ud-Dawla, neither better nor worse, and the iniquitous and degrading parallel which was recently drawn between this notorious rascal and our own leading clergy should bring a blush to the cheek of every decent-minded Britisher. The comparison was a gross outrage on Christianity; and had the speaker known the person with whom he was comparing our bishops he would never, I feel sure, have lent himself to the spread of such a disgraceful and misleading statement. England has been misled by a combination of misguided zeal, hysterical heroics, and a questionable apathy—apathy on the part of some of the leading newspapers and of the British Government.—Yours obediently,

B. W. STAINTON.

Horndean, August 24, 1912.

A PERSIAN ON PERSIA.

To the Editor of THE NEAR EAST.

Dear Sir,—With reference to the letter from Constantinople in THE NEAR EAST for July 26, signed "Observer," I presume "Observer" is a Persian from the way he retorts to my letter. I have no quarrel with "Observer," and would have ignored him had he not permitted himself to pass into Oriental exaggeration. He states that I know "very little" of Persia and Persians, and—as a proof of it—cites my spelling of the name of the Russian Minister in Teheran. Is that a proof that I know "very little" of Persia and Persians? Is it not possible for one to know Persia and the Persians without having the acquaintance of the Tsar's Minister in Teheran? Is it essential that a Persian, in order to know his people and his country, must also know the foreign Ministers at the Shah's Court? "Observer" may not have the acquaintance of the Sultan; would it be right to insist that he may not know Turkey or the Turks?

Because I have condensed the double hyphenated name of the Russian Minister in Teheran into a single name, and because I have transformed his name (Gaziole — Wild-goat) into the English "Gazelle," tell me, pray, what has that got to do with my knowledge of Persia and the Persians? I suppose if I had written the Persian form of the word—Khazal—"Observer" would call me an infidel for applying a Moslem name to a Christian! After all, I suspect, it is not my spelling of the Minister's name that makes "Observer" wroth. He is angry because I have said that the Russians are more civilised than we are, and could give us some political sunshine in the Persian political cloud! If I had indulged in some vain patriotism and empty self-praise, I am sure "Observer" would be better pleased, and would be willing to wink at my spelling of a Russian name in its English form. If I have spelled a Polish name (Gaziolsky) to my own liking, how does that affect my knowledge of Persia and Persians? Do not we in Persia transform (nearly always) such Christian names as James, Joseph, and Alexander into their Persian forms of Yacoub, Yousuph, and Iskender? Why, then, should I not write a Polish name in its English form (keeping in mind that I am writing for English readers)?

Granted, for one moment, that I have spelled the Russian Minister's name wrong *ignorantly*—how many Englishmen, Americans, and Russians spell Persian names wrong, and are yet up-to-date in their knowledge of Persian politics? I do not care to tell "Observer" how much I know of Persia and Persians, but can assure him that—being in daily contact with the people—I probably know a good deal more than "Observer" would know in Constantinople! If I had indulged in praise of the Persian courage and "patriotism" of last December, "Observer" would be quite proud to know that there is (besides himself) another true patriotic Persian in Tabriz! From the schoolboy patriotism of "Observer" it can be seen that he does not possess a sober mind to judge! Was he in Tabriz last December? What was the result of the hot-headed *fedayi* patriotism? The result was that the Sighat-el-Islam, the great and learned *mujtaheed* of Tabriz, was hanged on the very day of Ashoora, the most sacred day of the Shia Moslem world! And remember, it was not patriotism on the part of the people in general, but a localised *fedayi* patriotism. Had it been a general thing on the part of the *Persians as a whole*, no Persian of any importance would be living to-day, and most likely no independent Persia would be existing to-day.

I might remark here, in parentheses, that there is no "patriotism" in Persia in the European sense of the word. What "patriotism" there is is religious. Persian "patriotism" is like an egg: it is made up of a shell and a substance. Religious fanaticism forms the substance. Take that out, and you will have left nothing but a shell!

When I say the Russians are more civilised than we are, and might give us some political sunshine and security, it is my unwilling conclusion on the state of affairs as I see it at present! It is not an invitation to the Russians to come and rule over us! It is a statement of my conviction of what is going to take place within the next few years. I repeat, the sunshine—the only sunshine behind the political cloud of North Persia—is the Russian sunshine, which is going to come in some day in some form, either by an excuse, by force, or by invitation. I see no other light ahead.

"Observer" advises me to study the "sacrifices made under my own eyes the last few years." Thanks! Deeds and words sound high from a distance! "Observer" has been misled by the sound of those "sacrifices," which have echoed to him in Istamboul! Living in Tabriz (not in Constantinople) I know something of those "sacrifices," their working and their machinery! It was by those "sacrifices" that a Sattar, working for a hundred tomans a year, became a "Sardar" with a salary of 400 tomans per month; and that a banna Bagher, who earned his living by working for 5 krans a day as a bricklayer, became a "Salar" at 300 tomans a month!

Bagher—poor Bagher—never had had the luxury of a servant in his life, but—though those "sacrifices"—in passing through the streets of Tabriz he used to have 50-60 armed horsemen preceding and following his carriage! How did he provide for his cavalrymen? Where did he get the money? I do not care to enter into details, nor write too long, but if "Observer" would come and live among his own people he would see events at first-hand, and learn a thing or two of the sorrows and needs of his people. Sitting in a row-boat on the smooth waters of the Bosphorus in a moonlight night and criticising Mirza Firooz Khan for spelling a certain name not to his liking, would not give bread and water to his people. Give *us* some sunshine. If you don't like the Russian sunshine, then give us Persian sunshine. Let "Observer" come home! Persia needs the help of all her able sons. Let them come home and help to disperse the thick cloud and mist that threatens her very life. Let them come and untwine the rope from around her neck. Then, and not till then, "Observer" may have the right to criticise me for not knowing a Russian name correctly.

MIRZA FIROOZ KHAN.

Tabriz, August 10.

THE PRESS ON THE NEAR EAST.

The Trans-Persian Railway.

This much-discussed project has, according to the *Manchester Guardian* (August 28), received a formidable setback. The London correspondent of that journal writes:—

It may be stated confidently that nothing more will be heard of the Indo-Russian railway project—the plan, as it was described to me by a military authority, of putting a revolver and a latch-key in a burglar's hand. Though the Government has never published the military opinions which it admittedly sought on the matter, it is an open secret amongst those who are aware of the discussions which have taken place that Lord Kitchener has taken a very strong line against what appeared to him to be a very foolish proposal. His opposition (which was to be expected from a soldier who devoted several years to the sole study of Indian frontier defence) may be said to have finally settled the matter.

The Berchtold Proposals.

In concluding a long leading article on Count Berchtold's proposals, the *Journal des Débats* (August 23) states:—

Un journal de Vienne a porté sur la proposition Berchtold un jugement de nature à suggérer d'utiles réflexions. "Personne, dit la *Zeit*, ne peut préciser quels sont, au juste, les remèdes préconisés par le comte Berchtold. Son programme manque de précision. Une seule chose est claire: c'est une modification des principes de non-intervention que l'Autriche Hongrie professait depuis l'avènement du régime constitutionnel en Turquie. Tout d'un coup, sans y être prié, nous allons donner dans ce nid de guêpes de la politique intérieure turque, et nous allons conseiller au gouvernement turc de pratiquer la décentralisation. Comment osons-nous donner de semblables conseils alors que nous appliquons les plus rigides principes de centralisation en Croatie, et qu'à tous les coins de la double monarchie, en Galicie et en Bohême, il y a de semblables problèmes d'autonomie qui nous intéressent de plus près que ceux de Macédoine et d'Albanie?" Voilà un thème tout trouvé pour les plénipotentiares ottomans à la future conférence.

Au point de vue international, la conférence ne peut que jeter le trouble parmi les puis-ances. Elle accentuerait les dissentiments existants et serait l'occasion d'en créer d'autres. Les puissances de la Triple-Entente doivent se garder de se mettre dans ce guêpier. Quand on a parlé pour la première fois d'une conférence, au mois de mai dernier, M. Jean Herbette a dit dans le *Siècle* ce qu'il fallait penser de cet expédient: Les Congrès européens n'ont jamais été profitables ni à l'empire ottoman, ni à ceux qui s'étaient fatigués pour le vaincre. Ils ont le grand défaut de faciliter les spoliations en divisant les responsabilités. C'est encore ce qu'il convient de répéter aujourd'hui.

Germany and the Austrian Proposals.

The Berlin correspondent of the *Westminster Gazette* (August 24) defines the position of the German Government towards the Berchtold proposals as follows:—

The German Government is always against any gratuitous co-operation between Powers, whether in the cause of internationalism or humanity, or any interest not specially German. It acts in the belief that such co-operation causes offence and seldom effects anything. In particular, it dislikes meddling in Turkish affairs, or considering the Turkish question at all, except from the point of view of German trade or concession interests. Austria-Hungary understands German sentiment on this question; and it is impossible for any Austrian proposal to go counter to German wishes, all the more so because without German support Austria would be practically isolated. That being so, Germans from the first took the Berchtold proposal as excluding pressure on Turkey. And, since presumably the Turkish Government realises the platonic nature of Austro-German counsel, it may take only so much of the counsel as it wishes.

Peace Negotiations.

The Rome correspondent of the *Morning Post* (August 27), in the course of a dispatch on the peace negotiations between Italy and Turkey and their probable outcome, writes:—

Italy feels that, by her own action in eliminating European Turkey from the zone of battle, she condemned herself to take only an academic share in what is now felt to be the first act of the partition of Turkey. Besides, she is by no means sure of Germany. The proposals of Count Berchtold are on the same plane with Baron Marschall's "trick" last January, for a "trick" it was certainly considered, and just as Austria-Hungary had the consent of Germany for the annexation of Bosnia-Herzegovina, so, it is felt, she has Germany's backing to-day. Italy, therefore, would be glad to see the war finished, it being always understood that the sovereignty decree will never be revoked, that she may have a free hand to use her increased prestige and influence in safeguarding her interests in the Balkan Peninsula. Until the position in the Balkans became acute, Turkey had expressed no particular desire to finish the war. . . . In May Turkey was willing to submit the question of peace to an international conference, feeling sure that she would have minimum terms imposed on her, and that at the worst it would be a question of an Italian protectorate in Tripoli.

But since May much water has flown under the bridges, and a conference now would be equally disastrous for Turkey as for Italy. The Balkan question in its many phases would have to be discussed, the question of the Ægean Islands would come up for settlement, and very probably the question of the Dardanelles. Turkey, it is believed here, would like to see Italy back on the Balkan playfield again, to counter Austria-Hungary. For this reason she will enter the present informal negotiations more heartily than she did the last ones at Evian-les-Bains. It is certain that to-day neither Italy nor Turkey would consent to a conference. Signor Giolitti has made up his mind that peace shall be treated for direct between Turkey and Italy without the intervention of any "honest brokers," and if the form of acceptance of the "sovereignty" decree can be made agreeable to Turkey, there is no reason why the unofficial negotiations should not shortly become official. . . .

That a solution will be found, and found quickly, is now the general opinion. That the Ballhausplatz shall have unwittingly hastened peace, and so leave Italy and Turkey with free hands to deal with the Balkan situation, will be regarded here as one of the jokes of the diplomatic year.

A Sane View of Turkey's Situation.

The *Orient*, of Constantinople (August 21), which cannot be suspected of rabid Turkophile tendencies, writes:—

The defeat of the Committee of Union and Progress, the displacing of the Said Pasha Cabinet and the downfall of Djavid Bey, Talaat Bey, Gen. Mahmoud Shevket Pasha and other leaders of the Young Turkey Party of four years ago, coupled with the amnesty of a lot of the rascals of the Hamidian régime, have very naturally led many in America and Europe to think that reaction had set in, and that the Young Turks were once more out of the saddle and in danger of being trodden under foot by the Old Turks or reactionaries. We are happy to say that this is not so. No less an authority than Sir Edwin Pears, who is a staunch friend of liberty and union and progress, asserts that the present Cabinet is the best Turkey has had in forty years. It is in no true sense reactionary, but really constructive and progressive. It is as strong for constitutional government and as determined to prevent the return of Hamid as anybody could desire. The fact is that the Committee of Union and Progress, blinded by the lust of power, had begun to use methods just as despotic and illiberal as those of Abdul Hamid, and were becoming cordially hated by a large proportion of their former supporters. The change of to-day is not the downfall of the Young Turks; it is a sudden and violent check to the Committee of Union and Progress; and if that organisation can be purged of its oligarchical and illegal tendencies and methods, it may yet be of service to the State, made wiser by its knockdown. But the principles of constitutional freedom, of liberty, equality, justice and brotherhood, were in imminent danger of sacrifice on the altar of a self-perpetuating Committee; and to-day they appear to have been rescued by the more level-headed exponents of the Young Turk idea.

The Cyprus Agitations.

The *Times* (August 28) contains a leader on the demands of the Cypriots, which, while expressing the sympathy with which the tribute grievance is generally regarded in England, reduces the matter to its true proportions and reveals the agitation in its proper light. We extract the following:—

The present anti-British agitation, with its impossible aspirations for "union with Greece," and with its methods of offensive rudeness to His Majesty's representative in the island, is probably due to the fact that the long-drawn struggle over the election of an Archbishop is now settled. The host of agitators who found employment and remuneration in verbally assailing the respective candidates and their adherents have now no outlet for their peculiar talents, except in fomenting the present artificial and detrimental agitation. If we consider that but for the presence of the British, Cyprus would be just such another Turkish province as Adana or Aidin, we must realise that the greatest grievance of these agitators is that there are so few real grievances left for them to exploit.

Articles to Note.

NEAR EAST BOOKSHELF.

PERSIA'S LOST CHANCE.*

The decision of the Persian Cabinet in December, 1910, to obtain financial administrators from America "to reorganise and conduct the collection and disbursement of the revenue" was probably the only genuine effort made by the Nationalist régime to command success. Such an enterprise deserved a better fate. Thanks to the assistance given by the United States Secretary of State, it is certain that every care was taken to make a wise selection. Of Mr. Morgan Shuster's qualifications for the post as a financial expert there can hardly be two opinions. Temperamentally, however, he proved altogether unsuited to fill the office of Treasurer-General of Persia, and failure had to be written across his mission. This result is regretted by all the well-wishers of Persia, and it is to be feared that a perusal of the book in which he tells the story of his brief career in Persia is not likely to cause them to exonerate him from all responsibility for the fiasco. Possibly Mr. Shuster does not realise the extent of his failure. But while there will be no desire to minimise the difficulties of his position, it is useless to ignore the facts. On Mr. Shuster's own showing, Persia was in a parlous condition, and her one hope of salvation lay in the reorganisation of her finances. The Treasurer-General would naturally be opposed by all and sundry who believed it to be to their interests that the state of financial chaos should continue; but he could also have counted on powerful support if he had gone about the right way to secure it. He had, however, to acknowledge defeat in the contest; he allowed himself to be worsted in a trial of diplomatic strength by mere Russian Consuls, and he is succeeded in office by a man whose character he seems unable sufficiently to besmirch. Everyone will realise to the full how much Mr. Shuster had to contend against; but surely he will understand how much better it would have been in the interests of Persia that he should have so conducted his campaign that it was he who remained on the field of victory and his enemies and those of Persia who were routed. To this Mr. Shuster will, doubtless, reply that the forces marshalled against him were too strong for him to cope against single-handed. We have read all that he has to say in his own favour, and we cannot subscribe to that contention. He played into his enemies' hands, and his was a struggle in which he could not afford to give away points.

When this has been said, we might almost leave *L'Affaire Shuster*, but in so doing we should render an injustice to "The Strangling of Persia." The narrative is of particular interest, and, although Mr. Shuster allows his personal feelings free scope, there is no reason to doubt the accuracy of the main outline of the picture that he draws. He is indeed as little at pains to gain the confidence of the reader as he was to conciliate the foreign element on his arrival in Teheran. The book, therefore, while affording interesting reading and throwing a lurid light on the internal situation in Persia, will leave Mr. Shuster in the public estimation very much where he was before. If he has given us a clearer appreciation of his plans for the regeneration of Persia, he only causes us the keener regret that his lack of diplomacy and tact should have caused Persia to lose her one chance of national salvation.

Mr. Shuster believed thoroughly in the Mejliss, which he regarded as the symbol of Persian nationalism and liberty, and he confirms the opinion expressed in these columns of the ordinary Persian official. His description of Russian methods in dealing with Persia may be left to the individual reader to pass judgment upon. If we accept every word he says, we must recognise the more how injudicious he was to try to counteract those methods at the first encounter instead of gradually feeling his way, ingratiating himself with Persia, Great Britain and Russia, until he could, if necessary, persuade those in authority into a more wholesome policy, or at least checkmate the worst features of the Russian programme. Mr. Shuster's methods were otherwise. The day after he arrived in Teheran he discovered a very formidable brick wall, and at once proceeded to run his head against it. Persia knows Mr. Shuster no more, but we fear that she still has the brick wall with her.

In all that concerns Persian finances—or rather the absence of them—and the methods that do duty for financial administration, we may well accept Mr. Shuster's analysis. Peculation was rife in every department of State; a system of "pensions" entailed the annual grant of over £1,000,000 in money and grain to nearly 100,000 different people, and in one case quoted Persia is represented as paying for munitions of war from Russia a price "that worked out about three times that for which the same arms could be obtained on the market in Europe."

At the root of Mr. Shuster's failure lay his unwillingness to recognise that, whether for good or ill, both Russia and Great Britain had "special interests" in Persia. It was perfectly true that he was in the employ of the Persian Government and, strictly speaking, was only responsible to his employers; but the Persian Government could not afford to ignore Russia and Great Britain, and still less was it politic on Mr. Shuster's part to attempt to do so. Nor did it reflect the least credit on his statesmanship; he admits that his personal relations with the Russian Minister were always cordial, that the latter was estranged from his own Consul-General, and that there were two schools of thought in the Russian Cabinet in regard to the policy to be adopted in Persia. What a splendid opportunity for a Persian official in Mr. Shuster's position to strengthen the position of the moderate element in Russia with a view to eliminate the Russian representatives in Persia who were the tools of the Extremists! The appointment of Mr. Stokes to command the Treasury gendarmerie was a case in point. If Mr. Shuster had been less enamoured of the *Sic volo, sic jubeo* type of administration, he would not have moved in the matter until he had completely won over to his way of thinking Sir George Barclay and M. Poklewski-Koziell. The two Ministers could then have secured the sanction of their respective Governments, and the appointment could have been announced. We do not pretend to justify the British action in this matter; probably all that can be said for it is that the British Government had to take cognizance of more important affairs than Persia and Mr. Shuster's schemes, and the less was sacrificed to the greater. But a more tactful man would have succeeded where Mr. Shuster failed. In no particular does the ex-Treasurer-General show more conclusively what a narrow-minded interpretation he placed on his functions than in his repetition of the statement that the Persian Government had refused to recognise the Anglo-Russian Convention of 1907, and instructed him to do the same. Mr. Shuster would have conferred a benefit on the country if one of his first acts had been to persuade the Persian Government to accept the *fait accompli* and to make the best of it. Persia's refusal and Mr. Shuster's blind insistence on that refusal together completed the undoing of the country.

"The Strangling of Persia" recounts fully the events of 1911, and outlines the incidents that led up to the chaotic condition of affairs that Mr. Shuster found on his arrival. It also discusses the European situation that may have determined the relative attitudes of Russia and Great Britain towards the country. For reasons that we have already given in THE NEAR EAST, we believe that the attitude of Great Britain has undergone considerable modification in some particulars, although we do not suppose that the Government is yet fully embarked on a constructive policy. It would be interesting to know what steps, if any, M. Mornard, who succeeded Mr. Shuster as Treasurer-General, will take to satisfy the British and Russian Governments that the charges brought against him by Mr. Shuster are unfounded. They are serious charges, and in any other country it would be difficult for M. Mornard to retain his post so long as they remained unrefuted.

*"The Strangling of Persia." By W. Morgan Shuster. T. Fisher Unwin London. 12s. 6d. net.

Copies of "The Strangling of Persia" will be forwarded, post free, to any reader of the NEAR EAST on receipt of the published price, viz., 12s. 6d. net, by the Manager, The Near East, Limited, 16-17, Devonshire Square, London, E.C.

CURRENT COMMENTS.

In a letter addressed to the editor of the *Morning Post*, Mr. Robert Williams enters a strong plea for the preservation of the ruins of Palmyra from further damage. He points out, rightly enough, that "for want of proper care the more ornamental and easily portable objects and parts of the ruined city and of the tomb towers are fast disappearing." He suggests the formation of an international committee for the purpose of urging upon the Governments of the European countries and America the desirability of attending to the work of examining, clearing, and preserving the ruins from further injury and decay; and he feels sure that "each Government would bear its share of the cost, which would be quite £50,000."

***

We fear that Mr. Williams is far too sanguine in his view of the Governments' willingness to do anything of the kind. And though Palmyra is certainly worth taking care of, and should be fully and scientifically explored, so to say, we are inclined to think that there are far better ways of spending money on archæological work in Turkey than that suggested. Fifty thousand pounds, wisely expended, would suffice to examine some of the Babylonian and Assyrian sites that so urgently require excavation, and almost any one of these sites would yield a better return for the outlay than Palmyra.

***

The report, forwarded to this country by the *Standard's* Vienna correspondent, and referred to in these columns a fortnight ago, that King Carol was leaving his palace at Sinaia as a protest against the opening of the new Casino, appears after all, to have been inaccurate. Our Bucharest correspondent writes: "The rumour started by an Opposition paper here, copied into various Viennese journals, and passed on to the *Standard* by its Vienna correspondent, as to the King's abandonment of Sinaia for this season, and the removal of himself and the Queen to Redea and Curtei de Arges for the rest of the summer, on account of the Casino, is utterly without foundation. As a matter of fact, the Casino has now been opened more than a month, and although the Opposition journals seek to make capital out of it, they have only succeeded in making themselves ridiculous, and doing damage to their own cause; whilst the Casino has so far brought absolutely no change to the general life of Sinaia. The terrible gambling, with its attendant evils, prophesied so strongly by the above-mentioned papers, has resolved itself into a little mild "haâle" with baccarat, in which the proprietors of the Casino take no interest whatever, the bank being held, as in any club, by private individuals.

***

"The theatrical performances, restaurant, café, etc., are exactly to the taste of the Roumanian public in general, and therefore there is really no reason for the outcry on the part of the Opposition journals. Had the Casino been started under another Government than Conservative, the tune would have been very different. As a matter of fact, neither the King nor the Queen have ever had any intention of quitting their lovely summer home, and even the usual visit to an Austrian bathing resort, or to Abbazia, was not contemplated. It is quite possible that, as in other years, a few days may be spent at one or other of the monasteries, which, like that of Sinaia, before the castle was built, formed the summer residences of their Majesties. The Austrian Semitic Press has the habit, when in want of news to fill up, of turning to this country for subjects; and, as has more than once been pointed out, either gets hold of a mare's nest or else "imagines" at this country's cost."

***

Elsewhere we mention the appearance of a distinguished Cairo judge in the Westminster Police Court recently for an innocent trespass of the English motor-car regulations. Judge Halton was in this instance guilty of that ignorance of the law which our courts do not recognise as a valid defence. This cannot be said with regard to his acquaintance with the Egyptian Codes, for there Judge Halton has few peers. He is well-known for his work on the Bench and at the Khedivial School of Law in Cairo, but especially for the legal text-books elaborated by him for the school at the request of the Egyptian Government.

***

About ten years ago it was found that students presented themselves for instruction at the School of Law who, having in the secondary schools opted for English instead of French as their foreign language, could not attend the lectures of the French instructors or study the French text-books, until then exclusively employed. Although lectures were given in the English language, the absence of English text-books was a severe handicap to students unfamiliar with French. The Government therefore decided to issue text-books in English and entrusted Judge Halton with the task of compilation.

***

This task was by no means a light one, for, to commence with, there was a whole legal terminology to create in order to express ideas differing widely from those of English law. Those who are familiar with English and French law will realise the difficulties and dangers besetting an English author in writing on law derived mainly from French sources. However, Judge Halton triumphed over these and many other obstacles and produced a work which earned for him permanent distinction and the gratitude of those who have at heart English interests and influence in Egypt.

***

Is there some kind of fatality attaching to attempts to deal dishonestly with ancient papyrus? It would almost seem that there is. Not long ago we told in these columns the true story of a certain archæologist who endeavoured to smuggle some choice specimens out of Egypt and was baulked in the attempt through the agency, apparently, of a mere bag-snatching thief. Now we read that an unsophisticated fellah of the Fayum district has met with a good deal worse fate in consequence of attempting to turn a dishonest penny in connection with a find of *wuruq*.

***

The fellah in question, we read, while engaged in digging operations on a hill in the Fayum district—which, by the way, has yielded some remarkable finds in the way of precious old documents—came across a collection of papyrus, and, realising the value of his discovery, proceeded at once to secrete the same in his house. His intention to sell it subsequently and pocket the profits is, we fear, hardly a matter of conjecture in the circumstances. Unfortunately for him, however, another fellah gave information of the find to the authorities, who promptly arrested the amateur excavator, and consigned his "haul" to the Service of Antiquities. So the collection at the Cairo Museum will no doubt be the richer, and the fellah of the Fayum will probably assist in making roads for the development of his fatherland.

In this case the papyrus is at least saved, and should it prove to contain any fresh literary material, scholars will have to thank the peasant who found it, and, having found it, was intelligent enough to recognise that it had some value at any rate. For it appears that in the past—and not the very distant past either—large quantities of papyrus used to be destroyed by the native antiquity grubbers who carried on their calling in this very Fayum district. An archæologist who had excavated in this district told the present writer that some of his workmen, who cheerfully owned up to having conducted operations on their own account before being employed by the Frank, were greatly astonished to find that papyrus fragments were thought worthy of being saved. "We have found lots of the stuff before," they said, "but we thought it of no value and threw it away or burned it." So that it is quite likely that not a few literary gems of value met an inglorious end in serving to cook the supper of a Fayum peasant!

***

Apropos of the above, it is interesting to observe that Reuter's Cairo correspondent reports that a number of large rolls of historical papyri have been discovered by Mr. Robert de Rustafjaell. The manuscripts were unearthed by a fellah whilst sinking the foundations of his mud hut, near a temple of the Ptolemies in Upper Egypt, and are said to be of the best Græco-Egyptian period. They are about twelve inches wide, all closely rolled, some of the rolls reaching to four inches in diameter. A fair estimate of the size of the largest would be about fifty feet, which it is considered would constitute a record for a roll of papyri. They are well preserved so far as the writing is concerned, but discoloured, and owing to their dry and fragile condition have to be handled with the utmost delicacy. It is anticipated that the contents will prove to be of real archæological value in adding to our present knowledge of Egypt, and possibly Syria, as recorded in the days of the Ptolemies. A study already made reveals the fact that they relate to interesting historical events.

***

It is reported that three hundred *fedayis*, under Yar Mohammed Khan, have deserted Prince Firman Firma, who is at Senneh, and have seized Kermanshah; and it is added that this move "is intended as a protest against the delay in summoning the Mejliss." As a protest it can hardly be said to be lacking in vigour. The militant "suffragettes" will have to look to their laurels unless they wish to be outstripped by the untutored *fedayis*. But the crowning touch of humour about the report, from which we draw our information, is contained in the last sentence, which runs:—"Reports from Anglo-Russian sources indicate that they have gone over to the side of Salar-ed-Dowleh, who is reported to have promised the re-establishment of the Constitution." The idea of Salar-ed-Dowleh yearning to "re-establish" the Constitution is certainly a novel one.

***

Our Cyprus correspondent writes that the Troodos season this year is not up to the average of recent years. The number of visitors from outside the island is smaller than usual, but the tendency has been for the hotels and lodgings to fill up rather late in the season, and it is hoped that this may be the case this year again. It is somewhat discouraging to those who lay themselves out to provide for possible visitors that the seasons should be so capricious in point of the numbers of tourists who may arrive, but as the place becomes better known and accommodation improves, as it is annually doing, a certain stability in the matter of "summer season" may be established.

PERSONAL & SOCIAL.

Prince Christopher of Greece, who arrived in London on Saturday from Harrogate, left Marlborough House on Monday, accompanying Queen Alexandra and Princess Victoria to Port Victoria en route for Norway.

Viscount Kitchener arrived at Kingstown on Monday morning, in order to attend the Dublin Horse Show.

H.E. Tewfik Pasha, the Turkish Ambassador, left London on Tuesday for Harrogate.

Lady Helen Vincent left Esher Place for Venice last week.

King Peter of Servia returned to Belgrade last Saturday from his visit to Arangelovatz.

H.I.M. the Sultan has given £T1,000 from his privy purse for the relief of the sufferers by the recent earthquakes.

Lieutenant-Colonel Taylor, from Dublin, has been selected to command the A.S.C. in Egypt.

Lieutenant-General Sir John Maxwell returned to Cairo on the 18th inst. from Cyprus, after inspecting the British garrison in the island.

Mr. Graves, Inspector at the Egyptian Ministry of the Interior, has been granted a leave of three months and a-half, to begin on the 1st proximo.

Mrs. Alban, the wife of the British Consul in Cairo, has arrived in England.

Mr. Hebert, Acting British Vice-Consul in Cairo, is now in England on leave.

Mr. Ronald Graham, the Adviser to the Ministry of the Interior, is due back in Cairo from leave on October 15.

Mr. F. R. Sanderson, of the Khedivial School of Law, Cairo, who has been spending some time in Scotland, leaves for the Continent on Tuesday, on his return to Egypt.

Mr. Ernest Weakley, Commercial Attaché of the British Embassy, left Constantinople on leave of absence last week.

Major-General J. S. S. Barker, C.B., commanding Royal Artillery, Malta, has been granted leave of absence until September 25, and during his absence the command will devolve upon Lieutenant-Colonel C. S. Meeres, R.G.A.

Mr. Hanemoglou, manager of the Beyrout branch of the Imperial Ottoman Bank, left London on August 28 for Paris.

Lieut.-Colonel C. S. O. Monck, who has served twenty-eight years in the Coldstream Guards, will next Monday give up command of the 3rd Battalion, which he took up in Egypt four years ago.

Mr. W. Donald Hart, the manager for the Gresham Life Assurance Society in Cairo, and Mrs. Hart have arrived in London from Egypt and will shortly be leaving town for Eastbourne.

Mr. E. W. P. Foster has left Alexandria for England and does not expect to return to Egypt until December.

Mr. C. S. Cade, Commissioner of Nicosia, and Mrs. Cade have gone on vacation leave for two months, and on half-pay leave thereafter for three months. Captain W. Durham Hall will act as Commissioner during Mr. Cade's absence.

Dr. R. A. Cleveland, Chief Medical Officer, Cyprus, is absent on vacation leave, his duties being taken by Dr. E. Corsellis, of Limassol.

Bimbashi H. Castle Smith, Inspector at Rejaf, who has returned to the Sudan from leave, is now at Mongalla, where he replaces Bimbashi Beaumont as Acting-Governor of Mongalla Province, in the absence, on leave, of Miralai Owen Bey.

Marshal Zekki Pasha, for many years Commander of the Old Fourth Army Corps at Erzindjian, at which place he was confined in exile by the ex-Sultan Abdul Hamid, has been appointed Vali of Baghdad.

The Lord Mayor has received from the Turkish Embassy the thanks of the Ambassador and of the Turkish Government for the appeal that he is making for funds for the relief of the sufferers by the Dardanelles earthquake.

King Carol of Roumania has conferred the Grand Cross of the Order of Carol I. on Count Berchtold, the Austro-Hungarian Foreign Minister. Count Fürstenberg has received the Grand Cross of the Order of the Crown of Roumania, and Count Hoyos the Commandership of the Star of Roumania.

Last Saturday was the forty-seventh anniversary of the birth of Prince Ferdinand of Roumania, who was born at Sigmaringen in 1865. August 9, by the way, was the eighth birthday of his youngest son, Prince Nicholas, who is just now the guest of the Royal children at Frogmore.

The Roumanian Court went into mourning for fifteen days, commencing from the 14th ult., for the Duchess Elizabeth of Genoa.

M. Pacliano, Roumanian Consul-General in Egypt, who has been transferred to Berne in the same capacity, left Egypt on the 23rd inst. He was received in a farewell audience by the Khedive.

M. Francis Peter, a Geneva jurist, has just been appointed Judge of the Mixed Tribunals in Egypt. M. Peter, who is thirty-six years of age, has had much experience at the Swiss Bar. His appointment has given much satisfaction in Switzerland.

The marriage arranged between Captain R. C. J. Alexander, Royal Garrison Artillery, youngest son of the late Very Rev. John Alexander, Dean of Ferns, and Mrs. Alexander, Wellington House, Cahir, and Daysie, fourth daughter of the late Sir Edward Hudson-Kinahan, Bart., and Lady Hudson-Kinahan, of The Manor, Glenville, Fermoy, will take place quietly at the end of September.

A marriage will shortly take place between John M. E. Langton, E.S.R., Tanta, Lower Egypt, eldest son of the late John Langton, F.R.C.S., of Harley Street, Cavendish Square, and Olive, second daughter of Lieutenant-Colonel Walter J. Boyes, late Suffolk Regiment.

Judge H. W. Halton, of the Mixed Tribunals of First Instance in Cairo, has recently had the unfortunate experience of being fined five shillings, with two shillings costs, at the Westminster Police Court for having kept a motor-car from July 19 until November 7, 1911, without having a proper licence. The magistrate said the case was certainly not one in which an attempt had been made to defraud the Revenue, but one in which a bona fide mistake had been made, to which small importance should be attached.

Turkish journals mention Joseph Saba Pasha as a possible candidate for the Governorship of the Lebanon.

Bimbashi Sinauer, of the Military Works Department, Egyptian Army, is now on leave of absence in this country.

Captain W. H. McCowan, Queen's Own Cameron Highlanders, and Lieutenant C. W. Edwards, of the Army Service Corps, have been taken on the strength of the Egyptian Army with the rank of Bimbashis. The former is posted to the 15th Sudanese, and the latter to the Department of Supplies.

We regret to hear that Mr. F. H. Teall, of the Egyptian Ministry of the Interior, whose marriage to Miss Cox was recently announced in these columns, is suffering from smallpox at Mansourah.

Sagh. Abdul Atti Effendi, commanding the Egyptian coastguard cruiser "Nour-el-Bahr," who lately passed his nautical examination in this country, and obtained his certificate, is said to be the first Egyptian to have obtained this honour.

The fourth annual dinner of "The Malta Association" will be held on Thursday, September 26, at 7.30 o'clock, in the Westminster Palace Hotel. Colonel Frederick Sedley, Marquis della Taffia, will preside, and Cardinal Bourne has accepted the invitation of the committee to be present. Tickets for the dinner may be obtained by members for themselves and their friends (including ladies) from Mr. F. E. Caruana, hon. treasurer, Malta Association, 166, Worple Road, Wimbledon, S.W.

Mr. G. Cosentino, of Alexandria, has written a spirited military march for the pianoforte, entitled "The Kitchener March," and has dedicated his work to Viscount Kitchener of Khartoum.

The marriage took place at Alexandria on the 15th inst. of Mr. G. Contomichalos with Miss Haikali Pacha.

The Genoa correspondent of the *Times* reports the death of General Cerruti, who was Italian Military Attaché at Vienna from 1882 to 1887, and in that capacity presided over the International Commission which enforced an armistice between Servia and Bulgaria after the war of 1885. General Cerruti was born at Alexandria in 1840.

The funeral of the late Mr. Ambrose Ralli, whose death we announced in our last issue, took place at Alexandria on the 15th instant. The Khedive, the Egyptian Government, the Alexandria Municipality, the Archæological Society, and many public institutions with which the deceased was identified were represented. The procession left the residence of M. Alexandroff, son-in-law of the deceased, and, preceded by the clergy of the Greek Orthodox Church, reached the Evangelismo Church at six o'clock, where the religious ceremonies were conducted by Monseigneur Photios, Greek Patriarch. At the cemetery addresses were delivered by Ismail Pasha Sidky, on behalf of the Egyptian Government, and by Mansour Pasha Youssef, on behalf of the Alexandria Municipality.

The death took place suddenly, at the Royal Hotel, Khartum, on the 11th inst., of Mr. J. Shore, of the Sudan Printing Press.

The death has occurred of Mr. Clinton Thomas Dent, Vice-President of the Royal College of Surgeons, who in 1886 and the following years conducted a series of explorations in the Caucasus.

FRIDAY, AUGUST 30, 1912.

TURKEY AND THE BALKAN STATES.

To the onerous problems that confronted the Turkish Government on its accession to office—the war with Italy, the hostility of the Committee of Union and Progress, and the revolution in Albania—has now to be added a sudden embroilment with the three Balkan States on its northern frontier. Undoubtedly the most serious complication is presented by the state of feeling in Bulgaria, which has been roused to fever pitch by the Kotchana massacre. The details of this incident, which took place on August 1, have already been given in our columns. Later information only tends to confirm the original report that the slaughter and beating of defenceless Bulgarians was systematically carried out by a large number of soldiers, who were marched from the barracks to the bazaar immediately after the second bomb explosion. A series of meetings in Bulgaria has served to stir public indignation to a degree that has probably never been equalled in the country's history, and the climax was reached on Sunday, when a great national conference was held at Sofia, to which every district in the country sent delegates, while all parties in the State were represented. Resolutions were adopted unanimously calling upon the Government to mobilise the army and to make urgent representations to the Great Powers to induce Turkey to give autonomy to Macedonia and the vilayet of Adrianople, under a Christian Governor elected by the population and accepted by the Powers. In the event of the Powers failing in their mission or refusing to undertake it, the Government was to declare war on Turkey. At the close of the conference the delegates, accompanied by the Macedonian associations, proceeded to the monument of the "Tsar Liberator," where a further demonstration was made and more bellicose speeches delivered. Meanwhile the war fever has spread to Servia, owing to the report of a massacre of Serbs in the vilayet of Kossovo. It is stated that Turkish troops entered the towns of Sienitza and Bielopolyl, and, assisted by the Mussulmans, massacred numbers of the Christian inhabitants. Confirmation of these outrages is lacking, and it is probable that the reports are exaggerated; but there would seem to be little doubt that the Turkish troops on the Montenegrin frontier have been guilty of terrible excesses.

The Turkish Government took prompt steps to investigate the Kotchana incident, and a preliminary report rendered by the Commission incriminates both the civil and military authorities. Several officers and a large proportion of the men of the garrison, as well as three civil officials, are held to have taken an active part in the killing of the Bulgarians. A state of siege has, accordingly, been proclaimed at Kotchana, and the Minister of Justice has ordered the immediate trial by court-martial of all those who have been accused of participation by the Commission. The Turkish Government has also sent £1,000 to be distributed among the sufferers. This readiness on the part of the new Cabinet to recognise Turkish responsibility is a welcome feature of the situation, and there is no reason to doubt the anxiety of the Bulgarian Government to keep the peace. At the same time, it will be difficult for the latter to ignore the popular excitement, which is hardly likely to be satisfied by the punishment of some of those responsible for the massacre and by the distribution of doles to the injured. The co-operation between the Macedonian associations and the hastily summoned national conference shows that the revolutionary bodies have been quick to seize upon the tactical advantage that the Kotchana massacre has given their cause. From the repetition of these massacres on the Montenegrin and Servian frontiers they will argue that, in spite of its good intentions, the Turkish Government has proved that it is powerless to control its subjects or troops in these provinces, and that, so long as present conditions are maintained, the population must be exposed to these outrages and to general insecurity of life and property. If the reports from Sienitza and Bielopolyl are confirmed, the Porte will also have to reckon with the Servian Government as a further claimant for compensation. When the time comes for an adjustment of its difficulties with Montenegro it may not be easy to decide with which of the two combatants the bulk of the blame for the frontier incidents near Berane has to lie; but it is evident, from the communications of the Montenegrin Government to the Powers in accepting their advice to avoid all aggression, that King Nicholas's advisers are satisfied that the guilt rests on the Turkish side. Even if the demands of the three Governments are advanced in the most correct form and reflect no warlike intentions, they are calculated to cause the Porte considerable embarrassment. Combined with the war with Italy and the unsatisfactory condition of the domestic situation, they will offer a problem that may well prove too complicated for the Turkish Government to attempt to solve single-handed.

At this point it is possible that the invitation addressed by the Austro-Hungarian Foreign Minister to the Powers for an exchange of views on the Balkan situation may meet with wider approval than it has secured up to the present. Although the various Governments have agreed to the principle of "conversations," it is evident that the suggestion has evoked little enthusiasm in any quarter. The Porte has thanked Austria-Hungary for her good intentions, but has pointed out that Turkey will have nothing to do with any proposal that can be construed into an attack upon Turkish autonomy or independence, nor can it allow any interference with its domestic affairs. In the conditions confronting the Turkish Cabinet such a message was inevitable. Whether the storm-cloud on the Balkan horizon will cause Turkey to feel less optimistic remains to be seen. Certainly any common action on the part of Bulgaria, Servia, and Montenegro would afford the Powers the necessary basis for the exchange of views, and would save Count Berchtold's invitation from the "cold shoulder" which up to the present has been offered it. Turkey would then have to decide whether she would accept the friendly offices of Europe as a whole or would endeavour to place herself more unreservedly on the side of one or other of the European groups. The tendency towards the latter line of action seems an inevitable product of the constitutional régime, and the possibility of adopting such a policy must have occurred to the "elder statesmen" who are now in charge of Turkey's destinies. It is noticeable that the Committee of Union and Progress has already attempted to make political capital out of Count Berchtold's proposal by pointing out that the "Austrian menace," which was eliminated during its régime, has returned with the new Cabinet. Internal difficulties may provide the Turkish Government with as cogent an argument as extraneous complications in favour of seeking support for the settlement of all its problems. Development on these lines would be welcomed, because it could only take place if Turkey first introduced wholly satisfactory methods into her administration of Macedonia and Albania.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The *Novoe Vremya's* Teheran correspondent gives some interesting particulars concerning the value of parcels transmitted to Persia in the current year. This amounted to nearly thirteen million roubles, being an increase of approximately four million roubles. Of this amount Russia is responsible for nearly twelve million, Germany for 248,000, France for 183,000, and Great Britain for 145,000—rather a dwindling scale, I am inclined to think, in view of the Anglo-Russian entente.

***

Some time ago the Teheran correspondent of the *Frankfurter Zeitung* complained of the unscrupulousness with which Russia manipulated the Post Office tariff to her advantage. The above figures certainly tend to support his contention. As for Great Britain's gigantic share in the parcels traffic, it would seem that an entente with Russia is at least productive of one useful feature—silent acquiescence in methods pertaining to Russia's commercial subjugation of Persia.

***

I notice that a correspondent of the *Egyptian Gazette* states that "a very remunerative investment would be to build small hotels on European lines in every mudirieh town in Egypt. The existing so-called hotels are deplorable, and it is quite impossible to take a lady to one. Also one cannot obtain meals in these places. To obtain breakfast, lunch, or dinner one has to wander along some filthy street to get to a germ-ridden Greek restaurant and there partake of the awful messes provided. A respectable hotel with a decent restaurant inside would, I am sure, pay handsomely."

***

From my own uncomfortable experiences in the "villages" in Egypt, I can fully and sympathetically endorse the plaint of the *Gazette's* correspondent. If I am not greatly mistaken, however, an attempt was made several years ago to establish an hotel company in Cairo for the purpose of providing the provincial towns with decent hostelries. The constitution of the concern was announced with a great flourish of trumpets, but apparently subsequent investigation convinced the promoters of the doubtful nature of the prospects before such an enterprise. Apropos of hotel undertakings in Egypt, I am informed that there is every likelihood of Alexandria being endowed shortly with a new first-class hotel.

***

I learn that the concession granted to the Bulgarian contractor, M. Ghenew, for the erection of a sugar factory at Rustschuk has been transferred by him to a Belgian company. This concern will soon commence construction of the factory, to which a sum of five million francs will be devoted.

***

I have frequently touched on the proper utilisation of the services of our Consular representatives abroad, and am, therefore, glad to quote the following extract from the report of U.S. Consul Cunningham, of Bombay:—"Attention is again called to the importance of American manufacturers reporting the fact of the establishment of local agencies to consular officers. As a case in point, an inquirer came to this office to ascertain something in regard to an American product. The consulate, not being familiar with the name of the American manufacturer, gave the inquirer the names and addresses of other makers. It developed that a local agent had recommended the article, and it took some time to explain the consulate's lack of knowledge of the firm and its product. If manufacturers would write consular officers of the appointment of agents in the cities where American consulates are established it would frequently expedite and enlarge their trade, thus making the best use of the facilities provided by the Government for advancing American commerce." The moral to be drawn is obvious.

***

The reports on the Finance, Administration, and Condition of the Sudan during the year 1911 have recently been issued, and are of the greatest interest to those who have the prosperity of the country at heart, whether resident or non-resident, official or commercial. I notice that the reports are now published in two volumes, which makes the work much more handy for reading and reference. Volume I. contains the memorandum of the Governor-General, and the reports of the Legal Department, Sub-Department of Lands, Railways Department, and Steamers Department. Volume II. contains the Provincial and Departmental reports, other than those published in Volume I.

***

The report that the Turkish Government has negotiated a loan of £T1,250,000 with the Imperial Ottoman Bank is misleading. I am informed, authoritatively, that the bank is acting solely as agent or broker for the placing of Treasury bills to the amount mentioned. This operation represents the issue of the reserved balance of the £T2,500,000 series created by the late Government.

***

It is a curious fact that, in spite of the Tripoli campaign and the consequent obstruction of commercial activities in Turkey, the larger banks all report improved positions and increasing profits. This must, I think, be due to the prudent transference of business from the smaller banks and private bankers to the better known and more substantial institutions.

***

Apropos of the reduction of 50 centimes a ton in the Suez Canal dues, which is to take effect from the beginning of next year, Reuter's Washington correspondent reports that: "The State Department officials regard this as the first retaliatory step against the free toll provision for American ships passing through the Panama Canal." This is surprising. Surely the gentlemen in question must be well aware that the reduction in question is to be made simply in accordance with the 1884 Convention, which provided for a reduction of 50 centimes in the rate at each increase of dividend paid by the company.

***

THE NEAR EAST was the first to announce, some time back, the conclusion of an agreement between Lynch Brothers (the Euphrates and Tigris Steam Navigation Company) and the Baghdad Railway. Mysterious references to this agreement have appeared in several of our contemporaries, who were unacquainted with the details of this agreement, the broad outlines of which were published in these columns. For those who are unacquainted with the terms of the transaction it may be well to repeat that it is purely a business one. As is well known, the Baghdad Railway Company has, by its charter of 1903, the right to transport on the two rivers the material necessary for the construction and working of the line as well as the workmen engaged in the work. This right, as the London correspondent of the *Manchester Guardian* points out, is an infringement of the concession under which the Lynch Company has been carrying on its business ever since its establishment. The dispute which arose over it at the end of 1909 under the Grand Viziership of Hilmi Pasha will probably still be fresh in the memory of the public. After prolonged negotiations the two concerns ultimately agreed to solve the conflict by establishing a new company on the basis of their joint interests. This is the new concern of which we heard a little while ago.

***

A "Société des Transports Fluviaux en Orient" was formed at Brussels on July 3, having for its object to carry on the transport and other business on the two rivers and their affluents, but also—and this is the material point in the whole transaction—to negotiate with the Ottoman Government for the formation of an Anglo-German-Turkish company to take over the concern from the Société. In other words, the present Société has been formed only as a transient concern, to be merged into a permanent one, in which the Turkish Government would also participate. The nominal capital of the Société consists of 5,000 shares of 500 francs each, of which 10 per cent. has been paid up. The Lynch Company and the Deutsche Bank (as representing the Baghdad Railway) have taken up 2,497 shares each. Of the remaining six, one each has been allocated to the representatives of each group — viz., Herren Helferich, Otto Riex, and Conrad Bischoff, on the one hand, and Mr. Henry F. B. Lynch, Mr. F. Parry, and Sir Charles Archibald Nicholson, on the other hand.

***

In a recent issue I referred to the adulteration of British distillery produce as practised in Egypt, and suggested that steps should be taken without delay to put an end to the evil. I am glad to observe that the *Egyptian Mail* has now taken up this matter in a more general way, and advocates criminal prosecutions in cases of adulteration and falsification of labels and trade marks. All too often the manufacturer is satisfied with a public apology, without insisting upon adequate and proper punishment of the offender.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, August 24.

Hydraulic Lime and Cement Works.

The Société Anonyme Ottomane "Arslan" was formed in 1910, with a capital of £T50,000, to erect hydraulic lime and cement works at Touzla, in the Gulf of Ismidt. At an extraordinary general meeting held in April, 1911, it was decided to increase the capital to £T70,000, with a view to enlarging the plant to give an annual output of 50,000 tons of cement and 25,000 tons of hydraulic lime. The works, which cost £T71,781, according to a balance-sheet just published, were inaugurated in October last. At the annual general meeting held recently the proposal of the board of directors to further increase the capital by £T37,500 was carried. They are stated to have made important contracts with various companies, and the Government has admitted their products on its official cahiers des charges. With the works to be undertaken for the embellishment of the city, and the contracts entered into by the Government for undertakings in stone concrete, the directors anticipate a greater demand than they can meet, and propose further enlarging their plant. The Ottoman Customs Returns for the year ended March 13, 1910, give the total imports of cement into Constantinople as 17,750 tons, and of hydraulic lime as 2,665 tons, and for the whole Empire as 37,183 tons, and 10,060 tons, respectively, so that the company evidently anticipates exporting some of its output; but considering that these are not the only works of their kind in the vicinity of Constantinople, it would seem that the usual mistake of such enterprises in Turkey is being made; that of "attempting to run before having learned how to walk."

Concessions for Mines.

The Ministry of Commerce and Agriculture notifies that in the absence of any objections within a period of two months, from July 30 and August 21, respectively, in accordance with Art. 36 and 37 of the Mining Law, it will grant the following concessions: For a period of 99 years, for a copper mine mixed with zinc and argentiferous lead, covering an area of 378 hectares, in the villages of Kuzghun and Ketan Tchukur, in the province of Trebizond; for a period of 99 years, for a coal mine covering an area of 947 hectares, in the village of Divan Dagh, in the province of Castamuni.

Adjudications.

The Prefecture of the City invites tenders for 40 to 100 double-acting fire pumps with accessories, for the local municipalities and those of certain cities in the provinces. If the tenders received are satisfactory, the provisional adjudication will take place on September 28, and the definite adjudication on September 30. For conditions and particulars application should be made to the Council of the Prefecture of the City. A deposit of 10 per cent. of the amount of the tender will be required.

The Administration of the Ottoman Public Debt invites tenders for one million jute sacks "Liverpool twill," with tarred edges and hems, and a two-inch blue stripe. Of these, 600,000 are to measure 44 by 26½ ins., weight 2½ lbs., and 400,000 measuring 28 by 23 ins., weight 1½ lbs. Delivery at Smyrna, half of each category on about April 15, and the remainder by July 15, 1913. Offers to be addressed to the General Direction of the Ottoman Public Debt, under seal, bearing the inscription, "Offre pour adjudication des sacs," not later than January 6, 1913, together with a security of £T2,700 in cash, or in bonds, or a guarantee of a financial establishment approved by the Administration. This security will be released in equal amounts with each delivery. Payment by cable (on London or Calcutta at the fixed rate of 1s. 4d.) against Bill of Lading accompanied by certificate of Chamber of Commerce at port of shipment identifying quality, dimensions, and marks of sacks with the samples held by the Administration at the disposal of those desirous of tendering.

Electric Tramways for Baghdad.

The convention was signed yesterday between the Minister of Public Works and an Ottoman group for the concession of an electric tramway line Baghdad-Kiazimié-Kazaré.

Treasury Returns.

The total Treasury receipts for the first quarter of the current fiscal year ended May are in excess of those of the same period of the preceding year by £T592,019. The Customs receipts, however, during the month of May of the current year are less by £T14,419 than during the corresponding month of last year.

New Publication.

The first volume of a new work, edited by A. Biliotti, Dr. en Droit de la Faculté de Paris, and Ahmed Sedad, Dr. en Droit de la Faculté de Constantinople, entitled, "Législation Ottomane depuis le rétablissement de la Constitution" (Jouve and Cie., 15, Rue Racine, Paris), containing translations of the laws and regulations published since July 10, 1908, to November 1, 1909, has just appeared. This is to be followed by two other volumes, bringing the work down to date November, 1911, when a yearly issue will be published of the legislation enacted during the year. The price of the volume is 20 frs. It contains translations of all civil, military, and commercial laws, administrative regulations, treaties, concessions, and loan contracts, and will be of value to those interested in any kind of undertaking in Turkey. It effectively brings up to date the valuable work of Mr. George Young, late second Secretary of the British Embassy at Constantinople, entitled, "Corps de Droit Ottoman" (Clarendon Press, Oxford, 1906).

BAGHDAD RAILWAY.

(From Our Own Correspondent.)

Busreh, August 3.

Two Hamburg-American steamers have recently landed here a large quantity of railway material, which has all gone forward to Baghdad. The site of the terminus there has already been fixed and is on the right bank of the Tigris, almost opposite the British Residency and a short distance from the river. On the morning of July 27 the first sod was cut by the Vali of Baghdad, in the presence of all the Europeans and a large gathering of natives, speeches being made by the Vali, the director of the railway, and the Nakeeb.

NEW RAILWAYS FOR BOSNIA-HERZEGOVINA.

In a recent address delivered at Serajevo by the Austro-Hungarian Finance Minister, he declared that the Government agreed, in principle, to the construction of the following railways, costing in all 270 million kronen, to be found in equal proportions by Austria, Hungary, and Bosnia-Herzegovina:—(1) A normal gauge line from Banyaluka to Mostar, 115½ million kronen, including a new line between Banyaluka and Jajce (75 kilometres), 37½ million kronen; the transformation to normal gauge of the line between Jajce and Bugojno; a new line from Bugojno to Rama, viâ Prozor (35 kilometres), 44 million kronen; transformation of the line between Rama and Mostar to normal gauge; (2) a new line of narrow gauge from Bugojno to Arzano, 35½ million kronen; (3) a new normal gauge line from Broka to Tuzla and Celic to Raca viâ Bijelpina, 27 million kronen; (4) a line of normal gauge between Samac and Serajevo, 90 million kronen, comprising a new line from Samac to Doboj and the transformation of the narrow gauge line from Doboj to Serajevo. Bosnia-Herzegovina will bear the total cost, estimated at 21 million kronen, of a new line between Bihac and Novi.

A new normal gauge line will connect Serajevo with the new line Banyaluka-Mostar, near Bugojno, and another normal gauge line will run from Serajevo to Tuzla. If the Diet votes the necessary laws in time, the construction of these lines will commence this year, and will be finished in six years. The provisional credits to be applied for will amount to about 170 million kronen.

NEWS FROM ALL SOURCES.

The *Levant Herald* states that a group of American capitalists has applied for authorisation to establish a number of sugar factories in Turkey.

It is reported that the Turkish Government has granted a concession for the exploitation of the coal mines discovered on the Black Sea coast at Djideh.

Mr. Howard, of Messrs. B. Nathan and Co., Omdurman, left that town on the 13th inst. for Europe. He will visit the United States before returning to Omdurman in December.

The trade relations between Wadai and the Sudan, which were broken off last year owing to the war between the French Central African expedition and the Sultan of Wadai, have now been resumed.

According to *Alam*, the Egyptian Government intends to create a new Ministry for pious endowments, when it will separate the Wakfs of the Haramieh (Holy Shrines) and those of the former Khedives in Egypt from the estates controlled by the Wakfs Administration. Ali Pasha Aboul Futouh will, it is stated, in that case be made Minister of Wakfs.

A sharp shock of earthquake occurred at Perim on August 28 at eleven o'clock. The steamer "Andrée Rickmers" reports that the disturbance was felt at sea and seemed to be severe.

According to an official telegram received in Constantinople several chiefs in Assyr (Yemen) have surrendered to the authorities, and communications between Abha and Kunfuda have been re-established.

Under date of the 25th inst., Reuter's Bushire correspondent reports that the Bahaloo tribesmen attacked Bunder Abbas last Friday, and some British subjects were robbed. The raiders appear to have left again afterwards.

A telegram from Urmia states that watchmen and kawasses belonging to the Turkish Consulate attacked a native dragoman of the Russian Consulate in the street, although the latter wore the Consulate badge. The Russian Consul has protested to the Turkish Consul and has demanded the punishment of the guilty persons

The Marshal of the Court of His Majesty the King of Roumania has given public notice that certain persons having assumed, without authority, to attempt to traffic in appointments as tradesmen, furnishers, etc., to the Court of Roumania, any such appointments can, according to the regulations, only be legally made by and through the Marshal of the Court, at Bucharest, and not by or through any intermediaries.

Wednesday, September 18 next, at 10 a.m., the Egyptian Ports and Lighthouses Administration will sell, by public auction, at the Central Stores, Arsenal, Alexandria, old material such as wood, uniforms, zinc, iron pontoons, etc., which can be examined, with the conditions of sale, at the Stores Department, Alexandria.

The Bulgarian Government has granted leave to sixty thousand soldiers in order that they may assist in gathering in the heavy harvest of this year.

The Board of Trade have received, through the Foreign Office, copy of a "Customs (Amendment) Decree" (No. 3 of 1912), dated May 31, 1912, which amends the Customs Decree of 1911 by providing for the free importation of gold bullion and sem sem into the Zanzibar Protectorate. The duty previously leviable on these articles was 7½ per cent. ad valorem.

A contract has been awarded to a Bulgarian firm for the construction of the local railway between Tulowo and Kazanlik in the attar of roses district.

Openings for Business.

BUSINESS IN CRETE.

The *Board of Trade Journal* states that in the report by H.M. Vice-Consul at Canea (Mr. E. C. D. Rawlins) on the trade of Crete in 1911, which will shortly be issued, a word of warning is given in regard to the general extension of British trade in the island. It would be unwise, says the Vice-Consul, to advocate too strongly at the present moment commercial operations on a large scale, as, owing to the prevailing uncertainty in the political situation there, it cannot be said that normal conditions prevail. Still, it must be admitted that the Cretan trader is careful, and has no bad reputation for honesty.

Travellers and Catalogues.

Although the United Kingdom is already interested in the majority of the articles imported into Crete, there is room for expansion. To this end the Vice-Consul suggests the sending of more commercial travellers, well equipped with samples, and knowing, if not the language of the country (modern Greek), at least French as well as English. The visits of such travellers are undeniably advantageous. Crete is by no means out of the way, being approached easily from Trieste by vessels of the Austrian Lloyd Steamship Company, or from Athens and the Piræus, the crossing from the latter port only occupying fourteen hours, and sailings being frequent.

The sending of catalogues, with weights and measurements in the metric system and the prices in decimal coinage, the text being, if possible, in French as well as English, is important.

The high quality of British goods is well known, but in a poor country like Crete cheapness is the one desideratum, and it is this that often tempts the native to look to countries other than the United Kingdom for many of his wants.

Credit Terms.

The usual terms of credit are from three to six months, or cash against documents at a bank in Crete with 3 to 5 per cent. discount.

In regard to methods of shipment, etc., the Vice-Consul remarks that prices should always be c.i.f. Crete, if possible. The best route for goods from the United Kingdom is viâ Piræus, whence steamers sail five times per week for Cretan ports. Shipments viâ Syra are not convenient, as two transhipments are necessary—viz., at Syra and at Piræus. Shipments viâ Alexandria and Smyrna should also be avoided, the goods taking much longer in transit, and two or more transhipments being necessary.

THE SELECTION OF AGENTS.

In his report on the trade and agriculture of the district of Odessa for the year 1911, Mr. Consul-General C. S. Smith states :—"In the course of the year a large number of applications come to that city from British firms anxious to begin trade there. They have no idea of the local requirements, condition, or terms upon which people in this market are in the habit of buying. A long correspondence follows, and in the end nothing comes of it. Business houses in the United Kingdom should notice that, excepting only for raw materials unobtainable in this country, for which the terms are cash in exchange for documents at Odessa, or by London banker's acceptance in London against documents, all manufactured goods are usually sold in this market on credit ranging from four to six months or longer, against customers' bills. Firms desirous of opening trade here should be very careful in the selection of their agents, who should be able to supply satisfactory British references."

There is, of course, nothing new in this; we have frequently drawn attention to the conditions under which business is best inaugurated in the Near East, but unfortunately it is impossible to repeat these and similar warnings too frequently.

LEATHER FOR ALEPPO.

Mr. Jesse B. Jackson, the United States Consul at Aleppo, states that the leather market in his district has been very good for some years past, since many of the inhabitants took to using footwear made from European and American leather. Black glazed kid has always been most in demand, and perhaps composes half of the entire amount of leather sold for making shoes of European or American pattern. It is imported by the commission houses, which usually sell direct to the shoemaker a few skins at a time, collecting the cost in small amounts. Most of the commission houses buy for their own account, relieving the exporter of all responsibility. The shoemakers are too poor to buy a consignment of leather at a time from the manufacturers, so they rely on the importers to furnish the funds therefor, and they naturally pay a much higher price for their leather.

European firms have established agencies to which they send considerable stocks on consignment, to be sold for the account of the manufacturer. One of these agents sells about £14,000 worth of leather a year, approximately half of which is black glazed kid. Several other firms have the same arrangement with other European exporters, doing a smaller but important business.

Terms, Samples, and Shipping.

As a rule, Americans require cash in advance, but a few of them have been selling "against documents," thereby retaining possession of the goods until paid for. Where qualities and prices are favourable this method can be employed successfully. Samples should be sent, and it is better to submit cuttings than to require the buyers to purchase a few skins as a trial order. European firms send whole skins as samples, without payment, to reliable persons. In this case none but the low-priced skins should be sent, as the market demands a cheap though good article.

The question of correspondence and shipping methods should be taken up with the various importing and commission houses which import practically all of the goods purchased in Aleppo. French should be employed, as English is little known. Samples should be forwarded registered, or they may be lost, and prices and discounts should be stated. Shipments may be made by parcel post.

PAPER FOR SALONIKA.

Salonika (says the *Oesterreichisch-ungarische Konsular-Korrespondenz*, Vienna) imports large quantities of white and coloured writing papers.

White paper is imported in the following dimensions: 44 by 64 centimetres, 57 by 87 centimetres; coloured paper, 57 by 80 centimetres.

For white paper 26.50 frs. is paid; for coloured paper 30 or 31 frs. per 100 kilog. c.i.f. Salonika, with 3 per cent. discount. Packing is effected in two packets of 250 reams. The principal importing countries are Sweden, Germany, and Belgium.

U.S. TRADE WITH SYRIA.

The Washington *Daily Consular and Trade Reports* state that the declared exports from Beyrout to the United States during the first half of the current calendar year aggregated 345,975 dols., an increase of over 100 per cent. above those for the corresponding period of 1911. Raw wool advanced from 71,037 dols. to 107,664 dols., and cotton lace from 77,736 dols. to 221,305 dols. Cotton lace is becoming an important article of export to the United States. Its manufacture is entirely a cottage industry, and gives employment to many unattached women and girls, who otherwise would have no means of livelihood. This lace is made from cotton and from patterns which have been furnished in the United States, where it is known by the name of Baby Irish. Some of the very finest lace is made by the girls connected with an American mission school here; but the mistress of this school has had difficulty in marketing her lace in the United States.

TENDERS INVITED.

EGYPT.

Supply of Timber.—The Railway Administration invites tenders for the supply of timber. Specification from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W., on payment of 2s. 1d. Tenders to be on form attached to specification. Date, October 10 (10 a.m.).

Supply of Material, Clothing, etc.—Tenders will be received at the Central Administration, Department of Public Health, Cairo, for the supply of material, clothing, and various articles necessary for the Central Stores during the year 1913. Forms of tender, samples, and all other information may be obtained on application to the Director of Stores, Central Administration. Tenders (on special forms issued gratis by the Department of Public Health and accompanied by a stamped paper of 30 milliemes) should be addressed to the Director-General, Department of Public Health, Cairo, and marked in left hand corner, "Tender for material, clothing, etc." Date, September 15 (noon).

Steel Barge.—Tenders will be received at Financial Secretary's office, Cairo, for construction and delivery at Shellal of decked steel barge for the use of the War Office. Conditions of contract and other documents in connection with the above may be seen at the office of the Assistant Director of Military Works, War Office, Cairo. Date, September 23 (11 a.m.)

Supply of Paper, Bristol Board, and Millboards.—Tenders are invited for the supply of paper, Bristol board, and mill-board required by the Printing Department of the Egyptian Government during the year 1913. Conditions of contract and schedule of quantities may be obtained at the Secretariat of the Ministry of Finance, and at the Printing Department, Bulaq.

Tenders to be forwarded to the Director, Printing Department. Date, September 10 (noon).

Supply of Wood.—Tenders will be received by the Director of Stores, Coast Guard Administration, Arsenal, Alexandria, for the supply of wood required by the Coast Guard Administration. The conditions of tender may be had from the office of the Director of Stores, Arsenal, Alexandria. All tenders must be made on stamped paper of 30 milliemes, addressed and submitted in sealed and registered envelopes as indicated in the abovesaid conditions of tender. Date, September 16 (noon).

Supply of Envelopes.—Tenders are invited for the supply of envelopes required by the Printing Department, Finance Ministry, during the years 1913-1914-1915. The conditions of contract may be obtained at the Secretariat of the Ministry of Finance and at the Printing Department, Bulaq.

Tenders should be sent to the Director, Printing Department. Date, September 26 (noon).

TURKEY.

Supply of Fire Pumps.—Tenders invited by the Constantinople Prefecture for the supply of 40-100 double-acting fire pumps with accessories. Full particulars will be found in our Constantinople Business Letter. Date, September 28.

Supply of Jute Sacks.—The Administration of the Ottoman Public Debt invites tenders for the supply of one million jute sacks. Full particulars will be found in our Constantinople Business Letter. Date, January 6, 1913.

SILVER PLATE IN TURKEY.

If, owing to the absence of statistics, it is not possible to indicate the exact value of the importation of silver-plate into Turkey, the trade done in this article annually at Constantinople is estimated at about £6C,000, according to the *Bulletin* of the French Chamber of Commerce of that city. The same journal draws the attention of manufacturers to the development of the trade in fancy articles in the Ottoman Empire, because everything of this nature which was formerly made in crystal or porcelain is now sold in plated metal. The deliveries are generally effected f.o.b. Constantinople, and the credit allowed is from six to nine months.

Engineering Notes.

The Corinth Canal.

The Corinth Canal was opened about twenty years ago. It runs across the Isthmus of Corinth, the width of which is six miles, thus dividing Peloponnesus, or Morea, from the northern part of Greece. Its width is 29 metres (95 ft.), and its depth sufficient to allow vessels of very large size to pass from the Gulf of Corinth into the Saronic Gulf, and vice versa. By the use of this canal the route between the Adriatic and the Ægean and Black Seas is shortened by about one day, and the rough seas of Cape Malea and the adjacent narrow channel, between the island of Cerigo and the southern coast of Morea, are avoided. From a strategical point of view the canal is of great importance to Greece, and in case of any troubles in the Near East this waterway may play a great part in the movements of Mediterannean fleets, for the inner entrance of the Corinth Gulf has been called the "Little Dardanelles," and in the Saronic Gulf on the island of Salamis there is a naturally well-protected dockyard of the Greek Government. A glance at any good map will show the importance of the place. For some reason, however, connected with towing arrangements, the larger vessels, for fear of accidents in passing through the canal, prefer the longer route round the Morea.

An American Proposal.

An American firm has sent to Greece a representative, who was last week received by the Prime Minister, M. Venizelos, and submitted proposals to the Greek Government, by which the firm proposes to effect certain alterations in, and the application of steam engines on land for towing the ships through, the canal, without increasing its present width. The idea is to lay on the one bank of the canal a railway line on which very powerful and heavy engines of special construction will run. The vessel on entering the canal will be attached to one of these engines, which will tow it steadily through the canal quickly, and without touching any of its banks. According to the plans submitted, ships up to 14,000 tons will be able to pass quite safely through the whole length of the canal. This is of great importance to Greece, whose latest battleship, just ordered, will be of 14,000 tons. M. Venizelos assured the representative of the American firm that the proposals and plans will be submitted to an expert committee, and that if their report be satisfactory, he will gladly ask the Chamber of Deputies to pass the necessary Bill, since the scheme will solve a problem of great importance to navigation.

Proposed Railway to Jerusalem.

In a recently published report, Mr. Stanley Hollis, U.S. Consul at Beyrout, writes as follows:—"It is reported that a branch to Jerusalem of the Hedjaz Railway is to be shortly constructed from Affouleh, which is on the main line of the Hedjaz Railway running from Haifa to Deraa, and is located at a spot to the west of the Jordan. Engineers who were sent by the Hedjaz management to make a preliminary survey for this project have returned to Constantinople and submitted the report required from them. They state that only fifty-six miles of additional trackage must be constructed in order to carry a branch from the Hedjaz line into Jerusalem.

"Such a line would mean a great deal to the people of Jerusalem, for it would afford welcome facilities for the tourists and pilgrims who annually flock in great numbers to that city. At present all travellers for Jerusalem must disembark at Jaffa, which has no harbour, and where the sea is for days at a time so rough that neither goods nor passengers can be transported from ships in the roadstead to the shore. Haifa, on the other hand, is on the shore of a partially sheltered bay, and safe landing places can be constructed there at comparatively little expense. This proposed branch line would also put Jerusalem and the Jordan Valley in direct rail communication with Damascus, Beyrouth, and the other large Syrian cities north of Beirut, which already enjoy rail communications with the coast ports."

PORT SAID NOTES.

(From Our Own Correspondent.)

Port Said, August 9.

New Destructors.

Early in 1909 the Domaine Commun put at the disposal of the East Division, Public Works Department, a credit of £E1,002.951 for the construction of two refuse destructors. Of this credit a sum of £E948.622 was expended, but as there was no road of access it was quite impossible to utilise the destructors. The East Division constructed an embankment next the destructors which was meant to form part of the road of access, but as it was only 40 metres in length and started with a rise of nearly 2 metres it was impossible to get the refuse near the destructors, which were placed 400 metres distant from the nearest road. The cost of forming a suitable approach was estimated at £E604.329, of which sum the Ministry of Finance were to give £E275; the Municipality, £E275; and, with the remaining £E54.329 of the Domaine Commun credit, the total amount was made up. Both the Ministry of Finance and the Municipality approved of the credits being granted. Some time ago the Ministry of Finance handed over the £E275, and the work of construction of the approach was commenced without delay. The road was completed, and the first trial made a week ago. It is hoped that this method of removing all the refuse to a place outside the town, and burning it in properly constructed destructors will greatly aid towards an improved condition of sanitation in the town.

Drainage Scheme.

For some years past the inhabitants of Port Said have been alive to the urgent necessity of introducing into the town a proper drainage system. In November, 1909, some five or six representative citizens went to Cairo to plead their cause, and saw various Ministers on the subject, but although all the authorities concerned sympathised with their claim, yet the money required for the work could not be found. The claim was naturally revived on the creation of the Municipality last year. Indeed, the first object which the people had in view in applying for a Mixed Municipality was the construction of the drains. As much as 10 per cent., and, in some instances, 15 per cent. of the rental value of their houses is paid by proprietors to the Vidange Company, and the work is carried on in the most rudimentary manner. In fact, some parts of the town are rendered almost uninhabitable for want of a proper system of drainage, and it is only due to the strenuous efforts of the Sanitary Administration, and to the sub-tropical sun, "the best doctor," as the Roman writer says, that the health of the town is so well maintained, and compares so favourably with any healthy town in the world. Nor can the general cleansing of the town ever be properly effected until the drains have been constructed. On the other hand, people expected, or were led to expect, too much of the Municipality. A propaganda was set on foot thirteen days after the elections had taken place to the effect that, as the Municipality had taken no steps with regard to the drainage, the voluntary house tax should not be paid. The idea not unnaturally appealed to the pocket of the general taxpayer, but it was a foolish and a dangerous one. It was most unreasonable to expect anything from the Municipality at that time. Hardly a month had elapsed since the first meeting of the Council was held, and had the people acted according to this misguided advice they would at best only have succeeded in delaying the construction of the drains indefinitely. At a meeting on July 1 the drainage scheme prepared by Mr. Carkeet James was submitted to the Commission, and at a meeting on November 4, 1911, Mr. Carkeet James was present. The estimate amounted to £E16,971. This was submitted and approved at the meeting of December 21, 1911. A few months ago the financial difficulty was overcome by an offer on the part of the Suez Canal Company to lend the money through the Egyptian Government for the financing of the Port Said drainage at a favourable rate and under exceptional conditions. The two first sections (digging, placing of pipes and ejectors) will be put up for tender for two months from the beginning of September. The contractor will, therefore, be able to commence the work towards the end of December. Experts have stated that the works will not require more than three years, and that during this period the parts which are finished can be used.

Oil Topics.

Cheleken.

Cheleken Oil Fields, Limited, had a cable on Monday to the effect that their "well No. 11 blew two hours on Sunday afternoon, well No. 10 twelve hours. Estimated quantity, 4,438 tons, chartering a supplementary steamer." This had the effect of putting up the price, and Cheleken shares are talked higher. The capital of the company is £300,000, of which £280,000 has been issued. The property consists of five plots of an area of about thirty-two acres. The company also owns 200 acres of land on the main land adjoining the island. Nine wells have been sunk and oil has been found at about 650 feet. The production of the company has been fairly steady during the whole of this year, eleven producing wells having turned out about 4,500 to 6,000 tons of oil a month. August, however, shows a production up to the present of over 9,000 tons. The company has an ambar of four million poods, some iron reservoirs of a capacity of two million poods, a pier at the harbour, which is ten versts from the wells, and a pipe-line six miles in length. The cost of boring is moderate, being about 25s. to 30s. per foot. The company has contracted for the sale of its oil at Baku at 23 copecks per pood. As the price of oil is now about 38½ copecks this does not sound like a particularly good contract, but it leaves the company a profit of about 30s. per ton. The chairman explained at the last meeting that the reason they could not get the full price for their oil was that it contained a large percentage of paraffin wax, 5 per cent. being, we believe, the exact quantity, and there is only one refinery in Baku that can extract it. Therefore, the Cheleken oil is mainly used for fuel purposes. The oil is rather low in benzine, containing only 9 per cent. The Cheleken Company declared its first dividend of 2s. a share in June, and, it is said, will be able to pay 30 per cent. per annum. If the Tcharken Cheleken, which has just struck oil, turns out a big producer then the parent company will get a considerable dividend, for it holds 24,000 shares in the subsidiary.

Maikop Oil Outputs.

British Maikop output for last week was only 695 tons, as against 748 tons in the previous week. It is officially stated that this company does not intend to ask the shareholders for fresh capital. Therefore, it is probably selling its oil and using the money for drilling purposes. It is a pity that it has not obtained a fresh supply of working capital, but 60,000 shares are under option until December, 1913, at 4s., and this probably has prevented the directors from dealing with the unissued capital. Maikop Spies production has jumped up from 260 tons to 535 tons. It is quite evident, therefore, than well No. 3 on plot 488 is baling freely. This plot seems to be one of the most productive in the Maikop district. Maikop New Producers is in bad luck. Last week its production was 226 tons, and the excuse made was that well No. 2 was giving trouble through the flood. The present week, ending 24th, shows a further falling off to 206 tons, and we are told that the lower production is on account of the wells being cleaned. Maikop Victory, which last week gave 643 tons, has fallen off again, and for the week ending 24th could only give 616 tons, but a new well has reached the oil sands and should now be baling. We shall see how far this new well affects the production of British Maikop, as it is on the boundary of that company. The Black Sea production is almost the same as last week, being 1,084 tons, or three tons less. Black Sea production is certainly not as satisfactory as it might be, and a good many people are disappointed. The Maikop Midland report that their No. 2 well flowed for twenty minutes to the top of the derrick. It is to be hoped that one or two more Maikop companies will come into production shortly, for really, considering the large amount of money that has been put into the field, the production is very small.

The Grosny Field.

The North Caucasian production for the week ending August 20 was 761 tons, and there is no news yet of the new well. However, we hope for the best. Spies production for the year to August 25 was 170,623 tons as compared with 218,221 tons for the corresponding period last year. The total production of Grosny for the first half of 1912 shows a great falling-off, being only 32,637,866 poods as against 38,003,848 poods in the corresponding period of the preceding year, which is 5,365,983 poods less, or about 14.1 per cent., and there have been no fountains at Grosny up to the present in 1912, whereas last year more than 2½ million poods came from gushers. There was also great trouble in the western portion of the field, where the water got into the wells and many of them had to be abandoned. Grosny is certainly most unfortunate. Baku is supposed to be a dying field, but whilst Grosny production fell off over 14 per cent. Baku has fallen only 4.9 per cent.

Oil-Drilling Trust of Roumania.

The Oil Drilling Trust of Roumania has held its statutory meeting, and the chairman made a very enthusiastic speech, in which he said that all the properties of the company had been transferred and the obligations which they had to undertake in connection with drilling had been carried out. The company has issued 44,000 shares, and has still 66,000 shares to place. It paid a large sum for promotion expenses, and although Mr. Lincoln announces that the company had struck oil we are unable to see any ground for the optimism of the chairman.

Anglo-Persian Oil Company.

Writing on the 3rd inst., our Busreh correspondent says:—The Anglo-Persian Oil Company have commenced operations, and several tank steamers have loaded at Abadan full cargoes of crude oil for Burmah, Java and Bombay. So far no refined oil has been placed on the market, but it is reported that the refinery is now working and case-oil is expected to be available shortly. The Standard Oil of New York have only recently sent up two full cargoes of case-oil, and it would appear that they have every intention of striving to maintain the position which they at present hold on the market.

Cyprus Oilfields.

Cyprus is one of the newest places in which serious exploration work has been undertaken with the object of oilfield development, says a writer in the *Financier*. Along the northern coast of the island, which thrusts a long and narrow peninsula out to the eastward, runs a chain of mountains, and upon the slopes of this a well-known geologist has been working for some time in the hope of finding oil indications. He has selected, as probably oil-bearing, half-a-dozen areas which lie in two groups, and run in a line nearly east and west, the eastern extremity tending slightly to the northward. One area lies to the south-east of Kyrenaia, the next to the eastward of the former close to Malonda, the third still further to the eastward and to the west of Akonto. Then there is a gap, and the other three areas lie stretched out in a line five or six miles to the north of Tricomo. The entire series from east to west extends about twenty-four miles.

The Colonial Office has granted the request of a British syndicate for a lease of one of these areas, which has an area of some 1,300 acres; and other leases are in course of negotiation. It may be remembered that upon the neighbouring mainland of Palestine oil traces have been found, as also in Asia Minor; so that there is nothing unlikely in Cyprus being a prospective oilfield, especially considering how rich in petroleum many of the Mediterranean countries have proved to be.

Petroleum in Zante.

Springs of crude petroleum on the island of Zante, Greece, are attracting not a little attention, says Mr. A. B. Cooke, U.S. Consul at Patras, in a recently issued report. They are locally known as pitch springs (like so many other true petroleum sources), and are to be found at the southern end of the island, in a wide and marshy hollow hemmed in by mountains, but open on one side to the sea. Analysis shows that the oil is of a high degree of purity. It issues from the earth in cavities where water is found, the drops oozing up from below and spreading like a scum on the surface. Only a few gallons a day is the total flow from the various sources.

Local capital recently provided the funds for drilling close to the springs. A bore was made near one of them with a pipe 2 ins. in diameter, with the result that after a depth of some 200 ft. had been passed oil was obtained in small quantities. Water is associated with the oil so yielded, and it is stated that water and oil flow up the pipe together; but this means nothing, as defective shutting off of inferior surface water would produce this phenomenon. In May last a steam-engine and a proper drilling rig were brought to the spot, and the first power-well has now been begun with 12-in. casing.

The above attempt at oil exploitation in Zante is by no means the first. An American concern was drilling there in 1867, but no oil was found, and the field was abandoned. An English company in 1871 had no better luck, and since then a Galician company has proved unsuccessful, as have the Greek Government drillers, and a second English syndicate, which for a short time operated there. The flow of petroleum at the springs continued undisturbed all this time.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, August 24.

Prahova-Constantza Pipeline.

The pipeline which is to be constructed by the Roumanian Government from the Prahova district to the Black Sea is to be commenced, if possible, this autumn. The engineers, Messrs. Tancred Constantinesca, C. Mircea, and M. Samitescu, who were despatched by the Government to study and report on pipelines in America and Russia, have now returned and presented their reports to the authorities.

The pipeline will follow the railway track of Baicoi, Ploesti, Buzeu, Constantza. The pipes necessary for the line will cost ten million francs, which sum has already been voted. An adjudication for the work will be held next November. The pipes will be in three lots, being of steel, 45-50 centimetres, and capable of resisting a pressure of 100 atmospheres. Three lines will be laid. One, for raw petroleum, will have an annual carrying capacity of one million to one and a-half million tons. The other two, which will be for conveying refined oil, will be of a carrying capacity of 300,000 tons and 200,000 tons per annum, respectively. These two latter can have their carrying capacity increased if necessary by the erection of extra pumping stations. The entire cost of the construction of the pipeline, including the pipes, will be 18 million francs.

New Tank Steamer.

The cargo-boat of the Roumanian State line, the "Dobrodja" is to be transformed into a tank steamer for the transport of petroleum. It is intended to employ this steamer between Constantza and Rotterdam.

Steaua-Romana Subsidiary Co.

The Steaua-Romana Company have decided to take measures for the introduction and sale of their petroleum in Bulgaria, and have therefore founded a separate company at Sofia, with a capital of a million francs, under the name of "Nafta."

MINERALS IN ARABIA.

U.S. Consul Homer Brett, of Muskat, Sultanate of Oman, reports that an Indian business man recently completed an extended prospecting tour of Oman at the instance of the Sultan. Only surface work was attempted, and it was found impracticable to visit the coal beds which are said to exist in the Sharkeyah district, but it is reported that a valuable chrome deposit, containing small percentages of lead and silver, was found about four miles from Sib, and that development work will soon be undertaken. Tentative plans involve building a 30-mile tramway from Matrah to Sib. The prospector also states that he discovered a mountain of pure crystals of carbonate of lime, but there is no present intention of attempting to utilise this. Attention was also paid to the pearl fisheries, and it is possible that modern diving equipment may be purchased with which to work a hitherto unused bank in the vicinity of Ras el Had.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondents.)

Busreh. August 3.

The shipments of grain during the last six months must have been a record for Busreh. Just now, owing to the fall of prices in Europe, little or nothing is being done. Although stocks here are large, prices have not dropped sufficiently to meet those ruling at home.

The general topic of conversation is dates; everbody, being more or less interested, realises that the season is fast approaching. Two steamers, one owned and the other chartered by the Hamburg-America Line, have arrived laden with wood for 900,000 boxes from Fiume and Norway, besides which a British steamer is expected with a further 500,000 boxes. The fruit is well advanced and will probably be ready for packing by the end of the month, but little work will be done before the middle of September, the close of Ramazan, on account of the weather being extremely hot and the natives having to fast. A very large crop is looked forward to, and it is estimated that of the three principal qualities—Hallwees, Khedrawees, and Sayers—the first two will be considerably above the average and about twice as large as that of last year. The Sayers, however, are not quite as plentiful, but are expected to be up to the average.

Baghdad. July 31.

The market is suffering from the despondency caused by the unending troubles in Persia. A few days ago the Ministry of the Interior prohibited all exportation to Persia. The merchants thereupon made urgent representations to the Vali, and they obtained from him the removal of the prohibition, but with a declaration that if they choose to send goods to Persia while the troubles last they will be doing it entirely on their own responsibility. In addition comes the news of fresh troubles in the changes in the Ministry, etc. Although these affairs do not produce a great effect on this part of the country, they are always a sufficient ground for grave fears among an important section of the population, with the result that cash is beginning to get scarce, and confidence is somewhat shaken.

These things are counteracting the effects of the commencement of the construction of the railway, which was inaugurated officially on the 27th inst. by the Vali, in the presence of a great number of guests, including the foreign Consuls.

The wool clip this year is good and abundant, and a great quantity is being pressed and shipped to the United States, England, and other Continental ports.

This is the end of the gum season. This year, owing to the disturbed state of Persia, very little gum reached Baghdad for export.

Opium and carpets are also scarce. It is said that this produce is going up north. Cotton goods also, it is said, are reaching Ispahan, Hamadan and Kermanshah from the north.

The closing of the south routes has lasted for close upon a year now. If this state of things should continue much longer the goods from Russia will get a firm hold in those places, and all Manchester firms and other firms will suffer in consequence. Everyone here agrees that these troubles in Persia are manufactured. Some say by Russia, some by England, and some by both. As to who is injured by them that is very clear.

Varna. August 19.

Attar of roses.—The production of attar of roses being this year very considerably below that of 1911, sellers asked 20-25 per cent. higher prices, but the buyers united and formed a kind of syndicate to oppose this increase. The greater portion of the supply is therefore likely to remain unsold, until foreign buyers come into the market with higher offers.

Cereals.—There arrived this day from the interior five wagons of red wheat, 55½ lbs., with 13½ per cent. admixture, and this was sold at 17¼ frs. per 100 kgs. No other arrivals of the new crop are reported.

On August 17 four wagons of winter wheat arrived at Bourgas and were sold for Greece, 60 lbs., 18¼ frs. per 100 kgs.

Buyers of millet offer 12 frs. per 100 kgs.

Political conditions in the Balkan Peninsula cause wholesale buyers of wheat to be somewhat reserved, and prices have consequently fallen to a low level. It is, however, reported that the National, agricultural, and private banks are ready to make advances to farmers for current expenditure, in order that they may not be forced to sell their produce at the existing low prices.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

Busreh. Aug. 3.

Imports.—The optimistic reports concerning the routes to Persian centres continue to arrive, and, aided by the approach of the Mohammedan festival, the market is improving. Numerous orders, especially for produce, have been placed for early shipment, and consequently local stocks are reduced.

Exports.—Stagnation characterises the cereal market, buyers and sellers being reserved. However, in consequence of constant arrivals from the interior, sellers will finish by giving way. Since July 20 about 8,500 tons have been shipped, of which 5,280 tons are for London, Antwerp, or Hamburg, per s.s. "Silver Birch," delivery to be made at the port or ports to be specified by the buyer, before arrival of the ship at Port Said. The balance was for Jeddah, per s.s. "Husseinee" and "Lawde."

The date market shows a slight decline.

Mitylene. Aug. 17.

Prices of oil are still well maintained, which prevents export.

Exports.—100 barrels of oil, value about £700, and 600 sacks of soap, value £1,200.

Imports.—350 sacks Trieste sugar, 50 sacks Rangoon rice, 50 sacks Trieste coffee.

Crops.—The drought continues to the great detriment of the olive crop.

ROUMANIAN CROP CONDITIONS.

(From Our Own Correspondent.)

Bucharest, August 24.

On account of the unfavourable weather conditions which prevailed during the ripening season, this year's crops were inferior, both in quality and quantity, to what was expected. The result as regards wheat, barley, and oats is, in general, less than last year, and is between 10 and 15 Hl. per hectare. In Wallachia, as in the Eastern district, where the reaping and harvesting were carried on under favourable conditions, as much as 20 Hl. were secured. Principally in the north and middle of Moldavia the wheat suffered, as the cut corn lost weight and colour through having to lie in the rain.

The maize is much improved on account of the heavy rainfall, and especially in the middle and north of Moldavia shows a good appearance; in some places it has reached a height of over 6 feet. In the eastern part of the country, and especially in the districts of Jalomitza, Constanza, Tulcea, Braila, Rimnic Serat, Putna, Tecuci, Covurlui, Tutova, and Faltisheni, where it rained less, the maize is smaller, and where late sown is practically lost.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending August 16:—

Speculators have been actively buying again this week at 17s. to 18s. for low grade New Crop and 18s. to 19s. for Old Selected druggists' 1910-1911 crops. The sales amount to 36 cases, of which 31 on speculation, and the balance bought by American buyers. Our sellers continue to maintain a very firm attitude; so if any active buying by American buyers takes place we shall soon see a higher basis established, and probably reach 20s. to 24s. as to quality. The arrivals are 855 cases, against 449 at same date last year.

PRODUCE REPORT.

London, August 29.

There has been a fair amount of activity in the markets during the past week, but operations are somewhat cramped, owing to the unseasonable weather. Sugar has further declined. Coffee is steady. Common currants are lower. Seeds are firm at full late rates. Linseed steadier. Linseed oil is firm, but cotton oil easy. Petroleum is dull. Turpentine lower.

Sugar.

Refined is 3d. to 4½d. per cwt. lower; old crop beet, 5d. higher. The beetroot crops in Europe are progressing favourably, but fine, dry weather now appears to be generally desirable. British markets are well supplied with cane sugar, refiners having lately purchased rather freely; prospective supplies are ample before new beet becomes available. Reports from Java state that the yield may not exceed 1,300,000 tons, and Cuban crop is estimated to reach 1,850,000 tons. Closing rates for beet are:—August, 11s. 7½d.; September, 11s. 5½d.; October, 9s. 11½d.; November-December, 9s. 10½d. f.o.b. Hamburg. Refined sugar:—English, Tate's No. 1 cubes spot, 21s. 9d.; September, 21s. 6d.; November-December, 18s. 9d. No. 2 spot, 21s. 3d. Foreign: Say's cubes, prompt, 18s. 9d.; October-November, 15s. 10½d. f.o.b. Paris. Dutch cubes, prompt, 17s. 6d. f.o.b. Amsterdam. German and Austrian cubes, November-December, 14s. 3½d. f.o.b. Hamburg.

Coffee.

There is not much change in the market, but prices are quite steady. East India Plantation, small to mid, 76s. to 82s. per cwt. Mocha, long berry, 80s. to 85s.; short berry, 82s. to 100s. Costa Rica, low to ordinary, 74s. to 77s. Mexican, 75s. to 86s. Brazil, 68s. to 86s.

Currants.

The market is easier for bags. Provincial kind on the spot at 24s. 9d.; quarter cases are scarce at 26s. Patras and Gulf are from 28s. to 29s. 6d.; also Vostizza, at 32s. to 33s. Siftings sell slowly. New crop to arrive are cheaper, while only a limited trade passing. The crop is reported to be excellent, and a great part of the same is housed safely.

Sultanas.

There is not much inquiry for old Smyrnas, except choice fruit, of which little remains. The new crop is estimated at about 37,000 tons, and fairly high prices are anticipated. Samarkand are going much better from 38s. to 40s.

Figs.

Bags, naturals, on the spot have sold better, from 18s. to 20s., and should be cleared before the arrival of new. The prices are very high for new crop, and not much demand is expected, on account of the stiff rates asked.

Dates.

To arrive:—It is difficult to get reasonable quotations, especially for Sichs. Old, Khadrowie, 17s. 6d.; Hallowie, 18s. 6d.; Sich, 12s. to 13s. Egyptian, none.

Seeds.

Transactions are on a reduced scale. Canary-seed is in poor request, although values are upheld; Turkish, 58s. to 60s. per qr.; Spanish, 85s. to 95s.; Mazagan, 68s. to 70s. Linseed is in quiet demand at irregular prices. Russian, 71s. to 73s. per qr.; Calcutta, 63s. to 64s.; English, 70s. to 72s.

Oils.

Linseed oil is dearer, but only a small business is passing.—Spot pipes, £33 5s.; barrels, £33 15s.; August, £33 12s. 6d.; September-December, £32 17s. 6d. Cotton oil has a drooping tendency, holders being desirous of selling. Ordinary pale refined, spot, £27 to £27 5s.; sweet edible, £30 10s. to £31 10s. Olive oil is quiet, but steady. Rape oil is quiet and easier; ordinary brown on spot, barrels, £32 10s.; English refined, in casks, £33 15s.

Oilcakes.

A moderate business is passing in all descriptions at steady rates. Egyptian cotton seed cake on the spot and forward is steady at £6 7s. 6d. Linseed-cake, London made, £9 to £9 5s.; Russian, £8 17s. 6d. to £9. Soya, London, are in small supply, and firm at — 10s.

GREEK CURRANTS.

Last Year's Crop.

Messrs. Burlumi's annual report on currants states that the shipments from Greece during the currant year ended 22nd inst. reached 113,000 tons. To the retention stores of the Privileged Currant Company there were delivered 40,000 tons; 7,500 tons of fresh and dried currants were made into wine in Greece, and it is estimated that about 2,500 tons of old fruit is being carried over to the new season, making altogether 163,000 tons. Deducting 6,000 tons of old fruit brought over from the old season 1910-11, the crop of 1911 was 157,000 tons, against 123,000 tons in 1910 and 185,000 tons in 1909. The quantity shipped has been distributed as follows :—

	In 1910-11.		
To the United Kingdom and Australia	Tons. 60,500	against	Tons. 65,000
To the United States and Canada	17,000	,,	14,500
To the Continent of Europe	35,700	,,	35,000
	113,000	,,	114,500

The feature of the closing season has been the very slight fluctuations in prices. The season's trading has been unsatisfactory to the shippers, though they cannot have suffered considerable losses. They had to contend against dragging markets in England all through, and at no time could they cover the cost of the goods, the Greek markets being always dearer than the English. The clearances for home consumption in the United Kingdom from August 1, 1911, to July 31, 1912, have been 60,943 tons, against 60,748 and 62,102 tons in the two years ending July 31, 1911 and 1910 respectively. Were it not for the considerable decrease of 4,649 tons in the clearances of the first seven months of this year, due exclusively, or almost exclusively, to the strikes, this would have been a record season in the matter of consumption. The shipments to the Australian colonies have been almost exactly the same as the year before, and the largest part was taken by New Zealand, while the shipments to the United States and Canada have exceeded by 2,500 tons those of the previous year. France has taken 3,000 tons less than the year before, but the other currant consuming countries of the European continent have taken nearly 4,000 tons more. The universal consumption outside Greece has been about 117,500 tons, against 114,000 tons in 1910-11 and 118,000 tons in 1909-10. The visible universal stocks at the end of this month are estimated at 2,000 tons, excluding stocks in Greece, but including cargoes of old fruit afloat, against 6,500 tons in 1911 and 6,000 tons in 1910. The invisible stocks are supposed to be almost nil, considering the over-cautious policy of the retailers since January last.

The recent considerable addition to the dock charges seems to have diverted to the outports goods which came previously to London.

The conditions which in 1910-11 interfered with a more rapid working of the deracination convention have continued in full force in 1911-12, and the area uprooted during that period has been only 7,600 stremmas, equal to 1,900 acres. It is hoped that a much larger area will be uprooted during the coming twelve months, the company having made more advantageous offers to the owners.

The prospects of the new crop early in the spring looked rather poor. There are, as usual, a variety of estimates as to the yield, which Messrs. Burlumi put at about 160,000 tons. The quantity promises to be very good, and so far the weather during the drying process has been favourable. Shipments are expected to commence immediately. The land tax of 40 per cent. on the fruit of the Ionian Islands and of 35 per cent. on all the rest will be taken in kind on the first shipped 160 millions of Venetian pounds and on the balance in kind or in money at the option of the shipper. With the purchase by the Privileged Company and conversion into wine of a quantity of fresh fruit estimated at over 10,000 tons of dried currants the retention in kind will not fall short of the maximum fixed by the Convention.

Cotton and Cotton Goods.

MANCHESTER REPORT.

Messrs. Reynolds and Gibson telegraph :—Trade shows distinct improvement over last week, perhaps owing to conclusion of holiday period at the largest spinning centres. However, the fact remains that considerable business was done in both cloth and yarns. With cotton at 6d. per lb. buyers are not afraid to go a little beyond immediate requirements. Egyptian yarns show a variable demand, with a more promising outlook. Again the market for Egyptian cotton has been a limited one. Cotton is freely offered at the decline. Quotations of all grades are reduced 5-16ths. Estimated sales, 1,100 bales.

EGYPTIAN COTTON FIGURES.

For 51st week, ending August 23.

Supplied by Reynolds and Gibson.

COTTON CULTURE IN CENTRAL ASIA.

The *D.O.K.* reports that, given a continuance of favourable weather, in the district of Fergana this year's crop will exceed last year's by 10 to 20 per cent.; in the district of Samarkand by 5 to 10 per cent.; in the district of Syr-Darja by 10 to 20 per cent.; in the Transcaspian district by 15 to 20 per cent. For the Bokhara district no estimate can as yet be formed in consequence of irrigation difficulties and the resultant delay in the development of the plants; but all indications point to a satisfactory crop in that district also.

EGYPT'S NEW HALAKAS.

(From Our Own Correspondent.)

Cairo, August 22.

About April last Lord Kitchener, pursuing the policy of solicitude for the material welfare of the fellaheen which he had set before himself, decided that cotton halakas should be constructed in various districts, so as to facilitate the sale of cotton and to protect the cultivator as much as possible from the frauds which certain merchants habitually practise on him. Barely have four months passed since that decision was first come to, and Egypt is now covered with a complete system of halakas, which will start working in real earnest next month, when the cotton crop begins to move. There are at present about one hundred of these institutions—ninety-five to be quite exact—and of that number all but twenty-one are in Lower Egypt. More will be added as the need arises.

A halaka is a compound—in some cases covered in—whither the cultivator may take his cotton, where he can get it weighed and stored pending sale, and where he can ascertain the ruling Minet-el-Bassal prices at the time he completes his bargain with the merchant. These halakas are directly under the control of the local municipalities or provincial councils, with a responsible Government inspector attached to the Ministry of the Interior. A "rais" is in charge of each halaka, and a certified weighing machine is to be found there, in addition to which the latest cotton prices, according to the Alexandria market, will be daily posted up. The expense attaching to the use of the halakas by the cultivators is very slight indeed. Five milliemes (1¼d.) will be charged for every cantar of cotton that enters, and a very small additional charge will be made when cultivators store their crops in the halaka. The weighing will be done gratis by specially appointed officials.

From a recent circular issued by the Ministry of the Interior, it appears that the Government does not intend that the official weighers shall interfere or compete with the "quabbanis" who have carried out the weighing hitherto; but it is pretty certain that in the long run those worthy but not altogether reliable gentlemen will find their trade has forsaken them. Once the fellah realises the utility of the halaka and the protection it affords him, he will decline to sell his crop unless the sale is completed and the weight ascertained within the precincts of the Government compound. Without exaggeration one may say that the institution of these halakas is one of the greatest innovations that has been introduced of late years. Cotton is the one great crop of Egypt, and many firms annually make little fortunes by the barefaced manner in which they degraud the fellah in weight and price. Now these deceptions cannot be practised, and any disputes can be immediately settled on the spot, thanks to the official records that are to be had for the asking at the nearest halaka. At the same time, there is just a possibility that the authorities will have to turn their attention to a habit of the fellaheen which will lead to a swindling of the merchants. The average fellah, in order to protect himself against the short weight recorded invariably by the merchant, resorted to damping his cotton—in many cases so skilfully that detection was impossible—and so equalised matters to a certain extent. Whilst this practice was, perhaps, excusable under the circumstances, it was most regrettable, for its effect was injurious to the cotton. To-day, of course, there is no excuse, but it is doubtful whether the fellah will drop a practice which has become with him part and parcel of his daily life; and the Government, which has already issued friendly warnings, will quite possibly find itself forced to inflict penalties where damping has been performed. It is a somewhat Gilbertian position; but if at the outset the dealers find themselves deceived they have only to thank certain unscrupulous colleagues of theirs.

The idea of the halakas has been taken up with enthusiasm by the provincial councils and the larger cultivators, and there seems to be little doubt that the smaller men will come into line as soon as their slow brains have succeeded in realising what this scheme really means to them.

Shipping Intelligence.

THE ODESSA-HULL SERVICE.

(From Our Own Correspondent.)

Odessa, August 26.

The recently organised South Russian Steamship Company, which is financed by the Odessa Commercial Bank, has established a regular line of steamers between this port and London, Hull being the only other port of call in the United Kingdom. Three steamers—the "Ella," "Constantine," and "Alexander"—all vessels of 6,000 tons and 14 knots, and registered A1 at Lloyds—have been placed on the new line, and two more steamers will later be added. The liners touch at Constantinople and the Piræus both on the outward and homeward journeys. They are fitted with refrigerating chambers for the carriage of the more quickly perishable classes of merchandise. Among other Russian specialties in edible products which these liners will supply to the London market is fresh caviare. Russian sugar will also form one of the chief articles of export by these liners, and they expect, by the grande vitesse of their trips and very moderate freight rates, to command a lucrative homeward trade in general cargo. They have accommodation for a limited number of state-cabin passengers and for 300 steerage travellers.

The same company is also opening a regular line between Odessa and South America. On this route will be placed seven steamers of 7,000 tons and 12 knots. The pioneer ship of the line, the "Salacia," leaves within the next few days. The ports of call are Constantinople, the Piræus, Genoa, Marseilles, Gibraltar, Rio de Janeiro, Santos, Montevideo, and Buenos Ayres. These vessels will have accommodation for 1,500 emigrants and 250 cabin passengers. On the homeward journeys they will call at New York, whence they will ship agricultural machinery for the Black Sea ports.

The company's London and Hull liners will load part of their outward general cargo at Nicolaieff. Russian westward sugar exports are shipped both from the Bug port and Odessa, and they are likely to show a large increase in the near future if, as is semi-officially stated, the Government repudiate the control of the Brussels Sugar Convention.

The South Russian Steamship Company has started its London line independently of the project fostered by the Ministry of Trade and Industry for a subsidised service of passenger and goods steamers between London and Odessa, a project which has been on the *tapis* for the last eighteen months, and may now, very probably, fall through It is the old story of official dilatoriness.

Government Project.

Writing in last Saturday's *Morning Post* Mr. Victor E. Marsden makes some interesting reflections upon, and gives some further details concerning, the Odessa-Hull steamship service, to which reference is made in the above letter from our Odessa correspondent.

"For twenty-three years," he reminds us, "Russia ran a line of regular sailings between the Black Sea and English ports. It received a subsidy from the Government for the greater part of the time, but the line was discontinued for want of traffic in 1880. The mainstay of the line in those days was the import of railway material from England. To-day it is the other way round. Russia has developed enormously in the past thirty years, and is now quite prepared to maintain a line of regular steamers for conveying foodstuffs from Odessa to London and Hull. The central idea of the scheme is borrowed from transatlantic practice, which makes the carriage of costly perishable foodstuffs partly pay for the carriage of bulky cargoes like grain, thereby reducing the market price in England of the first necessary of life. Wheat costs more to deliver in London from the Black Sea than from the other side of the Atlantic solely because in the latter case it is carried as a supplementary cargo to costly and perishable commodities."

The scheme, as Mr. Marsden remarks, is specially noteworthy in view of the attention recently devoted to the question of Mediterranean defence and the protection of our interests in that sea; and it certainly has the strongest official backing. A Government subsidy under a contract of fifteen years is one of its essential features, and at the instance of the Ministry of War the vessels employed will be of a type suitable for the conveyance of troops, and fresh water condensers are specially stipulated for in this connection. The Mercantile Marine Department of the Russian Ministry of Commerce and Industry hopes to have three boats of 6.000 tons each, with a speed of ten or eleven knots, running between Odessa and London, or Hull, from January next. These vessels are to make either sixteen or twenty-four trips per annum. Roughly speaking, of the total burden of 6,000 tons, two-thirds will be grain, supplementing some 2,000 tons of cold-storage shipments, if sixteen trips be decided on, or 1,000 if twenty-four trips per annum be arranged. Independently of, but connected with, this scheme, the Government intends to establish in Odessa and other Black Sea ports, extensive cold-storage accommodation on the most modern principles.

A feature of the scheme upon which the Russians, at any rate, are to be unreservedly congratulated is that special precautions have been taken to ensure that the ships shall be *bonâ-fide* Russian vessels and not merely sailing under the Russian flag, while actually financed from abroad.

The trade experts whose opinions were sought by the Russian Government were all agreed as to the commercial value of the new undertaking. It was pointed out that at present not 20 per cent. of the enormous export of Russian sugar now passes through Odessa, although some of the most important refineries are in the immediate neighbourhood. England is a very large consumer of Russian sugar, which, however, finds its way here chiefly through German ports in German ships. The new line, it is estimated, may safely count on conveying 100,000 tons annually of Russian sugar direct to London, thereby cutting out the German middleman to that extent.

The cold-storage shipments will chiefly consist of game, meat, eggs, and butter. The meat export is a long-cherished hope of Russian stock-raisers, and there is no beef on the Continent of Europe that can compare in any respect with the famous Caucasian product. Mr. Marsden presumes also that the opportunity will be seized to deliver in London something of the wealth of Central Asia in fruits of every kind.

PORT SUDAN NOTES.

The *Sudan Times* says:—"Port Sudan is feeling the effects of the London dock strike; very few general cargo steamers are taking cargo direct for the port, consequently the number of ships calling is small. Consignments, which have been ready for shipment for some weeks, are being 'shut up.' The s.s. 'Carisbrooke Castle,' which is the October steamer for Port Sudan, will bring a large number of Sudan passengers; and owing to heavy passenger and freight bookings from London, the Union-Castle Line are running an extra steamer, the 'Corfe Castle,' at the end of this month."

PIRÆUS HARBOUR WORKS.

The *D.O.K.* learns from Athens that the Greek Government intends to devote a portion of the last loan to the enlargement of the harbour at Piræus. New Customs buildings, warehouses, cranes, and quays are to be erected. The Government expects that the gap between the Greek and Turkish railway systems will soon be filled by a connecting railway, and therefore wishes to so develop the harbour of Piræus that it will suffice to accommodate the increased traffic which will result from the opening of the connecting railway.

SALONIKA-CONSTANZA SERVICE.

Our Roumanian correspondent writes, under date of August 24:—The Roumanian Commercial Attaché at Salonika, M. Grigoire Ghika, in his last report on the commerce of that port, voices the wish of the Salonika merchants in general for a regular steamer service between that town and Constanza. At present, as the Attaché shows, all Roumanian goods for Salonika have to be transhipped in Constantinople and forwarded by other lines.

THE "EGYPTIAN" ASHORE.

On Monday, in bad weather, the steamer "Egyptian" went ashore on Cross Ridge, near Haisborough. She was at the time bound from Antwerp for the Tyne, partly loaded for an outward voyage to the Mediterranean and the Black Sea. Her last homeward cargo of ore from the Black Sea had been discharged at Antwerp. She is managed by Westcott and Laurance (Ltd.), and is a vessel of 2,923 tons, built in 1891, and valued at £14,000.

The Cross Sands, it may be added, lie to the south of the formidable Haisborough Sands. The wife of the "Egyptian's" captain and ten of her crew were promptly rescued from the ship and taken to Yarmouth, but the captain and the rest of the crew stood by the vessel.

VOLGA SHIPPING.

We are informed that the Caucase and Mercure Steamship Company (says *Syren and Shipping*), which runs regular services on the Volga between Ryainsk, Nishni-Novgorod, Kasan, Samara, Saratov, and Astrakhan, a distance of 1,800 miles, has just put into commission four new and luxurious passenger steamers fitted with Diesel engines working on naphtha. These vessels—the "Annie Douze," "Borodino," "Kutuzov," and "Bagration"—have long promenade decks, and large and handsomely furnished saloons and state-rooms, Few people have any idea of the magnitude of the passenger traffic on the Volga and its tributaries. The Caucase and Mercure Company alone despatch nearly thirty steamers a day from Nishni-Novgorod, while they maintain, in addition, regular services on the Caspian Sea, providing a speedy means of reaching Persia. The company, whose headquarters are at Newsky, 30, St. Petersburg, cater largely for tourists, and every year witnesses an increase in the number of people taking holidays on the Volga.

PASSENGER LISTS.

Passengers per the Bibby s.s. "Herefordshire," leaving Liverpool on August 24 and Marseilles on August 31.—For Port Said, from Liverpool: Mr. J. B. Andrews, Mr. A. M. Anthony, Mr. A. E. Bliss, Mr. A. W. Hazel, Mrs. Hazel, Mr. G. Maclaren, Mrs. Maclaren, Mr. Burton Pearson, Mrs. M. Stubbs, two children and nurse, Mrs. Thomas, Mr. Vivian White. From Marseilles: Mr. Gabriel Bahari, Mr. C. Moore, Mrs. Moore, child and governess, Mr. E. C. Reed, Mrs. Reed, Mr. F. W. Cramer Roberts, Mr. Dimiri Salagni and two children, Miss Tristram.

Per Anchor Line "Circassia," leaving Liverpool September 4.—To Gibraltar: Mr. O. F. Odell, Mrs. Odell, and infant. To Port Said: Mr. J. R. Holmes, Mrs. Holmes, Miss Olive Holmes, Miss Jean Holmes, Miss Katie Holmes Miss Noëlle Holmes, Mrs. Barbara Rietz.

STEAMSHIP MOVEMENTS.

British India Steam Navigation.

"Berbera."—At Calcutta August 25. "Chanda."—At London. "Chyebassa."—At Antwerp August 19. "Chupra."—At Bombay August 26. "Colaba."—Left London for Calcutta August 23. "Culna."—At Bombay August 15. Stock and Share Markets.

Bank Rate 4 per cent. (August 29, 1912.)

SETTLING DAYS.

CONSOLS.
Monday, September 2.
STOCKS AND SHARES.
In Mining Shares the next carry-over is September 10.

Continuation Days.	Ticket Days.	Pay Days.
Wed., Sept. 11.	Thurs., Sept. 12.	Fri., Sept. 13.
Wed., Sept. 25.	Thurs., Sept. 26.	Fri., Sept. 27.

LONDON, August 29.

Outlook Favourable.

Business has improved. In many of the departments of the Stock Exchange the dealers are quite busy. Rubber and Egyptians seem to occupy a considerable amount of attention. There is also a general feeling of confidence in the other markets, and good judges think that prices will rise. The bad weather does not improve the Home Railway market, but here there is very little speculation, for the certainty of dear money makes gambling a costly luxury.

Foreigners Unchanged.

Foreigners show practically no change. Bulgarian 4½ per cent. remain at 90, Egyptian Unified at 100½, Greek Fours are the turn harder, and are quoted 55. This does not look as though the big financiers thought that any trouble would occur in the Balkans. Hungarians remain an attractive security at 90¼. There has been a little movement in Perus, and a good deal of gambling in Tintos. Turkish Unified are a shade harder at 91. The Yankee market shows a very firm tone, and it is confidently expected that Wall Street will give us an autumn boom. Chesapeakes are good and look cheap. Eries have been bought by the gamblers, and Missouri, Kansas, and Texas have been purchased by those who like a long shot. Rocks are also another cheap share that seems to attract the public simply because it is cheap. Unions and Southern Pacific are both likely to benefit by the big crops, and have risen. They will go higher. Canadian Pacifics fluctuate very violently. We believe that there is no chance of any opposition being made to the increase in capital. The company has probably a greater political pull than any other corporation in the world. In a sense it runs Canada.

Revival in Rubber.

There has been quite a small boom in Rubbers. The dealers are short and the shops have been buying. Thus the rise in some of the shares has been important. Linggis and Rubber Trusts are good markets, and Anglo-Malay, Consolidated Malay, Pataling, and Highlands are all likely to see higher prices. Copper shares have been quite a feature, and a big gamble has taken place in Mount Elliott, almost entirely upon Paris buying. The share appears very much over-valued. The Americans have also been supporting their shares.

Mines Backward.

Mines have not yet come into line with the rest of the market. But we are promised a rise, and certainly the big houses mean to make an effort. Chartered seem incapable of getting over 30s. Giants have been bid for on the story that the reef has been found. Amalgamated Props and Planets are to be put up. Tin shares have been good, and the report of the Nigerian Tin Corporation was excellent. Rayfields and Bisichi look good. The Dolcoath report was very disappointing, the management having failed to take advantage of the high price of tin. Nevertheless, the shares rose to 27s.

Egyptians Booming.

In the Egyptian market we have seen a very considerable rise, and there is no doubt that what we have been pointing out for weeks past is now being recognised by others, namely, that all Egyptian shares are very much under-valued. Egypt under Lord Kitchener will be one of the most prosperous countries in the world. If Lord St. Davids brings his great financial influence to bear we shall see very much higher prices for all shares. The prosperity of the country depends to a large extent upon the cotton crop. Fortunately this year it is much earlier than usual. Thus it avoids considerable risk from fog. If, as is anticipated, the crop is picked five weeks earlier than usual, then the early pickings will escape the fog altogether. This means improved quality and a larger quantity. It is hoped that the eight million cantar mark will be reached. If so, Egypt will be once again rich. She has gradually improved her position ever since the crisis. Things are now on a sound basis, the banks are in funds, the fellaheen are prosperous, and all that is wanted is confidence.

Aboukirs have been bought. As we have often pointed out, it is one of the soundest land companies in Egypt. There has been a big rise in Beheras, probably because it is intended to quote these shares officially on the London Stock Exchange. The large block of shares that were put on the market when the Zervudachi failure occurred were taken by various trusts connected with the Lord St. Davids group, and it is important that these trusts should hold shares that are officially quoted. Delta Lands are always a very free market. The position of the company has improved very much, and there is no reason why the price should not gradually go back to 28s., at which it stood in 1911. Delta Light Railway prefs. are an admirable security in view of the new arrangement come to with the Government. One of the cheap shares in the market is Egyptian Investment and Agency, usually called Abdys. It is incredible that Lord St. Davids will long allow a company with which he is connected to stand at 9s. 6d. for the £1 share. Egyptian Markets are a reasonable investment, but the price is fairly high. Salt and Soda was one of the shares turned out by the Zervudachi liquidator, consequently it is much undervalued. Its proper price is about 23s. Gharbieh Lands have some of the finest land in Egypt, and as a lock-up there are few securities in a sounder position. Both the Land Bank and the Mortgage Company are excellent and well-managed concerns. We need not mention the National Bank. It is, as its name implies, the Bank of England of Egypt. New Egyptians seem likely to settle their quarrels and should rise. United Egyptian Lands are the cheapest shares in the market, and they are very much undervalued.

COMPANY NOTES.

Suez Canal Company.

The Suez Canal Company has published in Paris the results obtained for the first half of the present year, which, in spite of the reduction of the Canal tariff, show an increase in the receipts of 2,146,000 frs. (£85,840). This favourable result on balance was obtained, however, after considerable fluctuations, the traffic during March and April being particularly poor. The coal strike in England, the report states, exercised a certain influence, which was particularly shown in April in the total absence of any coal cargoes from the United Kingdom. Nevertheless, even in April, the tonnage was better throughout than in 1911. Since the commencement of the second half of 1912, the statement concludes, receipts have taken a definite upward turn. The settlement of the dockers' strike and the seamen's strike has given a new impulse to business, and so far through the year the surplus receipts show an increase of 3,000,000 frs. (£120,000) over those of the corresponding period of 1911.

Banque de Chemins de fer Orientaux.

The board of directors of this bank, at a meeting held on August 21, considered the report and accounts for 1911-12 which are to be submitted to the general meeting of shareholders. The final accounts show a credit balance of 1,864,871 frs. The board will propose the following distribution to the general meeting, which will be held at Zurich on September 21:—To the ordinary reserve, 88,138 frs.; statutory allocation to the board, 50,597 frs.; a dividend of 6½ per cent. on the paid-up share capital of 25 million francs, 1,625,000 frs.; carried forward, 101,136 frs.

Egyptian Investment and Agency.

At an extraordinary general meeting of the shareholders of Egyptian Investment and Agency, Ltd., held August 26, the resolutions which were passed at the extraordinary general meeting of the company, held August 9, were submitted for confirmation and carried unanimously.

General Oilfields, Ltd.

A company with the above title was registered on August 12 by J. E. Albrow, 26, Wormwood Street, E.C. The capital is £32,500, in 30,000 ordinary shares of £1 each and 50,000 deferred shares of 1s. each, and the objects are: To carry on the business of producers, importers, exporters, manufacturers and refiners of naphtha, petroleum, ozokerite, bitumen, asphalte and mineral or other oils, mine-owners, merchants, carriers, wharfingers, etc., and to acquire any naphtha or oil-bearing land or property, or land or property reputed to be naphtha or oil-bearing, in any part of the world. The minimum cash subscription is seven ordinary shares. The first directors (to number not less than two nor more than seven) are: H. F. Allan and W. Bray. Remuneration, £150 each per annum (chairman £200), and 5 per cent. of the surplus profits remaining after 10 per cent. dividend is paid, divisible. Registered office of the company is at 26, Wormwood Street, E.C.

Anglo-Egyptian Spinning.

In accordance with an agreement entered into between the Anglo-Egyptian Spinning and Weaving Co., Limited (in liquidation) and the Filature Nationale d'Egypte (Société Anonyme Egyptienne), duly approved by resolutions passed at the extraordinary general meetings of the company, held on May 18, 1911, and March 16, and April 10, 1912, the shares in the above-named company in liquidation can now be exchanged against shares in the Filature Nationale d'Egypte, at the National Bank of Egypt, Alexandria. The exchange will be made on the following basis, viz.: 16 ordinary shares of £1, fully paid, in the Anglo-Egyptian Spinning and Weaving Co., Limited, will be exchanged against one share of £4 sterling, fully paid, of the Filature Nationale d'Egypte; and 64 deferred shares (parts de fondateurs) of 5s. each fully paid of the Anglo-Egyptian Spinning and Weaving Co., Limited, will be exchanged against one share of £4 sterling, fully paid, in the Filature Nationale d'Egypte. Provisional certificates will be issued for fractions of shares in the Filature Nationale d'Egypte necessitated by the exchange. Holders of such provisional certificates may, on making up the necessary number of fractions of shares, exchange them against fully paid shares of the Filature Nationale d'Egypte in the proportions above indicated. Printed forms, which must be filled up and accompany all shares brought in for exchange, can be obtained from the National Bank of Egypt, and also from the liquidator of the Anglo-Egyptian Spinning and Weaving Co., Limited.

Credit Foncier Egyptian.—An interim dividend of 10 frs. per share is now payable on production of coupon No. 37.

LONDON, August 29.

Outlook Favourable.

Business has improved. In many of the departments of the Stock Exchange the dealers are quite busy. Rubber and Egyptians seem to occupy a considerable amount of attention. There is also a general feeling of confidence in the other markets, and good judges think that prices will rise. The bad weather does not improve the Home Railway market, but here there is very little speculation, for the certainty of dear money makes gambling a costly luxury.

Foreigners Unchanged.

Foreigners show practically no change. Bulgarian 4½ per cent. remain at 90, Egyptian Unified at 100½, Greek Fours are the turn harder, and are quoted 55. This does not look as though the big financiers thought that any trouble would occur in the Balkans. Hungarians remain an attractive security at 90½. There has been a little movement in Perus, and a good deal of gambling in Tintos. Turkish Unified are a shade harder at 91. The Yankee market shows a very firm tone, and it is confidently expected that Wall Street will give us an autumn boom. Chesapeakes are good and look cheap. Eries have been bought by the gamblers, and Missouri, Kansas, and Texas have been purchased by those who like a long shot. Rocks are also another cheap share that seems to attract the public simply because it is cheap. Unions and Southern Pacific are both likely to benefit by the big crops, and have risen. They will go higher. Canadian Pacifics fluctuate very violently. We believe that there is no chance of any opposition being made to the increase in capital. The company has probably a greater political pull than any other corporation in the world. In a sense it runs Canada.

Revival in Rubber.

There has been quite a small boom in Rubbers. The dealers are short and the shops have been buying. Thus the rise in some of the shares has been important. Linggis and Rubber Trusts are good markets, and Anglo-Malay, Consolidated Malay, Pataling, and Highlands are all likely to see higher prices. Copper shares have been quite a feature, and a big gamble has taken place in Mount Elliott, almost entirely upon Paris buying. The share appears very much over-valued. The Americans have also been supporting their shares.

Mines Backward.

Mines have not yet come into line with the rest of the market. But we are promised a rise, and certainly the big houses mean to make an effort. Chartered seem incapable of getting over 30s. Giants have been bid for on the story that the reef has been found. Amalgamated Props and Planets are to be put up. Tin shares have been good, and the report of the Nigerian Tin Corporation was excellent. Rayfields and Bisichi look good. The Dolcoath report was very disappointing, the management having failed to take advantage of the high price of tin. Nevertheless, the shares rose to 27s.

Egyptians Booming.

In the Egyptian market we have seen a very considerable rise, and there is no doubt that what we have been pointing out for weeks past is now being recognised by others, namely, that all Egyptian shares are very much under-valued. Egypt under Lord Kitchener will be one of the most prosperous countries in the world. If Lord St. Davids brings his great financial influence to bear we shall see very much higher prices for all shares. The prosperity of the country depends to a large extent upon the cotton crop. Fortunately this year it is much earlier than usual. Thus it avoids considerable risk from fog. If, as is anticipated, the crop is picked five weeks earlier than usual, then the early pickings will escape the fog altogether. This means improved quality and a larger quantity. It is hoped that the eight million cantar mark will be reached. If so, Egypt will be once again rich. She has gradually improved her position ever since the crisis. Things are now on a sound basis, the banks are in funds, the fellaheen are prosperous, and all that is wanted is confidence.

Aboukirs have been bought. As we have often pointed out, it is one of the soundest land companies in Egypt. There has been a big rise in Beheras, probably because it is intended to quote these shares officially on the London Stock Exchange. The large block of shares that were put on the market when the Zervudachi failure occurred were taken by various trusts connected with the Lord St. Davids group, and it is important that these trusts should hold shares that are officially quoted. Delta Lands are always a very free market. The position of the company has improved very much, and there is no reason why the price should not gradually go back to 28s., at which it stood in 1911. Delta Light Railway prefs. are an admirable security in view of the new arrangement come to with the Government. One of the cheap shares in the market is Egyptian Investment and Agency, usually called Abdys. It is incredible that Lord St. Davids will long allow a company with which he is connected to stand at 9s. 6d. for the £1 share. Egyptian Markets are a reasonable investment, but the price is fairly high. Salt and Soda was one of the shares turned out by the Zervudachi liquidator, consequently it is much undervalued. Its proper price is about 23s. Gharbieh Lands have some of the finest land in Egypt, and as a lock-up there are few securities in a sounder position. Both the Land Bank and the Mortgage Company are excellent and well-managed concerns. We need not mention the National Bank. It is, as its name implies, the Bank of England of Egypt. New Egyptians seem likely to settle their quarrels and should rise. United Egyptian Lands are the cheapest shares in the market, and they are very much undervalued.

COMPANY NOTES.

Suez Canal Company.

The Suez Canal Company has published in Paris the results obtained for the first half of the present year, which, in spite of the reduction of the Canal tariff, show an increase in the receipts of 2,146,000 frs. (£85,840). This favourable result on balance was obtained, however, after considerable fluctuations, the traffic during March and April being particularly poor. The coal strike in England, the report states, exercised a certain influence, which was particularly shown in April in the total absence of any coal cargoes from the United Kingdom. Nevertheless, even in April, the tonnage was better throughout than in 1911. Since the commencement of the second half of 1912, the statement concludes, receipts have taken a definite upward turn. The settlement of the dockers' strike and the seamen's strike has given a new impulse to business, and so far through the year the surplus receipts show an increase of 3,000,000 frs. (£120,000) over those of the corresponding period of 1911.

Banque de Chemins de fer Orientaux.

The board of directors of this bank, at a meeting held on August 21, considered the report and accounts for 1911-12 which are to be submitted to the general meeting of shareholders. The final accounts show a credit balance of 1,864,871 frs. The board will propose the following distribution to the general meeting, which will be held at Zurich on September 21:—To the ordinary reserve, 88,138 frs.; statutory allocation to the board, 50,597 frs.; a dividend of 6½ per cent. on the paid-up share capital of 25 million francs, 1,625,000 frs.; carried forward, 101,136 frs.

Egyptian Investment and Agency.

At an extraordinary general meeting of the shareholders of Egyptian Investment and Agency, Ltd., held August 26, the resolutions which were passed at the extraordinary general meeting of the company, held August 9, were submitted for confirmation and carried unanimously.

General Oilfields, Ltd.

A company with the above title was registered on August 12 by J. E. Albrow, 26, Wormwood Street, E.C. The capital is £32,500, in 30,000 ordinary shares of £1 each and 50,000 deferred shares of 1s. each, and the objects are: To carry on the business of producers, importers, exporters, manufacturers and refiners of naphtha, petroleum, ozokerite, bitumen, asphalte and mineral or other oils, mine-owners, merchants, carriers, wharfingers, etc., and to acquire any naphtha or oil-bearing land or property, or land or property reputed to be naphtha or oil-bearing, in any part of the world. The minimum cash subscription is seven ordinary shares. The first directors (to number not less than two nor more than seven) are: H. F. Allan and W. Bray. Remuneration, £150 each per annum (chairman £200), and 5 per cent. of the surplus profits remaining after 10 per cent. dividend is paid, divisible. Registered office of the company is at 26, Wormwood Street, E.C.

Anglo-Egyptian Spinning.

In accordance with an agreement entered into between the Anglo-Egyptian Spinning and Weaving Co., Limited (in liquidation) and the Filature Nationale d'Egypte (Société Anonyme Egyptienne), duly approved by resolutions passed at the extraordinary general meetings of the company, held on May 18, 1911, and March 16, and April 10, 1912, the shares in the above-named company in liquidation can now be exchanged against shares in the Filature Nationale d'Egypte, at the National Bank of Egypt, Alexandria. The exchange will be made on the following basis, viz.: 16 ordinary shares of £1, fully paid, in the Anglo-Egyptian Spinning and Weaving Co., Limited, will be exchanged against one share of £4 sterling, fully paid, of the Filature Nationale d'Egypte; and 64 deferred shares (parts de fondateurs) of 5s. each fully paid of the Anglo-Egyptian Spinning and Weaving Co., Limited, will be exchanged against one share of £4 sterling, fully paid, in the Filature Nationale d'Egypte. Provisional certificates will be issued for fractions of shares in the Filature Nationale d'Egypte necessitated by the exchange. Holders of such provisional certificates may, on making up the necessary number of fractions of shares, exchange them against fully paid shares of the Filature Nationale d'Egypte in the proportions above indicated. Printed forms, which must be filled up and accompany all shares brought in for exchange, can be obtained from the National Bank of Egypt, and also from the liquidator of the Anglo-Egyptian Spinning and Weaving Co., Limited.

Credit Foncier Egyptian.—An interim dividend of 10 frs. per share is now payable on production of coupon No. 37.

NOTES FROM ATHENS.

(From Our Own Correspondent.)

Athens, August 22.

New Companies and Issues.

The Hellenic Powder and Cartridge Company have issued for subscription, through the Banque Commerciale de Grèce, a further 10,000 shares at 100 frs. This increase of capital has been thought necessary owing to the new and important Government contracts which this company has secured, in order to fulfil which, improvements must be effected and new machinery laid down in the smokeless powder department.

The formation of a Grecian Mutual Marine Insurance Company has been announced. This company will undertake all classes of marine insurance. The director is Mr. D. G. Hughes, Billiter Square Buildings.

The amalgamation of the Greek Transatlantic Line and the National Steamship Company is spoken of as about to take place in the near future. It will be a wise step, good for the shareholders of both companies.

Wireless Telegraph Stations.

Two more stations are to be established besides that already existing at Athens—one on the coast of the island of Eubœa, and another at Corfu.

Provincial Autobus Service.

Until such time as it may be considered remunerative to extend the railway communication to the undermentioned towns and villages, the Athens-Peloponnesus Railway Company are to establish autobus communication between Tripolitza-Sparta-Gythion to the South and Tripolitza-Calavryta to the North, and between Megalopolis and various small towns and villages to the South-west.

Proposed Repeal of "Octroi" Tax.

M. Coromilas, Minister of Finance, is preparing a Bill doing away with the unpopular "Octroi," or municipal tax, in all but the largest towns. The tax imposed by each municipality on all goods entering is resented more than any other, owing to its unfairness and the abuses it allows. It is generally farmed out, and everybody knows what that means. Besides, goods are all valued at a fixed average value. The official average value of a horse, for instance, is 800 frs. If a horse is actually worth 2,400 frs. you only pay 1 per cent., but if it is an old cab horse worth only 100 frs. you pay 24 per cent. Naturally the poor man pays a far heavier tax than the rich one. Again, olive oil may be worth 80 centimes this year and two francs the next. Timber and many other things are down on the official list only in loads; for the compilers of the schedule had not sufficient imagination to suppose that one-half, or even one-quarter, of a load might be taken from one town to another. If the goods have to be passed through half-a-dozen townships till they reach their final destination a deposit equal to the amount of the tax must be deposited in each several town as guarantee, and on the goods reaching their destination, all you have to do is to take your tax receipt, retrace your steps 50, or it may be 100, miles to get back the guarantees deposited, to say nothing of the various *pourboires*. Many consider it pays better to lose the deposits altogether.

Another point in this "octroi" is that many articles indirectly pay two or three taxes. For instance, shoes are taxed as such, but the leather of which they are made has already been taxed as leather, and the raw hide has also been taxed.

Agricultural and Industrial Laws.

The Minister of Agriculture, Commerce and Industries, Mr. Mihalacopoulois, is preparing a series of Bills to be submitted to Parliament with the object of improving the status of the agricultural population and assisting in the development of the natural resources of the country. The principal innovations are the founding at the Ecole Polytechnique of classes for the teaching of the higher branches of agriculture, industrial chemistry, agricultural economy, etc., and the establishment of an agricultural bank, wihch will advance loans to farmers at low rates instead of the 15 per cent. or 25 per cent. expected by usurers.

GREEK FINANCIAL RE-ORGANISATION.

Writing from Rome, under date of August 23, a correspondent of the *Morning Post* says: Commendatore Zappelloni, of the Ministry of the Treasury, has been loaned by the Italian Government to the Greek Treasury to reorganise Greek finances. Commendatore Zappelloni has already arrived in Athens, and expects that the work of reorganisation will occupy one year.

FINANCIAL NEWS IN BRIEF.

The receipts of the Egyptian Delta Light Railways for the ten days ended August 10 amounted to £E7,262, an increase of £E52 over the corresponding period of last year.

Notice is given that coupons (No. 33) of the Ottoman Four Per Cent. Loan of 1890, due September 14, 1906, as well as the bonds drawn at the fifteenth drawing, August, 1897, which shall not have been presented for payment up to September 13, 1912, will be forfeited.

The net profits of the Usines du Laurium, Athens, for the first half-yearly period of 1912 are 118,056 drachmes, against 28,711 drachmes for the corresponding period of 1911. Including the carry-over, the balance available amounts to 282,902 drachmes, against 100,125 last year. No dividend will be declared.

Reuter's Teheran correspondent reports that the sum of £50,000, which the British and Russian Governments are advancing, is regarded as inadequate for the needs of the Persian Exchequer, and the Government is pressing for more money.

The receipts of the Egyptian Markets for the week ended August 22 amounted to £526, a decrease, compared with last year, of £257. The total receipts from the commencement of the year amounted to £34,531, a decrease of £2,875.

An extraordinary general meeting of the Smyrna Fig-packers, Limited, was held at Smyrna on the 16th inst., when the following resolutions were submitted to the shareholders and passed. 1. That the capital of the company be increased to £250,000 sterling by the creation of 50,000 new shares of £1 sterling each. 2. That it be left to the competency of the directors to allot or dispose of the new shares to such persons and under such conditions as they shall from time to time think fit.

The interim dividend of the Banque d'Orient, of Athens, for the first half-yearly period of 1912, has been declared at 2.50 frs. per share, the same amount as was paid last year. The final dividend, for the second half-yearly period of 1911, was 4.50 frs.

The receipts of the Ottoman Railway from Smyrna to Aidin for the week ended August 24 amounted to £9,054, an increase of £1,384 on last year. The aggregate receipts from January 1 amount to £73,043, an increase of £12,992.

A FRANCO-RUSSIAN DEAL.

It has been announced some little time ago that the firm of Sir John Jackson, Limited, has obtained the contract for the construction of protected harbours at Samsun and Trebizond, the two most important ports on the Black Sea coast of Asia Minor. If this be true, then the report, which is accepted in competent quarters here as very probable, that M. Poincaré has during his visit to St. Petersburg obtained Russia's consent to the construction of certain railways to those ports in return for French support to the Russian policy in the matter of the Chinese loan gains additional interest. It is well known that those railways, as being calculated to strengthen Turkey's position on the Caucaso-Armenian frontier, have long been vetoed by Russia, whose Ambassador, M. Zinovieff, induced the Porte in 1901 to bind herself to allow no one except Russia to build railways in the north-eastern region of Anatolia should she not be able to do it herself. So great was the value attached by Russia to this privilege that at Potsdam she agreed to the linking up of Russian railways in Northern Persia with the Baghdad line viâ Khanikin at the price of Germany's "disinterestedness" in the matter of railways in Eastern Anatolia. But just because the German rival had been rendered innocuous France thought fit to step in, and in July last year obtained from the Porte a concession for the construction of four railways in Anatolia.

This intrusion by France, which was little relished in Russia, was but thinly disguised by the arrangement that the French company in question, the Régie Générale de Chemins de Fer, should construct the lines in the capacity of a simple contractor to the Turkish Government, which would thus alone remain their proprietor. Of course, the latter would have to pay the cost of construction, which was fixed at 20,000 frs. per kilometre, together with a certain percentage of profit, and where was it to obtain the money? Here, however, the Ottoman Bank miraculously came to the rescue and agreed to lend Turkey the necessary cash, viz., £T25 millions. In this way everything was arranged in order to save appearances, and, what is most interesting, not merely M. Bompard, the French Ambassador, but also M. Tcharykoff, the then Russian Ambassador, took an active part in carrying the matter through. What followed will probably for ever remain the secret of the Chancelleries of Paris and St. Petersburg. From the recall, however, of M. Tcharykoff as well as from the complaints in the French Press one is justified in inferring that Russia did not allow herself to be deceived by this arrangement, and that she protested against the execution of the scheme. Now we are informed that the Russian veto has been withdrawn, and that the Régie Générale will be allowed to proceed with the execution of the projected railways, with the exception of one, on the abandonment of which Russia has, for strategical reasons, insisted, whilst the scheme of another is to be modified to suit Russian views.—*The Manchester Guardian.*

SERVIAN RAILWAY LOAN.

The *Oesterreichische Monatsschrift für den Orient* states that the Servian Government proposes to contract a new loan of 150 million francs in Paris. The former Servian Finance Minister, Dr. Patsu, has been entrusted with the negotiations for this loan, which, it is stated, is to be utilised chiefly for the construction of new railways.

THE EASTERN BANK, LIMITED.

Head Office: 4, CROSBY SQUARE, LONDON, E.C.

Subscribed Capital, £1,000,000. Paid up, £400,000. Reserved Liability of Shareholders, £600,000.

Branches:

BAGDAD. BOMBAY. CALCUTTA.

Board of Directors.

The Right Hon. LORD BALFOUR OF BURLEIGH, K.T. (*Chairman*).

Sir JACOB E. SASSOON, Bart. EMILE FRANCQUI, Esq.

NOTES OF THE WEEK.

By far the most interesting piece of intelligence connected with the semi-official peace negotiations that are taking place between Italian and Turkish delegates in Switzerland is given this week by the correspondent of the *Times* in Rome. Writing on August 31, he states that he has just learned that the authorities suppressed a telegram, dispatched on August 26, which contained the information that the Italian Premier had met at the Hotel Boulogne in Milan the Deputies Signor Bertolini and Signor Fusinato and Commendatore Volpi, who had come from Switzerland to talk over with him the present state of the negotiations for peace with Turkey. In other quarters it is maintained that peace is nearer than the Italians pretend. The common ground which is supposed to have been found for the two belligerents is based on the omission from any written agreement of reference to the Italian decree of annexation of Tripoli and to the recognition of Turkish suzerainty. As an indication of the readiness with which the idea of peace is entertained on both sides it may be mentioned that the *Tanin*, the organ of the Committee of Union and Progress in Constantinople, in pointing out that the initiative emanated from Italian private persons who submitted an acceptable basis for peace, says:—"The present Turkish Cabinet is merely continuing the work of its predecessors, and, if it succeeds in concluding peace on that basis, it can rely on the support of the Unionist Party. Otherwise the war should be continued." In the meantime General Caneva, who has been in command of the Italian military operations in Tripoli, has arrived in Rome, and it is stated that the decision of the Government in regard to his return to Tripoli or his retirement from the post of Governor of Libya will not be made known until after a Cabinet Council to be held on September 14.

Some light is thrown on the recent disturbances on the Montenegrin frontier in a dispatch to the *Morning Post*. According to this information two separate incidents have to be distinguished. The first, on August 3, arose over a hay crop situated on land within the Montenegrin boundary or claimed to be within it by the Montenegrins. Turkish troops crossed the debatable frontier to the north-east of Kolashin and threw up trenches to protect their harvest operations. They were at once driven out by the Montenegrins, who pressed home their pursuit for several hours, and burnt some Turkish blockhouses. It was this incident that led Rustem Bey, the Turkish Minister in Cettinje, to lodge a protest with the Montenegrin Government and to attempt to break off diplomatic relations between the two countries. He was not supported, however, by the Turkish Government, and the justice of the Montenegrin case was tacitly recognised in Constantinople. The second incident took place on August 16, when again an agrarian dispute was the cause of the trouble. In the district lying between Ipek and Berane a Moslem Albanian tribe, it is stated, destroyed the crops of some Orthodox Slavs. Reprisals followed; the Turkish garrison at Berane took part in the fighting, a large number of Christians were killed and their villages destroyed. A Montenegrin brigade, with some batteries of artillery, was mobilised at Vasojevitch, and there would probably have been a serious violation of Turkish territory if the Powers had not made strong representations to King Nicholas's Government. The effect of this embargo would seem to have been that the Moslems and non-Moslems in the Berane district were left to fight out their quarrel among themselves, with the inevitable losses in life and property to the non-Moslems. In referring to the Berane "insurgents," the Porte may be supposed to mean the Slav population, who on the destruction of their villages had withdrawn to any neighbouring locality that offered some measure of safety. Some compensation is to be given to these people in the restoration of their houses and Church property at the expense of the State.

Two developments in the Balkan situation may have to be recorded as the result of these frontier incidents. In the first place, as the Montenegrin Government was not slow to point out to the Powers when they insisted upon the non-interference of King Nicholas's troops, there can be no justification for any further delay in adjusting the frontier disputes between Turkey and Montenegro. If the Powers see fit to prevent the latter from taking steps to protect her own interests, they

Digitized by Google

must insist upon the Porte's accepting a reasonable delimitation of the frontier. Until this step has been taken such incidents as took place on August 3 are always likely to recur. The later trouble concerns primarily the internal situation in Turkey, and is part and parcel of the Balkan question, that still awaits solution. The second outcome of the frontier incidents is to be witnessed in Servia, where mass meetings have been held to protest against the reported massacres of Serbs in Sienitza, in the Sandjak, and in Old Servia. Servia's position in the Balkans has suffered in the past from national indecision. If in the face of recent developments a truce can be proclaimed between the rival political parties, and public opinion can be induced to give undivided support to the Belgrade Government in regard to its foreign policy, a new factor may yet be introduced into the Balkan problem.

A certain obscurity still attaches to the situation in Albania, and it is reported that a final settlement has by no means been reached in regard to the arms question. The Turkish Government does not appear to have met the wishes of the Albanians in the matter of distributing rifles, even when the latter were anxious to defend the frontier against an anticipated attack from Montenegro. For the present the leaders of the Albanians have contented themselves with registering a further demand for arms, but are said to have threatened the Turkish authorities that, if their request be not granted by September 17, they will renew their "demonstrations" in Uskub. Meanwhile, wherever opportunity offers, the Albanians, on their way to their homes, are increasing their stock of rifles from Government depôts. In their efforts to meet Albanian aspirations the Turkish Government is causing complications in a fresh quarter. The Epirotes, whose sympathies are with Greece and not with the Ottoman Empire, are now protesting against the extension of Albanian influence into their territory. An Albanian has recently been appointed Governor of Janina, and in view of the truculent attitude of the Albanians in this vilayet the Epirotes have lost no time in sending by their fellow-countrymen in Greece requests to the Powers, as well as to the Turkish and Greek Governments, for protection against the Albanians.

In the domain of Turkish domestic politics speculation is rife regarding the stability of Ghazi Mukhtar Pasha's Cabinet. On the one hand the Ministry has to cope with the avowed opposition of the Committee of Union and Progress, while on the other side is ranged the Entente Liberale, which is inclined to favour a Cabinet under the Grand Vizierate of Kiamil Pasha, of a more obviously "Liberal" composition than the present one. There is said to be, however, no reason to suppose for the present that the Grand Vizier contemplates relinquishing his office. The congress of the Party of Union and Progress has been opened in Constantinople, under the presidency of Hadji Adil Bey, with Talaat Bey and Saïd Bey, a former leader of the party in Parliament, as vice-presidents. For the first two sessions the proceedings were mainly of a formal character. Interest centres in the attitude which the congress will adopt towards the question of the party's participation in the coming elections, and in the details of the electoral platform that may be decided upon for that occasion.

Sedition-mongering in Egypt is dying hard. After the posting of offensive placards on walls in Alexandria and Cairo, and the arrest of a youth arriving from Constantinople with a further supply of seditious literature —episodes which our Cairo correspondent deals with in his letter in this issue—comes the news that the Nationalist journal, *El Lewa*, has been suppressed. *El Lewa* was founded by Mustapha Kamel in 1898. It has been in financial straits for a number of years, and less than a fortnight ago, as the result of a judgment obtained in the Mixed Courts, the premises that it occupied in Cairo and their contents were seized for payment of the rent due to the landlord, the Wakfs Administration. Its circulation was reputed to be very large, and there can be little doubt that it was responsible for the spread of Nationalist doctrines and in part for the anarchical turn recently given to the Nationalist propaganda. The ground for its suppression is said to have been an infringement of the Press Law in engaging an editor without official sanction and the publication of seditious articles. The first offence might be a purely technical one, but could also represent a deliberate assertion of antagonism to the powers that be. In regard to the second, it is not difficult to understand how *El Lewa* might be tempted to exceed the limits of fair criticism in dealing with recent events in Egypt. The Egyptian Government has evidently satisfied itself of the artificial character of the seditious agitation and holds the opinion that the consistent application of a firm hand will eventually rid the country of this moral pestilence. A further development in this connection has been the arrest in Constantinople of the notorious Sheikh Shawish, who is supposed to have been directing the Nationalist campaign from the Turkish capital. He is being conveyed to Egypt for trial. A number of papers were seized on the premises of the newspaper of which he was editor, and the printing offices have been closed.

An interesting statement on the financial situation in Persia is reported to have been issued by M. Mornard, the Treasurer-General, who declares that the Customs revenue alone would provide adequate security for a loan of £5,000,000. He adds that with this sum Persia would be able to pay off her floating debts and the claims of the foreign Legations, and would still have at her disposal for the execution of urgent reforms a balance of about £2,500,000. If this statement represents the facts of the case, it renders quite inexplicable the long delay of the British and Russian Governments in making to Persia the loan without which she cannot hope to effect any improvement in the conditions of the country. When approached on the subject Sir Edward Grey has taken refuge in the statement that no loan has been possible without adequate security; but if the Customs revenue is capable of providing security for a loan of £5,000,000, there ought to have been no question of the paltry advances made by the British and Russian Governments on such onerous terms. It is to be hoped that M. Mornard's statement will be followed by definite action on the part of the two Powers, and that it will form the basis of a constructive policy already too long delayed.

THE NEAR EAST.

THE NEAR EAST is on sale at all Bookstalls and Newsagents in Great Britain. Should any difficulty be experienced in obtaining the paper, readers will oblige by notifying the Manager. Abroad THE NEAR EAST may be obtained in:

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.
VIENNA. Goldschmiedt Brothers, Zeitungsbureau, Wollzeile, 11.
CONSTANTINOPLE. Economic Co-operative Society, Pera; Benjamin Rawe, British Oriental Bazaar; D. Marianopoulo, 280, Grande Rue de Pera; Otto Keil, Librairie Internationale, Pera.
SALONIKA. Librairie Francaise, Rue Sabri Pasha.
SMYRNA. Dem. Tzannou, Petite Rue de Rose.
BEYROUT. Sarrafian Brothers.
JERUSALEM. Palestine Educational Store, Jaffa Road; Librairie Internationale et Artistique.
CAIRO. Diemer and Company, Shepheard's Buildings.
ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; F. Diemer, Cairo Station.
PORT SAID. Charles Evans.
KHARTOUM. Sudan Stationery and Bookstore.
PORT SUDAN. E. A. Zoides.
ATHENS. Eleftheroudakis and Barth, Place de la Constitution.
SOFIA. Librairie de la Cour.
BUCHAREST. Socec and Company, Calea Victoria.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)
Constantinople, August 30.

Cabinet Discords.

The situation, though it has improved in some respects, is still by no means satisfactory, owing in part to Ministerial dissensions, in part to the continuance of disturbances in the provinces. Rumours of the impending resignation of Ministers have revived, and while the friends of Kiamil Pasha assert that he, with Nazim Pasha and the Sheikh-ul-Islam, are annoyed by the slowness of the Grand Vizier to adopt certain measures which they regard indispensable for the restoration of order and of "normal political life," others declare that the presence of Mahmud Mukhtar Pasha in the Cabinet is the principal cause of dissension. There can be no doubt that the position of the Minister of Marine is a most difficult one. To begin with, he is regarded by the Fleet with the hostility which sailors naturally feel for a military chief. Furthermore, the Army regards him as an ambitious but hot-headed officer who has played, none too skilfully, for his own hand in the past, and has at times played the game of the Young Turks, who are at present anathema in most military circles. His military critics accuse him of having provoked the rising of April 13, 1909, by his tactless disregard of the religious susceptibilities of the soldiery, and add that it is strange to find a soldier who was prepared on July 15 to become Minister of War in Said Pasha's Cabinet representing in his father's Ministry the forces which caused Said's downfall. Finally, the extremists, who desire not merely the defeat, but the annihilation, of the Committee of Union and Progress, accuse him of being in close touch with the *camerilla*, and draw attention to his recent interview with Talaat Bey, which lasted for upwards of an hour, and in which the political situation was discussed with great freedom. Whether the extremists are right in their theory is very doubtful indeed. The fact, however, which tells most against Mukhtar *fils* is that he was a member of Hakki Pasha's Cabinet, which most of the supporters of his father's Ministry desire to impeach. It would, therefore, not surprise many Turks if the Minister were to abandon his portfolio and take up a military command in the provinces.

False Alarm of Mutiny.

Rumours of Ministerial dissensions, the increasing boldness of the Committee party, and the *malaise* induced by the Ramazan fast, have produced a condition of extreme nervousness among the Moslem population, and some unimportant troop movements on Wednesday night caused a regular panic, which was intensified by the inventions of certain reporters and the outbreak of a fire in Galata. Part of the garrison stood to arms, and the preparations made by the artillery at Ramiz Kishla gave rise to reports of a general mutiny, which added to the panic. To-day we learn that proceedings are being taken against newspapers which gave false versions of the affair.

The Provinces.

While N.E. Albania is quieter—the Albanians having been allowed to help themselves to the much-desired Mausers from the Government depôts—the Epirote Tosks are still in a very excited state, and demand the heads of certain local Young Turks, whom they accuse of the murder of Kadri Bey, president of the Albanian Club at Janina. Several of their chiefs, Salih Puka, Mersim Diño, and the Orthodox Spiro Belkameni, announce their intention of preserving an expectant attitude with regard to the Government's reforms in the high mountains. In the North-West, where the population is mainly Catholic, the Malissors of the important Five Banner group have mostly taken the oath of allegiance to the Sultan, while the Mirdites proper have given little trouble. But the Highlanders of Alessio, Kroya, Selita, and Mat, the latter a formidable Moslem tribe, have followed the example of the Kossovo Ghegs in demanding arms, and, according to the latest accounts, have attacked a number of Turkish posts with the object of seizing rifles.

As for the Bulgars, the last few days have been marked by a fortunate cessation of bomb outrages and band raids. The insurrection in Berane on the Montenegrin frontier has apparently been mastered, after considerable bloodshed, and the reports of a massacre of Serbs at Bielopolyé and Sienitza prove to have been unfounded. On the other hand, some of the local officials in Macedonia belonging to the Committee of Union and Progress have been giving considerable trouble, and it has transpired that the dismissal of the heads of the telegraph office at Salonika is due to the fact that Government wires have been mysteriously delayed at critical moments—*e.g.*, during the troubles at Kotchana, the outbreak on the Montenegrin border, and the advance of the Albanians on Keuprülü and Uskub. Ibrahim Pasha has complained that at a time when a collision with the Albanians could be avoided only by the receipt of certain orders from Constantinople he was quite unable to communicate with the capital, owing to Salonika having "held up" his telegrams for hours at a time. Under these circumstances the groans of the Committee Press at the partiality displayed by the Government seem somewhat misplaced.

The Committee Congress.

The Congress of the Committee of Union and Progress will open here on Monday, when the Committee will decide to participate in the elections. The Committee leaders are optimistic, or profess optimism, as to their electioneering prospects, and aver that they will reappear in Parliament at the head of from 110 to 120 deputies. Their opponents give them at most fifty seats. In any case they are unlikely to have a majority.

DARDANELLES EARTHQUAKE.

The Mansion House Fund.

Last Friday the Lord Mayor received a letter from Sir William Carington, Keeper of the Privy Purse, enclosing a cheque for £100 as a contribution from the King to the fund which his lordship has opened at the Mansion House for the relief of sufferers by the recent disastrous earthquakes in Turkey. The letter was as follows:—

Balmoral Castle,
August 28, 1912.

My Lord Mayor,—I have the King's command to announce to your lordship his Majesty's gracious intention of contributing the sum of one hundred pounds to the fund your lordship is raising for the relief of the sufferers from the recent earthquakes in Turkey.

I have the honour to be, etc.,

William Carington.

The Lord Mayor has also received the following letter from the Treasurer to the Prince of Wales:—

10, Buckingham Gate, August 31, 1912.

My Lord,—At the Prince of Wales's desire I have the honour to send you a cheque for £50 as a contribution from his Royal Highness to the Mansion House Fund for the relief of the sufferers from the terrible earthquakes in the Dardanelles and Sea of Marmora.

Among other donations received at the Mansion House are the following:—£200 from Messrs. N. M. Rothschild, £105 from Messrs. Ralli Brothers, £100 from Messrs. Lynch Brothers, £52 10s. from Lord Michelham, £25 from the Greek Minister (M. Gennadius), £10 from M. Alexander C. Vouros (Secretary to the Greek Legation), £25 from Messrs. Michalinos and Co., £10 10s. from Sir James Reckitt, £10 from Mr. George F. Barbour, £10 from Mr. Walter Leaf, £25 from Messrs. A. A. Embiricos and Co., £10 from Dr. Needham, and £10 from "H. C. B."; collected on the Stock Exchange, £414 15s., including £105 from Messrs. A. G. Schiff and Co., £26 5s. from Messrs. S. Kennedy and Co., £26 5s. from Messrs. Greenwood and Co., £26 5s. from Messrs. Nivison and Co., £26 5s. from Messrs. Campion and Co., £26 5s. from Messrs. Nelke, Phillips and Co., and £26 5s. from Messrs. L. Messel and Co.

The Turkish Embassy has forwarded to the Lord Mayor the following first details respecting five of the villages visited by the earthquake: "In the villages of Charkeuy and Arkeuy, out of 1,085 houses, 755 were demolished and 200 burnt down. The number of dead exceed fifty-three, and there are 470 wounded. The houses in the neighbourhood were completely wrecked, and about one-fifth of their inmates lost. Out of 2,000 houses in the village of Myliofito hardly fifty are now inhabitable, and the buildings all round are in ruins, while the loss of life was heavier than at Charkeuy. Gallipoli likewise suffered severely from the earthquake shocks, as also did Rodosto, where people died by hundreds."

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, August 31.

The Albanian Difficulty.

Although the Albanians were induced—by what promises or threats remains much of a mystery—to leave Uskub and Keuprulu hurriedly and to retire towards their homes, it must not by any means be taken for granted that their unrest is at an end, and that they will now contentedly settle down to constitutional ways. In fact, it cannot truthfully be said that they have as yet shown any signs of returning to a more orderly life; for we hear from Janina that they packed off the Governor of Premedi, the Vice-Procureur, and the President of the Court (after first playfully shaving off their beards), together with the chief of the local police, whom they had wounded. And from Varisovitz others sent an ultimatum to the Governor-General of the vilayet demanding the dismissal of all the officials of the district within twenty-four hours, failing which they declared they would not be responsible for anything that might happen. As the Governor-General made no reply to this demand, the officials themselves, together with the commissary of police, deemed it the more prudent course to take their departure by the first train, and by so doing left the whole region without any recognised authorities. Moreover, a goodly number has concentrated at Ipek and Jakova with the avowed intention of waiting to see what real steps the Government will take to carry out the convention made with them. As it happens, it suits them just now to be nearer their homes during Ramazan, and especially in view of the feast of Bairam to follow.

As for the arms that were to be returned to them according to the terms agreed upon, they are not waiting for the official distribution of these, but are helping themselves by force from Government stores whenever practicable, it being reported that they have broken into the armouries of Ipek, Jakova, Prizrend, Mitrovitza, Sienitza, and Avlona, taking in all some 15,000 stands of arms. In the first-mentioned town they have also burned a fine new school and sacked the market place. To say the least of it, the wanton burning of a college seems hardly consistent with their cry for greater educational facilities, and with Article 7 of the Convention, which stipulates for full liberty to open schools. During their stay in Uskub they seem, on the whole, to have been kept fairly well in hand; but they were undoubtedly a great tax on the townsfolk, who had to contribute to their support; and they were the cause of a considerable dislocation of business, with a vast amount of general inconvenience and uneasiness. So it will be quite understood how a cold shiver ran down our spines when the London *Daily Telegraph* of August 19 announced to us in large type the "Advance of Albanian Rebels: March on Salonika," giving a printed map of their route to our gates; while on the following day the same paper told us our town was actually in the hands of from 1,000 to 1,500 of them. Notwithstanding the heat, we broke out in a cold perspiration until it slowly dawned upon us that, as "nobody seemed one penny the worse," it could only be one more instance of premature journalistic inaccuracy—but it shattered the faith of several in a newspaper in which they had always had a childlike trust.

The Union and Progress Party.

After all, the Congress of the Union and Progress party is not to be held here, but in Constantinople; or in Brussa should it be found inexpedient to meet in the former place. Djavid Bey is still here, but Talaat Bey has already left for the capital. Meanwhile, there is some speculation as to the coming and going of Dr. Rifaat, a prominent member of the U. and P. Committee, who is believed to be negotiating with Hilmi Pasha with the object of inducing him to become the president of the party. The latter is supposed to be not altogether opposed to the proposition provided the Committee will consent to make certain changes in its programme. It is somewhat curious that Hilmi Pasha is said to have begun an action against the *Alemdar* for recently charging him with receiving orders through Djavid Bey from the U. and P. Committee, and with secretly negotiating an understanding with the Young Turks. At the Congress the policy to be adopted with regard to the elections will have to be decided upon. Just now there appear to be two different currents of opinion as to the best course to adopt. Djavid Bey and some others are supposed to advocate a complete boycotting of the elections, holding that to take part in them would be a condonation of the dissolution of Parliament, which they still hold was illegal; while others of the party are in favour of an energetic struggle to maintain their majority and influence. This will have to be one of the first questions brought before the Congress, and after that will have to be discussed the principle of decentralisation, to which the Young Turks have always been bitterly opposed, the possibility of peace with Italy, and certain other measures affecting the internal organisation and constitution of the party. Some fifty delegates will attend the Congress, which is expected to last about a week. While the Committee declare their intention to use only legal means for the attainment of their ends, news comes from Uskub that, notwithstanding the prohibition to meddle with politics, some officers garrisoned in that town are already organising for the purpose of assisting the U. and P. Committee in the struggle; and it may be taken for granted that, whatever may be the case afterwards when things have somewhat calmed down, it will be next to impossible now to keep the military from backing up their own side. With party feeling running so high and internal animosities, ambitions, etc., so strong, what authority is going to oppose and stop them?

The Kotchana Inquiry.

The Kotchana inquiry being now over and a good deal of the real truth known, it is said the Council of Ministers has decided to try by court-martial the civil and military authorities of that town. If this be true, the result will be awaited with the greatest interest, and much depends upon the finding of the court; for, it is well known, the people are becoming utterly hopeless and desperate through having lost all faith in justice ever being done. And, by the way, we learn that the officials of the different railways have made the discovery that the layers of bombs on the lines are becoming more proficient, and are beginning to adopt a system which will make the detection of the machines much more difficult. However, with the present moonlit nights nothing of any great importance is immediately looked for, but what may happen when the long, dark nights come remains to be seen.

ENGLISH BOYS' SCHOOL,
CONSTANTINOPLE.

The New School Building will be opened on September 15th. The School House has accommodation for forty boarders. Resident staff, six English masters and English matron.
Healthy situation on Nishantash Hill, facing open country; drainage sanitary fittings, baths and lavatories by English sanitary engineers
Preparation for Commercial Education Examination of London Chamber of Commerce. French and Turkish visiting masters. SPECIAL ATTENTION TO FRENCH. Turkish and Latin optional. English games. Fees moderate.
PROSPECTUS can be had on application to the Chairman of the School Committee—
A. T. WAUGH, Esq., *British Consulate-General*, **Constantinople.**

ENGLISH SCHOOL,
NICOSIA, CYPRUS.

Preparation for Public Schools and for Commerce
Modern Languages. Turkish and Arabic if desired
ENGLISH GAMES.
Complete charge taken. Very healthy climate. Boys remaining for the summer holidays are taken to the Mountains. Moderate Terms.
Apply REV. CANON F. D. NEWHAM, B.A.Cantab., Director.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 28.

Echoes of the Conspiracy Case.

It will be remembered that during the trial two of the witnesses contradicted the statements they had made during the inquiry. In fact, one of them declared that he could remember nothing, and drew from the presiding judge the retort that he pitied his future patients—both the witnesses were medical students—if his memory was so bad. The Parquet considered their attitude as very serious and meriting punishment, and so the pair, whose names are Abdel Halim Metwalli and Hassan Effendi Noureddine, have been arrested, and will be charged to-morrow before the Saida Zenab Correctional Court with perjury. They are all liable to a penalty not exceeding three years' imprisonment. In the meanwhile the advocates of Wakid El Arabi and Abdel Salam have lodged their appeal to the Cour de Cassation, and the case will be heard next month. As yet the grounds of the appeal have not been made known.

The Leadership of the Nationalist Party.

It is said that a movement is on foot amongst the Nationalists to remove Mohammed Bey Farid from the leadership of the party. The reason invoked is that the Bey is constantly in the habit of making declarations in Europe and writing articles to the European Press in his capacity of head of the Egyptian Nationalists, whereas in reality the opinions expressed in those articles and declarations are his own personal ones and in no wise reflect the opinion of the party. Farid Bey succeeded Mustapha Pasha Kamel as leader on February 12, 1908, the day after the latter's death, and on January 21, 1911, he was confirmed in his position for life. One of the rules of the party lays down that all declarations such as those made by the Bey should first of all be submitted to the approval of the executive committee. This he has never done, and so the members, or a section of them, hold that he has forfeited his leadership. They further state that the party's *raison d'être* is loyalty to and respect for the Khedive, for whose sake alone they want to obtain the freedom of their country. Farid Bey's hostility to his Highness is therefore very displeasing to them. As the declarations complained of are not of recent birth, and the attitude adopted by the life leader dates from at least two years ago, one cannot help feeling that this is but an astute attempt at hedging on the part of the executive committee, who by disavowing their leader hope to make amends for the errors of the past, and to counteract any information regarding their previous connection with political intrigues which may have fallen into the hands of the authorities.

The Nile Flood.

The official report issued by the Public Works Ministry tends to demonstrate that the hopes expressed recently out here of a high though late flood will not be realised. It appears that the fluctuations in the levels of the Blue Nile have been very great, and during the last part of July and the first ten days of August they were well above normal, so much so that a very high flood was expected, especially in view of the abnormally heavy rains in Abyssinia. But during the second ten days of this month the levels dropped below normal, and although such a fluctuation is quite a usual occurrence, the tendency is towards a low flood. The White Nile continues to rise, and the levels at Malakal are slightly above normal. However, the main stream, which attained an abnormal height during the early part of August, has now dropped back considerably, and the report states that unless an exceptional late rise is registered in the Blue Nile all hopes of a high flood will have to be abandoned. Upper Egypt, south of Esneh, will feel the pinch, but Middle and Lower Egypt will have a supply of water sufficient for all requirements.

The Cotton Crop.

Ismail Sirri Pasha, Minister of Public Works, under whose control the Department of Agriculture lies, is evincing very great interest in the progress of the crop. He has just concluded a tour, partly by rail and partly by automobile, through the provinces of Galioubia, Gharbia, Menufia, and Dakahlia, and he has given it as his opinion that the cotton crop is in excellent condition.

That in Egypt the unexpected always happens has now received a further proof from the effect which the new law dealing with Ashmuni cotton has had. The law forbade the transport of unginned cotton from Upper to Lower Egypt and *vice versâ*, the object being to prevent the mixing of Ashmuni cotton with higher grades. The latest development is that certain ginners working in Upper Egypt, where the Ashmuni crop will henceforward have to be ginned, have combined in order to raise the ginning rates, and have agreed not to compete with one another in the matter of purchasing the local crops. The law was, of course, never framed with a view to enabling anyone to make a corner in the Upper Egypt cotton, and it will be interesting to see what steps the Government will take to frustrate the offending ginners. As yet no details are forthcoming as to the firms in the "combine," and one can scarcely believe that the responsible cotton buying and ginning establishments would be parties to such tactics.

The Ministries of Interior and Justice.

In a recent letter I referred to the possibility of great changes taking place in the Ministry of the Interior. The retirement of Dr. Harold Nolan, Chief of the Public Security, and the appointment of Dr. Granville, the Director-General of Municipalities and Provincial Commissions, to the Alexandria Municipality, leave two important vacancies which it will be exceedingly difficult to fill. There is talk of doing away with the Public Security post and of reviving in its stead the office of Inspector-General of Police, which was last held by Lord Kitchener. In connection with this post the name of George Morice Bey is mentioned. He is undoubtedly the only man in the country fitted for the work, for his prestige and his knowledge of Arabic and the natives are quite unique. But at the present moment he is Chief Inspector of the Ministry of Justice, and can ill be spared there, so that if he is transferred to the Interior it will be like robbing Peter to pay Paul.

Especially will his loss be felt if the forthcoming vacancies in the Native Courts are filled, as they should be, from the Inspectorate of the Ministry of Justice. Two of the British Councillors of the Native Court of Appeal are about to retire, and one of the British Judges of the Court of First Instance has been promoted to a position in the Contentieux. In addition, it is said that the British Judgeship at Keneh is to be revived. At the lowest estimate, therefore, there will be three vacancies to be filled in the lower Courts. There are at the present moment only five inspectors, in addition to the Chief Inspector, attached to the Ministry of Justice. If the proper procedure is followed, and the new judges are taken from the Inspectorate, then the Ministry will be left with but two junior inspectors, whose position will be rendered all the weaker if the Chief Inspector is transferred. If, on the other hand, in view of this difficulty, outside men are nominated as judges, the Native Courts will be considerably weakened by the appointment of men inexperienced in native legal affairs, and an injustice will be done to the inspectors, who will thus be deprived of the promotion which is their due and which all along has been their sole prospect, simply and solely because the responsible officials have been so entirely lacking in foresight in the recent past. This state of affairs completely bears out the comments on the subject recently made in your columns.

Coming Causes Celebres.

From details that have leaked out it would appear that the next three months have in store for us several *cause célèbres*. One or two of the administrations have not been conducted in a properly efficient manner, and as a result scandals have arisen which will unfortunately obtain full publicity in the law courts. It is sincerely to be hoped that some means will be devised whereby, whilst full justice is done, this public washing of administrative dirty linen will be avoided.

NOTES FROM THE SUDAN.

(From Our Own Correspondent.)

Khartoum, August 20.

The "Slack Season."

There is not much of interest to report from the Sudan at present. This is our "silly season," when the Law Courts are closed, and most of those who are able to go on leave are in England. Our chief topics are rain, sandstorm, temperature, and the height of the Nile.

Very severe storms have been experienced, which have inevitably disorganised the railway traffic. A large section of line was washed out between Atbara and Halfa, more than twenty kilometres being rendered unworkable. This delayed the mail trains, and for a short time mails and passengers had to be conveyed by steamer from Abu Dis to Shereik. The effect of the rains was felt all over the system; but every year, as the building of bridges and culverts proceeds, this problem of the interruption of a line built largely on sand will present fewer difficulties. Considering the natural obstacles, it is wonderful that interruptions are not more frequent. The rains flooded Khartoum and district, a good many native mud-houses being washed away. The presence of large pools of water, which even the trenches dug weeks ago could not drain off quickly enough owing to the flatness of the ground, made everyone think of mosquitoes; but the exertions of the authorities prevented the breeding of more than a few of these, our natural enemies. The temperature, which has been low during the time of rain and cloud, is now rising again, and our maximum stands at more than 100 degrees once more.

The Nile Flood.

The Nile has till lately been rising steadily; now a temporary fall has taken place. It is, however, expected that another rise will follow, though it is not anticipated that we shall have a very high Nile at Khartoum this year.

Colonel J. J. Asser, the Adjutant-General of the Egyptian Army, has returned from leave, and, during the absence of Sir Reginald Wingate, is acting as Governor-General and Sirdar. He is at present on a steamer tour in the Southern Sudan.

THE ANUAK EXPEDITION.

The *London Gazette* of Tuesday evening contains a despatch relating to operations in the South-Eastern Sudan, against the Beir and Anuak tribes, January to March, 1912, which has been received by the Secretary of State for Foreign Affairs, from Lieutenant-General Sir F. R. Wingate, G.C.V.O., K.C.B., K.C.M.G., D.S.O., Sirdar of the Egyptian Army and Governor-General of the Sudan. The despatch states:—

The country inhabited by these tribes lies between the White Nile and the Abyssinian frontier, south of the Sobat River, and the operations were undertaken to put a stop to the frequent and cruel raids made by the Beirs against the Dinka, a friendly and loyal tribe, situated on the White Nile, in the neighbourhood of Bor; to punish the Anuaks for their raids against the Nuers, another friendly tribe; and to put a stop to the illicit traffic of arms and liquor into the Sudan by that portion of the Anuak tribe resident in Abyssinia. The force employed against the Beirs was under the command of Major W. H. Drake, Royal Artillery (attached to the Egyptian Army), and consisted of one section maxims, one company Sudanese Mounted Infantry, one section Arab Battalion Mounted Infantry, four companies Sudanese Infantry, and two field hospitals, with transport, supply, and veterinary detachments.

This was divided into three columns, which advanced early in January from Nasser, Bor, and Mongalla, on Sheikh Loms, in the heart of the Beir country. The columns from Nasser and Bor concentrated in the neighbourhood of Sheikh Loms on the fixed date, but the Mongalla Column was compelled to return to its base owing to the scarcity of water. Sheikh Loms was found to be deserted, the enemy having driven off their cattle and scattered in the surrounding forest. Small columns were accordingly sent in all directions, effecting large captures of cattle, and at first meeting with a stubborn opposition on the part of the Beirs. Gradually, however, the resistance began to weaken and the chiefs came in slowly and tendered their submission to the Government, which was finally complete on March 26. Our troops suffered considerable hardships from lack of water and long marches under trying conditions, while the enemy were ever on the alert to seize any advantage, and the utmost vigilance had at all times to be observed.

Our casualties during this period amounted to:—Killed, five non-commissioned officers and men; wounded, nine non-commissioned officers and men, while those of the enemy are unknown. I consider the pacification of so large a tract of country with such comparatively small loss testifies to the excellence of the arrangements and dispositions made by Major Drake.

The column against the Anuaks, which concentrated at Akobo Post, the junction of the Akobo and Malaktoj Rivers, was under the command of Major C. H. Leveson, 18th (Queen Mary's Own) Hussars (attached to the Egyptian Army), and consisted of one section of artillery (mountain), one company Sudanese Mounted Infantry, two companies Sudanese Infantry, and one field hospital, with transport, supply, and veterinary detachments. The objective of this column was Odonga, on the Oboth River, the village of the Chief Akwei, who was mainly responsible for the recent raids against the Nuers, and who was reported to be collecting the fighting men of his tribe with a view to resistance. The force started from the place of concentration on March 4, and after meeting with great difficulties owing to lack of water and the impossibility of procuring reliable guides, reached the vicinity of the Anuak camp on the evening of March 14. Advancing early on the 15th, the Anuaks, who had taken up a strong position in a thick belt of wood, were soon encountered. The Mounted Infantry, in endeavouring to work round the right flank of the position and ascertain the enemy's strength and dispositions, became heavily engaged in thick and difficult country, and suffered severe loss from the rifle fire of the enemy, who were well armed with modern rifles. While our main body was forming for the attack, the enemy, estimated at five to six hundred riflemen and two thousand spearmen, abandoning their position in the wood, advanced with great dash and bravery, firing steadily and with accuracy. In spite of the fire of the artillery and the volleys of the infantry, this advance was continued right up to our line, and was only checked by a counter-charge, in which the Sudanese Infantry did considerable execution with the bayonet, and finally drove the enemy from the field. An advance was then made against Odonga, which was found to be completely deserted. On the following day the village was destroyed, and the force, having accomplished its object, returned to the Akobo Post, where a strong garrison has been left.

I venture to think that the severe lesson meted out to these tribes and the occupation of their country by a military force will stop these raids and the misery and unrest caused by them.

I desire to place on record my approval of the manner in which these operations were carried out, and to bring to notice the names of the following officers for particularly good work performed:—

Major C. H. Leveson, 18th (Queen Mary's Own) Hussars, who conducted the operations against the Anuaks in a capable and praiseworthy manner.

Major W. H. Drake, Royal Artillery, for his skilful arrangements and dispositions in command of the column against the Beirs.

Captain W. Byam, Royal Army Medical Corps, for his gallantry in attending to the wounded under fire.

Captain W. J. L. Poston, Royal Artillery, for the efficiency and discipline displayed by his gun detachment.

I regret to report the following casualties:—

Killed: Captain J. W. Lichtenberg, D.S.O., 18th (Queen Mary's Own) Hussars; Captain C. E. Kinahan, Princess Victoria's (Royal Irish Fusiliers); three Egyptian officers: forty-two non-commissioned officers and men. Wounded: One Egyptian officer; thirteen non-commissioned officers and men. It was impossible to estimate the losses of the enemy, but they are known to have been heavy.

The *Gazette* also contains an announcement that the King has recognised the services of Major Leveson by appointing him to the Distinguished Service Order and those of Major Drake by promoting him to the rank of Lieut.-Colonel (dated May 14).

ARABIAN AGRICULTURE.

"Southern Arabia is an agricultural country in a very limited sense, due principally to the sterile condition of the soil," states U.S. Consul Schulz, of Aden. "The principal crop of the Arab is the date, which is usually cultivated by the richer Arabs in gardens. These gardens are segregated from the rest of the desert by a mud wall from 6 to 10 feet high, and about 2 feet wide at the base and tapering to 10 inches at the top. These gardens usually cover 5 to 10 acres and are irrigated by ditches which honeycomb the preserve. Wells 25 to 30 feet deep furnish the water which is more or less brackish, but improves the farther one continues inland. By means of a windlass camels bring up the water into a ditch, from which it finds its way into innumerable smaller ones running in every direction, and thus irrigating the garden.

"One of the characteristics of an Arab village is the small gardens dotting the neighbourhood. These plots are built in circles around a water hole and are rarely more than 60 feet in diameter, and in them the Arab raises the few vegetables that give him and his family sustenance. They may be justly described as the poor Arab's garden. Tomatoes, sesame, and melons form the principal crop. A small bushwork obstacle, perhaps 12 to 16 inches in height, serves as an inclosure. The Arab depends upon dogs to keep out intruders. He also takes the precaution to build his hut within 150 feet of his little plot.

"There is no sheep and goat raising in this section, but immediately north of Aden most of the wealth is represented by sheep and goats. There are no fences to restrict these animals and to prevent the flocks from mixing, but as they are marked the herders have no great trouble in singling out their respective charges."

LETTRE D'ATHENES.

(De Notre Correspondant Particulier.)

Athenes, le 30 août.

Les agissements des Albanais en Epire.

L'outrecuidance des revendications albanaises en Epire, auxquelles je faisais allusion dans ma lettre du 2 août, ne cessent de préoccuper les cercles politiques aussi bien que l'opinion publique en Grèce. Ces préoccupations sont devenues même plus vives à la suite de la tournure qu'à prise dernièrement le mouvement albanais.

La nouvelle de la nomination de l'Albanais Hassan Pacha comme gouverneur du vilayet de Janina a provoqué ici un sentiment d'indignation général. Toute la presse, sans distinction de parti, s'est faite l'interprète de ce sentiment et considère la concession faite par la Turquie aux Albanais aux dépens des autres nationalités comme une mesure imprudente, dont elle ne tardera pas à se répentir.

En effet, étant donné les tendances ambitieuses des Albanais, la nomination de gouverneurs albanais dans des villayets dont les populations sont, en grand majorité, slaves (serbes et bulgares), comme à Kossovo et Monastir, ou grecques, comme dans celui de Janina, est un fait significatif d'une importance toute particulière. Ces valis ayant obtenu leurs postes par la force de l'insurrection n'auront évidemment d'autre objectif que d'étendre l'influence albanaise et de multiplier dans ce but les oppressions et vexations habituelles. La personne qui serait désignée pour ce poste ne peut que justifier ces funestes prévisions. Hassan Tassin Pacha serait une vieille connaissance des Epirotes qui, disent-ils, ont conservé de lui des souvenirs exécrables du temps qu'il était commandant de la gendarmerie. Ils affirment même qu'il favorisait les bandes des brigands qui infestaient leur pays.

Voilà, fait-on observer, comment on entend la protection que le nouveau grand vizir a promis dans la Chambre et par la presse d'accorder aux populations chrétiennes! Si ses promesses eussent été sincères, fait observer le journal *Embros*, au lieu de nommer un gouverneur turc-albanais dans une province habitée pour les deux troisièmes par des Grecs, (l'autre tiers n'étant d'ailleurs que des Grecs islamisés à force de vexations) et comme telle cédée à la Grèce par l'article 23 du traité de Berlin, il aurait nommé un gouverneur grec et consacré la langue grecque comme langue officielle du vilayet telle qu'elle existait il y a vingt ans. Le langage de la presse officieuse va encore plus loin. Tout en faisant remarquer qu'aucun des états des Balkans, dans la crainte de troubler la paix, n'a voulu profiter des dissensions intestines de la Turquie, elle proclame bien haut qu'aucun état si pacifique et si faible qu'il soit ne saurait racheter sa tranquillité aux dépens de ses intérêts vitaux ni consentir à renoncer à ses légitimes revendications à des droits acquis et reconnus. *L'Estia*, insistant sur les empiètements et les exactions arbitraires auxquels se sont livrés les chefs albanais à Novi-Bazar et Kossovo aux dépens des habitants serbes et bulgares, affirme la cordialité des relations entre les états balcaniques et l'unanime concordance de leurs vues relativement aux agissements des Albanais. Elle donne à faire supposer que ces relations meneraient eventuellement à une coopération visant à la défense de leurs intérêts contre les tendances usurpatrices des Albanais.

L'officieuse *Patris*, qui voit toujours l'Autriche derrière les Albanais, fait observer que par une étrange coïncidence la proposition assez vague et assez obscure du comte Berchtold a été lancée juste au moment où les Albanais ont eu l'insolence de parler de l'Epire comme d'une province albanaise. Prévoyant un soulèvement des Epirotes, dont la patience a été poussée à bout par les vexations que leur font subir les bandes albanaises qui désolent leur pays, la *Patris* réclame la prompte intervention des puissances pour imposer aux Albanais l'obligation de rester dans les limites ethnologiques de leur territoire et prévenir ainsi des troubles.

Le gouvernement grec n'a pas manqué de faire de vives représentations auprès de la Turquie contre la nomination du vali albanais. Il paraît même que la conversation à ce sujet entre le ministre des affaires étrangères et le ministre de Turquie avait pris un caractère de violence inusité. La chose ayant été ébruitée, un communiqué a paru deux jours après affirmant que les relations des deux diplomates étaient des plus cordiales.

Les Epirotes résidant à Athènes et au Pirée ont tenu avant hier un meeting, place du Théâtre municipal, pour protester contre l'action propagandiste des Albanais en Epire et la nomination d'un gouverneur albanais. Un député de la partie de l'Epire appartenant à la Grèce a prononcé un discours à la suite duquel on a voté la résolution de protester dans le sens indiqué plus haut et de demander au gouvernement grec, à la Turquie et aux grandes puissances, de mettre un terme aux oppressions que les bandes albanaises font subir à la population grecque pour l'obliger à proclamer aussi en Epire l'indépendance albanaise et à signer des pétitions contenant les revendications bien connues des Albanais. D'après cette résolution les Epirotes déclarent que dans le cas où on laisserait leurs compatriotes abandonnés à leur sort ceux-ci seraient décidés à pourvoir d'eux-mêmes à leur propre défense. Copie de ce document a été remise au gouvernement grec, à la légation de Turquie et à celles des grandes puissances.

Projet d'une Expedition des Cretois a Samos.

Quelques-uns des Crétois les plus exaltés, c'est-à-dire à peu près les mêmes qui ont été les meneurs du dernier mouvement insurrectionnel et qui persistent encore à envoyer des députés à Athènes, ne pouvant attendre dans l'inertie l'ouverture de la Chambre grecque pour revenir à la charge, ont imaginé une singulière aventure. Ils se sont avisés de tenter un coup de main contre la Turquie hors de Crète, croyant de cette façon pouvoir forcer les puissances à effectuer l'union de l'île avec la Grèce. C'est ainsi qu'après avoir conçu plusieurs autres plans beaucoup trop téméraires qu'ils n'ont osé exécuter, ils ont décidé d'organiser une expédition à Samos. Un corps de 600 Crétois armés devait partir à cet effet de Crète le 26 de ce mois, de la façon suivante. Après avoir d'abord embarqué les fusils à la Canée sur le bateau postal grec ils se seraient rendus par petits groupes à une autre localité de l'île. Ils y auraient attendu le passage du bateau et se précipitant à l'abordage auraient forcé le capitaine à faire route pour Samos. Là, renforcé par des Samiens, le corps crétois aurait attaqué la garnison turque composée de 900 soldats et, après l'avoir soumise, aurait proclamé la déchéance du prince et de la domination turque et l'union de Samos avec la Grèce. Tel était le projet insensé des Crétois qui a échoué avant d'avoir pu être réalisé. Le recrutement du corps d'expédition se faisait les derniers jours si ouvertement que les consuls des puissances, qui avaient déjà vent de la chose, ont fini par tout comprendre. Aussi vendredi dernier sont-ils intervenus auprès du gouvernement crétois et ont ils exigé qu'il prît des mesures rigoureuses pour empêcher cette expédition, lui ayant même offert de renforcer en cas de besoin la force armée dont il disposait par des détachements de marins. En même temps le stationnaire anglais "Medea" a suivi le paquebot postal sur lequel devaient s'embarquer les Crétois jusqu'à une assez longue distance. Un des membres du gouvernement crétois, M. Koundouros, n'ayant pas hesité à répondre aux consuls que, pour écarter tout danger d'un pareil mouvement, la Turquie aurait dû retirer de Samos les troupes qu'elle y avait envoyées en violation des traités, les consuls lui firent savoir par leur doyen que toute immixtion de la Crète dans les affaires de Samos pourrait provoquer de graves complications internationales qui seraient préjudiciables à la Crète. Ils lui expliquèrent que la question du retrait des troupes turques n'était pas aussi simple qu'elle paraissait à ceux qui avaient organisé l'expédition, étant donné qu'après la proclamation de la constitution ottomane, les puissances ont reconnu le *status quo* existant alors en Turquie sans déclarer faire exception pour les troupes qui se trouvaient à Samos. On m'affirme d'autre part que la France, la Russie et l'Angleterre auraient fait également des représentations auprès du gouvernement grec pour qu'il usât de toute son influence afin de détourner les Crétois d'une aventure qui les exposerait à des mesures coercitives de la part des puissances. On télégraphie de Crète que deux navires de guerre, un anglais et un français, sont arrivés à la Canée et que deux autres des mêmes puissances ont été expédiés à Samos pour prévenir tout éventualité de débarquement. Cette attitude des puissances qui, sans s'être jamais souciées de la violation des privilèges de Samos par la Turquie, se sont maintenant empressées d'intervenir en sa faveur, cause ici une pénible impression.

SERBO-BULGARIAN RELATIONS.

Professor Peritch, of the Belgrade University, has been kind enough to forward us a communication, which will, we feel sure, prove of much interest to our readers as giving the Servian view of the "Macedonian Question."

He writes as follows:—

Dès le moyen-âge la Serbie et la Bulgarie furent deux rivales dans la péninsule balkanique; pendant deux siècles elles luttèrent pour la prédominance dans l'est européen. Cette hostilité entre les deux états slaves renaquit après leur restauration au dix-neuvième siècle, car l'ancienne Serbie et l'ancienne Bulgarie avaient été supprimées par les Turcs victorieux. L'inimitié qui divisait les Serbes et les Bulgares modernes atteignit son paroxisme en novembre 1885, lorsque le roi de Serbie, Milan Obrenovitch, déclara la guerre à la Bulgarie, à la suite de la révolution de Roumélie (septembre 1885), révolution pour laquelle l'équilibre dans les Balkans fut rompue au profit des Bulgares et au détriment des Serbes.

Ce qui jette, à l'heure qu'il est, la discorde entre la Serbie et la Bulgarie ce n'est pas ce qu'elles ont, mais bien ce qu'elles n'ont pas; ce n'est pas le présent mais l'avenir. Si l'on n'avait égard qu'aux possessions actuelles de la Serbie et de la Bulgarie, le meilleur accord devrait et pourrait exister entre ces deux pays, aucun d'eux ne détenant des territoires réclamés par l'autre. Ce qui met aux prises les deux états, c'est, nous venons de le dire, l'avenir, leurs *possessions futures*; en d'autres termes la Macédoine. La Serbie et la Bulgarie ne sont pas adversaires à cause de ce qu'elles ont elles-mêmes, mais à cause de ce qu'a un autre, la Turquie. Elles se disputent à raison d'un morceau que tient leur voisin. Et ceci est tout naturel: d'abord, la Macédoine est destinée à être séparée de la Turquie, puisqu'elle est, en principe, un pays slave; ensuite, étant peuplée de Serbes et de Bulgares, elle est et doit être partagée entre le royaume de Serbie et celui de Bulgarie. Or les deux royaumes ne s'entendent point sur la manière de ce partage. Où s'arrête la partie serbe et où commence la partie bulgare de la Macédoine? Il y a, sans doute, en Macédoine des contrées que les Serbes reconnaissent être bulgares, de même qu'il y en a que les Bulgares ne contestent pas aux Serbes. Mais il y a des zones incertaines, zones auxquelles les deux peuples prétendent à la fois. Et ce sont ces zones-là qui entravent l'amitié et la collaboration de la Serbie et de la Bulgarie, c'est le partage de la Macédoine que, déjà, elles envisagent et escomptent, qui paralyse leurs forces en face de l'ennemi commun.

Aussi, depuis bien des années les politiques clairvoyants tant serbes que bulgares s'evertuent-ils à amener sur ce point un accord entre les deux royaumes, c'est-à-dire un accord relatif au partage futur de la Macédoine. Cet accord produirait également un résultat actuel et immédiat, notamment une délimitation des sphères d'influence de la Serbie et de la Bulgarie en Macédoine, délimitation qui, cela va sans dire, contribuerait puissamment à la réconciliation serbo-bulgare et à leur action commune dans les Balkans.

On parle beaucoup, depuis quelque temps, d'une convention que la Serbie et la Bulgarie aurait conclue à l'égard de la Macédoine. Nous ne savons pas si ce bruit, que la presse a grossi jusqu'à des proportions phantaisistes, est fondé, pas plus que si, en cas d'affirmative, cette convention contient des clauses autres que la délimitation des sphères en Macédoine. Mais dans tous les cas, il est grandement désirable que la Serbie et la Bulgarie tranchent une fois cette question, condition première d'une entente chrétienne dans les Balkans vis-à-vis des Turcs.

Mais, tandis qu'en ce qui touche la Bulgarie, une pareille convention représenterait une œuvre complète et finie après laquelle il ne resterait, pour la sauvegarde des intérêts bulgares, qu'à la faire réaliser, il en est autrement de la Serbie. En effet, la Bulgarie n'a pas en Macédoine, en dehors des Serbes, de compétiteurs sérieux; tandis qu'il lui suffit de se concerter avec la Serbie, cette dernière se heurte, au contraire, dans les parties de la péninsule balkanique où les droits des Serbes sont reconnus par la Bulgarie, notamment le sandjak de Novi-Bazar, la Vieille-Serbie et les contrées serbes de la Macédoine, aux intérêts de l'Autriche-Hongrie, une puissance de premier ordre et dont la Serbie—est-il besoin de le faire remarquer?—ne peut manquer de tenir compte dans ses combinaisons politiques. Quelle utilité réelle présenterait, pour la Serbie, une convention passée avec la Bulgarie relativement à la Macédoine, si la Serbie n'assurait pas en même temps, aussi vis-à-vis de l'Autriche-Hongrie, l'efficacité des droits qu'elle élève par rapport aux dites provinces? Or la Serbie ne peut y parvenir que par l'une de ces deux manières: ou bien obliger, grâce à une entente effective avec la Russie, l'Autriche-Hongrie à la neutralité le jour où elle, la Serbie, s'aviserait, en compagnie avec la Bulgarie, d'attaquer la Turquie, ou bien, en cas que la Russie se déroberait à conclure une telle entente avec la Serbie, se tourner du côté de l'Autriche-Hongrie elle-même et s'efforcer de trouver un terrain propre à concilier ses droits ethnographiques et historiques avec les intérêts économiques de la monarchie voisine. C'est à la diplomatie serbe de mener à bien, sous la protection de ses amis étrangers, cette tâche qui, sans doute, n'est pas facile mais qui est d'une importance capitale dans la question serbe, question qui, à partir de l'annexion de la Bosnie-Herzégovine, est devenue une question européenne.

THE LEBANON PROVINCE

(From Our Own Correspondent.)

Beyrout, August 14.

Public attention has lately been too much absorbed by the important political events that have been succeeding one another with such bewildering rapidity in the capital to bestow as much notice as it merited upon the recent explosion at the arsenal at Beit Eddine, the summer headquarters of the Lebanon Government. But such comments as have been provoked cannot fail to be interesting even to those who have no immediate interests in that Province. Many conjectures have been indulged in, but the one that has found most favour and credence with even the most enlightened class of Lebanese is that "the Committee" was the secret instigator of the deed. Poor Committee! It has lately become the scapegoat for many other ills. As circumstantial evidence supporting this theory, the fact is adduced that a few days before the accident one of the dragoon officers stationed at Beit Eddine left on the plea of ill-health, to be replaced by another officer from Beyrout, and that soon after the latter's arrival the horses that had been stationed near the arsenal were removed to a safe distance. It is further stated in support of this theory that the Young Turks have not forgiven the Lebanese for the cool manner in which the latter met their overtures for sending representatives to Parliament; for their indulgence recently in rather too active discussions of their Constitution and the introduction therein of certain reforms calculated to weaken the political bond between the Province and the Empire; or for their protests against the recent manœuvres of Turkish troops in Lebanese territory.

The crowning cause of the ill-feeling, however, is said to be the suspected smuggling through Junieh of mountain guns and ammunition by the French. At the outbreak of the Italo-Turkish War, when Moslem feeling was in a state of high effervescence, French men-of-war used to be most of the time stationed at Beyrout, and one of them once called at Junieh. Instead of this being looked upon as a mere diplomatic visit to the Maronite Patriarch (which it really was), a few organs of the Moslem Press indulged in the certainly startling statement that some packages containing guns and ammunition for the Lebanon Government were discharged by the French war vessel under false pretences! The subsequent visit of M. Caillaux to the Maronite Patriarchate, where toasts were exchanged and patriotic speeches were made, and the suspicions that were thereby aroused as to the spread of French interest in the Province, undoubtedly lent a certain touch of "artistic verisimilitude" to these otherwise "bald and unconvincing" rumours. Such speculations may well appear to be worth mention only for their amusing character; yet account must, nevertheless, be taken of the fact that what may appear as ludicrously improbable to the clear reason of the West, assumes, in the vivid imagination of the East, the semblance of reality.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, August 31.

War Fever in Bulgaria.

The national indignation expressed at the protest meeting in Sofia on August 13 has been followed during the past fortnight by other protest meetings in the provinces. At these meetings fiery and bellicose speeches were delivered. But in order to express the will of the nation in a more energetic manner and force the Government to mobilise the army and declare a "War of Liberation," a congress of delegates from all political parties and from all twelve departments met on August 25 in Sofia at the club called "Slavanska Besseda," each department being represented by one speaker on the great national congress, as they styled themselves. Almost all speakers referred to the intolerable position of their kinsmen, in Macedonia and in the Vilayet of Adrianople, caused by the chaotic state of affairs which now exists in the Turkish Empire. After a secret meeting, at which it is said that the eventualities and consequences of a war with Turkey were discussed, the Congress decided in favour of the mobilisation of the Bulgarian army, and at the same time demanded that urgent representations in favour of the autonomy of Macedonia and the Vilayet of Adrianople should be made by the Bulgarian Government to the Great Powers.

In case the Great Powers should pay no attention or fail to accede to the demand for an amelioration of the intolerable position of the Christians in Turkey, then, it is felt, the Bulgarian army must do its duty. The warlike enthusiasm of the people here has reached such a pitch that it is difficult to foresee to what it may lead. The concessions made to the Albanians and the proposals of Count Berchtold have come at a most inopportune moment, and instead of pacifying public opinion here have served, on the contrary, to augment to a certain extent the unrest that already existed in Bulgaria. Almost all the local papers are brandishing the sword and clamouring for war, the only exception being the *Mir*, the organ of the Government. The *Mir* points out that the right of declaring war belongs, according to the Constitution, to the Government with the Chamber, and not to a self-constituted national congress or to the man in the street; and at the same time it reminds the authorities of, and asks them to do, their duty.

The Army Manœuvres.

In the army paper *Voeni Izvestia* appears the order for calling to the colours the reserve officers who will take part in the forthcoming manœuvres. According to the order they must present themselves for a three weeks' exercise from September 7 to 28. The reserve officers called out are distributed as follows:—The infantry regiments of the 4th Division receive 184, those of the 5th Division 167, the artillery regiments and siege battalions 83, and the sanitary department 27. Thus altogether 461 officers of the reserve are called out to join the colours and take part in the manœuvres.

His Majesty will direct the manœuvres personally, assisted by the Chief of Staff, General Fitcheff. The two opposing sides will be commanded respectively: The 5th Division by General Christoff, assisted by Colonel Kavarnalieff as Chief of Staff, and the 4th Division by General Boyadjieff, assisted by Colonel Economoff as Chief of Staff. Their Royal Highnesses the Princes Boris and Cyril will be present also. It is supposed that the main manœuvres will begin on September 18, and that the review of the troops will take place on the 26th.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, August 31.

The Manœuvres.

H.R.H. Prince Ferdinand will arrive back in Roumania very shortly, when he will at once be engaged, together with General Averesco, Commander-in-Chief, in work connected with the coming manœuvres. This year King Carol will not, as on former occasions, attend the manœuvres only during the two or three final days, but will be on the field for a week. His Majesty will view the passage of the troops across the Danube, which will be by means of a specially improvised pontoon from the monitor "Lascar Catargi." This manœuvre, always difficult and never before executed by the Roumanian army in time of manœuvres, will be doubly arduous, as it will take place at night. The crossing of the Danube in the Russo-Turkish war took place during the day, and was then viewed and directed by "Prince" Charles as Commander-in-Chief of his troops. After the crossing the King will take up his quarters at the town of Medjidia, living with his suite in the royal railway carriages, and proceeding each day to the scene of the fighting by motor-car.

Another Roumanian Steamer "Searched."

The Roumanian State cargo boat, the "Jassi," announced on her arrival at Constanza on Thursday that she had been stopped and searched in a most impudent manner by the Italian auxiliary cruiser "Citta di Siracusa," in spite of the repeated protestations of the commander, Captain G. Ionesco, who insisted that he was in Greek waters, being, in fact, within a mile and a-half of the island of Zea. Three shots were fired by the cruiser at very short intervals. The "Jassi" was brought to as soon as possible, when a boat with two Italian sailors approached and demanded to search the steamer. Captain Ionesco at first refused this for the reason that the man-o'-war had not conformed to maritime rules by allowing ten minutes between each shot, and that the "Citta di Siracusa" did not figure in the list of Italian warships. During this argument another boat arrived with the second officer of the Italian vessel, who, in spite of all protestations, boarded the steamer, and commenced to search her. These operations lasted from midnight till five in the morning without anything suspect being discovered, and the Italians then left. The Roumanian Press expresses great exasperation at this impudent action on the part of the Italians, following as it does so closely on the perquisition of the "Imperatul Trajan."

LETTERS TO THE EDITOR.

FOREIGN POLICY AND THE NATION.

To the Editor of The Near East.

Sir,—At this time questions of equal urgency and difficulty confront the English Foreign Office.

These questions bring into sharp relief points of contact between England and all the first-class Powers.

Upon those whose duty it is to conduct our foreign affairs there lies at this juncture a responsibility as great as at any period in our history, for upon their wise decision will depend not only our diplomatic and our political relations, but the social well-being of our people for generations to come.

It would be invidious, perhaps impossible, to discriminate as to the relative importance of the problems presented by the present chaos in the Turkish Empire, the partition of Persia, and the thorny matter of the Panama Canal dues.

The influence of the several policies to be pursued in relation to these problems will directly affect a people at this moment distracted by internal dissensions and which is now facing a situation in which revolution and evolution as descriptive terms are employed with the emphasis of alternative partisanship.

Is it not time for a comprehensive survey of the unforeseen, perhaps unforeseeable, effects of an unprecedented social and industrial development and of the traditional methods of dealing with foreign affairs in the light of cumulative evidence of their inter-dependence? Is it not time to recognise that economic pressure is the mainspring of international relationships, and that, consequently, the effects of foreign policy upon those who produce that pressure should be the first consideration of statesmen?

One-third of our population lives virtually a hand-to-

Digitized by Google

mouth existence, dependent upon industrial and commercial fluctuations, and is blindly guided by a crude political understanding, which has no means of gauging the significance of events.

An indefinite majority is almost completely ignorant of political considerations which must immediately affect their private prospects, not less because they are unaware that their own welfare is synonymous with national greatness.

And yet these immensely difficult and complicated questions, so intricate as to perplex the trained minds of the shrewdest political economists, are made the subject of private and obscure negotiation, and people at large reach with difficulty a slight and casual acquaintance with what is toward through an occasional telegram or article in the Press, vigilant indeed, but handicapped in its means of acquiring information to a degree inconceivable.

How many people in the British Isles realise that a British occupation of Southern Persia must inevitably lead ultimately to conscription, that violation of the Hay-Pauncefote Treaty in so far as it led to discrimination against our overseas carrying trade would involve us in commercial disaster and consequent unemployment on a colossal scale?

On the other hand, how many of those millions whose living depends directly or indirectly upon our import and export trade realise what a pacified and well-governed Turkey, open to the peaceful arts and resources of civilisation, would signify in relation to our share in its prosperity?

Is it really indispensable that policies so far-reaching in their results should emanate from a small secret Comitia of Foreign Office officials, subject to a sectional Cabinet order, and reducible or modifiable, if at all, only when dispositions have been taken, preliminaries decided upon, and negotiations, perhaps irrevocably compromising, initiated?

Is it not time that the Foreign Office were reorganised and brought up to the standard of democratic requirements?

In such a Foreign Office devolution would take the place of despotic centralisation, and the people's representatives would be consulted upon questions involving the well- or ill-being of the people at large.—Yours obediently,

SYDNEY SCHIFF.

Devonshire Club, London,
September 1, 1912.

CYPRUS AND EGYPT.

To the Editor of THE NEAR EAST.

Sir,—The remedy proposed by Mr. R. G. Cavendish Bentinck in your last issue can hardly be considered practical. It is to the effect that one portion of the Ottoman Empire, administered under a Convention by Great Britain, should be "ceded" to another portion of that Empire now occupied by Great Britain. The idea that the Khedive would be proud of his "colony" is amusing. The "magic wand" of Lord Kitchener is (1) to settle easily the tribute difficulty; (2) to improve the island administration; and (3) to restore the island prosperity.

Lord Kitchener (under the Foreign Office) has his hands more than full in Egypt and the Sudan. As regards (1) and (2), there is no reason to doubt that any difficulties can be more efficiently dealt with from Downing Street, in co-operation with High Commissioners, than through Egypt. As regards (3), the restoration of prosperity must necessarily be gradual. What is most required is expenditure on agricultural development (including reafforestation) and roads, and the attraction of foreign gold, which should be accelerated by better steam communication.

That the people of Cyprus would rejoice at the proposed solution is also a statement that will amuse those who know Cyprus. The people are in reality perfectly contented. The causes which have led to friction have been fully dealt with by THE NEAR EAST and the *Times* (August 28). All Englishmen sympathise with the desire that real grievances, which *do* exist, should be dealt with justly; but want of loyal co-operation on the part of leading Cypriots can only tend to alienate sympathy and retard progress.

To place Cyprus under Egypt (the military *are* under that command) could only render the anomaly of our tenure still more anomalous. ROLAND L. N. MICHELL.

THE MUSSALMAN.

An up-to-date English Weekly, conducted by a Mussalman Editor of liberal and independent views. Though all topics of special interest to the Mussalmans are discussed in its columns, social, political, and economic questions of general interest always receive due attention It is entirely free from sectarian bias and is a true exponent of the catho principles of Islam, but it advocates the Mohammedan cause boldly and fearlessly when such advocacy is necessary.

Annual subscription (inland), 4 Rs., (foreign), 8 shillings.

THE MUSSALMAN, CALCUTTA, INDIA.

THE PRESS ON THE NEAR EAST.

Austria-Hungary and The Balkans.

From a long dispatch from the Vienna correspondent of the *Times* (September 2) we extract the following interesting observations on Austrian policy in the Balkans:—

Austria-Hungary has, on the one hand, called the attention of Europe to the outlook, and is, on the other, doubtless taking steps to guard herself against surprises in case circumstances outrun counsel. The rumours of military preparations in Bosnia-Herzegovina—rumours less unfounded than official denials pretend—show the direction in which Austro-Hungarian fears are believed to be running. But it is not military action that the Monarchy most needs to prepare. Sound political preparation in the Southern Slav world is more urgently required. Austro-Hungarian policy can, however, rarely be judged by the light of reason. Some years ago an Austrian Polish statesman of great culture and political acumen was asked by the Ambassador of a European Power whether there were not some general principle to guide foreign diplomatists through the complicated impalpabilities of Austro-Hungarian affairs and to help them in judging the probable course of Austro-Hungarian policy. "There is an almost infallible principle," answered the Polish leader with grave mien and twinkling eye. "Your Excellency has but to conceive what policy an intelligent appreciation of Austro-Hungarian interests would suggest. Then—bet on the opposite, and you will rarely be wrong!"

Prospects of Peace.

On August 31 the *Statist* had a leading article on the Turkish position, which thus sums up the prospects of peace:—

But Turkish feeling against a further disintegration of the Empire is extreme, and it is by no means certain that the Government is strong enough to give up Tripoli as things stand at present. If, indeed, Italy were to recognise her true interests, to withdraw the decree of annexation, and to offer a reasonable price for Tripoli, and if the Great Powers were to back up this action of Italy with all their influence, the Turkish people might be brought to see that further resistance was absolutely impracticable, and, therefore, that the only reasonable course left to them was to accept the best terms they could get. But whether Italy can be persuaded to take this step, and whether the Powers can be induced to act together loyally and firmly remains to be seen.

The Fate of the Ægean Islands.

Mr. Lucien Wolf writes in the *Graphic* (August 31) with regard to the ultimate destinies of the islands:—

As it is, the retrocession of the islands will cause a good deal of cackling. But what is to be done? They cannot be handed over to Greece, for if she were to accept them the Bashi-Bazouks would be in Thessaly in a twinkling. Autonomy is scarcely less difficult, for the Powers do not want any more Cretes on their hands. As for annexation to Italy, neither Great Britain nor France could entertain it for a moment. France is already sufficiently disturbed about Italian naval rivalry in the Mediterranean, while we have to see that our route to India, already very much endangered, is not rendered any more difficult than it is. Italy at Rhodes or Stampalia in addition to Tobruk, would so dominate the eastern basis of the Mediterranean as to be able to bar all access to the Suez Canal. This would be a grim pendant to the Trans-Persian Railway—the sea route to India in the hands of Italy and the land route in the hands of Russia. It is clearly a mad world in which such projects can be discussed aloud.

A Turkish Criticism.

General Cherif Pasha, writing in the *Revue*, of Paris (September 1), criticises the composition of the Turkish Cabinet somewhat severely. We give the following extract relative to the Grand Vizier:—

On avait tant exalté auprès du sultan la force du Comité qu'il a cru bon de nommer grand vizir un homme qui ne fût pas suspect à la trop célèbre association secrète, un homme neutre, Ahmed-Moukhtar pacha. Ce dernier, faible par nature et encore affaibli par l'âge, se laisse absolument guider par son fils Mahmoud pacha, ministre de la marine, qui se laisse à son tour diriger par le Comité, auquel il est affilié, et par l'Allemagne, qui n'a pas de meilleur serviteur. Au moment où tout le pays est soulevé contre le Comité et demande une politique nationale, basée avant tout sur un rapprochement franco-anglais, est-ce que cela ne semble pas un peu paradoxal? Sir Edward Grey, renseigné par les rapports de l'éminent homme d'état, lord Cromer, rapports qui se trouvent au Foreign Office, sait du reste parfaitement à quoi s'en tenir sur le compte des deux Moukhtar. Quelle confiance la France ou l'Angleterre peuvent-elles avoir en un gouvernement ainsi composé?

Turkish Finances.

In a leader of the *Financier* (August 31) on the relations of Turkey's finances to general governmental reforms in that country, it is stated that:—

The first essential to a reformed Turkey is the restoration of her finances. At present her credit is on a 7 per cent. basis, as shown by the recent placing of £T1,250,000 of Treasury bonds at that rate of interest. In his report on the Ottoman Public Debt, compiled in October of last year, Sir Adam Block stated that the deficit was then about seven and a-half millions.

Digitized by Google

and the Ministry of Finance was strenuously endeavouring to reduce it by restricting the expenditure within reasonable limits. . . . With the gradual and normal improvement in the returns of existing taxes the Ministry of Finance hoped to be able eventually to cover the deficit and to establish an equilibrium in the course of from two to four years. The war, however, must have profoundly modified these calculations, and has rendered the task of the Government in obtaining the necessary financial assistance extremely difficult.

British Interest in Turkey.

Tuesday's *Morning Post* contained a leader on Near East Problems, from which we quote the following passage concerning the purpose of British policy in relation to Turkey:—

The chief interest of Great Britain in Turkey is that Turkey should be prosperous and peaceful. It probably matters less to Great Britain than most people suppose that the regions of the Balkans, of the Straits, and of Asia Minor should be administered by one set of people rather than by another. But if those regions are well governed, populous, and prosperous they will give less trouble to their neighbours, and trade with them will be more profitable than if they are ill governed and have a poverty stricken, discontented, or turbulent population. The British interest, therefore, is that there should be peace and prosperity in Turkey, and that her territories should not be even thought of as the possible prey of other Powers. Great Britain covets no Turkish territory, and no British Government would use British forces to bring about territorial changes in Turkey. Great Britain is, therefore, in that region disinterested. Her one intelligible aim is the welfare of the States and peoples of those countries, and even that aim is not one for which she can make great sacrifices. That being the case, the method of her diplomacy should be based upon the recognition of the fact. If Turks, Bulgarians, Serbs, and Greeks are given to understand that British forces are not to be used except in the maintenance of the vital interests of Great Britain; that the British Government does not regard Turkey and her neighbours as pawns in a British game, and that their affairs are not primarily a British business, there will be less chance of misunderstanding and disappointment. Great Britain will no longer be thought of by Greeks and Serbs as the *deus ex machinâ* to whom they can look for the solution of their own complications. They will then come to regard British advice as that of a disinterested and perhaps impartial spectator. Perhaps to such advice they would pay no regard, but at heart they would learn that their wisest policy is to face their own difficulties by their own resources.

NEAR EAST BOOKSHELF.*

PROGRESSIVE ISLAM AND INDIA.

"Taj" evidently conceals the identity of an Indian writer. This is plain from the intimate knowledge which is shown regarding native life and thought, and, perhaps, from a few peculiarities of style. The book has been written, quite evidently, with the object of acquainting English minds with the religion and customs of the Mohammedan population of India. In achieving this aim the author has been successful, but the method might have been more skilfully chosen. There seems to be no plot or coherence of any kind in the tale, as it is called. Characters appear suddenly and as suddenly disappear, without more reason than the author's apparent urgent need of a peg on which to hang opinions. One of the characters, Zorah,* from whose name the book takes its title, is shown to us in the first chapters as an adorable, altogether charming child, and we fully expect her to ultimately become an equally adorable heroine. But, alas! she is neglected; we hear nothing of her until we reach the closing chapters, and then with but melancholy result.

The writer's presentation of the Mohammedan faith is very pleasing and skilful *in itself*, but its connection with the tale is of so extenuated a nature that it forms almost a separate pamphlet at the beginning of the book. Some of the observations of the Murshid on the principles of Islam are of the greatest interest:—

In this same stubborn, levelling Monotheism of Islam is to be found the root of that democratic instinct which not even the most corrupt forms of despotism have been able entirely to drive away out of the consciences of Moslem communities.

Islam recognises neither colour nor caste, neither wealth nor poverty; it levels down all such meretricious distinctions. Even now, far as we have strayed from the pristine purity of our faith, the lowest of the low, an outcast, a pariah, becomes the peer and equal of the best as soon as he is converted to Islam, and is welcome to his table and drinks out of his cup. This is the secret of the rapidity with which, in peaceful times, the blessings of Islam have spread over countries where the domination of caste or colour has weighed heavily on a section of the people, and they will go on spreading whatever rival religions may do to stem the tide.

This again will surprise some readers, but not those who know Islam:—

When your countrymen (*i.e.*, the English) talk of the intolerance of Islam, may I remind them that, during the thirteen centuries of its benign existence in this world, Islam has burnt no man at the stake, nor was there a Moslem Inquisition to torture them ere they were burnt.

No fire was ever kindled for a Moslem *auto-da-fé;* Moslems never closed the gates of knowledge to all but their priests and their preachers; Moslems never committed wholesale slaughter in the name of God, or expelled hundreds and thousands of men and women and children from their country because of their religion; Moslem conquerors never exterminated whole nations because they were not of their way of thinking, or to get possession of the land they lived in, or of the gold they quarried. Nor were they ever accused of having converted simple, guileless savages into drunken brutes by the million for the sake of filthy lucre.

We quote an Indian native remedy for dysentery which may benefit our own British pharmacopœia:—

He requested that a tender pomegranate should be fetched from the garden, and when this was procured he punctured a hole in it and put in a small quantity of opium; then he smeared it thickly over with moistened red clay and wrapped it in with strips of muslin smeared with the same clay. He then had a hole dug in the ground and lined with cow-dung cakes, and after placing the pomegranate in the centre he lighted the cakes. When well roasted he removed the burnt clay from around the fruit and pounded it into a powder. He ordered that a good pinch of the powder should be given three times a day, and that the child should be kept on a strict diet of curds and soft rice, and I assure you she made a rapid recovery.

"Zorah" is a book which will prove interesting to all desirous—as all should be—of obtaining a knowledge of Islam and its standpoint. Arabic terms are carefully explained by a useful appendix and glossary.

CURRENT COMMENTS.

One by one the altars raised to the glory of the Nationalist party in Egypt by the late Mustapha Pasha Kamel have fallen to the dust as the magnetism of the dead leader's personality faded from the people's minds. First, even before the Pasha's death, the *Egyptian Standard* ceased publication, then its French edition, *L'Etendard Egyptien*, and now, alas! the *Lewa*. The unconscious humour which characterised much of the more serious side of the writing in this paper will be greatly missed by other editors in Egypt. For a long time past it had ceased to count as a journal of political importance, but as the mouthpiece of the more ignorant Nationalists it provided a copious fund of humour. Although its professed supporters put patriotism before everything else, and were prepared to suffer unheard-of torture rather than submit to British yoke, they could not find the money to support their chosen journal, and its suppression by the Government was really a kindly act of mercy, as it could not in any case have long survived the slough of poverty into which it had sunk.

***

Discredited by the vast majority of its former supporters, hopelessly behindhand with its office rent, its existence for a considerable time past was anything but a cheerful one, and even before the Government had cause to put it out of its misery the stern hand of the law had fallen upon it, and everything but its printing press—which was retained as a guarantee for the arrears of rent—was turned out into the street. For a few sad days sedition blossomed from an obscure office in the Abdin; then came the Government order, and the journal, after having been twice warned, has been suppressed altogether.

***

Various causes have combined to produce the downfall of this once important paper. Chief amongst them is, perhaps, the fact that its former supporters grew tired of continued and unreasoned vituperation. The paper possessed no policy; even the cry of "Egypt for the Egyptians" was lost in the cry of "Down with the English." And the final nail was placed in its coffin by its connection with, and its attitude towards, the conspiracy which has been so recently unmasked. Mustapha Pasha Kamel was a patriot and a gentleman; his successors in 1912 have been found floundering about in a morass of anarchism and murder, and the country would have none of it. So disgusted, indeed, have many of the more important members of the Nationalist community become, that it is understood that Mohammed Farid Bey will be replaced in his leadership by a man who is less violent in his antipathies, if, indeed, the party continue to exist at all, which seems doubtful. The last meeting of the party showed that a very decided feeling of revolt was abroad in its ranks, and it is quite possible that the whole party will sink into oblivion with its chosen mouthpiece.

***

The existence of hasheesh dens in Cairo is well known to almost every visitor to Egypt, but there are very few Englishmen, apart from those serving in the police force, that have ever actually visited them. It is true that for a rather large recompense most of the more irresponsible dragomans who haunt the Cairo streets will take the unsuspecting stranger to a place which he designates as a hasheesh den, but it is not genuine. These guides know their business too well to run any risk of being identified as habitués of these places. When in Egypt during the past winter, however, the writer had the good fortune to come across an Englishman who had not only penetrated to these dens, but had at one time been in a fair way to become a "hashash" himself. A spirit of devilment and an unlooked-for opportunity were responsible in the first place for his visit and for his initial taste of the drug; domestic troubles were responsible for his return to it. At first he dwelt in a veritable paradise. The drug soothed him, and when he reached the first stage of dreamland his only regret was that he had passed so many years of his life without it. This stage continued for some considerable time; then one night came a dream of quite a different description.

***

Fortunately for my friend it came rather earlier than is usually the case, and the horror of it is still, after many years, a definite memory which always returns to him with the scent of the drug. The first stages of his sleep that night were bright and glorious; he was in the hasheesh smoker's paradise. Gradually, however, he became conscious of the presence of a large toad in his heaven, and from the moment that he clearly realised its presence the place was turned to an inferno. Quietly, like a transformation scene at a pantomime, the gorgeous figures which had surrounded him changed their shape till at length he stood, he dreamed, amid a seething mass of giant toads which writhed and scrambled at his feet. Then, as he watched in horror, they grew until they were elbow high. Bigger and bigger they became, until at last he felt that he must suffocate in their presence, and he waked at last screaming with the terror of the hideous thing. He never visited a hasheesh den again. There would be times in the watches of the night when the whole world seemed to be calling upon him to go, but the memory of the dream was too powerful, and he resisted the lure. He is now a strong, healthy man, but he was perilously near the brink of destruction then.

***

And there are thousands and thousands of the inhabitants of Egypt who nightly pass through the same period of horror, but are unable at nightfall to resist the temptation of the drug which, at least for a time, brings them peace and dreams of splendour which otherwise they could never know. Sometimes the horror of the night carries its stamp upon the faces of these men all through the day, their eyes are glassy and stare vacantly at some ghastly thing invisible to eyes which have not looked through the haze of hasheesh smoke. Their spirits alternate from wonderful buoyancy to irrepressible gloom; they would, when the fit takes them, murder their parents for the price of the drug. And it is for the wealth which comes of smuggling the forbidden drug that white men risk their freedom by assisting its entry into Egypt. We suggest a new form of punishment for such offenders. Let every man convicted of being concerned with the smuggling of this drug be first compelled to listen to our friend's description of his dream and then be compelled to take it himself.

***

The Albanians, it has been said, are brave to the point of foolhardiness; and after reading the letter of an Uskub correspondent of the *Daily Chronicle*, one must admit the truth of the saying. The writer referred to describes how the notorious Issa Boletinatz (bent, apparently, on entering into competition for the "William Tell" championship with the Servian youths to whom we referred a few weeks ago) drilled a hole through the fez of one of his followers with a shot from his rifle at long range—of course, while the said follower was wearing the said fez. "I learned afterwards," the writer continues, "that this peculiar amusement is customary among the Albanians. Two friends see one another from afar, and one, desirous of attracting the attention of his comrade, aims at his fez and shoots. Both then approach, shake hands heartily, and smile." We certainly shall not quarrel with the qualification of the amusement as "peculiar." And, having regard to the cost of respectable head-wear in this country, we are inclined to think that it will never prove popular here.

***

On Wednesday, August 28, the monastery at Sinaia celebrated the 217th anniversary of its foundation with all the usual festivities and curious customs that always attend this "holy day." At 10 o'clock in the morning Queen Elizabeth and her guest, the Princess of Bentheim-Steinfurth, accompanied by two ladies-in-waiting and a royal aide-de-camp, proceeded to the little mediæval church attached to the monastery, where prayers were offered up with all the pomp of the Orthodox Church. There were present, besides Mr. Maioresco, the Premier, and a number of high officials, as numerous a public as the small space in the little old church allows. The service finished, an ample meal was provided, as in other years, for 300 poor peasants of the district, who are allowed to take away with them the plates, mugs, etc., of national manufacture, used at the repast. Queen Elizabeth herself assisted at the ceremony, passing among the tables and conversing with her guests. Thousands of people, peasants of the district, and visitors who came from long distances by special excursion trains, viewed the distribution; and the former joined in the national dance, the "Hora," and made holiday till a late hour.

***

This monastery of Sinaia was founded in the year 1695 by the "Spatar" (Sword-bearer, or practically Minister of War to the governing Prince), Michel Cantacuzino, as a thanksgiving for his having returned safely from a long and adventurous journey in the land of the Turk; and the name is actually an old form of that of Mount Sinai, chosen by the founder, who passed within sight of the holy spot when on his travels. Even in very early days a fortress existed at this spot, which, in the times of the old methods of warfare, was an important strategic position, where the Roumanian warriors were wont to seek refuge in their fighting with their enemies the Turks or the Austrians. The "Spatar" chose it, however, on account of the calm and peaceful beauty of the position, it being here that he spent his first night after entering once more his native country.

***

A British resident in Constantinople sends us the following charming anecdote, which is not without point for us at the present moment:—Numerous are the donations made and funds started for the sufferers by the recent earthquake on the Marmora, and, as usual, in matters of this kind, we come a bad last. During the selling of "a little red flower" by the ladies of Constantinople for the benefit of the homeless, the total takings of whom reached £T2,800, the following sublime incident occurred. A lady at one of the fashionable summer resorts on the Bosphorus took up her position at a church door. The first to have a flower pinned to his coat was a beggar-man with a wooden leg, whose regular station it was. After paying his penny he said, with a faltering voice, "I will go, so as not to compete with you," and, without further ado, he hobbled off.

PERSONAL & SOCIAL.

Lord Newton has left for the Caucasus and Teheran, and is returning in October.

Prince Nicholas of Roumania arrived at St. Leonards on Monday from town.

Prince Antoine Bibesco, who has been appointed First Secretary to the Roumanian Legation at St. Petersburg, has left London for Russia.

Sir Gerard Lowther, British Ambassador at Constantinople, and Lady Lowther were among the members of a large party from Lowther Castle who were present on Saturday at the Ullswater sports at Pooley Bridge.

Sir Hamilton Goold-Adams, High Commissioner for Cyprus, is coming to England on leave in November. It is expected that Sir Charles Tyser, the Chief Justice, who is at present in London, will replace the High Commissioner during his absence.

On Sunday Viscount Kitchener inspected at the Royal Marine Barracks, Deal, the local companies of the National Reserve.

General Sir Reginald Wingate, Sirdar of the Egyptian Army, will remain in residence at Knockenhair, his East Lothian home, during the greater part of this month. He will afterwards leave for the East.

The visit of Lieutenant-General Sir Rudolf von Slatin Pasha to the King at Balmoral has been postponed to the middle of this month. Sir Rudolf is at present on a motor tour in the Tyrol.

Prince Paul Karageorgevitch is amongst the party of guests of Mr. and Mrs. Jefferson Davis Cohn, who have left England on board their yacht "Alberta" for a cruise.

Prince Nicholas of Greece, who has been confined to his room for more than two months owing to the wounds in his legs caused by a fall, is staying at Bagnoles de l'Orme to undergo treatment.

King George of Greece arrived in Paris on Sunday last, accompanied by his aide-de-camp, General Pallé, Count Carnowitz (equerry), and Mons. Poncet (steward). His Majesty is travelling strictly incognito, and expected to leave for Copenhagen after a stay of three or four days in the French capital. The King of Greece will return to Paris during the current month.

Admiral Sir R. Massie and Lady Blomfield, who have been taking the "cure" at Contrexéville, left Montana on Tuesday last for Lausanne, where they will stay at the Grand Hotel du Château d'Ouchy until the 18th inst., when they return to London.

Coles Pasha, with Mrs. Coles and their son and daughter, who are at present at Montana, will spend a month at Montreux before leaving for Egypt on October 5 from Venice.

Madame Brient-Erlenn, wife of the Inspector-General of the Egyptian Quarantine Service, who has been staying at Montana nursing her son at the Stephanié Clinique, organised a concert for the benefit of the patients before her departure for Alexandria. Madame Brient-Erlenn, who is a celebrated singer, was assisted by Dr. Bourdon, organist of Notre Dame Cathedral, Paris.

The Khedive will leave Alexandria after the Bairam for Anatolia, where he will inspect his estates in the Dolman. His Highness will remain there for about three weeks.

Sir George Barclay, the new British Minister at Bucharest, was received in audience by King Carol of Roumania last Saturday at Castle Pelesh. Sir George was accompanied by the Secretary of the British Legation and Colonel Baranga, an aide-de-camp to the King. M. Maiorescu, the Premier and Minister for Foreign Affairs, was present at the interview when Sir George Barclay presented his credentials to His Majesty. The new Minister remained to luncheon at the Castle.

King Carol has presented Prince Fuad of Egypt, uncle of the Khedive, who lately visited Roumania, with the Order of the Grand Cross of the Star of Roumania, and M. Vicenzo Fagu, Chef de Cabinet of Prince Fuad, with the ribbon of Commander of the Order of the Crown of Roumania.

Sir George Buchanan, the British Minister at St. Petersburg has suffered a bad fall during gymnastic exercise. The bar broke, and the Ambassador came down heavily on his cheekbone and temple, causing slight concussion of the brain, but no fracture of the bone. The doctors have ordered absolute quiet for some days. His Excellency is making good progress.

Mr. J. R. Holmes, Acting Puisne Judge, Nicosia, left London on Monday on his return to Cyprus.

Major F. D. Finlay, 2nd Wiltshire Regiment, has been appointed assistant military secretary to General Sir Leslie Rundle, Governor of Malta.

Lady Edeline Strickland, who has just presented Sir Gerald Strickland with a daughter at Perth, the remote capital of West Australia, is already the mother of four little girls, says a contemporary. The eldest of these is their to the Maltese title of her father, who is Count della Catena, and owner of a palace in Valetta and a villa at San Antonio. Sir Gerald was at one time Chief Secretary at Malta, and has since been Governor of several British dependencies.

Sir W. B. Peat left London for Scotland on Tuesday.

At Breamore, Hants, the Harvest Festival was observed in conjunction with the celebrations of the birthday of Sir Edward Hulse, who yesterday left England to join the 1st Battalion Scots Guards in Egypt.

M. Nicolas Yamkoloff has been appointed Attaché to the Bulgarian Legation in London, and has entered upon his duties.

Captain Arif Bey has been appointed Naval Attaché to the Turkish Embassy in London, and Vehby Bey, First Secretary to the Embassy, has been transferred to Berlin.

Mirza Adbol Ghaffer Khan, Councillor to the Persian Legation, has arrived in London from Paris.

El Lewa Asser Pasha, Acting-Governor-General, who has been making a tour of inspection on the Upper Nile, is expected back in Khartoum at the end of this week. He has been accompanied by Bimbashi Butler, Bimbashi Harman, and Mr. Cornwallis.

An engagement is announced between the Rev. F. J. Blamire Brown, late of the Archbishop of Canterbury's Assyrian Mission, eldest son of the Rev. G. Blamire Brown, rector of Monks Risborough, Bucks, and Beatrice Aiskew, only surviving daughter of the late Rev. E. Keatinge Clay, formerly vicar of Great Kimble, Bucks, and of Mrs. Clay, of Askett Lodge, Monks Risborough, Bucks.

The marriage of Mr. Boris Gordon Harris, of the Sudan Irrigation Service, only son of Mr. Edmond Legh Harris and Mrs. Harris, of Odessa, Russia, and Phyllis Campbell, third daughter of Mr. and Mrs. Islay Young, of Brynfield, Langland Bay, Glamorganshire, will take place at St. Peter's Church, Newton, Glamorganshire, on Thursday, September 19.

El Lewa Matthews Pasha left Khartoum on August 18 on leave.

Mr. G. D. Hornblower, inspector of the Egyptian Ministry of the Interior, left Egypt on August 21 for Constantinople on leave.

Maitre Carton de Wiart, who is at present staying at his country house at Oxshott, Surrey, has been promoted by the King of the Belgians to be an officer of the Order of King Leopold I.

El-Miralai Wilson Bey, Governor of Khartoum, has returned from leave, and resumed his duties.

El Kaimakam Symes Bey, Assistant Director of Intelligence, Sudan Government, has returned to Khartoum off leave.

The Khedive has conferred the 3rd Class Osmanieh on Kaimakam E. G. F. Vaughan Bey, assistant private secretary to H.E. the Sirdar and D.A.A.G. of the Egyptian Army, on his retirement from service in His Highness's army.

Mr. Crewe Coles, of the Egyptian Domains Administration, has arrived at Montana from Egypt.

Mr. Monteith Smith, of the Ministry of Interior, Cairo, is also among the Egyptian visitors at Montana.

Prince Mohammed Ali arrived at Alexandria on the 26th ult. on the Austrian s.s. "Helouan."

The Rev. S. M. Zwemer, D.D., F.R.G.S., who has recently united with the American Mission, is expected to arrive in Egypt about the middle of this month, and will make his headquarters at Cairo, with duties in the American Mission and the Nile Mission Press.

Mr. Leonard Gorringe, late of the Egyptian Government and the Sudan Slave Trade Repression Department, is at present farming in East Africa.

Dr. Alfred Eid has arrived in Paris from Carlsbad.

Mr. Leo Weinthal, F.R.G.S., is leaving South Africa for England on the 23rd inst.

M. Michel Salvago, of Alexandria, is staying at the Savoy Hotel.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

SWALLOW.—On the 14th ult., at Cairo, the wife of James Leonard Swallow—of a daughter.

KYAN.—On September 2, at 44, Duchy Road, Harrogate, the residence of her mother, Mrs. Brotherton Ratcliffe, the wife of John Howard Percy Kyan, of Cairo, of a daughter.

THE NEAR EAST.

Editorial and Publishing Offices:
DEVONSHIRE SQUARE, LONDON, E.C.
Telegrams: "EASTAPROX, LONDON." *Telephone No. 618 London Wall.*

FRIDAY, SEPTEMBER 6, 1912.

"CONVERSATIONS" ON THE NEAR EAST.

The past week has seen Austria-Hungary all agog with diplomatic activity. Count Berchtold, whose proposal for an exchange among the Powers of views on the Near Eastern situation holds the European stage for the moment, has been busy elaborating the basis of the "conversations." After a visit to the King of Roumania at Sinaia, which in some quarters has been regarded as a symptom of a positive agreement between the Dual Monarchy and Roumania, Count Berchtold had a long audience of the Emperor Francis Joseph at Ischl, and subsequently saw Prince Fürstenberg, the Austro-Hungarian Minister to Roumania. To-morrow the German Imperial Chancellor will be the guest of Count Berchtold at Buchlau, and both the Austro-Hungarian Ambassador in Berlin and the German Ambassador in Vienna will be present at the meeting. At Ischl the Emperor Francis Joseph is presumed to have given his consent to the form of the concrete suggestions that are to be submitted to the Powers, and these proposals will also be the chief topics of discussion at Buchlau. As the international "conversations," as far as is known at present, will be carried out in their entirety at the various capitals, it may be surmised that some communication on the subject has already been made by the Austro-Hungarian Government, and that the first stage, after the formal acceptance of the invitation to exchange views, has begun. Every indication points to the fact that Count Berchtold's proposals will be found to contain no very startling elements. At the same time the conviction that an exchange of views at this juncture will not be altogether inopportune is gaining ground, the more so as the preliminary distrust of Count Berchtold's motives is being replaced by a better understanding of the direction in which lie the immediate interests of Austria-Hungary in the Balkans. As these must form the pivot of the "conversations," it may be useful to try to discover some of the principles underlying the present policy of the Dual Monarchy in the Near East.

The annexation of Bosnia and Herzegovina made the attitude of Austria-Hungary towards the Balkan problem more than ever suspect in the Balkans themselves, and put an end to the co-operation between Vienna and St. Petersburg that had been evolved as a result of the joint possession by the two Powers of "special interests" in this part of the world. During the lifetime of Count Aehrenthal there was little hope of the restoration of the former understanding; but from the first the new Austro-Hungarian Foreign Minister has shown anxiety to reassure the Russian Government that the fate of the two annexed provinces is to be regarded as a thing apart, with no bearing on the general situation in the Balkans, inasmuch as Austria-Hungary could not allow these countries to be considered as coming within the limits of the Balkan problem instead of as an integral portion of Austro-Hungarian territory. It is not improbable that, in view of the consolidation of the Triple Entente which has followed the act of annexation, the Austro-Hungarian Government may have had reason to suppose that the reassuring of all the Great Powers simultaneously regarding the legitimacy of its attitude to the Near Eastern question was the most effective method of removing Russian misgivings. At the same time the rapid sequence of events in Turkey has proved the undesirability of allowing the situation in the Balkans to develop in the face of a negative attitude on the part of the Powers. The more determined the Government in Constantinople may be to solve its domestic problems without interference from abroad, and the greater the likelihood there may be of its being able to cope with its difficulties with some measure of success, the more imperative does it become, if a Balkan conflagration is to be avoided, that the minor Balkan States should be restrained from trying conclusions with Turkey. For them a satisfactory settlement by Turkey of the Macedonian and Albanian questions will mean the death-blow of their national aspirations, and they cannot be expected to share the Powers' objections to a Balkan war. In addition to the desire for a better understanding with Russia, and for the reintroduction of definite action on the part of the Powers in regard to events in the Balkans, a third factor in Austria-Hungary's attitude may be found in her unreadiness to face any would-be permanent settlement of the Near Eastern question. The part to be played by the Dual Monarchy in the Balkans must depend in large measure on her hold on the Southern Slavs. Circumstances of late have tended to an estrangement between these and the Monarchy, and it would be difficult to find a more unsuitable moment, from the Austro-Hungarian point of view, for submitting the Balkan question to the risks inseparable from a settlement by force.

As far, then, as Austria-Hungary is concerned, there is no reason to doubt the honesty of Count Berchtold's intentions in wishing to see the influence of Europe on Near Eastern affairs co-ordinated. If it is to her interests to have the *status quo* maintained, it is no less to her advantage that this attitude should be clearly appreciated by the other Powers. The success of the "conversations," however, may be marred in one of several ways. An exchange of views may bring home to one or more of the Powers an appreciation of the apparent hopelessness of Turkey's administration of her European provinces in the face of such incidents as have occurred recently at Kotchana and along the Montenegrin frontier, and may evoke the question whether the interests of Europe as a whole will be served by postponing the day when the fate of these territories has to be decided. Again, the extremists in one or other of the Balkan States may feel that the most likely effect of Count Berchtold's proposals will be to confirm Turkey in a fresh lease for an indefinite period of Macedonia and Albania, and they may try to risk everything on a conflict. It cannot be overlooked that in the Near Eastern question the interests of the Balkan States, as they conceive them, and those of the Powers are diametrically opposed. The former have only one ambition—to possess themselves of Turkish territory; the latter hitherto have been set on staving off a crisis to which their mutual jealousies alone would impart any real danger. If Count Berchtold, finding that in the Turkish Government's promised "system of decentralisation" lay the chief hope of a more or less permanent maintenance of the *status quo*, has decided upon an attempt to throw the whole weight of Europe's influence in the Turkish scale, then the constructive policy to be evolved from the "conversations" must turn on the ability of the Powers to bring the minor Balkan States into line. Turkey will have no cause to be otherwise than grateful for the assistance thus rendered her, and Europe may look forward to a brief respite from the eternal problem of the Near East.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

It appears that rumour is busy in Jerusalem with a projected railway uniting that city with Cairo. It is even stated that engineers and surveyors are already actively engaged in planning the best route for the line via El Arish. What truth there may be in these rumours, I know not; but I imagine that many a long year will pass before the visitor to Jerusalem can dispense with the often tempestuous landing at Jaffa.

***

Schemes for railways in the Near East are legion, but only a very small number of them have any chance of realisation within the next decade or two. In their eagerness for development many communities endeavour to run before they can walk; before they have even an elementary system of roads they wish to have a complete network of railways. Good roads are the prime necessity for Syria and Palestine.

***

The *Tanin*, I notice, declares that the news that certain foreign capitalists had petitioned the Turkish Government for permission to establish several sugar refineries in Turkey is inexact. It appears that the Ministry of Agriculture had appointed a commission to study the question of the possible erection of refineries, but that till now no report has been submitted, and the matter, therefore, remains in suspense.

***

Figures, which we print elsewhere, show that Turkish revenue has evidently been seriously affected by the war with Italy. The latest returns issued by the Council of Administration of the Ottoman Public Debt (for March last) show a total collection of £T466,211, as compared with £T547,539 for the corresponding period of 1911. This is a large shrinkage, but it is temporary and is not one which need in any way alarm holders of Turkish Government securities.

***

The *Deutsche Orient-Korrespondenz* learns from Constantinople that the rumoured amalgamation between the National Bank of Turkey and the Bank of Salonika is shortly to be realised. This news is, it states, confirmed by Sir Henry Babington Smith, who is described as the retiring president of the National Bank of Turkey. I have the best authority for stating that Sir H. Babington Smith is not retiring from the presidency of the bank, which he has held for the last three years with great distinction. With regard to the talked-of amalgamation between the two banks named, I believe that the negotiations have not yet been definitely abandoned.

***

The *D.O.K.* reports that French finance has suffered a defeat in the competition for Bulgarian loan business. In spite of great efforts, the French financiers have not succeeded in persuading the Bulgarian Government to entrust Parisian banks with the issue of the new loan. This loan, states the *D.O.K.*, is to amount to 180 million francs, and is to be taken up this autumn. Several Austrian banks are to contract for the whole loan, under the leadership of the Länderbank. The matter seems to be devoid of any deeper meaning than such as attaches to the fact that Austrian institutions are satisfied with smaller, or, at any rate, less direct, profits on the deal.

***

I learn that there is every probability of the opening of a branch of the Imperial Ottoman Bank at Jeddah. Indeed, I believe that the preparations are quite complete, and the inauguration will take place after the conclusion of peace between Turkey and Italy. There must be considerable possibilities for an exchange business in Jeddah, owing to the stream of pilgrims which yearly flows through that town on the way to Mecca. Competition is not proving detrimental to the Imperial Ottoman Bank; on the contrary, its business must be enormously increasing, and there are everywhere evidences that the management is turning to account, in the most skilful manner, the changed and changing circumstances in the Turkish Empire.

***

Apropos of his remarks concerning the comparative failure of British firms in securing important business in Bulgaria, our Varna correspondent quotes the opinion of the Bulgarian business man, who is well-disposed to this country on the subject. This gentleman writes: "I believe that the English consuls are to be blamed for the falling-off of English industry and commerce in our country and other Eastern lands. It seems that most of your consuls come from the high-life London families, who are ashamed to visit our merchants carrying samples in their pockets, as the Belgian, Austrian, German, and many other consuls do—especially the Belgian consuls. They never meddle in politics and their pockets are always full of samples of cloths, rice, coffee, tea, sago, tapioca, etc."

***

It is hardly necessary, of course, to say that the writer does not mean his remarks to be taken *au pied de la lettre;* but his observations strike one as distinctly shrewd. Only I should not be disposed to "blame" the English consuls. With things as they are—that is to say, with our consuls being required to do a great deal of political work, especially in the Balkan countries—it is quite obvious that we cannot reasonably expect them to go about with their pockets bulging over with "samples of cloths, rice, coffee, etc.," to say nothing of more bulky goods, such as locomotives and trifles of that kind. But is it not time that we had some agents whose sole duty it should be to do very much what these energetic Belgian consuls are said, by the writer referred to above, to pass their time in doing?

***

I notice from the annual report, just published, that Walker and Meimarachi, Limited, have had another bad year. It is a pity that this news should coincide with the strong revival in Egyptian securities which we are now experiencing. Of course, the welcome interest in Egyptians has no reason to be, and will not be, affected by the report of this store-owning concern, which has been languishing for years under mistaken administrative policy. Affairs have evidently now arrived at a crisis, where the only alternative to liquidation is a most radical and ruthless reorganisation.

A telegram from St. Petersburg to the Agence Telegraphique Bulgare states that Prince Amatouni, Director of the Société Russe de Navigation sur le Danube, has left for Sofia in order to study the Bulgarian Government project for the establishment of a regular commercial service on the Danube. At the same time it is stated that the Russian Ministry of Commerce has placed on the budget a credit of 700,000 roubles to be utilised for subsidising Russian shipbuilding yards which will devote themselves entirely to the construction of commercial vessels destined for navigation on the open seas and on the Danube and its tributaries. These reports are symptomatic of a revival in Russian trade enterprise in the Balkan regions, which England, as a party to the Triple Entente, can only warmly welcome.

***

In the *Pall Mall Gazette* I notice an article from an Alexandrian correspondent with reference to the affairs of the Bank of Egypt. The decision not to institute proceedings against the directors and auditors has occasioned some surprise and resentment in Egypt, for it was there considered that a clear case lay against them. "People out here," says the correspondent, "fail completely to understand why faith should be so blindly pinned to one particular set of counsel, and it is considered that, as the interests at stake are so important, it surely was the duty of the Official Receiver and his colleagues in the liquidation to seek other and additional advice before abandoning the idea of an action against the directors. Certainly it is thought that it would have been fairer to the shareholders if a statement of the case, which had been laid before counsel, had been vouchsafed them." There is a good deal of ground for these and similar complaints on the part of shareholders, but, of course, the remedy, if any, lies in their own hands.

***

I notice that the Khedivial Agricultural Society in Cairo has received from the Government a grant of £E700 to be spent in the breeding of birds useful to plants and vegetation. It was originally intended that the Agricultural Department should be entrusted with this task, but the stress of work in the department makes the efficient carrying out of the scheme impracticable at the present moment. This may seem a matter of little significance now, but I am convinced that a right policy is being pursued. It was with the greatest interest that I heard recently of the intention of the Egyptian Government to despatch an official to India for the purpose of finding, if possible, a natural ally in their fight against the cotton-worm.

***

Since writing the above note, I have received the latest issue of the *Agricultural Journal of Egypt* (Volume II., Part I.), which contains a most excellent paper by Dr. Lewis H. Gough on the Natural Enemies of the Cotton-Worm. This paper, by the entomologist of the Cairo Department of Agriculture, is evidence of the scientific spirit presiding over Egyptian affairs. This spirit will in time exercise a beneficent influence over native modes of thought in other fields also.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, August 31.

The Constantinople Telephones.

The Constantinople Telephone Co., Ltd., with a capital of £300,000, was floated in London in December last, and its general manager, Mr. Francis Douglas-Watson, who was for many years superintendent of the National Telephone Company, together with its commercial manager, Mr. John H. Bigland, arrived here during the following month to take up their duties. Since the approval of its plans and specifications by the Ministry of Posts and Telegraphs, the technical staff of the company, some thirty in number, has been actively engaged in the installation of its plant. Contrary to an unauthorised statement in the local press, to the effect that the service would be completed and open to the public in the early part of next year, this cannot be accomplished before the end of August, 1913, which is within the time-limit, specified in the convention, for the completion of the installation.

To date, the company has some 5,000 kilometres of cable, 3,000 kilometres of underground wire, and 30,000 kilometres of piping in position. In the city proper, to Bobek, on the European shore, and to Scutari, on the Asiatic shore of the Bosphorus, as well as in Prinkipo, the largest of the Princes Islands, the installation will be underground; beyond these limits it will be overhead. It is very satisfactory to learn that the company has to date received subscriptions for 2,101 stations, representing an annual revenue of £T15,000, which is slightly in excess of its estimated chart of subscribers as the work progressed. I also learn—which is equally satisfactory, and, perhaps, at the same time surprising, in view the Oriental's known dislike for any kind of innovation—that of the subscribers 22 per cent. are purely Turkish.

As illustrating the economic principle that commerce invariably follows capital, it may not be out of place to mention that some 30,000 kilometres of cable, 10,000 kilometres of wire, and 23,000 pipes have been imported from Great Britain. It would seem almost superfluous to add that if this concession had been taken up by any other country there orders would not have come our way.

The Underground Railway.

I have on several occasions referred to the scheme for an underground electric railway between Taxim, on the north-eastern summit of Pera, and Sultan Bayazid, on the heights of Stambul. The name most prominent in connection with this project is that of M. Huguénin, the director of the Anatolian Railway, representing a group headed by the Deutsche Bank. From what I now learn, this undertaking was to have been carried out by the Electric Trust, known as the "Consortium of Constantinople," a syndicate including several German and French banks, as well as the Société Financière de Transports et Entreprises Industrielles, closely connected with the Loewe group of Berlin, and the Belgian-Hungarian group of the electricity firm of Ganz and Co., of Budapest. I have previously mentioned that a French group has also made application for the same concession under conditions more favourable to the Government. It would now appear that the former group has received a serious set-back, its conditions having been considered too onerous, and that the offer of the French group, which does not form part of the Consortium, was under consideration by the Council of State at its meeting of Thursday last.

Treasury Returns.

The Treasury receipts for the first four months of the current fiscal year ended June are in excess of those for the same period of the preceding year by £T561,549. The Customs receipts during the month of June are, however, less by £T3,005 than during the corresponding month of the preceding year. The total decrease in the Customs receipts during the first four months of the current year, as compared with the corresponding period of the preceding year, amounts to £T178,522, and of this sum £T161,214 is on import duties, which represents a decrease in the total value of imports of almost a million and a-half Turkish pounds to the end of June.

BRITISH TRADE WITH THE SUDAN.

The trade of the Sudan is now becoming a factor of some importance and worthy of the attention of those interested in the development of this part of the African continent. With the exception of cattle and durra passing to Egypt through Halfa by the Nile route, and of goods entering Suakin, practically the whole of the Sudanese imports and exports go through Port Sudan. The value of the imports via this port only has increased from £E642,661 in 1909 to £E1,356,457 in 1911, including imports of Government stores.

One of the chief causes of this development is the extension of the railway to the south of Khartoum, which has brought the fertile Gezireh district between the White and Blue Niles into direct and easy communication with the sea. The total value of the imports viâ Port Sudan, excluding Government goods, was £E621,465 in 1911, as compared with £E418,088 in 1909. The United Kingdom is by far the largest exporter to the Sudan, having sent goods to the value of £E258,000, practically one-third of the total, Austria-Hungary being second with £E22,000, Germany third with £E21,000, and British India fourth with £E12,500—the latter chiefly consisting of cotton piece-goods, flour and spices. Exports continue to increase at quite a remarkable rate, taking into consideration the nature of the country that is being developed, the figures for Port Sudan being £E723,097 in 1911, as compared with £E342,987 in 1909.

Compared with most ports known to the trading public, these figures seem small and even insignificant. It must be remembered, however, that only a few years ago the place as a port did not exist. If, therefore, comparison of figures for these few years has any value, there is no doubt that in the near future the trade of the Sudan will be an important feature of African commerce, and it should be worth the while of United Kingdom exporters and importers to inquire on the spot as to its undoubted possibilities. There is now an excellent hotel managed by the Sudan Government Railways at Port Sudan, and a comfortable and fast train service to Khartoum, so that a visit to the Sudan entails no hardship but rather luxury.

SUDAN'S SALT INDUSTRY.

The question of renewing work at the Ras Rowya salt fields has lately been engaging the attention of the Sudan Central Economic Board, and is touched upon in the recently published annual report. The *Sudan Herald*, in an article on the subject, points out that in 1911 the imports of salt into the Sudan amounted to nearly 4,000 tons, and that with the exploitation of a local article, and consequent reduction in cost, the consumption would be greatly increased.

This valuable deposit (says our contemporary) has not been worked for over seven years, and the concession for the exploiting of the salt having lapsed, the Sudan Government are now carrying on negotiations for the reopening of the fields. The salt is of an excellent white quality, equal to that now imported from Egypt, and far superior to the native desert salt.

The concession for the working of the Ras Rowya deposits dates back to 1890, and during the period from that year to 1904 salt was exported in large quantities to India, Burmah, and the Malay States. Cargo steamers, of three to four thousand tons cargo capacity, loaded regularly at the so-called port, and the Ras Rowya salt was known in most Indian ports and sold as a rival to the coarse salt of the Cheshire fields.

The difficulties, in transporting the salt from the shore in lighters or sambuks to the steamers lying at anchor, were very great, and added so much to the cost of the product that, after having held its own on the eastern markets for a number of years, the Sudan article could not compete in price with the salt from Port Said, Aden, and Salif.

ROUMANIA'S TRADE WITH EGYPT

(From Our Own Correspondent.)

Bucharest, September 1.

M. Michel Pacliano, the Roumanian Consul-General in Egypt, furnishes some information on the commerce between this country and Egypt, which is of interest and importance to Great Britain. He commences his report by stating that the country is in a condition of great prosperity, and that last year the exterior commerce of Egypt amounted to 1,514,933,196 frs., of which 707,905,068 frs. represented the value of the imports and 743,573,766 frs. that of the exports. The imports increased by 95,531,592 frs. in comparison with 1910.

Among the twenty-five countries which export to Egypt, Roumania holds the tenth place, with a total of £E730,000. As regards the increase of the exports of these twenty-five countries, Roumania has nearly the first place, having increased them by 45.5 per cent., as against the previous year. She takes first place as regards building timber with 156,273 cubic metres, value 7,914,530 frs. She is also in the first place for petroleum with 68,639 tons at 4,542,892 frs., and in the second place for wheat flour with 22,140,552 kgs., worth 5,953,844 frs. She exported besides: Maize, 5,542,020 kgs., for 46,450 frs.; vegetables, for 144,638 frs.; benzine, gasoline, etc., for 87,906 frs. There is a great number of other articles of minor importance. Exports from Egypt are still very reduced, having amounted last season to only 244,258 frs. Mr. Consul-General Pacliano notes that during the first three months of the present year this country's imports show the same satisfactory proportions.

EGYPT'S FOREIGN TRADE.

The Director-General of Customs has just published the statistics of Egypt's foreign trade for the month of July.

During the month of July the imports amounted to £E942,892, as against £E2,002,411 during the same month in 1911, making deficit of £E1,059,519, or about 30 per cent. On the other hand, the exports have risen considerably, and we find £E1,286,574, as against £E917,145, which makes an increase of £E299,429, about 31 per cent. This increase in exports and decrease in imports have been going on now for some months, and seem likely to continue.

The following are the figures for the first seven months of the year:—

The imports have decreased by £E1,257,562, or about 8 per cent., the figures for 1912 being 13,653,601, and those for 1911, 14,911,163. The exports, on the contrary, have increased by £E1,988,060, or about 13 per cent., the figures being for 1912 £E17,305,888, and for 1911 £E15,317,828.

The following figures are even more instructive:—

In 1911, from January 1 to July 31, the exports exceeded the imports by £E401,626; in 1912 the excess of exports over imports in £E was 3,652,287, an enormous change in one year.

The principal countries that suffer from this decrease are American, not counting the U.S.A., with £E24,000, against £E62,000; Austria-Hungary, with £E127,000, against £E149,000; France, with £E61,400, against £E193,159; Italy, with £E93,987, against £E105,287; Russia and Turkey. It is to be remarked that France, and not Italy, is the country most touched by this decrease. On the other hand, several countries have gained rather than lost, as, for instance, Great Britain, Germany, Belgium, and Roumania.

The countries which have most increased their imports from Egypt are Germany, £E126,240 in 1912, as against £E106,547 in 1911; the United States, £E233,248, against £E84,591; China and the Extreme Orient, £E33,434, against £E13,896; Austria-Hungary, £71,188, against £E52,022; France, £E155,876, against £E79,587; Italy, £E49,701, against £E28,769; Turkey, £E67,613, against £E51,976, and Switzerland.

Under date of the 4th inst. Reuter's Teheran correspondent reports that the latest news from Kermanshah is not reassuring. It is reported that Yar Mohamed Khan has seized the Customs, acting on Salar-el-Dowleh's telegraphic orders.

Openings for Business.

COAL IN BULGARIA.

Our Varna correspondent writes:—"During the time that the coal strike lasted in England Bulgarian coal merchants turned their attention to Russia as a field of supply, and there found some qualities suited to their requirements and to local needs. Though in the past the competition of Russian coal in these markets has been due to a spirit of opportunism, so to speak, yet, on account of lower prices, shorter distances, and a certain alertness on the part of the Russian coal merchants, who have lately become active, such competition is undoubtedly capable of being made formidable. The Bulgarian State Railways purchased about 30,000 tons, and many Bulgarian coal merchants have bought much more. But most of this coal was not satisfactory, as it proved injurious to the furnace bars. In one case, it is stated, a Bulgarian steamer employing Russian coal could not develop a speed above three knots an hour, besides the furnaces of her engines being damaged.

"On the other hand, some qualities of Russian coal are very good, and they will certainly prove serious competitors with British coal unless English merchants take measures to change the present conditions of supply and to introduce better ones. However, in winter the Sea of Azoff is frozen, navigation stops, and with it stops the importation of coals. I would throw out a suggestion that English coal merchants might perhaps do well to establish a large coal depot at Varna or at Bourgas, where coal should always be kept ready for sale, especially in the winter season."

TRADE OPENINGS IN CRETE.

From U.S. Consular sources we obtain the following:—"The island of Crete is attracting increased attention from manufacturers and capitalists abroad. American merchandise is welcomed in Crete and Amercian capital would be equally welcomed if offered. Public works on a fairly comprehensive scale are planned for Crete, including waterworks, telephones, electric light, and tramways. In the *Levant Trade Review* (published by the American Chamber of Commerce for the Levant) No. 1, Volume II., Mr. Themistocles Psaki, representative in the Levant of a group of American cotton-goods manufacturers, who recently visited Crete, says: 'The island of Crete has very rich soil, but on account of frequent disturbances it has not been cultivated as it might have been, and commerce, etc., has been neglected. Of late years, however, considerable progress has been made. Crete is in need of many improvements, such as enlarging of Candia and Canea Harbours, a railroad to join the principal towns, a telephone company, electric tramways, etc. Many European firms applied to obtain permission for such enterprises but have not yet met with success. Lately the Anglo-American Telephone Company applied for the establishment of the telephone, but the Government has not yet decided on the concession.

'Crete imports all kinds of manufactured articles from Greece, Italy, England, France, Austria, Germany, and buys some leather, hardware, steel goods, windmills, etc., from the United States. The value of the importation amounts to £1,200,000. The export trade of the island has greatly advanced during the last ten years, and it will keep on growing, owing to the richness of the soil and favourable climate. The chief articles of export are: Olive oil, citrons in brine, honey, almonds, chestnuts, raisins, soap, olive-oil foods, St. John's food, oak, silk, and wine. The exportation for 1911 amounted to about £2,000,000.

'In the last seven years Cretans have started to emigrate to the United States, and up to the present over 10,000 persons must have left their native land for the United States. They remit about £160,000 every year to their relatives, and there are two villages that are supported by American money. Crete has three banks: The Banque de Crète, a branch of the National Bank of Greece, and a branch of the Bank of Athens."

MOTOR CARS FOR THE CAUCASUS.

We derive the following from American Consular sources, and publish it in the hope that British automobile manufacturers may find some of the hints useful:—

A good market should be found in the Caucasus for light-weight, low-priced automobiles. The American car is peculiarly suited to road conditions here, which are practically the same as in the United States. Purchasers have found the cars of European manufacture too heavy and swung too low, and are turning their attention to the American product. Within the past few weeks two or three American runabouts have been brought in and have attracted wide and favourable interest. There is every reason why the American car will have a preference if advantageously priced.

As a contrast to the apparent arrangements made by American manufacturers for the sale of their product abroad it is interesting to note that the makers of one of the best English cars offered a friend in Batum the agency of their cars for the Caucasus. It was my privilege to read their letter, and the friend was offered a per cent. reduction on the advertised and catalogue price of their cars as his commission on each car sold; but this per cent. reduction was not to apply to any car sold in the district to a customer who bought his car direct in England independently of the agent. In other words, if I wanted this car I could buy it either direct from England or from the Batum agent. In either case, whether I bought it here from the agent or whether I purchased it in England and paid the charges of getting the car out myself, the price of the car would be the same to me. Although knowing I wanted the car purely for private use, and that I was in no way interested in the sale of automobiles, four European firms offered me the car I inquired about at a reduction of 12½ to 17 per cent. simply to have one of their cars represented and running in this section.

American cars, particularly in Russia, should have a splendid field. The British cars are built for the superb English highways, and are too low, too heavy, and have too little road clearance—seldom 8 inches—for the Russian roads. There are a few firms that make what they call a "colonial" model with 9½ to 13 inch road clearance, but these cost about 2,750 dols. in England, and, with the superb coach work on their bodies, are more expensive and luxurious than the masses in Russia can afford, or would appreciate to the extent of being willing to pay the difference in cost between an English and an American body.

TENDERS INVITED.

EGYPT.

Construction of Three Pavilions.—Tenders will be received at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo, for the construction of three new pavilions to Khanka Lunatic Asylum (Qaliubia). Specification, plan, and estimate, at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo. Tenders must be submitted on stamped paper. They should be addressed to the Chief of the Administrative Service, Public Works Ministry, Cairo, in a sealed envelope, bearing the inscription: "Tender for the construction of three new pavilions to Khanka Lunatic Asylum." Date, September 30 (11 a.m.).

Sanitary Installations.—Tenders will be received at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo, for the sanitary installations at the three new pavilions at the Khanka Lunatic Asylum (Qaliubia). Specification, plan, and estimate at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo. Tenders must be submitted on stamped paper. They should be addressed to the Chief of the Administrative Service, Public works Ministry, Cairo, in a sealed envelope bearing the inscription: "Tender for the sanitary installations at the three new pavilions at the Khanka Lunatic Asylum. Date, September 30 (11 a.m.).

Supply for Material, Clothing, etc.—Tenders will be received at the Central Administration, Department of Public Health, Cairo, for the supply of material, clothing, and various articles necessary for the Central Stores during the year 1913. Forms of tender, samples, and all other informations may be obtained on application to the Director of Stores, Central Administration. Tenders should be made on special forms issued gratis by the Department of Public health, and accompanied by a stamped paper of 30 milliemes. They should be addressed to the Director-General, Department of Public Health, Cairo, and marked in left hand corner: "Tender for material, clothing, etc." Date, September 15 (noon).

Supply of Various Articles.—Tenders are invited for the supply of lime, native, and cement tiles, sanitary installations, water pump (air motor), iron water tank, etc., required by the Coast Guard Administration at Kerdassa Station (in the vicinity of Giza Pyramids). The conditions of tender and specification can be obtained from the Headquarters, Coast Guard Administration, Bab el Luk, Cairo, or from the office of the Director, Coast Guard Western Directorate, Transit, Alexandria. Tenders must be made on stamped paper of 30 milliemes, and submitted with the conditions of tender and specification in sealed and registered envelopes, marked: "Tender for the supply of various articles for Kerdassa Station," to the Director Coast Guard Western Directorate, Alexandria. Date, September 16 (noon).

Sale of Old Technical Instruments.—Tenders will be received at the office of the Administrative Service, Public Works Ministry, Cairo, for the sale of old technical instruments found in the Central Stores of the Ministry of Public Works. Persons wishing to tender for this adjudication can consult the specification, etc., at the office of the Administrative Service, Public Works Ministry, Cairo. Tenders must be submitted on stamped paper of 30 mill. They should be addressed to the Chief of the Administrative Service, Public Works Ministry, Cairo, in a sealed envelope bearing the inscription: "Tender for the sale of old technical instruments." Date, September 21 (11 a.m.).

Road Drainage.—Tenders are invited by the Alexandria Municipality for road drainage works. Deposit, £400. Date, November 26.

TURKEY.

Supply of Fire Pumps.—The Constantinople Prefecture invites tenders for forty to one hundred double-acting fire pumps, with accessories, for the local municipalities and those of certain cities in the provinces. If the tenders received are satisfactory the provisional adjudication will take place on September 28, and the definite adjudication on September 30. For conditions and particulars application should be made to the Council of the Prefecture of the City. A deposit of 10 per cent. of the amount of the tender will be required. Date, September 28.

Supply of Jute Sacks.—The Administration of the Ottoman Public Debt invites tenders for one million jute sacks, "Liverpool twill," with tarred edges and hems, and a two-inch blue stripe. Of these, 600,000 are to measure 44 by 26½ ins., weight 2½ lbs., and 400,000 measuring 28 ins. by 25 ins., weight 1½ lbs. Delivery at Smyrna, half of each category on about April 15, and the remainder by July 15, 1913. Offers to be addressed to the General Direction of the Ottoman Public Debt, under seal, bearing the inscription, "Offre pour adjudication des sacs," not later than January 6, 1913, together with a security of £T2,700 in cash, or in bonds, or a guarantee of a financial establishment approved by the Administration. This security will be released in equal amounts with each delivery. Payment by cable (on London or Calcutta at the fixed rate of 1s. 4d.) against Bill of Lading, accompanied by certificate of Chamber of Commerce at port of shipment identifying quality, dimensions, and marks of sacks with the samples held by the Administration at the disposal of those desirous of tendering.

SERVIA.

Supply of Railway Material.—Tenders are invited at the offices of the Servian State Railways for the supply of 865 tons of rails, 42 tons of fish plates, 102 sole plates, etc. Date, September 14.

Engineering Notes.

Military Aeroplane Factory in Greece.

Two or three military aeroplanes have already been bought by the Greek Government from France, and several Greek officers and non-commissioned officers have been, and some are still being, trained as pilots in the military aerodrome in Paris. The utility and success of these aeroplanes in recent naval and military manœuvres in Greece created a special interest in the country, and contributions are reaching the Greek Government from all parts of the world where Greeks are living. Up to the present a sum of about £12,000 has been placed in the hands of the Government, by such patriots, for the purchase of aeroplanes; but the Government has decided that instead of purchasing these from abroad, a factory shall be established in the country in which all parts of the aeroplanes shall be made, and that only the engines shall be procured from abroad. In this way it is calculated that each aeroplane constructed in the Government factory will not cost more than £400 to £450. The factory is being built in the Thriassion plain, a most suitable place, close to the Bay of Salamis, where the dockyard and naval stores are situated. A French engineer-aeroplanist has been engaged to superintend the works, and has already reached Athens. The factory, with all modern appliances and machinery, is nearly completed, and it is calculated that with the above sum of £12,000 from 16 to 18 military aeroplanes will be constructed, and ready, in a very short space of time; while the Greek officers, who have been trained in France, will have the opportunity of following their construction in the factory. A very successful method of transforming the aeroplanes into hydroplanes will be adopted, and the necessary work for such transformation or additions will be done in the same factory.

Greek Railways.

As the Turkish Government appears unwilling to sanction the junction of the Athens-Larissa Railway with the Turkish lines, the Greek Government is negotiating with the railway company to extend their line a few miles from the present railhead, to the coast town of Tsagedji (well known for its powerful fruginous and tonic waters), near the mouth of the river Pineios, in the north of Thessaly—where a harbour will be built. The same company's fast steam packets will carry passengers from there to Salonika in about four hours, thus establishing a rapid service between Paris, Vienna, and Athens. The Thessalian Railway Company, too, are about to build a 20-knot packet to ply direct between Pirœus and Volo. This trip will be a matter of not more than ten hours, mostly in land-locked waters, and will certainly be more comfortable and pleasant than the railway journey, especially in summer.

Greek Naval Construction.

The contract for the construction of the new Greek warship has been signed in Athens by the Greek Government and the representative of the Vulcan Works, of Stettin, Germany. The warship is to be delivered within twenty-four months, but in case of non-delivery at the expiry of the contract time, the Vulcan Works are to pay to the Greek Government as indemnity £20,000, if the delivery takes place within four months from the expiration of the twenty-four months. A proportional bonus will be paid to the Vulcan Works by the Greek Government if they deliver the battleship before the expiration of the twenty-four months.

On the same day another contract was signed by the Greek Government and the representative of the American Bethlehem Works for the supply of the guns for the above battleship, the number and particulars of which we have already given in these columns The price of these guns amounts to £134,000 (3,360,000 francs). The officers detailed for supervision during the construction of the battleship and the guns have already left Athens for Stettin and America.

New Roumanian Railway.

Under date of September 1 our Bucharest correspondent writes:—Last Saturday Mr. Alex. Cotescu, Director-General of the Roumanian State Railways, was received in audience by King Carol, together with the engineer, Mr. Enacovich, who has been entrusted with the studying and drawing up the plans for the new line between Moreni and Sinaia. His Majesty interests himself exceedingly in the new line, and requested Mr. Cotescu to commence as soon as possible with its construction, as it is of great importance to the petroleum industry. His Majesty also asked Mr. Arion, Minister of Internal Affairs, who introduced the engineers, to take all necessary steps for obtaining from the Government the funds required. This line will be 19 kilometres long. Two tunnels must be constructed, the Paduchiosul and Eforie mountains being pierced, the first by one of 4,600 metres, the other by one of 46 metres. The junction with the Predeal-Ploesti line will be made below the town, so that the aspect may in no way be spoiled as far as summer visitors are concerned.

Artesian Wells.

Under the same date our correspondent writes:—Much importance has been given of late to the utility of artesian wells in a country like this, of which so much territory is sterile for the want of regular irrigation. Professor M. Murgoci, the well-known geologist, has for some time been making boring experiments in artesian boring on the Crown domain at Ghergitza, and the news has just been received that he has succeeded in tapping water at a depth of 85 metres. The flow of water is 120 c. metres per day, and forms a veritable river. The water is excellent, with a temperature of 12 degrees centigrade. The professor intends to continue other borings at even greater depths.

Locomotives for Bulgaria.

Our correspondent at Varna writes:—

During 1911 Bulgaria purchased from Germany 1,915 tons of railway engines, as compared with 398 tons in 1910. Some of your readers may perhaps remember the time when the rolling stock on the Varna-Rustchuk line was bought from English makers; and people here still remember the strength and reliability of those English engines, some of which were in use for over half a century. Now, however, it is humiliating to find England last on the list of importers of such goods, or, rather, not to be able to find her on the list at all. That this should be the case with regard to a branch of commerce in which England surpasses every other nation in the matter at least of quality is, surely, remarkable.

Drainage of Lake Hadra.

Lake Hadra, which has an area of 400 acres, constitutes, owing to its stagnant waters and its contiguity to Alexandria, a hotbed of epidemics and a scourge for the inhabitants. The drainage of this lake presents no difficulties. Although the area of land which would be brought under culture by the drainage would at once yield a revenue of £E6,000 per annum and the drainage would cost not more than £E5,000 in the opinion of Mr. Lloyd Davies, chief engineer of the municipality, the owners of the lake refuse to undertake the work, in the hope that the town of Alexandria will ultimately be forced to bear the expense. Since 1875 the Egyptian Government and the Alexandria Municipality have tried all means of inducing the owners to undertake the drainage, but in vain. Prince Omar Pasha Toussoun, who is now guardian of the children of Prince Mohammed Ibrahim, the owners of the lake, is not to be persuaded. He agrees to paying half the expenses of drainage, but refuses to cede gratuitously the land necessary for the widening of the road giving access to the lake. Whatever may be the points in dispute, it is absolutely essential that an agreement be arrived at, for the town of Alexandria cannot indefinitely remain thus subject to epidemics because of the obstinacy of the owners of the lake and their misconception of their duties. The level of Lake Hadra is above that of Lake Mareotis, and, according to the plans of Mr. Lloyd Davies, it would be sufficient to erect a syphon in order to drain, by the action of gravity, the water from the former into the latter lake.

Engineer Inventors in Egypt.

As everybody knows, says the *Egyptian Gazette*, the original inventor of the steam turbine, lately improved by Sir Charles Parsons, was Hero of Alexandria. We also have pleasure in finding that Alexandria is still progressing on the lines formerly started by the late chief mechanical engineer to the Serapeum. As we understand, one of our fellow citizens, Mr. O. S. Wolstenholme, has obtained a patent for a rotary engine, which he claims will do away with reciprocal engines altogether.

The Aama Bridge.

The new bridge on the site of the Pont des Anglais, now in construction by the Cleveland Company, over the Bahr el Aama branch of the Nile, will be completed about the end of 1913. Like the other new bridges in Cairo it will have a swing section for allowing navigation.

To Circumvent the Dnieper Rapids.

Our Odessa correspondent writes:—A French syndicate, with a capital of £5,000,000, is about to receive from the Imperial Government a concession for the important enterprise of constructing a Dnieper canal which will vastly facilitate shipping between the upper reaches of that river and the Black Sea. The so-called Saporozhetz Falls have hitherto been an insurmountable obstacle to the freedom of riverine traffic. The canal will start from a point a little below the town of Ekaterinoslaff (above the rapids), and rejoin the river close to Alexandrovsk (below the rapids). The engineering surveying party arrived the other day at Kherson after having definitely determined the route of the new waterway. The French company also proposes, on the completion of the canal, to utilise the Saporozhetz Falls for the generation of electrical power, which will be distributed to the chief centres within the radius of Kherson, Ekaterinoslaff, Kieff, and Kharkoff. The new canal will considerably enhance the importance of Kherson as a grain export emporium.

A Fine Super-Heater Exhibit.

To-day British railway engineers are directing their attention to superheaters of British design, and we notice that in the British section of the Latin-British Exhibition, Shepherd's Bush, the Great Central Railway Company is exhibiting a remarkably fine high-pressure locomotive boiler fitted with the Robinson high temperature smoke tube superheater, which has leapt into almost instant favour through its simplicity, accessibility, and over-all economy. Very satisfactory results have been obtained in service by the Robinson superheater, and there is every reason to believe that this particular design will occupy a prominent place in the superheater world. Engineers and others interested in the use of superheated steam will find much that will appeal to them by paying a visit to the exhibit, as the various parts are shown in sectional detail, and in the evening the whole of the exhibit is most suitably illuminated.

ON ADMIRALTY LISTS.

Oil Topics.

The Roumanian Oilfields.

Two weeks ago we gave some very interesting extracts from the monograph written by Mr. Stefanescu on the Roumanian oilfields, and we have much pleasure in this week quoting some further particulars about Roumania, dealing with the Bustenari and other fields. The Bustenari district extends over an area of about six kilometres long and three kilometres wide. Bustenari is situate in the province of Prahova, and it is from Prahova that 95 per cent. of the total production of Roumanian crude oil is obtained. In the quadrilateral of Bustenari there are more than five hundred wells now baling and at least a hundred being drilled, whilst there are from a hundred to a hundred and twenty hand wells. Bustenari is the oldest of the producing districts of Roumania, and its whole production is derived from the first horizon. Here and there, however, some of the wells have proved the existence of a second, third, fourth, and even fifth horizon. There is, therefore, no reason why Bustenari should not continue a big producer. There are very few drilling troubles here, as the subsoil is generally dry. The wells have been pumped for over thirty years, and practically form only one bed of oil. If there are five other beds still almost untouched, it is certain that the hundred million francs, which is the value of the oil that Bustenari has produced, is but a small portion of what the field will produce when it has been thoroughly prospected and drilled to deeper levels.

Bordeni.

Bordeni is a comparatively new field. The Concordia, the Anglo-Romana, the Columbia, and one or two other companies have done well at Bordeni, and during the three years that this little field has been exploited it has produced thirty wells that have turned out an average of 4,000 tons a month from a depth of 150 to 200 metres. There is very little doubt that Bordeni will one day become a second Bustenari.

Campina.

Campina, the headquarters of the Steaua Romana Company, was for several years the greatest producer in Roumania, and even now ranks second only to Moreni. The Steaua has a production from this field of 25,000 tons a month, which is steadily maintained. Roumanian Consolidated Oilfields, Ltd., the new British combine, is sinking two important wells here in close proximity to the Steaua property, and each of these wells has already attained a depth of over 275 metres.

Baicoi.

Baicoi lies at the extreme north-east of the anticline, and its wells are nearly as old as those of Bustenari. However, Baicoi did very little until 1909, when the Steaua Romana struck a spouter in its well No. 5. This well has turned out 120,000 tons of oil. The same company followed up its success in No. 4 well by obtaining a big production from its No. 5 well at Tsintea. It now has thirty-five wells drilling and thirty-nine wells producing, and these are giving an average of about 10,000 tons a month. Baicoi looks like becoming a rival of Moreni and Campina.

Cheleken.

Cheleken looks as though it would come to the front very shortly. There has been a continuous rise in Cheleken shares for some weeks past, and the news has been published that the company struck two gushers. The production from this property, which in January was only 4,553 tons, for the three weeks in August amounted to over 9,000 tons. It is stated that the yield is to-day at the rate of about 12 to 14 thousand tons a month. The capital of Chekelen is £300,000, of which £281,000 has been issued. The company holds 32 acres. Boring began in the early part of 1911, and oil was struck at 650 ft. There is a storage capacity on the property of about six million poods, a pier has been built, and a pipeline, six miles in length, conveys the oil from the wells to two iron reservoirs of 150,000 poods each. These reservoirs are situated on the shore end of the pier, and from them oil is pumped direct into the steamers. The company sells its oil in Baku at 23 copecks a pood, plus half the difference between this price and the price of oil at Baku, so that if oil were 38 copecks in Baku the company would get about 30 copecks a pood. The cost of pumping is about 5 to 7 copecks, and the profit is estimated at 30s. a ton. The reason the company cannot sell its oil at full price is due to the fact that there is only one refinery in Baku that can extract paraffin wax, and the Cheleken oil contains 5 per cent. of this wax. It has 9 per cent. of benzine and 26 per cent. of kerosine. At the present moment 13 wells are down on the strata and more are in course of boring. The capacity of the Ale-Tepe plot is about 30 wells. It only costs about 25s. to 30s. a foot to bore, and as the oil is round between six and seven hundred feet the capital expenditure on new wells is extremely low. It is estimated that none of the wells have cost more than £800 to bore, and can be brought into production in about two months from the erection of the rig Cheleken declared its first dividend of 2s. per share in June, and the directors anticipated that it should be able to pay about 30 per cent. per annum. The property is well equipped with all the necessary buildings and houses for the staff, and machine shops have been erected. There is a water distilling plant, and an electric power station for lighting and supplying motive power for engines.

West Ural Petroleum Company

is the name of an oil property that is to be introduced on to the market this week, by Messrs. O. A. Rosenberg and Company. The nominal capital is £500,000, of which £200,000 shares are to be kept in reserve, £150,000 to be issued for cash, and £150,000 to be issued to the vendors for the property. The directors are Mr. Joseph Gee, Major Maitland Kersey, Sir Ernest Birch, Vladimir Konstantinovich Istomine, and Ivan Fedorovich Skrepinsky. The property to be taken over consists of 50 plots at Novo Bogatinsk, Uralsk District, in proximity to the western bank of the Ural River, and to the westward of the concessions of the Ural Caspian Oil Corporation and the Emba Caspian Oil Company. The plots alternate in chessboard form with those held by Messrs. Nobel Brothers, this distribution possessing the advantage that any favourable developments on the property of Messrs. Nobel must necessarily benefit the company, and vice-versa. As will be seen from the list of directors, Messrs. Nobel have consented that their chief secretary should join the board. Further, the offices of the company both in St. Petersburg and on the property will be accommodated on the premises of Messrs. Nobel, thus manifesting officially the interest Messrs. Nobel propose to take in the company's affairs. The property has been visited and examined by the well-known Russian expert, Professor Alexander Boganovich, who after carefully studying conditions on the spot, has prepared a most favourable report. The capital at the disposal of the company will be ample for all purposes, and the board of directors, consisting as it does largely of gentlemen with a large practical experience, should ensure for the company a successful career, and it will be noted that the price paid for the plots is very high as compared with that paid for the Ural Caspian.

Central Cheleken Oilfields

is the name of a company shortly to be issued with a capital of £400,000, of which £126,400 has been set aside for working capital, and 75,000 shares will be offered at par. The directors are Mr. F. S. E. Drury, chairman of the Cheleken Oil Fields, Major Gastrell, also a director of the Cheleken Oil Fields, and Aleksei Rodjestvensky. The company will acquire nine plots in Cheleken, or about 243 acres. The land has been reported upon by Mr. Lewis Hamilton, and by Mr. Rodjestvensky. On one of the plots oil was got at 700 ft., on another plot there are two wells from which oil is being pumped, and on other plots a certain amount of work has been done. The whole of the nine plots have been proved to be oil-bearing, and the prospectus states that the production of Cheleken in 1909 was 5 million poods, in 1910 10 million poods, and in 1911 18 million poods. Nobel Brothers' production is about 2½ million poods, Gadjinsky about 6½ million poods, whilst the Cheleken Oil Fields, from January to August, is nearly 2¾ million poods. The prospectus also tells us that Well No. 3 on the Gadjinsky property gave 5 million poods in 1910, and that No. 7 Well gave 7 million poods from a spouter. Geologists think that there are several layers of oil sands below those now being pumped, and that the thickness of the series is probably about 2,000 ft. Out of the £75,000 that the public will be asked to subscribe, £40,000 will be set aside for working capital. Mr. Lewis Hamilton has chosen various sites, and the cost of sinking the wells is estimated at from two to three thousand pounds each well. The report of Mr. Rodjestvensky is printed in the prospectus. He states that, in his opinion, within three months of starting to bore the company will be producing oil commercially.

Baku Naphtha Industry.

According to the *Frankfurter Zeitung* of August 20 the prices of naphtha in the Baku district have gone up very considerably. Of late it has been customary to insert in contracts a clause to the effect that half of the difference due to any advance in the market prices which may occur between the conclusion of the contract and the actual date of delivery shall be borne by the buyer. Sellers of naphtha are in a position to raise prices at will. Production is steadily decreasing, and stocks in the Caucasus are reduced to a minimum. The yield of naphtha in the Baku district during the first six months of 1912 amounted to 204,300,000 poods, compared with 214,900,000 poods for the corresponding period of 1911, and 240,300,000 poods in 1910. The reason for this decline in production is attributed to the pressure of water in those springs which have necessitated deep boring operations.

Crude Petroleum for Cyprus.

The *Cyprus Gazette* of July 19 contains an Order-in-Council dated July 13, 1912, notifying that crude petroleum imported solely for use as fuel in oil engines may be admitted free of Customs import duty into Cyprus. The term "petroleum" is held to mean natural petroleum which has not been steamed or refined in any way, and which is not capable of being used for illuminating purposes.

SPECIAL REPORTS.

(From Our Own Correspondents.)

Varna. August 29.

The following are the latest reports on crops and crop conditions:—

Maize.—On account of drought in the early months, maize was backward and undeveloped, but after a rainfall it recovered. Upon the whole, the prospect for the crop in north Bulgaria is good at present, while in the north-east and those parts of north-west Bulgaria where it is chiefly cultivated its condition is excellent, and in only a few places is it very good. In some districts in the south the rainfall has not been sufficient.

Millet.—In many places of southern Bulgaria, Sofia, and Kustendil this crop is a failure, but, taken generally for the whole country, it is good in quality and quantity.

Rice.—The rice crop is good. After the rains that fell during the second half of July the water of the rivers continued more than enough for the rice crop of Philipoppolis and Pazardjick districts. Now even those plantations which were nearly destroyed by the drought at the end of June are well watered.

Beetroot.—Though in the Sofia district the beet is a little better, taking the country as a whole the crop is weak compared with that of last year; though in the near future conditions may become better. In Tirnova and Plevna districts and generally in north Bulgaria this crop stands considerably improved.

Potatoes.—Speaking generally, the production of potatoes will be very good, but in many parts of Philipoppolis, Sofia, and Kustendil districts conditions are for the present not so good.

Beans, Peas, and Lentils.—In many districts these crops have been gathered with very good results.

Hemp and Flax.—In many places have given a very good production and nice quality.

Tobacco.—On account of the drought at the beginning of the summer in many tobacco centres the crop is poor, but, after the last rainfall it revived. In the districts of Philipoppolis and Doobnitza the gathering of the leaves began about June 10, and in some places even earlier. The quantity of the first-hand leaves is less than that of last year, but its quality is better.

Grapes.—Everywhere in the country the weather is excellently suited for the cultivation of the vineyards. In some places in northern Bulgaria the pernispora has appeared, though it will not harm the grapes so much, as many of the vineyards have been sprinkled with Fesox. In the district of Souhendol, besides the attack of pernispora, they suffered from an unknown disease, which caused the fruit to dry before it could ripen. In the district of Loukovit and some other places appeared the oidium tuckeri. But, taken generally for the whole country, the condition of vineyards is very satisfactory, and the crop will be much better than that of last year.

Bucharest. Sept. 1.

A rumour was prevalent a day or two ago on the Vienna and Buda Pesth bourses that Roumania and Servia intended prohibiting the exportation of oats and barley. This is, for the moment, at any rate, quite premature. The oat crop in Roumania is very unfavourable, and the Ministry of War have been considering the suggestion of not allowing the export of this article until the requirements of the Army are fully covered. The spot price of oats at the present moment in Roumania is so high that the exportation is unprofitable on account of the great disparity between prices asked on the market here and those offering from abroad. There is no question whatever of interdicting the export of barley, and even should the prohibition be placed on oats it would merely be until the requirements of the Army are fulfilled.

Greek Currants.

Under date of the 1st inst., our Athens correspondent writes:—Four steamers have loaded currants at Patras, and two at Katakolos, for London and Liverpool. These constitute the first shipment of the season.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

Angora. August 26.

Mohair.—The local stocks are visibly disappearing, and large exporters are recommencing their purchases. As stocks in warehouse are very insignificant and new arrivals in large quantity are not expected, it is probable that if purchases continue on the present scale all local stocks will soon be liquidated and only a few small lots will remain, because of the difficulty in inducing the owners to sell at reasonable prices.

Cereals.—Prices are still well maintained, but stocks, because of the ending of the season, are becoming more and more reduced. The new crop arrivals will commence in twenty to thirty days, and it is expected that opening prices will be very high.

Adrianople. August 26.

The hopes of peace in the near future, which are supported by the rumours of unofficial pourparlers between the belligerents, by the return of relative calm in Albania and the commencement of the business season, have induced some animation here. The movement of imports and exports have both become more active, as is shown by the following figures:—

	Imports. Waggons.		Exports. Waggons.
Cereals	25	.....	10
Flour	15	.....	25
Building Materials	20	.....	5
Cheese	5	.....	7

Mitylene. August 23.

Exports.—For different ports of European Turkey and Constantinople, 300 barrels of oil, value about £2,000, and 120 sacks of soap, value £250.

Imports.—Calm. Rangoon rice (viâ Alexandria) and Trieste sugar in small quantities. Flour and bran from Aivaly.

CONSULAR AND OTHER REPORTS.

Syrian Olive Oil.

A U.S. consular report from Beyrout (published in the Washington *Daily Consular and Trade Reports*, August 12) states:—There is a large stock of oil on hand in Beyrout, and large stocks are also held in the villages where the oil is produced. In Beyrout the amount is estimated at 2,000 cantars (1,100,000 pounds) and in the villages 5,000 cantars (2,750,000 pounds). Prices of olive oil are rising, as now practically no crop at all is expected for this coming season.

Very few shipments of olive oil have been made from here to the United States, principally because the Syrian oil has not been able to compete with the Italian oil in the American markets on account of its price. Syrian olive oil is still shipped to Egypt for consumption by the many Syrians residing in that country, who prefer their native oil to any that can be imported from Italy.

Cottonseed oil is still imported from Egypt for mixing, it is alleged, with the native Syrian oil, notwithstanding the fact that such mixing is prohibited by the laws of this country. No American cottonseed oil is now being imported, as the local merchants are finding that the Egyptian oil is cheaper than the American.

Syrian Wool Exports.

A recently published unofficial statement relative to the wool trade in Syria states that the total exports of wool from the Syrian coast during the calendar year 1911 amounted to 6,000 tons, packed in bales running between 300 and 350 pounds each in weight.

Of ths total amount about one-third or possibly a little more was shipped through Beyrout; another third was shipped through Tripoli-in-Syria, and the remainder was divided among the ports of Alexandretta, Haifa, and Jaffa. It is stated that about 80 per cent. of the wool exported from Syria is destined for the United States, principally for the ports of Boston, New York, and Philadelphia. The annual export returns of the U.S.A. Consul give the declared exports of wool to the United States during the calendar year 1911 as follows:—From Beyrout, $222,651; Damascus, $162,640; Tripoli, $5,267; total, $390,558. It appears, however, that much of the wool shipped from this district is invoiced out of the district, probably in Europe or Great Britain; consequently the declared export returns of the district do not show the full amounts of these shipments of wool to the United States. Of the remaining 20 per cent. of the Syrian wool crop, about one-half is shipped to Constantinople, where it is consumed in the factories established there for the manufacture of clothing and caps for the Turkish army, and the balance is shipped to Italy, France, and Germany.

PRODUCE REPORT.

London, September 5.

The markets have been moderately active during this past week, and prices in some instances were very irregular.

Sugar.

Beet.—The bear sellers of August have been caught again, for before they could liquidate their sales prices were advanced a full shilling, and when their operations were closed prices again fell to practically the previous level. It is possible that the same thing may happen in September, as it is understood there has been considerable over-selling for this month also. These variations in the beet market, however, have had no effect whatever on the prices of refined sugar. The weather on the Continent is not so favourable as could be wished, and should the absence of sunshine continue during the next few weeks prices are likely to advance.

Refined, English, Tate's No. 1, cubes, prompt, 21s. 9d.; Oct., 21s. 3d.; Nov.-Dec., 18s. 6d.; foreign, Say's, 18s. 9d., f.o.b. Paris; Meyer's, Nov.-Dec., 14s. 11½d.; Russian crystals, ready, Dantzic, 12s. 3¾d.

Coffee.

Very limited quantities have changed hands during the past week, and these at steady rates. East Indian sold fairly well. Common Costa Rica brought value, and a fair quantity of Mexican and Salvador sold at irregular prices. Dumont coffee is very late this season, and no further supplies will be available till about the middle of September. The prices at the closing calls show a decline of about 1s. per cwt.

Currants.

During the week some of the cheapest parcels of the season have changed hands. In Liverpool the demand is very good, and it is evident from daily orders that the country is not overstocked. There is a fair supply of medium quality, but the higher grades are practically cleared. Spot offers—Fine shade-dried Vostizza, ¼ cases, 32s. to 34s.; Panarity, 30s. to 31s.; Patras and Zante, 28s. 6d. to 29s. 6d.

Sultanas.

Choice qualities on spot are unobtainable. A few small lots of new fruit arrived in Liverpool last week, and were quickly sold at full prices. Free coloury bold sultanas, old fruit, are offered at 43s.; Persian, coloury, at 40s.

Seeds.

Linseed is quiet but steady: London-Calcutta, Aug., 62s. 6d.; Aug.-Sept., 61s. 9d.; Sept.-Oct., 61s. Rape-seed is slow: Aug.-Sept., 51s. 9d.; brown, 50s. 3d. Cotton-seed is steady: London, Sept., Fayoumi, £8 16s. 3d.; Nov.-Jan., £8 11s. 3d.

Oils.

Linseed, spot, pipes, landed, 34s.; barrels, 34s. 6d. Rape, ordinary brown, naked, 30s. 9d.; refined, casks, 33s. 3d. Cotton, crude spot, 25s.; refined sweet, 29s. 9d.; ordinary pale, 26s. 9d. Petroleum, American, 8¼d. to 8½d.; Russian and Roumanian, 7¾d. to 8d.

Corn, etc.

The cargo market was rather slow during this past week: South Russian, on sample, Sept., at 38s. 6d. to 41s. 6d. Barley is quiet and easier: Azoff-Black Sea, Sept., 24s. 3d.; Aug.-Sept., 23s. 9d.; Sept.-Oct., 23s. 3d.; Oct.-Nov., 23s. 3d.

Cotton and Cotton Goods.

EGYPTIAN COTTON MARKET.

Manchester Report.

Messrs. Reynolds and Gibson, Manchester, telegraph that there has been a fair amount of business passing again this week, but contracts have been somewhat unevenly distributed. The Near Eastern market for cloth has shown signs of improvement. In Egyptian yarns there is little change to report. Spinners still experience difficulty in disposing of their output. Egyptian cotton continues to be neglected, and is freely offered. Quotations for all grades are reduced 1-16. Estimated sales, 1,000 bales.

Egyptian Cotton Crop.

The Alexandria General Produce Association, in its fifth report on the condition of the crops, published on Tuesday, says that in Lower Egypt, owing to the favourable temperature which has prevailed during August, the cotton plants have advanced satisfactorily, and although worms are reported to have appeared in some places, they are causing but slight damage. Light fogs have been reported occasionally from certain districts, but these have had no effect upon the crop. Water for irrigation was ample all the month, and, with the exception of a few small proprietors, cultivators in general used it moderately. The first picking seems to be better than that of 1911, and it will become general towards the middle of September, which will be an advance of about fifteen days on last season. In Upper Egypt, according to the reports received, conditions are favourable. There have been no worms and also no fogs, except in a few districts of the Fayoum, where the damage done is of small importance. The crop seems to be satisfactory, and the first picking has already begun in some districts.

EGYPTIAN COTTON FIGURES.

For 52nd week, ending August 31.

SUPPLIED BY REYNOLDS AND GIBSON.

Turkey in Europe	1,906,757	1,873,374	103,327
Turkey in Asia	7,066,910	11,502,531	68,105

SUDAN COTTON GROWING.

The *Board of Trade Journal* publishes the following information on cotton growing in the Sudan, which it has received lately :—Experiments with cotton growing on a large scale are being systematically carried out with the most promising results, the cotton now exported being of an excellent quality, comparing favourably with the best Egyptian, and in the opinion of an expert from the British Cotton Crowing Association, who recently visited the Sudan, is capable of still greater improvement by careful planting and organised cultivation. The crop is at present small, but it is only a question of capital and labour for Sudan cotton to play an important part in the supply of the home market.

In 1911, 67,752 kantars (kantar=99 lbs.) of ginned cotton and 48,541 kantars of unginned cotton were exported. Of this quantity 56,349 kantars of ginned and 37,152 kantars of unginned cotton were shipped at Suakin, which practically represents the Tokar crop. Everything points to another excellent season there this year. A feature of interest is that the ginning factory at Suakin has been enlarged and the machinery improved, with the result that considerably more cotton was ginned and baled last year than ever before. Moreover, several steamers called at Suakin, and consignments of Tokar cotton were shipped direct to Liverpool and Manchester for the first time at about the same freight as used to be paid for shipments to Alexandria.

PERSIAN COTTON CROP.

H.M. Consul-General at Ispahan (Mr. T. G. Grahame) reports that the cotton crop in that district for 1911 has proved somewhat bigger than the original estimate of from 400,000 to 450,000 shah mans (say 46,430 to 52,320 cwts.), and is now estimated by experts at 500,000 shah mans (about 58,930 cwts.). To this amount must be added some 100,000 shah mans (about 11,600 cwts.) remaining over from the crop of 1910.

ADANA CROP PROSPECTS.

U.S. Consul Nathan, Mersina, reports that prospects for this year's cotton crop in the Province of Adana are better than ever before. "Weather conditions have been favourable thus far (July 9), and the sowings are 20 to 25 per cent. greater than last year. This is due to the inundations last December which injured the wheat plantings so that the fields were resown with cotton. It is confidently expected that this year's cotton crop will reach fully 100,000 bales. Crops of the last few years have been as follows : In 1909, 70,000 bales; 1910, 80,000 bales; 1911, 85,000 bales."

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending August 23 :—We have to report a very active week in opium, the sales amounting to 216 baskets of all grades and denominations. The American buyers secured about 140 baskets, 22 are for England, and 54 for account of interior and local speculators. The opening prices at the beginning of the week were from 13s. to 15s. for low-grade mixed goods, and 18s. to 19s. for extra Carahisar as to quality and crop. These figures were, however, quickly advanced by speculators to about 3s. per lb. higher, and to-day our quotations are firm with a rising tendency, at 16s. to 18s. for the low-grades and 21s. to 22s. for extra qualities. Although shippers have followed the market and paid as high as 22s. for our richer qualities, it is doubtful whether consumers responded to the advance. It is more likely that buyers were forced to pay the higher figures to fulfil engagements; or else they bought with a view to future business. The general opinion now is that the drug will be further enhanced, and will very likely reach last year's figures; for the estimate of our crop is reduced to 5,500 cases, and stocks are almost depleted on the consuming markets. The arrivals are 948 cases against 507 at same date last year.

AGRICULTURE AND TRADE IN KOSSOVO.

The vilayet of Kossovo is the largest in European Turkey, comprising a part of Macedonia (sandjak of Uskub), Upper Albania, the region of Kossovo, the Kara-Dagh, and the great sandjak of Novi-Bazar, and it is almost entirely an agricultural province.

The state of agriculture in the vilayet is still rudimentary (says the French Consul at Uskub), the peasants only employing the most primitive of ploughs, and having no knowledge of chemical manures or of intensive culture. Some time must elapse before progressive ideas and the desire for really scientific methods of cultivation can be instilled into the population, and from this point of view the Director of Agriculture in the vilayet does not exercise any influence.

It is estimated that the crops for 1911 were approximately as follows :—Corn, 1,560,000 quintals; barley, 720,000 quintals; oats, 510,000 quintals; rye, 1,150,000 quintals; maize, 600,000 quintals; tobacco, 50,000 quintals; raisins, 160,000 quintals; poppy seeds, 9,000 quintals; opium, 100 quintals; fruit, 1,500,000 quintals; haricots, 380,000 quintals; and rice, 53,000 quintals.

In general, the harvest of 1911 was markedly superior to that of 1910, and the importation of Servian flour has much diminished. On the other hand, owing to cholera, raisins could not be exported to Servia as usual, which caused a fall in prices. This loss, however, was partly covered by the export of wine.

Tobacco is one of the principal productions of the vilayet, and its cultivation increases fairly rapidly from year to year. Much land which was formerly given up to cereals is now producing tobacco. The tobacco crop of 1911 represented nearly 5,000,000 kilograms. The bulk of this tobacco is purchased by Turkey, but large consignments are disposed of to Italy, Germany, and Austria.

In consequence of the increased production —about 1,000,000 kilograms more than in 1910—and the financial crisis through which the country is passing, it is expected that prices will be inferior to those of 1910.

So far as imports are concerned, steel comes from Austria and Germany; matches from Belgium, Sweden, Norway, Austria, and Italy; stationery from Germany, Austria, France, and Italy; bicycles from Germany, France, and England; candles from Holland, France, and Austria; coal almost exclusively from England; cement and hydraulic lime from Belgium, France, and Servia; nails mainly from Hungary; cord, twine, sacks, and canvas from Turkey, Servia, Italy, Germany, and Austria (80 per cent. of the twine comes from Italy, 15 per cent. from Germany and Austria, and 5 per cent. from France; the consumption of twine is greatly on the increase owing to the extension of tobacco cultivation); sole leather from Egypt and France; copper from England; cotton waste (at one time exclusively supplied by England) is now being furnished to a great extent by Germany and Italy; hardware from Germany, Austria, and France (70 tons being imported in 1911); cotton thread and wool were almost exclusively imported from England and France, but the business is now divided with those countries, the United States, Italy, and Austria; enamelware from Belgium and Austria; in leather for the manufacture of shoes France heads the list, but Germany and the United States are making great progress, and will probably supersede France shortly; petrol from Russia and Roumania; soap from Turkey, Greece, England, and France, the importation being valued approximately at 450,000 frs.; cotton tissues from Italy, Austria, Germany, and Bulgaria.

It is important that manufacturers' prices should include delivery at Uskub station, as is done by the Germans and Austrians, and in order to do this the assistance of the railways and steamship companies is necessary. The Deutsche Levante Linie accepts goods from no matter what town in the interior of Germany to any place in the interior of Turkey. The non-adoption of this method has had a great deal to do with the falling off of French trade in European Turkey, which formerly occupied the first rank.

Shipping Intelligence.

BRAILA NOTES.

(From Our Own Correspondent.)

Braila, August 31.

We have had a very steady market here all this week, the amount of open tonnage available on the spot being sufficient to meet the demand. A good number of steamers were fixed in London both from the Danube and from Sulina, and had the Black Sea and Azoff markets shown any activity, considerably higher rates would have been paid. As it is, spot rates reached the level of those paid in London, which shows that the demand was sufficiently great to absorb the liner tonnage, without forcing them to break the rates. Antwerp is keeping steady at 13s. 9d., after having reached 14s. early in the week, whilst for Rotterdam 13s. 6d. has to-day been paid. Steamers are getting very fair despatch.

The Mediterranean market is still stagnant, but, fortunately, there is very little tonnage on the berth. Spot rates average about 13 frs., according to destination.

A fair amount of business has been transacted for loading at Sulina, at 12s. 6d. to 12s. 9d. Antwerp, 12s. 6d. Rotterdam. Supplies are not yet very plentiful, but a great number of barges are reported to be on the way laden with cargo.

A bank was formed at the fifty-seventh mile post on Thursday, which brought down the river draft to 21 ft., but the obstruction has now been removed, and vessels can proceed down the Danube drawing 23 ft. 3 in. Sulina bar draft remains unchanged at 23 ft.

PASSENGER LIST.

Passengers per s.s. "Leicestershire," left Liverpool September 5, Marseilles September 13, for Port Said:—Mrs. F. Billiotti, Miss M. A. Borthwick, Mr. Brain, Mrs. Brain, Miss Brain, Miss Dent, Mrs. V. Chesman, Mrs. Emery, Miss Evans, Mrs. W. L. Haywood, Mr. W. Hendry, Mrs. Hendry, Mr. Torsten Holm, Mrs. Torsten Holm, Miss K. S. Horn, Mr. A. J. Howie, Mrs. Howie, Mr. W. P. Hughes, Mrs. Hughes, Miss Lattey, Mrs. McLaughlan, Mrs. E. V. Makin, Mr. F. Marlow, Mrs. Marlow, Dr. Frank J. Mackinnon, Mrs. Mackinnon, Miss E. E. Marris, Miss Mollison, Mrs. Nisbet, Mrs. Parr, Miss Parr, Mrs. Peake, Miss Peake, Dr. J. Scott, Mr. W. V. Shearer, Mrs. Shearer, Master Harold Shearer, Mrs. H. C. Simpson, Miss Swannell, Mr. E. la Poer Trench, Mrs. la Poer Trench, Miss Woodhouse.

Per s.s. "City of Calcutta," leaving Liverpool on September 7 for Port Said:—Miss Myers, Miss Wolters, Mrs. Caines, child, and infant, Mr. and Mrs. G. H. Pearce and infant, Mr. Paul Raphael, Mr. Peter Raphael, Miss M. Scofield, Miss B. Scofield, Mr. A. M. Tabbara, Mr. W. Vaudrey, Mrs. E. Walton and two daughters, Miss H. Walton.

Passengers per the Messageries steamship "Dumbea," which left Marseilles August 28th For Alexandria: M. and Mme. Debosque and infant, M. Maceri, Miss G. Heath, Mme. Heath, M. Very, M. and Mme. Curiel, M. A. Defters, Mme. Suares, M. Padog, M. Spiegel, Tourtoulis Bey, Mme. Spiegel, M. and Mme. Flavet, M. and Mme. Tschopp, M. Evrard, M. Nasseau, Mme. Maurice, M. and Mrs. Philipp and child, M. Salham and two children, Mme. Ortali, M. Vuillemin, Mme. Maxio, M. and Mme. Cohen and three children, M. and Mme. Meyer, M. H. Stephan and child, M. Ducasse, M. and Mme. Ghoneimi, M. NATIONAL BANK OF TURKEY

ESTABLISHED 1909 BY IMPERIAL FIRMAN.

CAPITAL - - £1,000,000 Sterling.

BOARD OF DIRECTORS.

CONSTANTINOPLE.

SIR HENRY BABINGTON SMITH, K.C.B., C.S.I., Chairman.
SIR ADAM BLOCK, K.C.M.G.
F. EDWIN WHITTALL.
H.E. AHMED DJEMAL BEY.
HUSSEIN DJAHID BEY.
RECHID SADI BEY.

LONDON.

HON. SIDNEY PEEL, Chairman of London Committee.
HON. HUGO BARING.
HENRY BIRCHENOUGH, C.M.G.
C. S. GULBENKIAN.
R. H. MACAULAY.
E. N. MEYER.

Head Office: CONSTANTINOPLE (KENADJIAN HAN, STAMBOUL).
MANAGER - - H. P. KINGHAM.

London Agency: 50, CORNHILL, E.C.
MANAGER - - - R. HECHT.

The National Bank of Turkey undertakes every description of Banking business. It opens current accounts according to the custom of Bankers. Customers have the facility of discounting approved bills and of obtaining advances upon negotiable securities. The Bank will undertake the purchase and sale of bonds, shares, etc., on the London Stock Exchange, on the local and on all Continental Bourses, the safe custody of customers' securities and valuables, and the collection of drawn bonds and coupons when due. The Bank issues drafts and telegraphic transfers payable in all principal towns in the world. Letters of credit for the use of travellers are also issued. Advances made on merchandise. The purchase and sale of coupons, foreign bank notes, coin and bullion are undertaken. Bills negotiated or sent for collection. Mercantile credits opened.

Deposits received for fixed periods at rates of interest which can be ascertained on application.

BANK OF ROUMANIA, Ltd.

Head Office: 7, GREAT WINCHESTER STREET, LONDON, E.C.
Branch: 94, STRADA LIPSCANI, BUCHAREST.

CAPITAL (fully paid), £300,000. RESERVE FUNDS, £169,688.

DIRECTORS:

THE EARL OF BESSBOROUGH, C.V.O., C.B.
SIR R. HAMILTON LANG, K.C.M.G.
THE VISCOUNT GOSCHEN
E. W. H. BARRY, ESQ.
P. NAVILLE, ESQ.

The Bank was originally incorporated in 1869 under Roumanian law, but in 1903 was transformed into an English Company under the Companies Acts. It is the oldest bank in Roumania, and the only one with a London office.

A general banking business is carried on. Correspondence is invited from those doing business with Roumania, and should be addressed to THE MANAGER in LONDON or BUCHAREST.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, PARIS, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, and PORT-SAID.

Subscribed Capital - -	**£1,500,000.**
Paid up Capital - -	**500,000.**
Reserve - - - - -	**640,000.**

The Bank undertakes every description of Banking Business on most favourable conditions.

BANK OF ATHENS.

(Incorporated in Greece.)
CAPITAL FULLY PAID - - Dr60,000,000
RESERVE FUNDS - - Dr10,480,000
Head Office: ATHENS.
London Office: 22, Fenchurch Street, E.C.
Branches:
GREECE: Piræus, Patras, Syra, Calamata, Tripolitza, Volo, Larissa, Agrinion and Carlitza.
CRETE: Canea, Candia and Rethymo.

Stock and Share Markets.

Bank Rate 4 per cent. (August 29, 1912.)

SETTLING DAYS.

CONSOLS.
Monday, September 30.
STOCKS AND SHARES.

In Mining Shares the next carry-over is September 10.

Continuation Days.	Ticket Days.	Pay Days.
Wed., Sept. 11.	Thurs., Sept. 12.	Fri., Sept. 13.
Wed., Sept. 25.	Thurs., Sept. 26.	Fri., Sept. 27.

LONDON, September 5.

The pace on the Stock Exchange was too fast to last, and the past few days have been tired days, in which the professionals have been taking their profit, and the public taking a rest. But the general tone is good, and there is no doubt that we shall see a considerable revival in speculation before Christmas. The higher Bank rate has affected nothing except the gilt-edged market; it was expected, and therefore had little effect.

Internationals Agitated.

The Foreign market has been agitated in a mild sort of manner. All Russian issues have been harder, mainly because Paris is preparing a market for her big railway loans, which should be out within the next month. Bulgarians dropped smartly to 89½ on unconfirmed stories of trouble in the Balkans. Unified are steady at 100½. German Threes have been sold from Berlin; no one knows why, as the rumour of an Anglo-German agreement over the Panama Canal appears to be quite true. It is definitely said that Great Britain, Germany, and France have agreed upon a course of action. This all makes for peace. Hungarians at 90¼ show no change. Paris is talking of a big Hungarian loan which is being negotiated by the French banks, but which has not yet been blessed by the French Government. Whether the banks will persuade the Government to permit the loan is as yet doubtful. Greek Fours remain quite hard. The Greek Finance Minister proposes to unify the debt. But the consent of the six Powers will be necessary. Turkish Unified are unchanged.

Home Rails Dull.

The Home Railway market is dull. No business is done, although a few people are gambling in Metropolitans with the idea that eventually the line will come into the combine. The Scotch railway dividends are good, and the present half-year will probably even show better results. Yankees have not jumped, as the bulls hoped they would; nevertheless, the market is strong, and likely to remain so. Rubbers have not been moved. Evidently there are a great many more people anxious to sell their shares than the dealers imagined. Very little buying has come from the public, and the insiders have now shot their bolt.

Oils and Mines.

The West Ural shares have been put on the market. The company is alluded to under our "Oil Notes." Chelekens have been good, but the oil market generally is dull, without any business. The long-promised oil boom does not look as though it could come this year. Kaffirs, in spite of the efforts of the big houses, do not move. As in rubber, so in mines. The public has enormous blocks of shares, upon which it has made a very heavy loss. On every rise somebody comes in and unloads. Rhodesians, however, are in better shape, for here Sir Abe Bailey is determined to make a market in all the land shares. Chartered and Amalgamated Props. have been bought, and United Rhodesia are talked higher.

Egyptians Active.

The Egyptian market has been one of the best in the House. For some days every broker who specialises in Egyptians has had plenty of business. We warned our readers many weeks ago that the market was ripe for a rise. The cotton crop is not only good but early. The country is in a sounder position financially than it has been since the collapse of the land boom. Aboukirs are now at 1½. Beheras are very firm at 15½. Mr. Foster, the managing director, has arrived in London, and will no doubt tell the big trusts who hold such large blocks of shares what he thinks of the future of this great company. We hear that he is opposed to any debenture issue. Delta Lands are a little harder at 19s., but Delta Prefs. have eased off during the last day or two. Apparently many people were under the impression that this share was cumulative. In a sense it is because holders get a coupon for arrears of dividend, but as these coupons can only be sold at 5 per cent. of their face value it is merely moonshine to call such a share cumulative. Salt and Sodas remain stationary; they are a good investment, but it must not be forgotten that there are still some very large blocks hanging over the market. "Abdys" made up on August 27 at 9s., and they are now quoted at 10s. 6d. They will probably go to par. Khedivial Mail ordinary have also risen. They are now quoted 12s., and look a fair gamble. The prefs. of this company are much too cheap. Sidi Salem have been inquired for, and United Egyptian Lands are now 5s., having had a rise of eighteenpence during the past few weeks. Here again the market undervalues the share, and a further rise is likely.

The Money Market.

Rates are firm, owing to the knowledge that £200,000 has been taken from the Bank for Egypt, and £530,000 for Turkey; of the latter amount, £200,000 in sovereigns was sent yesterday, while the balance in gold bars has also been dispatched. The above-mentioned shipment for Egypt is the first instalment of the annual demand which each year arises, at about this period, for the financing of the cotton crop. The total amount required depends on the size and quality of the crop, and is thus a fluctuating figure. This year's crop is expected to be a bumper one, but prices are not high, and it is estimated that £10,000,000 will be required to move it. The effect of the withdrawal of such a sum from the market depends, to a great extent, on the amounts of the instalments called for, and on the rapidity with which the demands follow one another.

THE BAGHDAD RAILWAY.

The *Times* Constantinople correspondent states that the conversations of the British and Turkish Governments on the subject of the extension of the Baghdad Railway towards the Persian Gulf and kindred questions will be resumed in the near future.

ANGLO-RUSSIAN LOAN TO PERSIA.

The St. Petersburg correspondent of the *Times* reports that the Russian and British Governments have agreed to advance another small sum to Persia.

PERSIAN FINANCES.

Under date of August 30 Reuter's Teheran correspondent reports that, according to the report on the financial situation drawn up by the Treasurer-General, the Persian Customs revenue alone would provide adequate security for a loan of £5,000,000. He states that Persia would with this sum be enabled to pay off her floating debts and the claims of the foreign legations, and would still have at her disposal for the execution of urgent reforms a balance of about £2,500,000.

FINANCIAL NEWS IN BRIEF.

It is officially announced that M. Diomidis, member for Spetsai in the Greek Chamber of Deputies, has been appointed Minister of Finance.

The Galician Government is negotiating a loan of Kr.8,000,000 with a group of Galician banks, headed by the Galizische Landesbank.

The foundation of an Italo-Servian Bank in Belgrade is said to be in contemplation to promote commerce between Italy and Servia, the bank to become a branch of the Banco di Roma. An initial capital of 2,000,000 frs. is spoken of.

The *Frankfurter Zeitung* understands that the Greek Minister, Horomilas, is about to visit London and Paris in order to negotiate for the conversion of the Greek Government's loans, which are secured by international financial control, and for the unification of the whole of the debt of Greece.

The ordinary general meeting of Walker and Meimarachi, Limited, will be held at Winchester House, E.C., on September 10. We print a summary of the report elsewhere.

The Stock Exchange Committee have appointed Thursday, September 12, as special settling day for Central Carpathian Oil Company, Limited, 200,000 vendors' shares of £1 each, fully paid (Nos. 400,001 to 600,000), and Sudd Fuel (Suddite), Limited, further issue of 4,600 7 per cent. cumulative participating convertible preference shares of £1 each, 15s. paid (Nos. 75,401 to 80,000).

The National Bank of Egypt announces that an interim dividend of 6s. per share has been declared by the directors, and will be payable against surrender of coupon No. 17.

The results shown by the accounts of the Navigation Générale Italienne (Sociétés Florio et Rubattino Réunies) for 1911-12 allow an increase of the dividend from 20 to 25 lire for each share of 300 lire.

The Imperial Ottoman Bank announce the payment, at the offices of their coupon department, 27, Throgmorton Street, of the coupons and drawn bonds of the Ottoman 4 per cent. loan of 1890 and the coupons of the Unified converted debt, due 14th inst.

The directors of the Bank of Roumania, Ltd., have decided to declare an instalment of dividend for the current year of 6s. per share, free of English income-tax.

The directors of the Egyptian Markets, Limited, have declared an interim dividend at the rate of 8 per cent. per annum for the half-year to June 30 on the ordinary shares. The dividend for the corresponding period last year was at the same rate.

The receipts of the Egyptian Markets for the week ended August 29 amounted to £553, a decrease of £152 compared with the corresponding period of last year. The total receipts from the commencement of the year amounted to 35,034, a decrease of £3,027.

The directors of the Ionian Bank have declared an interim dividend at the rate of 5 per cent. per annum, free of income tax, for the half-year ending July 13, 1912, payable on and after Tuesday, September 17, 1912. The transfer books will be closed from September 7 to 18, both days inclusive.

NOTES FROM ALEXANDRIA.

(From Our Own Correspondent.)

Alexandria, August 26.*

The Share Market.

The improvement, which we were among the first to predict, is now being realised. The rise is general and business is active.

Local conditions are completely healthy, and the floating balance has been absorbed by solid purchasers. Confidence is reviving, and there is no longer hesitation in effecting large operations. Speculators are again taking an interest in the market, which they had deserted for a whole year in consequence of the difficulty of realising at an opportune moment. To-day our market is no longer so narrow and offers a favourable field for speculative dealings.

The Dessouk and Tantah Fairs.

These fairs attract each year nearly half-a-million people, and as the fellaheen abandon work in the fields in order to visit them, the Egyptian Government decided that the fairs should take place only after the cotton picking. This was a wise decision. As a matter of interest, we may add that the fellaheen frequenting these fairs spend at least £150,000 in railway fares and that their purchases amount to at least £450,000.

The Sugar Convention and Egypt.

In spite of the rise in prices of sugar and the expert management of MM. Harari Pasha and Naus Bey, the Société des Sucreries et Raffineries d'Egypte has not succeeded in earning sufficient profits to remunerate the large capital invested in the business. At the utmost the company only manages to meet the interest charges. The preferred shares may sometimes receive a dividend, but the ordinary shares do not seem destined to encash any coupons.

It is true that the company is burdened with a considerable capital, due to the Cronier krach, but it is none the less true that the conditions governing the sugar industry are far from favourable.

In consequence of the competition offered by the culture of cotton, which is easier and more profitable, the price of sugar cane has continually risen. Moreover, the Government, instead of protecting the sugar industry, imposes on it an excise duty of P.T.20 per ton of manufactured sugar. Now, it would seem, from the declaration of Mr. Acland in the House of Commons, that next year, on withdrawing from the Sugar Convention, England will grant bounties and privileges to cane sugar produced in the British Empire, and, on the other hand, will impose high duties on beet sugar. As Egypt produces only cane sugar, and as she virtually forms part of the British Colonial Empire, it follows that we will benefit by the protection to be accorded at the expiration of the Brussels Convention. Such protection would possibly revive the sugar industry in Egypt, but without it our sugar factories are foredoomed to failure.

New Companies.

Two new land companies have been founded, namely: The Société Anonyme d'Entreprises Agricoles, with a capital of £10.000, divided into 100 shares of £100 each; and the Société Foncière Nord-Africaine, with £E20.000 capital, divided into 5,000 shares of £E4 each.

Another new company is H. Pollak, and Co., with a capital of £E3,000, in 7.500 shares. The object of this company is to trade in iron and building materials.

The semi-official journal, *El Ahaly*, the organ of the Prime Minister, has become the property of the Société Nationale de Publications Mansour Pacha Youssef et Cie. The capital is represented by the assets of the journal, valued at £E 3,200 and by £E6.800 in cash. The shares are 1.700 in number and are fully paid. The duration of the company is fifty years.

The following are partnership companies which have been registered:—

Fils Costi Haggioannou, with £E35.000 capital. Object: Commerce.

Isaia Levi and Co., with £2.000 capital. Object: Sale of manufactured goods.

Agenzia Commerciale Italiana, Lusena Rosa and Co., which represents the powerful group of Italian manufacturers.

S. Cesana, Tamilands Co., capital, £1,400. Object: Commission business and commerce.

* Delayed in transmissi .

Alexandria, August 30.

The Market.

For eighteen months our bourse has not seen such animation as now prevails. It might be imagined that we were back again in the happy period which preceded the crisis of 1907.

The news published by The Near East that a syndicate had been formed for the purchase of depreciated Egyptian securities has certainly contributed to invigorate our market. It is, however, interesting to note that the present revival is by no means speculative; it is due to an increased demand. In fact, it is due to purchases for investment and not speculation, for the latter is comparatively small in volume. Speculators are awaiting a reaction, in anticipation of which they have heavy bear engagements. Meanwhile, prices are rising in a bewildering manner. Union Foncière has gained ¾ of a pound in a fortnight, and now stands at £2⅝; Sidi Salem has risen 9-32, and so on.

So rapid a revival can, it is true be justified by consideration of the previous abnormally low level at which the majority of Egyptian shares stood. Nevertheless, we think that it would be well that a certain reserve should be observed, in order that the favourable tendency may not be compromised. Moreover, it is not to be presumed that the present flourishing conditions would persist in face of a possible monetary crisis.

A Monetary Crisis.

The formidable crop of this year and its precocity render necessary the importation of eight to ten million pounds, from October 15 to December 15 next. Last year five million pounds was sufficient to move our cotton crop. The gold imports could, however, be reduced if the Government and the Agricultural Bank would collect the taxes and loan instalments before the end of October, for the sums thus paid are deposited with the National Bank of Egypt, which again puts them in circulation.

However this may be, Egypt will drain all the available gold from the London and Paris markets, and if the latter are not able to meet all our requirements, a grave monetary crisis will result, which will disturb our economic conditions and will paralyse the stock market until the end of the year.

Failures.

Yanan Makar El Malak, who represented the National Bank of Egypt at Assiout, has been declared bankrupt. The assets are stated to be £E1.045 and the liabilities £E31,226.

The bankruptcy of the New Economical Building Materials Co. has been annulled by the Mixed Courts in Cairo.

The timber merchant, Vita De Botton, has deposited his balance-sheet, with assets of £E4.046 and liabilities of £E13,400.

The bankruptcy of Soria and Co. shows liabilities of £E200 and no realisable assets.

Luigi Steragia, for 34 years pharmacist in Tantah, has been declared in bankruptcy, owing to having guaranteed debts of third parties to the extent of £12,000. His assets amount to £E2,672 and this liabilities to £10.672.

Dahan and Co., cotton merchants, show assets estimated at £E16,731 and liabilities at £E24.422.

The firm of B. J. Valsamides, merchants of cocoanut oil, pay their creditors 10s. in the pound.

PROGRESS IN THE SUDAN.

In the Sudan Budget the sum of £E10,000 has been allotted towards the building of offices for the Financial Secretary and his department at Khartoum. The *Egyptian Gazette* states that it is expected that the new building will be completed within a year, when the whole staff will be transferred from their present offices at the Sudan Agency to the capital of the Sudan.

The sum of £E4,632 has been set aside for carrying on experiments in sleeping sickness, a disease which is a terrible curse in some parts of the Upper Sudan.

For agricultural experiments and improvements £E10,457 have been voted; these experiments will be carried on mostly in the Ghezirah zone between the White and Blue Niles. The gum industry and its cultivation receives £E760, while £E1.867 are to be spent in building a new station at Moro, in the Province of Mongallah.

TURKEY'S ECONOMIC SITUATION.

The Constantinople correspondent of the *Berliner Tageblatt* states that Turkey's economic position has been more unfavourably influenced in the past few weeks than in the first eight months following the outbreak of the war. The internal crisis and the general insecurity caused thereby have almost brought about a complete stoppage of business. Yet no ground exists for undue pessimism, and competent judges of the situation even declare that a certain amount of optimism is justified.

Hitherto Turkey has borne the effects of the war in an economic direction surprisingly well, although the country had to overcome a serious monetary crisis after the declaration of war. Business firms in Constantinople promptly learned how to accommodate themselves to the situation created by the war. The Levant merchants proved to be better than their reputation, and only from 10 to 15 firms were unable to withstand the crisis. This is a small number when it is considered that since the summer of 1908 banks have arisen like mushrooms out of the soil, and that the system of credit had assumed a critical form, as certain banks overbid one another in the efforts to gain customers. However, the war has had the good result of placing business on a much more solid basis, and the large banks have probably obtained many new clients, since the smaller banks have been unable to lend money to the same extent as formerly, especially as deposits have been withdrawn by the public.

Notwithstanding this favourable result of the war, the correspondent considers, the economic situation must be regarded as abnormal. The war has not caused so much injury as might have been expected. The import trade has considerably declined, as the wholesale firms have mainly sold from stock, and have limited sales in the provinces; but the export trade has only been slightly affected by the war. The closing of the Dardanelles, which seriously injured Russia, scarcely touched Turkey itself. But a catastrophe would probably be inevitable if a fresh closing of the straits or a blockade of Smyrna took place at present, when the harvest season is beginning, as with the gathering of the harvest in Anatolia, Turkey itself would be prejudiced in the first place.

OTTOMAN PUBLIC DEBT.

The Council of Foreign Bondholders has received from the Council of Administration of the Ottoman Public Debt at Constantinople a statement, of which the following is a summary, of the complete receipts in respect of the month of March, 1912, compared with those for March, 1911:—

	March, 1912.		March, 1911.
Five revenues	£T140,436.18	....	£T171,701.15
Régie	187,500.00	....	187,500.00
Tobacco tithes	44,843.85	....	71,702.76
3% Customs surtax	84,688.23	....	107,873.36
Sundries	8,753.23	....	8,762.29
	£T466,221.49		£T547,539.56

EARTHQUAKE INSURANCE IN TURKEY.

Since the occurrence of the disastrous earthquake in Turkey at the beginning of August a good deal of insurance to cover property in the Ottoman Empire against the risk of earthquake has been offered in the London market, says the *Times*. Underwriters, however, have shown no great keenness to accept business, and in some cases have quoted £5 5s. per cent. per annum on commercial "fire-proof" buildings in Constantinople. The ordinary fire risk is included in the policies.

Company Notes and Reports.

Walker and Meimarachi.

The report of Walker and Meimarachi, Limited, for the year to April 30 last, to be presented at the meeting on 10th instant, states that the trading operations of the company in Egypt, after charging all management expenses, interest on loans, depreciation on stock, etc., show a loss of £16,012. To this must be added the expenditure incurred in London, including interest on debentures outstanding, the trustees', directors' and auditors' fees, and other administrative charges, amounting in all to £4,338. The profit and loss account shows a total debit of £20,279, which has been carried to the balance-sheet and added to the amount of £31,253 bought forward from last year, making a total debit of £51,532. The adverse result shown by the figures is attributable in the first place to the continuance and accentuation of the commercial crisis in Egypt and the competition of an ever-increasing number of similar concerns established in modern premises, also to the vigorous measures taken by the directors to realise old stock and to clear off doubtful accounts. As was foreshadowed in the last annual report, certain of the branches which were not returning profitable results have during the period under review been closed, and the losses incurred by the expenses attending such closing have thereby augmented the actual trading loss. In so far as the Alexandria branch was concerned, the company was successful in disposing of the lease for a satisfactory consideration, which minimised the loss incurred in closing down there. The business of the company is now being conducted almost exclusively in Cairo, where every effort has been made to centralise all the departments in two shops. It is intended, however, to bring about a closer touch between each department by housing all under one roof. The past year has been an exceedingly bad one for the company, and the expenses have been heavy consequent upon the facts set out above. Every effort is being made in order that future expenditure may be on a much lower scale and that the accounts should not have to carry such burdensome charges for the upkeep of branches as has been the case in the past. Important decreases in the yearly expenses have already been effected. The company has taken strong measures to encash the book debts, with the result that during the year the amount outstanding has been reduced by £20,000. The debtors at the date of the balance-sheet, after allowing for the provision made for bad and doubtful debts, represent an amount due to the company of £39,502, and the directors hope the same will be duly recovered. The amount collected as above mentioned, together with the effected sales of stocks, has enabled the company to show a great diminution in the amount due to trade and other creditors as compared with last year, the figures being for 1912 £14,230, as against £33,472 for the year 1911. The loan account has also been reduced from £21,121 to £3,189. The first mortgage debentures outstanding at the date of the balance-sheet amount to £29,840. In addition there are outstanding as collateral security debentures to an amount of £2,680, which, however, will be released when the loan account has been paid off. After many years of litigation, during which every obstacle was placed in the way of the company regaining its rights, the directors are now able to report that the general manager on June 20 last, on behalf of the company, formally took possession of the land which Messrs. De Vries and Boutigny had contracted to purchase. This has relieved the directors from grave concern, and it is hoped that now this asset of the company may be realised to the benefit of the shareholders. The goods on hand, as valued by the company's officials in Egypt, represent £72,718, and as compared with last year show a decrease of £34,929. In view of the reasons which for a considerable time past have prevented the company from developing and have compelled it to reduce instead of extending its operations, in face of active and ever-increasing competition, the Board draw the shareholders' attention to the desirability, as alluded to last year, of considering the question of a sale of its assets as a going concern.

Ottoman Gas.

The report of the Ottoman Gas Company, Limited, for the half-year ended June 30, 1912, to be presented at the meeting on the 17th inst., states that the gas rental amounted to £22,325 (for the corresponding half-year it was £20,928). The net profit is £4,362. The amount standing at the credit of profit and loss account is £9,685. The directors recommend a dividend at the rate of 7 per cent. per annum on the preference shares (less income-tax), and at the rate of 10 per cent. per annum on the ordinary shares (tax free), leaving £6,191 to be carried forward.

THE GREEK CURRANT MONOPOLY.

Differences have arisen recently between the Greek Government and the Privileged Society, which exports the unsold balance of each year's crop of dried raisins, with reference to the mode of payment of the toll levied on exported raisins, and which has this year been fixed at the maximum figure, namely 35 per cent. The society estimates the coming crop at 320 million Venetian pounds only, and, considering this production insufficient to enable the exporters to pay the said toll entirely in kind, has limited this mode of payment to 160 million Venetian pounds exported, and has allowed the exporters the faculty of paying the balance either in kind or in currency at the rate of 115 drachma for every 1,000 Venetian pounds, as provided in the Convention. But this decision taken by the society has aroused lively protests, and has created an agitation in the provinces which produce the inferior and middling qualities. The producers in these districts believe that, in consequence of this option allowed them, the exporters will prefer the payment in currency, and that the trade will thus remain burdened with about 20 million Venetian pounds, which circumstance would bring about a heavy fall in prices. Faced by these protests, the Government found itself compelled to refuse sanction to the society's decision, and, contesting the correctness of the estimates of the latter with regard to the underproduction of this year, has submitted the question to arbitration by the Court of Appeal. Whatever may be the result of the arbitration, it is hoped that a satisfactory arrangement may be reached.

BRITISH ENTERPRISE IN CENTRAL ASIA.

(From Our Own Correspondent.)

Odessa, September 1.

A Russian official just returned from Bokhara tells me that on a round tour through Turkestan he was recently surprised to meet so many Englishmen, most of them representing British financial and commercial groups of firms, and all studying at first hand the prospects of cotton cultivation in that region. The primary obstacle to cotton culture on an extensive scale is, of course, the necessity of irrigation, and that means the initial outlay of considerable capital. This notwithstanding, the Englishmen with whom my informant conversed were all apparently of the confident opinion that the cost of irrigation would be amply repaid in the result. Russian Central Asia has a great future before it as a cotton-cultivating region, and will command the Russian market on the one side and Afghanistan and India on the other. Now is the propitious time, said my informant, for foreign, and preferably for British, capital to exert its activities in Turkestan, since, sooner or later, in the absence of private exploitation, the Crown will step in and undertake cotton cultivation on a huge scale. It was with that view that the Minister of Agriculture and Imperial Domains spent six weeks in the early part of the current year in a studious tour of Turkestan. His report to the Council of Ministers was highly favourable, but the cost of the irrigation works necessary to the establishment of the vast Crown plantations proposed, he estimated at £50,000,000, and for the present that sum is not available; hence the opportunity for foreign enterprise. The Turkestan and Caucasian cotton fields will this year give a total yield of some thirty-five or forty thousand bales, a mere bagatelle as compared with the incalculable possibilities of cotton culture in the first-named province.

ITALY'S FINANCES AND THE WAR.

Indications are not wanting that the economic future of Italy will be seriously imperilled (says the *Manchester Guardian*) by the financial demands of her new foreign policy.

No one in Italy believes that the war expenditure has been met by the accumulated and current surpluses, and how far the Government is indebted to the banks has not yet been disclosed. Her lucrative trade with Turkey, chiefly in textiles, has been irretrievably lost; heavy failures in the cotton trade have taken place this year in the North.

Italian paper is depreciating, and gold has disappeared from circulation. But the immediate cost of her Mediterranean policy is a small consideration compared with the prospectve demands on the national resources. According to the *Secolo*, experts estimate the expenditure necessary to renew war material and the fleet at forty millions sterling; the Nationalist Party is clamouring for a two-power fleet, equal to those of France and Austria combined, and the cost of a permanent army of occupation, not to speak of penetration and of civil administration, in North Africa is a formidable unknown quantity.

Reuter's correspondent at Dardanelles telegraphs that a severe storm, accompanied by torrential rain, occurred there on Tuesday night.

THE EASTERN BANK, LIMITED.

Head Office: 4, CROSBY SQUARE, LONDON, E.C.

Subscribed Capital, £1,000,000. Paid up, £400,000. Reserved Liability of Shareholders, £600,000.

Branches:

BAGDAD. BOMBAY. CALCUTTA.

Board of Directors.

The Right Hon. LORD BALFOUR OF BURLEIGH, K.T. (*Chairman*).

Sir JACOB E. SASSOON, Bart. EMILE FRANCQUI, Esq.

J. C. GEORGES BOUILLAT, Esq. J. S. HASKELL, Esq.

J. LEIGH WOOD, Esq., C.M.G.

The Bank iusses Drafts, Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, and transacts Banking and Agency business in connection with the East on terms to be ascertained on application.

Deposits are received for 1, 2, or 3 years, at 4 per cent. per annum, and on Current Accounts interest is allowed at 2 per cent. per annum on the minimum monthly balances.

F. H. SUTTON, *Manager.*

THE DAWN MAGAZINE.

A High-class Monthly devoted to **INDIAN** Civilization and Culture, History and Achievements, Arts and Crafts, Industries and Education.

"That Most Useful National Organ," says *The Hindu of Madras*
"That Most Useful Magazine," remarks *The Indian Review.*
"Not a second of its kind in India." *The Muslim Review,* Alahabad.

INDIA: Rs. THREE a year. ABROAD: 5s.; Superior Edition, 6s.

Apply to THE MANAGER, Post Box 363 NX, CALCUTTA, INDIA.

The ALIGARH INSTITUTE GAZETTE

A High-class Urdu-English Weekly Journal.

Founded by the Old Sage of Aligarh, the late Sir Syed Ahmad, in 1866 A.D.

It is now the leading and officially recognised Organ of the M. A. O. College, Aligarh, All-India Muhammadan Educational Conference, and All-India Moslem League, on politics, education, and society. An excellent medium of advertisement on account of its large circulation amongst educated and enlightened class of Muhammadans, gentry and nobility in all provinces of India and places beyond India. Annual subscription, 4s. Agents securing advertisements have good offers.

Apply to THE MANAGER, Aligarh Institute Gazette, India (U.P.).

THE MUSSALMAN.

An up-to-date English Weekly, conducted by a Mussalman Editor of liberal and independent views. Though all topics of special interest to the Mussalmans are discussed in its columns, social, political, and economic questions of general interest always receive due attention. It is entirely free from sectarian bias and is a true exponent of the catholic principles of Islam, but it advocates the Mohammedan cause boldly and fearlessly when such advocacy is necessary.

Annual subscription (inland), 4 Rs., (foreign), 8 shillings.

THE MUSSALMAN, CALCUTTA, INDIA.

"THE UNITED INDIA & NATIVE STATES."

"A high-class weekly organ devoted to social, moral, political, educational and economic problems of the day, including that of the Native States. It is edited with great ability, and the fairness and moderation of its view are most conspicuous."—*Epiphany,* Nov. 5, 1910.

"*The United India and Native States,* of Madras is perhaps the only Hindu journal in the country that has steadfastly refused to be swayed by party feelings, and has been conspicuous for its sober views on public questions, particularly those bearing on the relations between Hindu and Mussalman."—*Muslim Review* for Feb., 1912.

Foreign Subscription, 12s. per annum.

"UNITED INDIA AND NATIVE STATES" OFFICE, Madras, India.

"The Comrade."

The leading weekly journal of India, conducted generally on the lines of the London **Spectator, Nation,** and **Saturday Review,** dealing with politics, education, literature and social questions of India, and the affairs of Eastern countries and Moslem governments, with great ability and independence. An excellent medium of advertisement on account of its large circulation among a select circle of readers in all provinces of India.

SUBSCRIPTION, FOREIGN, £1 PER ANNUM.

Offices: 109, RIPON STREET, CALCUTTA.

NOTES OF THE WEEK.

Hardly at any time within this generation has the situation in the Balkans presented elements of greater uncertainty or provided a more favourable field for speculation than at the present moment. In addition to the critical state of affairs in Turkey, where Cabinet discords threaten to superimpose constitutional complications on racial and military problems, we have war fever at its height in Bulgaria and Servia, and, over all, the possibility that the exchange of views among the Powers inaugurated by Austria-Hungary may lead to a conflict of opinion rather than to harmony. In such circumstances it is natural that the rumours of peace between Turkey and Italy should be redoubled. No war within modern times can have been undertaken with less enthusiasm on either side than has marked the concluding stage of this struggle for the possession of Tripoli, and for a long time it has seemed as if the stalemate that has been reached in the military operations was to be reproduced in the peace negotiations. Time, however, has enabled each belligerent to find a way out of the *non possumus* attitude that patriotism and the inconclusive character of the war called for at first. The informal conversations that took place in Switzerland between Turkish and Italian spokesmen were ultimately accorded semi-official authority, and, if the more recent reports are to be believed, the final stages of the *pour-parlers* have seen a formal agreement drafted which embodies at least the basis of a truce, if not the actual terms of a treaty of peace. Any agreement of this nature is to be welcomed. On the Balkan horizon are gathered far more interdependent storm centres than the political meteorologists of Europe care to watch at one and the same time, and the disappearance of any of these will produce a corresponding degree of relief in diplomatic circles.

Outside Turkey itself the course of events in Bulgaria calls for the closest attention. In a Note presented to the Powers more than a week ago the Bulgarian Government drew attention to the gravity of the position in Macedonia, and indicated that it would experience difficulty in resisting public opinion, unless Turkey forthwith applied the long-deferred reforms. The tenour of the Note implied, if it did not actually make use of the expression, that war would be contemplated with equanimity in Bulgaria. Since the presentation of this Note the Bulgarian bands in Macedonia have shown increased activity, public feeling has maintained a high pitch of excitement, and a fresh incident, involving the death of one or two Bulgarian non-commissioned officers, on the Eastern Rumelian frontier is reported. The two men were returning from patrol duty on September 8, when they were fired on from an ambuscade close to the Turkish station at Karatepe. In the present state of tension it will require but a small spark to create a general explosion. The position of the Gueshoff Cabinet must become daily more and more embarrassing, while on all sides it is admitted that its resignation would inevitably place in power an Administration less devoted to the cause of peace and much less amenable to the advice of the Powers. A short time ago it was conceivable that the Turkish Government might welcome war in the Balkans as a diversion from its difficulties in other directions, but with the prospect of peace with Italy the necessity for such a drastic solution has passed. The Porte, therefore, must appreciate the position of the Gueshoff Cabinet, and might be expected to make some effort to strengthen the Government of a neighbouring State that has shown itself consistently anxious for the maintenance of peace. But in regard to the chief cause of Bulgarian indignation—the Kotchana massacre—the Porte still refuses to give the least satisfaction. The Turkish official account of the outbreak admits that soldiers began the attack upon the Bulgarians, but at the same time it deplores the inability of the Commission of Inquiry to establish their identity.

In Servia a Ministerial crisis has already taken place, and the Cabinet presided over by M. Trifkovitch makes way for an Administration under M. Pasitch, which is expected to show strong Nationalist tendencies. Public feeling in Servia has not been aroused to the same degree of intensity as in Bulgaria, but the massacre of Serbs in Turkey has given rise to considerable excitement, and has led to a disposition among the political parties to sink their differences in favour of a national movement to deal with the Macedonian question. M. Pasitch, who has previously been at the head of a Servian Government, will carry more weight with the country than his predecessor. His experience will have taught him that Servia has little to gain by independent action that has not secured sufficient support among the Powers to ensure her the permanent enjoyment of any success such action may bring in its train. His return to power, therefore, should improve Servia's position in the Balkans, while it will lessen the chances of a precipitate policy on the part of Servia alone or of Servia and Bulgaria together. The position of the two countries in respect of the Macedonian question, though similar in many details, is not entirely the same. An agreement between Servia and Bulgaria might well confirm the latter in the possession of new territory, while it would

Digitized by Google

still leave the former—for all the goodwill of Bulgaria—the task of reconciling her successes with the preconceived ideas of Austria-Hungary. Both States, however, appear to be preparing for all emergencies, for it is unlikely that the export of corn and fodder would have been prohibited in Servia unless the possibility of a mobilisation of troops on a large scale had been foreseen.

The meeting between the German Imperial Chancellor and Count Berchtold, Austro-Hungarian Minister for Foreign Affairs, took place at Buchlau on September 7. A colourless *communiqué* purporting to give the result of their conversations announces that the two statesmen discussed all the questions of the moment, "especially those of the Near East, and established anew their complete reciprocal agreement on all points." This information throws no light at all upon the situation. It avoids reference to that ancient shibboleth, the *status quo*, and is equally silent concerning Count Berchtold's proposals regarding the Balkan question. The latter omission need not cause surprise, as the value of the "exchange of views" rests with the attitude of the Triple Entente rather than with that of Austria-Hungary's ally. Meanwhile the chief fear of those who would gladly see some good follow from Count Berchtold's initiative is that the progress of the "conversations" will prove too slow to cope with the situation that they set out to improve. It is reported that the Turkish Government has decided to extend to Macedonia the concessions that it has agreed to grant to the Albanians. On paper the resolve reads excellently; how much will be accomplished in the execution of it remains to be seen. It is true that little time has elapsed since the decision to acquiesce in the Albanian demands was taken, and that with the best intentions in the world the Porte has had no opportunity to give adequate effect to its whole policy. But in view of the issue of the Kotchana inquiry the Turkish Government cannot complain if some scepticism still attaches to its promises, and if the decision regarding Macedonia appeared to the European mind as a subtle device to gain time and to "counter" the threatened interference in Turkish affairs. On the other hand, even if experience has taught the Powers to appraise Turkish promises at their proper worth, it has not yet brought them into accord in dealing with Turkish breaches of faith. If Count Berchtold's proposals lead to united action in the face of the latter, they will indeed have justified the ceremony with which they were launched.

If it be true that the Turkish Government is contemplating the extension to other parts of the Empire of the concessions granted to the Albanians, it can hardly be from reasons of gratification with the success of their policy in Albania. The only appreciable effect of the "agreement" between the Government and the leaders of the Albanian insurgents is the destruction of all Turkish authority in the province. Magazines of arms and ammunition have been plundered, and the prisons broken open. At Mitrovitza Isa Boletinatz is established in supreme authority, and directs a kind of committee of public safety, which gives instructions to the gendarmerie. Taxes are being collected in his name, and his heralds, it is further reported, scour the country to proclaim his rule. Similar action has been taken at Ghilan by Idris Sefar. Mehmed Pasha, one of the rebel chiefs who was conspicuous in the recent insurrection, has been nominated by the Government Mutessarif of Prizrend, and in this way the first step in carrying out the agreement ratified at Uskub has been taken. But the situation in Albania is none the less unsatisfactory.

From another quarter of the Ottoman Empire lawlessness is also reported. Armenians in Kurdistan and Anatolia have again been the victims of Kurdish aggression, and the Armenian Patriarch has made the strongest possible representations to the Porte. As a result of this action the Vali of Van has been dismissed, and the military commandant has received orders to find and arrest within forty-eight hours the Kurdish brigands responsible for the murders which have lately occurred there. Nearer home the Government is confronted with a hardly less embarrassing licence under a more constitutional form. It has been found necessary to suppress the *Tanin*, the organ of the Committee of Union and Progress, which has not failed to interpret the difficulties of the new Cabinet in a manner that is likely to make the most capital for its own party. In spite, however, of repeated suppressions the paper has reappeared under a new name, only to continue its outspoken criticisms of the Government's policy. As a result of the congress held in Constantinople the party of Union and Progress has resolved to transform itself from a political secret society with a Parliamentary wing into a political party. It is to be hoped that the effect of this decision will be to strengthen the position of "constitutionalism" in Turkey. In spite of all the promises of the constitutional régime it was soon found that the tendency of the Committee of Union and Progress was to establish a despotism hardly less extreme than that of Abdul Hamid. Working under the direction of a secret organisation, any group of politicians in Turkey, however well-intentioned, would ultimately introduce the same system, and constitutional government must remain a meaningless expression. The action of the Party of Union and Progress may compel the present Administration to lay more stress on governing through Parliament; but the fact cannot be altogether overlooked that Turkey is still a stranger in many respects to the practice of Parliamentary government, and the new move of the Unionists may strengthen the hands of those who think that little good will accrue to the country from an excess of constitutionalism.

For the moment the relation, if any, between the retirement of General Caneva from the command of the Italian troops in Tripoli and the progress of the peace negotiations must remain obscure. An official statement of the Italian Government issued on September 5 announced that the first phase of the military operations in Libya—"the effective and secure occupation of the wide extent of coast from Cape Macahez to Tobruk"—having been successfully carried to a conclusion, the Government, "in order to facilitate the future development of operations in the interior," had decided to make independent the two commands of the troops in Tripoli and Cyrenaica. Accordingly General Caneva, after receiving "an expression of praise due" to him, was relieved of his command by Royal decree, and succeeded in Tripoli by Lieutenant-General Ragni, and in Cyrenaica by Lieutenant-General Briccola. It is generally supposed that General Caneva conducted the war in Tripoli on the lines that commend themselves to him, and that he was responsible for the policy of restricting operations to the seaboard instead of undertaking any rash venture into the interior. The work that he set himself to do would seem to have been well done, and whether any advance into the interior be undertaken or not, tactical considerations would point to the wisdom of separating the two commands in Tripoli and Cyrenaica.

Sheikh Shawish, the notorious Nationalist agitator, who has been for some time past directing the activities of the youthful Egyptian conspirators from the supposed safe refuge of Constantinople, has been arrested at the request of the Egyptian police and transported to Cairo, where he now awaits trial on serious charges. The Turkish police have shown most commendable activity in connection with this matter, in spite of some outcry on the part of Young Turkish organs, which protest against what they profess to regard as a breach of the right of asylum due to political offenders. On the other hand, it is pointed out that Egypt is, in law, still a province of the Turkish Empire, and that there can, therefore, strictly speaking, be no question of right of asylum in Turkey for offenders against the Egyptian laws. Moreover, there is no doubt that the Sheikh will be indicted of criminal offences when he comes up for trial in Cairo. Further arrests have been made in Egypt in connection with the circulation and posting of seditious placards in Tantah and Mansourah, but nothing definite has yet transpired.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)

Constantinople, September 6.

Arrest of Sheikh Shawish.

A considerable sensation has been caused by the arrest by Egyptian and Turkish police of Sheikh Abd-el-Aziz Shawish, the Egyptian Nationalist leader and editor of the Turco-Arabic journal *Hilal-i-Osmanié*.

Shawish fled from Egypt some six months ago to avoid a term of imprisonment—his second—which he had earned by the production of seditious and inflammatory articles. His arrival here was followed by a period of inactivity, during which he strove to obtain Turkish financial support. This he got in the end to the tune of £T1,500, and, though the donors remain anonymous, there is little doubt that they belonged, and still belong, to the Committee of Union and Progress. With this support Shawish founded a Turco-Arabic journal, the *Hilal-i-Osmanié*, which combined Pan-Islamism, especially directed against the British occupation of Egypt, with a vigorous support of the Committee of Union and Progress. The *Hilal-i-Osmanié* soon obtained a monthly subvention from Said Pasha's Government. Several of the members of that Government had frequently professed their friendliest sentiments towards Great Britain, and their grant of assistance to an open enemy of Great Britain, with whose aid they could easily have dispensed so far as Turkish internal politics are concerned, was the more surprising to those who believed in the Anglophile sentiments of the most prominent members of the Committee of Union and Progress.

The surrender of Sheikh Shawish, who was accused of causing seditious literature to be distributed in Egypt, was made at the request of the Khedive's Kapu Kehaya (representative) here, Youssef Sadik Pasha. Several Egyptian police officers, who had arrived from Alexandria to await events, effected the arrest in conjunction with the Turkish police. The offices of the *Hilal-i-Osmanié* and Shawish's house at Kadikeui, where the young Egyptians have their club, were searched, and a number of documents were seized and handed over to the Egyptian authorities.

The *Tanin* has protested vigorously against the "extradition" of this "honest Arab savant" and good Ottoman, and the *Jeune Turc* followed suit in a minor key. Other journals, however, have congratulated Turkey on being well rid of a very pestilent agitator.

Count Berchtold's Proposals.

As regards foreign politics, Count Berchtold's proposals have caused a considerable flutter at the Porte, and Ghazi Mukhtar has declared, in outspoken soldier fashion, that the Porte will have none of them—that is, when they are submitted to it. As for the nature and extent of these proposals, we know, or believe we know, what they do not mean; but does anyone know what they mean? Not the Turks certainly, and their apprehension is natural enough. The Porte's refusal in advance to discuss foreign proposals with regard to decentralisation is also natural. With the Committee of Union and Progress denouncing the "disruptive" tendencies of the Government and describing the concessions to the Albanian insurgents as disgraceful surrenders to a pack of ragged brigands, the Government could not risk even the suspicion of undue deference to Austria. It does not, however, follow that the Powers that be propose to imitate the highly centralising policy of their predecessors or to try further experiments in Turkification.

The Peace Negotiations.

Meanwhile semi-official negotiations between Italian and Turkish delegates continue in Switzerland, but no one knows, outside the Foreign Offices of the belligerent Powers, at what stage they have arrived. A Turkish suggestion that the Tripolitan coast line should be left to Italy, save for one port, and that the hinterland should remain Turkish, is reported to have been scouted by the Italians, while Kiamil Pasha's declarations to the *Neue Freie Presse* show that the Porte is unwilling to make terms till the Italians have shown their ability to follow up their successes on the coast line and defeat the 3,000 Turkish soldiers and the unknown number of their Arab allies in the interior.

The Armenians.

A recrudescence of Kurdish hostility to the Armenians is reported from Bayizid, Van, and Bitlis districts. A number of Armenian peasants have been murdered, several women carried off, and three villages plundered or burnt by the followers of Mir Mahé, Sheikh Hussein, and other brigands, and the infamous Musa Bey of Bitlis has threatened the Armenian Bishop of that see. The Central Government has dismissed the Committee Valis of Van and Bitlis. The military commandant of the former province has been ordered to arrest the guilty Kurds within forty-eight hours. Ali Pasha, a hard-handed and very honest Circassian general, has left for Bitlis, where it is hoped that he will be successful in taming the Kurds.

The Committee Congress.

The annual Congress of the Committee of Union and Progress began here on Monday, when Hadji Adil was elected President, and Talaat Bey and Ahmed Nessimi were made Vice-Presidents. The Central Bureau's report, which was read to some seventy delegates, condemned the action of the Senate, whose interpretation of Article 43 of the Constitution it described as "contrary to the spirit of the Constitution," and that of the Government in "illegally" dissolving the Chamber. On Wednesday sixty-three delegates voted in favour of participating in the elections, and fourteen, headed by Dr. Nazim, opposed this course as being tantamount to a recognition of the Cabinet's action as legal.

The presence of two police officers, appointed by the Government in accordance with Article 18 of the Law of Public Meeting, was much resented by the Committee leaders and by the ex-deputies, who had helped to get the law passed; but their resentment and their protests were all to no purpose.

Minor Events.

Among minor events of the week may be noted the acquittal of Mr. Montagu by the British Consular Court, the defeat of the false Mahdi Idris's forces by the Turkish regulars in Southern Assir, and a variety of crimes in Macedonia, ranging from attempted bomb outrages to kidnapping, arson, and cattle lifting. Several collisions with bands have occurred, and the Albanians of the Scutari side have given some trouble, though no serious fighting has taken place since the raids on Durazzo and Sheyak. An interesting occurrence, which would have made a greater sensation had it occurred three years ago, was the application of the ex-Sheikh-ul-Islam, Musa Kiazim Effendi, to be allowed to found a journal entitled the *Shenim*. This the Government would not grant, on the ground that the ex-Sheikh-ul-Islam, being a Senator, and therefore a salaried Government servant, was debarred from such activities. The *Tanin* has been suspended three times this week and the *Tanzimat* twice.

THE NEAR EAST.

THE NEAR EAST is on sale at all Bookstalls and Newsagents in Great Britain. Should any difficulty be experienced in obtaining the paper, readers will oblige by notifying the Manager. Abroad THE NEAR EAST may be obtained in:

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.
VIENNA. Goldschmiedt Brothers, Zeitungsbureau, Wollzeile, 11.
CONSTANTINOPLE. Economic Co-operative Society, Pera; Benjamin Rawe, British Oriental Bazaar; D. Marianopoulo, 280, Grande Rue de Pera; Otto Keil, Librairie Internationale, Pera.
SALONIKA. Librairie Francaise Rue Sabri Pasha.
SMYRNA. Dem. Tzannou, Petite Rue de Rose.
BEYROUT. Sarrafian Brothers.
JERUSALEM. Palestine Educational Store, Jaffa Road; Librairie Internationale et Artistique.
CAIRO. Diemer and Company, Shepheard's Buildings.

NOTES FROM SYRIA.

(From Our Own Correspondent.)

Beyrout, August 31.

Italian Squadron's Visit.

Early on Wednesday morning the appearance, close behind the breakwater, of six Italian warships caused a stir among the population. I say advisedly a stir, and not a shock, because the intelligence had already reached the people of this squadron's visit to Jaffa, Haifa, and Acre, without, however, any hostile demonstration beyond the searching of a steamer of the Deutsche Levant Linie at the first-named port. Nevertheless, a certain nervousness pervaded the atmosphere. The ignorant section, especially among the Moslems, labouring—not, perhaps, unreasonably—under the horrible memories of the last bombardment, fled from the town, although it must be owned that this partial exodus was, to some extent, determined by the women's fears. Almost all the shops were closed. As to the more enlightened, some serious misgivings began to grow on them as the Italians persisted in their mysterious attitude of aloofness, and at one time the belief was fairly general that a blockade was imminent. The Italians allowed no communication with the shore. The new commandant of the garrison, accompanied by the Mektubji, acting for the Vali, who had had no time to arrive from his mountain residence, called at the captaincy of the port, to be told that no communication whatever had been made by the admiral. It is said that the British Consul-General wished to go on board to be able to allay any fears that the British community was likely to entertain and help, if necessary, in preventing a panic. One is inclined to discredit this rumour, as the Italian vessels were flying the yellow flag. The commandant of the garrison, Noury Bey, was wise enough to cause the following proclamation to be printed and widely circulated in the town, and to cause, at the same time, the streets to be well guarded and patrolled:—

"The Italian warships have arrived at Beyrout, after calling yesterday at Jaffa, Haifa, and Acre. They searched some merchant ships. There is, therefore, no reason for excitement and fear. Let everybody attend to his business."

A Prize!

The Italian warships were the following:—"Regina Margherita" (flagship), "Ferrucio," and "Garibaldi" (that had sunk the Turkish gunboat and torpedo boat in February last), the "Varese" (reported to have been damaged and sunk in the first action of the Dardanelles), "Emmanuele Filiberto," and the torpedo destroyer "Coatit." The first thing the squadron did was to send a few launches to seizé and tow away a sailing vessel, flying the Ottoman flag, but belonging to a Greek from Chio. This vessel had discharged a cargo of salt a few months ago for the Public Debt Administration, and has since been waiting off St. George's Bay vainly trying to find some means of changing her flag.

Early in the afternoon the Austrian-Lloyd s.s. "Amphitrite" arrived from Port Said, and was steaming into harbour when a signal was made for her to stop instantly. As the order was not obeyed with the promptitude desired, a blank shot was fired, and the steamer at once came to a dead stop. Having a large number of passengers on board, especially Jews from Aden destined for Jaffa, it was about two hours before she was released and allowed to enter the harbour. Later in the afternoon the Russian mail steamer arrived, was stopped, and subjected to a summary search, but was released soon after. Then a few of the launches, each with a gun mounted at the fore-part, entered the harbour and searched a small steamer employed in the coasting trade and flying the British flag, also a few other small craft, and thus the mission of the squadron was ended. Next day, early in the morning, the squadron steamed away northward. At sunset, on the day of their arrival, the gun announcing the breaking of the Ramazan fast was not fired, evidently for fear of any misinterpretation. The Moslems were by this time calm and subdued.

Effect of the Demonstration.

As was only to be expected, speculation is rife here as to the motive of this unexpected visit of so many warships to the Syrian coast, and it seems, indeed, difficult to believe that the main object in coming to Beyrout was to search a few mail boats and seize an empty sailing craft. One is rather inclined to the belief that this is a diplomatic cruise preliminary to the conclusion of peace. The Government knows well that public opinion had been stirred to too high a pitch by the Chauvinistic Committee apparently to save its face, and such an impressive demonstration of naval force, contrasting with the helplessness of national resources at sea, may have been thought necessary to bring home to the population the futility of a further protraction of the war. A Moslem of strong anti-foreign tastes, after contemplating the Italian Squadron, turned round to a Christian friend of his and said, bitterly: "They are coolly lying there as though they were at home." Then after a pause he resumed, as though continuing a chain of thought, "And what about the peace negotiations. Are they nearer to a solution?" If the same impression has been made on other Nationalists of similar views, the Italian cruise has not been made in vain.

(From Our Own Correspondent.)

Haifa, August 27.

Alarm at Haifa.

That the Italian warships would some time visit Haifa has long been expected, and this expectation has been realised, for suddenly, at 2.40 this afternoon, three large warships appeared off this port. At first their nationality could not be distinguished; but on arriving within range of our telescopes, they were declared to be Italian.

The people were extremely alarmed, as they were convinced that the ships came with the sole object of bombarding the Hedjaz Railway station. In a very short time the banks and shops were closed, flags were hoisted on the flagstaffs of the foreign representatives and on the houses of the foreign residents, and the people were all running for refuge to Mount Carmel.

At 3 p.m. two of the warships anchored, the third one having remained steaming up and down the mouth of the Bay of Acre, ten miles away. A steam launch put off, with, apparently, orders to inspect the vessels in port. A large steamer, the "Ajius Jarasimas"—the only steamship in port at the time—which was discharging material for the Hedjaz Railway Company, was first inspected. Several sailing vessels were also inspected in turn.

At ten in the evening the unwelcome visitors steamed away to an unknown destination, having done no harm, much to the relief of the inhabitants.

ENGLISH BOYS' SCHOOL,
CONSTANTINOPLE.

The New School Building will be opened on September 15th. The School House has accommodation for forty boarders. Resident staff, six English masters and English matron.
Healthy situation on Nishantash Hill, facing open country; drainage sanitary fittings, baths and lavatories by English sanitary engineers
Preparation for Commercial Education Examination of London Chamber of Commerce. French and Turkish visiting masters.
SPECIAL ATTENTION TO FRENCH. Turkish and Latin optional. English games. Fees moderate.
PROSPECTUS can be had on application to the Chairman of the School Committee—
A. T. WAUGH, Esq., *British Consulate-General*, **Constantinople.**

ENGLISH SCHOOL,
NICOSIA, CYPRUS.

Preparation for Public Schools and for Commerce
Modern Languages. Turkish and Arabic if desired
ENGLISH GAMES.
Complete charge taken. Very healthy climate. Boys remaining for the summer holidays are taken to the Mountains. Moderate Terms.
Apply REV. CANON F. D. NEWHAM, B.A.Cantab., Director.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 3.

The Suppression of "El Lewa."

The so-called Nationalist party has received another blow, for one of its organs, *El Lewa*, has been suppressed. This time the Ministerial decree has not been called forth by any inflammatory vaporings, but solely and simply by the transgression of administrative regulations. As has been well known, *El Lewa* has been in financial difficulties for some time past, and no surprise was caused when the Wakfs Administration seized its printing press in guarantee of £E500 due for arrears of rent. *El Lewa* had perforce to seek other premises and other means of publication, and in due course it made its reappearance from a private printing press. But it had not obtained the consent of the Minister of the Interior to this change in place of publication, and so it became guilty of a contravention. To aggravate its position, the proprietors suddenly took it into their heads to appoint a new responsible editor without applying to the Government for permission to do so, and this serious violation of the law gave the authorities the opportunity they have long been looking for, and so they suppressed the paper once and for all.

Such are the circumstances surrounding the "passing" of the great Mustapha Pasha Kamel's one-time mighty organ. The founder of the Egyptian Nationalist party started *El Lewa* some fourteen years ago, and during his lifetime—while it was, of course, inclined somewhat to violent language—it never approached anything like the limits it has attained during the past two years. At the same time, its standard was high and its articles full of erudition and eloquence. After Kamel's death, it naturally followed the new policy of the party and attained an unenviable notoriety for inflammatory and fanatical tendencies. For this reason it has received two warnings under the Press Law—one on August 24, 1909, when it produced a scurrilous eulogy of the murderous deeds committed by Dingra, and the other on October 23, 1910, when it published an article violently attacking the British nation and calculated to incite the masses. As the Press Law only provides for two warnings in case of infringements of its clauses—the third transgression entailing suspension for good—the *Lewa* has itself solely to blame for the fate that has befallen it.

El Lewa will long be remembered as the chief member of the trio of Nationalist papers which the great ambition and large-minded ideas of Mustapha Kamel called into being in 1906. That talented Egyptian conceived the notion that he would obtain more support for his party if he ran an English and a French paper, side by side with his Egyptian organ, wherein the same policy would be enunciated and followed. So he launched the *Egyptian Standard* and *L'Etendard Egyptien—El Lewa* being the Arabic for "Standard." They were both short-lived, however, and now their parent has followed their example.

The Government's action, decreed on Saturday last, removes a factor which has counted for much in all the political incidents of the past five years, and which has been largely responsible for the state of unrest that laid hold of the country and for the misguided attitude and notions of the student element. Under Kamel Pasha, *El Lewa* became the most popular vernacular journal. After his death it retained its position for a short time, but the quarrel that ensued between Mohammed Bey Farid and Sheikh Shawish on the one hand, and Kamel Pasha's heirs on the other hand, in 1910, when *El Alam* was founded by the former, did it a certain amount of harm, and at times it has had to play second fiddle to its rival, which easily outstripped it as far as violence of language went. To-day *El Alam* is the sole remaining hope of the Nationalists, but, as it is understood that it also is in financial straits, it would look as if the party will soon be without an organ, as well as being without a shepherd.

The Seditious Posters.

The inquiry into the affair of the seditious posters and circulars still continues. The Parquet is directing it, but Rushdi Pasha, the Minister of Justice, and Sidki Pasha, the Under-Secretary for the Interior, are, in a way, supervising the proceedings. Absolute secrecy is maintained by the authorities, and, as a result, the most fantastic rumours are being retailed by the local Press. It would appear that the matter is regarded in a more serious light than was at first anticipated. Ibrahim Effendi Fauzi, the owner of the Cairo book store, who was arrested on information given originally by the chief prisoner Mukhtar, and who, it was hoped, would turn out to be the printer and distributor of the first posters, has been released, as he was able to prove an alibi through the evidence of very high-placed residents. It appears that the name Ibrahim Fauzi is very common, and that at least two other men bearing this name are known to the police. On the other hand, the Cairo police have caught five youths, who are suspected of having had a hand in the fabrication and affixing of the posters. Secret information had been brought that certain young Egyptians were meeting at Boulac, and were in the habit of making inflammatory speeches. So the police watched them very closely, and became certain that five of them had had something to do with the posters. It was at last decided to arrest them. This was done on Sunday, two of them being caught at the station just as they were leaving for Upper Egypt. It is understood that more seditious posters were found in the baggage of the would-be travellers. Was it their intention, then, to flood Upper Egypt with these inflammatory appeals to revolt? The inquiry into the question of the Cairo circulars seems to point to the guilt of three of these youths, Saad Effendi Hassan, teacher at the Beni-Suef Government School; Hassan Effendi Husny Mustapha, a student at the Muchtohor Agricultural School; and Shoneim Effendi Fauzi, a clerk; for the report on their case has been concluded and their two comrades have been set at liberty. It now only remains for the Parquet to make its inquiry.

One of the men originally arrested, Ahmed El Meligui, was released with Ibrahim Effendi Fauzi, but he was soon taken into custody again for having affixed a placard, threatening certain police officials, on the wall opposite the Alexandria Headquarters of the Army of Occupation. An accomplice of his has also been arrested. This brings the number of men in custody in connection with the Cairo and Alexandria posters to eight. A certain mystery surrounds a man, whose deposition was taken yesterday morning by the Parquet, and who is said to have arrived from Constantinople with a letter addressed to Ibrahim Shawish by his brother, Sheikh Abdel Aziz Shawish. All things considered, there seems little doubt that the prime mover in this affair has been the redoubtable Sheikh, and the official report on the inquiry, which cannot now be long delayed, is being most anxiously awaited.

It is expected that the accused will come before the October Assizes, and that they will be indicted under the new Conspiracies Law of 1910, which is very wide of interpretation and application, and is the law under which the recent conspirators were sentenced to their long terms of imprisonment.

Omdurman Day.

Yesterday was Omdurman Day, and the survivors of the charge which made that battle famous—the 21st Lancers—held an "At Home" at Abbassia in honour of the occasion. Lieut.-Gen. Sir John Maxwell, G.O.C. the Army of Occupation, was present. A most delightful afternoon was spent, and the programme provided produced events both interesting and amusing. This gathering of the military and civilian residents had an additional significance, for the Lancers are due to embark for India at the end of the month, and this "At Home" was one of the last opportunities they will have of dispensing hospitality.

It is a matter of much satisfaction to everyone to learn that they will be replaced by the 3rd Dragoon Guards, and that the cavalry regiment included in the Egyptian Command will not be withdrawn, as was rumoured early in the summer.

The Nationalist Party.

The question of Farid Bey's leadership of the Nationalist party is still exercising the minds of the members. After much trouble a meeting of the Executive Committee was arranged, and it was decided

Digitized by Google

thereat to open an inquiry into the matter of the leader's conduct. Most of the time of the meeting was taken up with a discussion as to whether the minutes of the proceedings should be made public. The latest development is the resignation of Mahmoud Bey Fahmy Hussein from his position as Secretary-General of the party. The Nationalist party is to-day more than ever a house divided against itself, and however much the leaders intrigue and plot from their safe refuges in Europe, it seems pretty certain, as a *Times* correspondent recently put it, that the death-knell of the party has been sounded.

NOTES FROM THE SUDAN.

(From Our Own Correspondent.)

Khartoum, August 31.

Officials' Sporting Accident.

This is still the slack season, and it is rendered slacker by the fast of Ramadan, the great Mohammedan fast, which this year began on August 14, and will go on till the middle of September. In consequence of this fast, most of the Government offices close earlier in the day than at other times. The chief news is bad—namely, that Captain Stafford and Mr. L. Bolton, of the Survey Department, have been mauled by an elephant. They met with their injuries near Fort Bruce, a post not far from the source of the River Pibor. No exact details are to hand, but the wounded sportsmen are expected to arrive in Khartoum to-day.

War Office Alterations.

The most important building operations going on in Khartoum at present are the additions to the War Office. The additions will take the form of two large wings built out from the east and west ends of the building towards the river, while a considerable verandah will be added to the main building. The work will take about two years to complete, and it is understood that the extra space available will be mainly given over to the Finance Department. At present the latter department occupies very inadequate quarters in the War Office itself; but it is believed that when more room is placed at their disposal, practically the whole staff, part of which is at present in Cairo, will be concentrated in Khartoum.

Dhurra Harvest.

Unlike the unfortunate Mother Country, the districts around Khartoum still need more rain if the dhurra harvest is to be a plentiful one and if the present exorbitant price of dhurra is to be materially lowered.

THE MOSQUE OF ST. SOPHIA.

The glass and cement bands which were plastered over the cracks in the interior of the mosque of St. Sophia by Mr. T. G. Jackson, the celebrated architect, and Sir Francis Fox, the eminent engineer, two years ago, have snapped in consequence of the recent earthquake.

Speaking to Reuter's representative on Wednesday, Sir Francis Fox explained that much the same process which has been going on at Winchester Cathedral for years past has been taking place in the famous old Byzantine St. Sophia mosque. The thrust of the huge dome of the mosque has been forcing the supporting columns outward, and the line of the dome itself has been falling in.

Two years ago Mr. T. G. Jackson and Sir Francis Fox were consulted with regard to the condition of the edifice, and strips of glass were placed over certain cracks in the interior to act as indicators in the event of the trouble spreading. The snapping of those strips showed, Sir Francis said, that the building was moving again. If restoration work was not at once placed in hand, there was imminent danger of the collapse of the mosque.

The mosque of St. Sophia is the most important of the many buildings of its kind in Constantinople. It has had a stormy existence. Built by Constantine in 326, it was destroyed by fire in 532, and rebuilt by Justinian I. In 559 the eastern portion of the dome was damaged by earthquake, and at a later period the building was plundered by the Romans.

When Constantinople fell into the hands of the Turks the church was turned into a mosque, the golden mosaics in so far as they displayed human figures being covered over. Since it was rebuilt by Justinian it has been somewhat restored and altered. It remains, however, the most noteworthy example of Byzantine architecture.

As the *Times* points out, one characteristic of this mosque is the unusual "flatness" of its dome. The lateral thrust is perhaps greater than that of the ordinary dome, and this fact renders the news of a fresh movement in the supporting walls of great gravity.

NOTES FROM SERVIA.

(From Our Own Correspondent.)

Belgrade, September 8.

War Clouds.

Ill-omened clouds hang over Servia. All eyes are turned to Bulgaria, and if the people of that country force their Government to go to war, as it is here thought likely to be the case, Servia is bound to follow suit. The Servians, who are already in a feverish state, will brook no holding back. Although the Servian Government is inclined to do all it can to obviate being drawn into an early war, if Bulgaria now rushes in, the existing jealousy between the two Slav States will impel Servian statesmen, even if uninfluenced by the people's clamour, to join in battle in the hope of securing a share of the spoils.

The reserves have been called out, the export of wheat and hay has been prohibited, and a Cabinet crisis exists, but all these events coming together may be but a coincidence. Prohibition of the export of wheat and hay is doubtless a precautionary measure, and there is in any case one good feature about it. Lately a quantity of hay has been exported, the bulk of which went to Bulgaria, so that this prohibition helps to prevent the bellicose neighbour from procuring freely some of the sinews of war.

The Sienitza Affair.

The Sienitza incident, happening so soon after the Kotchana massacres and the Montenegrin troubles, produced angry feelings and bitter complaints against Turkish misrule in Old Servia and Macedonia; but the Servian Government, although it did not feel itself justified in prohibiting the holding of protest meetings, did all it could to calm the people.

Another proof of the unwillingness of Servia to precipitate a rash war lies in the fact that the Government has not taken any hasty measures for the increase of armaments. They have been doing so for some time past, but quietly and slowly. Thus, for instance, in May last twenty million francs were voted in Parliament for the purchase of additional war material, but up to this moment no purchase of any description has been made, and those preparations which are being made are going forward slowly, as if no disturbance of the peace is likely to happen for some time to come. Should there be no outbreak of war for the next fifteen days it is thought here that things will settle down quietly for at least another year. Should the Porte consider it advisable to throw a bone to the Bulgarians to appease their greed and divert their thoughts from the Macedonian question, it is easily done, as there are many things which are in the power of Turkey to grant the Bulgarians, and which will satisfy them for a time.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, September 6.

The Army Manœuvres.

At the last moment some new features have been introduced into the general manœuvres. In addition to the 4th and 5th Divisions, fully mobilised, the 9th Infantry Division of Plevna, composed of the 4th, 17th, 33rd, and 34th infantry regiments, and the 9th artillery regiment, but not mobilised, will also take part in the general manœuvres. The pioneer battalions Nos. 4, 5, and 9, fully mobilised, will be added to the garrison of Shumla. The attack, red side, will be represented by the 4th, 5th, and 9th Divisions, and the defence, blue side, will be represented by the reserve infantry regiments Nos. 43, 44, 45, and 46; and the No. 10 reserve artillery regiment, the artillery of the fortress of Shumla, and the three above-mentioned pioneer battalions.

According to the programme, the concentration will begin on September 16, and must finish on the 17th. By that time the 5th and 9th Divisions will be transported from Plevna, Roustchouck, and Tirnova to Eski-Djoumaia by railway, and the 4th Division will proceed thither on foot. Thus forty-eight hours is allowed for the concentration of an army numbering 55,000 men, with 220 guns, from four different points distant from Eski-Djoumaia, respectively:—Shumla, 36 miles; Tirnova, 75 miles; Roustchouck, 105 miles; and Plevna, 165 miles. The period from September 17 till the 24th is allotted for manœuvring, and for approaching and besieging the fortress. On September 25 will take place the great parade and review, and two days, September 26 and 27, are allowed to the regiments to return to their quarters and to demobilise.

Aviation in the Bulgarian Army.

Last year the War Office asked for credits necessary for the creation and organisation for the Bulgarian Army of a small air battalion. The Chamber willingly voted the credit, and to-day the army is provided with flying machines and aviators. The firms which obtained the orders were also bound to receive students and teach them the art of aviation, and had thus at the same time to provide the flying machines and the aviators. No doubt the method adopted was an expensive one for the Treasury; but it must at the same time be recognised that this method is the most practical and the most expedient. The French firm Blériot received an order for four aeroplanes, and had to prepare four aviators. The English firm Bristol received an order for one aeroplane, and had to prepare two aviators. The German firms Wright and Albatross received an order for two aeroplanes, and had to prepare four aviators, two for each system. The French firms Voisin and Sommer received also an order for two aeroplanes, and had to prepare five aviators; the French received also the order for two dirigibles, system Gotard, and had to prepare four operators.

Although all the orders were given almost at the same time, the French firm Blériot were the first to execute their order, and the first to prepare the aviators. After them comes again the French firm Gotard, by sending one dirigible. The remaining flying machines, with their aviators, are expected to arrive in a week.

The trials with the Blériot flying machine took place during the present week. The first army aviators, Lieutenants Petroff and Topraktchieff, were seen flying over and round the city of Sofia at different heights, varying from 200 to 2,500 metres. On September 4 Lieutenant Petroff started at six in the morning from the aerodrome in Sofia, flew towards the city of Thtiman, and returned to the aerodrome at twenty minutes past seven o'clock the same morning. It must be remembered that the distance between Sofia and Thtiman is sixty miles, and the difference in the level between the plain of Sofia and the mountainous plateau of Thtiman is equal to 1,526 ft. Therefore the aviator had to cover a distance of 120 miles to attain an elevation of not less than 2,500 ft. over the plain of Sofia to cross the range of the mountains of Thtiman and return, and required only one hour and twenty minutes. Such a difficult flight may well merit a place in the records of aviation.

The splendid results already obtained in the first trials have encouraged the Minister of War to ask for a second credit of 100,000 frs. for new flying machines, which are already ordered from Messrs. Blériot. The Minister of War has also promised the chief engineer that he will ask for a larger credit from the next Chamber for the same purpose; the order must, however, be given to those firms whose machines shall have proved best after the trials which are now in process of execution.

After the manœuvres are over, towards the beginning of the month of October, a special aviation school will be opened. Already thirty young lieutenants have applied to the War Office to be allowed to undergo a course of tuition in aviation, and to form a reserve of aviators for the army, and be ready at any moment to replace the professional fliers in case of need.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, September 3.

Roumania and Bulgaria.

It is a curious thing that whenever there is any trouble in the Balkans, Austrian and Roumanian journals (by the latter I do not mean the more serious, and therefore more reliable) immediately start the scare of strained relations between this country and Bulgaria. For the last four months at least there have been daily telegrams and articles with reference to agreements between Turkey and Roumania, by which the latter is to come on Bulgaria's back in the event of hostilities between the latter and Turkey; of movements of troops and stores to the Bulgarian frontier, and similar vapourings. Naturally, in face of such reports the Bulgarian lesser Press responds, and an exchange of compliments commences. That such rumours can do an immense amount of harm, and dangerously incite public feeling, it is unnecessary to say. Happily, as heretofore, Roumania maintains her character of a peace factor, and Bulgaria has in her present Government a party intent on maintaining the *status quo* in spite of the agitation carried on by the Macedonian and other parties in her capital.

The Bulgarian Minister to the Roumanian Court, Dr. Calincoff, who has been in Sofia for some days now, has had several interviews with his Prime Minister, M. Gueshoff, and is only waiting to have audience of King Ferdinand before returning to his post at Bucharest. In well-informed circles one object of the Doctor's visit is stated to be with a view to establishing still better relations between the two countries, which are even at the present time excellent. Another object is to concert a plan of action in common with Macedonia should events in the near future require such action.

Bucharest Improvements.

The improvements to Bucharest go on apace, and soon, with the new Ministry of the Interior, Town Hall, etc., it will be one of the finest capitals of Western Europe. The continuation of the superb Boulevard Coltea to Strada Vienei is completed and it will be finally carried on as far as the Piata Georghe. This will much relieve the congested traffic of Calea Victorei, and thus fill a very much-felt want.

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, September 8.

Events in Persia.

A despatch from the Viceroy of the Caucasus to the Council of Ministers states that on August 29 four companies of infantry, with two machine guns and two field guns, and six sotnias of Cossacks, under General Fidaroff, occupied the district lying between Schirinsu and the River Karassu, in order to prevent any further attempt of the Shahsevans to force their way to the south. General Fidaroff made a sortie in the direction of Borran, and came up with a considerable force of Shahsevans, who were dispersed northward; in their hasty flight they abandoned their tents and a large number of horses. In the saddle-pocket on one of the horses was found a sealed despatch from the leader of several tribes, addressed to the Sipahdar, entreating his prompt assistance. General Fidaroff, leaving four companies of infantry, two quick-firers, two field guns, and five Cossack sotnias to hold the line between Schirikhsu and Karassu, pursued the Shahsevans to the River Aras, where he captured a large mob of cattle. The nomads retreated along the lower bank of the Aras, and, being hard pressed by the Russians, abandoned 5,000 head of cattle. The Shahsevans have evacuated the village of Tasa-Kend. Learning that the Shahsevans had broken away southward, abandoning most of their stores and carrying their women and children with them on horseback, General Fidaroff left Colonel Rafalovitch, with four companies, two quick-firers, four field guns, and five sotnias, at Tasa-Kend, and with only three sotnias made a night march across the steppe to the Maralu Hills to intercept the southward retreat of the enemy.

LETTERS TO THE EDITOR.

TURKEY'S POTENTIAL DEVELOPMENT.

To the Editor of The Near East.

Sir,—In the letter from Mr. Schiff, published in The Near East of last Friday, there is a paragraph which opens up a wide field for thought and discussion. It is that in which he asks, "How many of those millions whose living depends, directly or indirectly, upon our import and export trade realise what a pacified and well-governed Turkey, open to the peaceful arts and resources of civilisation, would signify in relation to our share in its prosperity?"

Such discussion would naturally fall under two heads: (1) The way in which our country can best contribute to the pacification and good government of Turkey; and (2) the new or increased openings for British commercial and industrial enterprise that would be provided by the improved situation.

With regard to the first point, writing from a fairly extensive knowledge of Turkish affairs, I venture to suggest that at the present stage of affairs England can best help Turkey by lending her more advisers. For Turkey undoubtedly wishes to progress along the road which Europe professes so much anxiety to see her follow; but at present she certainly needs advice and guidance. There are, of course, plenty of people ready to offer her counsel. But what she requires is skilled and disinterested advice; and while I do not suggest that Great Britain possesses a monopoly of men well qualified to tender such advice, she has in her Indian officials an unrivalled reserve of trained experts to draw upon. I believe, too, that British advisers are decidedly more ready to think first and foremost of Turkish interests than are those of other European nations, and this belief is shared by Turkish acquaintances. For the educated Turk recognises that, as far as his country is concerned, at any rate, Great Britain is far from desiring any territorial aggrandisement whatever; he understands that our strong objection to seeing either Germany or Russia establishing itself on the Persian Gulf inclines us to desire a strengthening of Turkey's position in that region, and he believes that England is sincerely desirous of seeing Turkey peaceful and prosperous, if only for the sake of her trade and commerce in the Near East. Moreover, as a rule, he finds the British advisers more easy to work with than those of other nationalities.

To deal adequately with the second point mentioned above would make this letter too long. Regular readers of The Near East at least must have some acquaintance with the great potentialities in the way of development that would be opened up by the establishment of peace and order in Turkey. The subject is, however, one that might with advantage be brought more prominently before "those millions whose living depends, directly or indirectly, upon our import or export trade," and I trust that other readers of your journal—especially those with a first-hand knowledge of Turkey—may be disposed to help people in this country to realise its importance.—Yours, etc.,

Bournemouth, September 10. Mushavir.

FOREIGN POLICY AND THE NATION.

To the Editor of The Near East.

Sir,—There can hardly be two opinions concerning the urgency and difficulty of the questions enumerated by Mr. Schiff as confronting our Foreign Office to-day, namely, the confused situation in Turkey, the apparently impending partition of Persia, and the question of the Panama dues—to which may be added the Chinese question. Nor can there be any doubt that the decisions to be arrived at will affect the social and economic well-being of the people at large for generations to come. But it is to be hoped that the majority of your readers will refuse to admit that this conclusion involves the necessity of any extensive democratising of our Foreign Office organisation, or the consultation of the people's representatives in the course of delicate and necessarily confidential negotiations with foreign Governments. For such consultation must result in publicity, and under such conditions no foreign Power would be willing to treat with us. Even as things are, the laying of papers before Parliament and the publication of Blue Books give rise to frequent embarrassment in our foreign relations. The feelings of the other party to any diplomatic arrangement must always be considered, and one must remember that in most cases that other party is under no obligation to disclose, and has no intention of disclosing, the details of any negotiations of the kind to an uninstructed public.

However distasteful the fact may be to a certain school of politicians, experience shows that, in order to be successful, the conduct of foreign affairs must always be entrusted to a small committee of professional experts under the direction of the Secretary of State for Foreign Affairs, who is responsible to Parliament and the nation for the results.

Whether the present organisation of our Foreign Office gives us what we need in this respect is, however, a matter of opinion. The lines on which our Diplomatic and Foreign Office services are run have undergone little or no change for generations, and it would be easy to suggest modifications in the system of recruiting and training the staff, as well as measures for the encouragement and utilisation of expert knowledge and the co-ordination of the departments of State interested in the solution of Foreign Office problems.—Yours, etc.,

Diplomaticus.

St. James's Club, September 9, 1912.

THE ISLANDS OF THE ÆGEAN.

To the Editor of The Near East.

Sir,—Whether the rumours lately current as to the near approach of peace between Italy and Turkey be well-founded or not, it is undoubtedly true that there have been discussions in both countries, as well as among politicians and in the Press of other European nations, as to the probable terms of peace, and also as to the future condition of the subject peoples of the Turkish Empire.

In these discussions Albania and Macedonia have monopolised most space, and—except in Italy and in France—but little attention has been paid to the future of the Ægean Islands. There seems to be a very general idea that Italy may hold the islands which she has occupied as a pawn to be exchanged for some concession to be obtained from Turkey. But many of the best Italians have protested in advance against any such action, feeling that it would be a shameful violation of those principles of unity and nationality on which the very existence of their own country is based; and the enlightened opinion of other nations, so far as it has been expressed, is strongly opposed to it.

In this country the merits of the question cannot be properly understood, else there would surely have been some movement to influence our Foreign Office to be prepared to support the only policy which would be consistent with British traditions and honour, viz., to secure for the inhabitants of the islands free and complete self-government, whether as an independent confederation or under the nominal suzerainty of Turkey.

The urgency of this question is great, and ought not to be left to the cold and unsympathetic discussions of a conference of the Powers, at which the assembled statesmen will be more concerned with the interests of their own countries than with those of the peoples affected by their mutual agreements, and will deal with the latter as mere pawns on the European chess-board, to be moved and exchanged and sacrificed so as to suit their own games.

An overwhelming majority of the islanders are Greeks. Their independence and right of self-government have been

Digitized by Google

asserted and guaranteed over and over again, not only explicitly by *firmans* of the Porte, but also by treaties to which all the Great Powers have set their hands. Their rights have been flagrantly violated by Turkey, in spite of protests, to which a deaf ear has been turned by those who were bound in honour to protect them. They have in the past suffered brutal reprisals at the hands of their conquerors—reprisals which are now being openly threatened by the Turkish officials and Press. Surely we are not going to stand idly by while those threats are carried into effect!

And if a sense of justice and freedom and of what is due to our own traditional honour will not suffice to range Great Britain on their side, it may be worth while to appeal to the political and commercial interests of this country.

In the possible event of the great struggle for supremacy in the Mediterranean, which so many believe to be near at hand, would it not be an inestimable advantage to us to have these islanders—expert and brave seamen as they are—on our side, and the islands as shelters and harbours for our ships? And though—as in all places whose fertility has been blasted by Turkish rule—there is now comparatively little in the way of commerce to tempt British merchants, there is every reason to hope that, under wise and stable government and with the freedom to work out their own salvation, the islands of the Ægean would become prosperous under the energy of their inhabitants, and would supply markets in which British products would find wide and welcome scope.

In the hope that there may be many who will be glad to join in a movement so consonant with British principles, so advantageous for British interests, political and commercial, a committee has been formed to agitate this question and to arouse public opinion in support of a proposal to secure through diplomacy, led by our Foreign Office, the independence of the Ægean Islands.

I shall be much obliged if you will allow me to appeal through your columns for the names and addresses of sympathisers.—Yours faithfully,

ARTHUR G. SYMONDS.

Queen Anne's Chambers, Westminster,
September 7, 1912.

A RUSSIAN IN ENGLISH SKIN.

To the Editor of THE NEAR EAST.

Sir,—Mr. B. W. Stainton, in his letter published in your issue of August 30, after assuming the air of a savant for having read in the setting star of Persia four years ago what others are now beginning to see, and affecting dramatical regrets for the inevitable fate of Persia, dwells on the order and security reigning in Persia at the time of the late Naser-ed-Din, and compares it with the disorderly state of Persia during the revolution and civil strife; consequently, he condemns the new régime in Persia, pictures the present Government of Persia as a model of corruption and incapacity, and concludes his letter by ridiculing Professor Browne and making a most vulgar attack on the Sekat-ul-Islam, and using preposterous abuse against that venerable ecclesiastic who has left this worldly life! Mr. Stainton, under the influence, presumably, of some City capitalists, has for some time been carrying on a regular campaign against the Persian Constitutional Government in the *Financier*. It is not my intention to deal here with the first part of his letter, because those who have any acquaintance with history know well that no revolution and sudden complete change from a despotic régime to a constitutional one has ever been accomplished in any land, at any time, without civil war, disorder, and insecurity. To condemn the new régime by comparing the disturbed condition of Persia under it with the comparative tranquillity, in a condition of slavery, at the time of a despotic ruler, is the same as condemning the French Revolution of upwards of twenty years (*sic*) by comparing it with the time of Louis XVI. Beside these historical and natural facts, anyone who cares to cast a look at Mr. Shuster's book on Persia will have little doubt that even these past and present disturbances in Persia were, and are being, engineered by the kindly neighbour, and will entertain nothing but admiration for the heroic struggle of the little Persian Madjless in introducing reform and liberty into the country in the face of the overwhelming opposition of one of the great tyrannical Powers. I will deal, therefore, only with the latter part of Mr. Stainton's letter, where he says: "The Sekat-ul-Islam was on a moral level with Samad Khan, neither better nor worse, and the iniquitous and degrading parallel which was recently drawn between this notorious rascal and our leading clergy should bring a blush to the cheeks of every decent-minded Britisher," etc., etc.!

I, as a Persian, know the Sekat-ul-Islam and Samad Khan very well. Samad is a disreputable character and chief of the Chardowloo tribe, and the Sekat-ul-Islam was esteemed by the whole of Persia as an upright, pious, learned, and well-read ecclesiastic. He was the author of several pamphlets on the blessings and merits of the Constitution, and the wickedness and demerits of despotism, and played a great part in the constitutional movement in Azerbaijan by leading the Nationalists through a moderate enlightened path. His pamphlets and lectures for the enlightenment of the people on Parliamentary Government was the sole reason for his being hated and hanged by Russians. In support of what I have said I can procure the written testimony of the whole population of Persia (except those who are under the Russian bayonets), and can send you the translations of his pamphlets. The very facts that Samad Khan gained favour with Russians, and was appointed Governor of Azerbaijan by them, and the Seket-ul-Islam was hated and hanged by Russians, proves to the hilt the unfoundedness of the monstrous accusation of Mr. Stainton, "that he was a notorious rascal on a level with Samad Khan." By the above-mentioned facts and my description of these two characters your readers can see that no one with the slightest conscience and a spark of honesty can level such an atrocious accusation against the Sekat-ul-Islam. I challenge Mr. Stainton to produce a single convincing evidence in support of his hideous accusation. If he cannot, then I will leave it to your readers to form their own judgment of the writer's character.—Your obedient servant,

September 10, 1912. GHARA.

CYPRUS AND EGYPT.

To the Editor of THE NEAR EAST.

Sir,—Mr. Roland Michell is such an attached friend of Cyprus and was so helpful to yachtsmen when he was Kaimakam of Limassol that I regret he dissents from the practicability of the revision of the Anglo-Turkish Convention of 1878—of course, in an amicable spirit—by which Cyprus *in its own interests* would be incorporated in the Pashalik of Egypt.

I agree that the insulting conduct of Cypriote politicians towards the High Commissioners is unpardonable. Such men do not count in the scheme propounded by me as a remedy, for I wish for the prosperity of the peasants, not for the exaltation of those who exploit them.

Of this, however, I am sure. Cyprus, as a colony of Egypt, would be under a competent administration. Lord Kitchener is a man who acts, whereas the Colonial Office (with laudable intentions) talks and writes beautiful dispatches, and at every step misses the main point—which is the weight of the tribute, for over thirty years an unjust and intolerable burden upon the taxpayers (*i.e.*, the peasants and not the political firebrands), calling for immediate remedy.

Downing Street has failed because it has no heart in this business. Cairo would succeed, for there you find initiation, capacity, perseverance, business knowledge, and courage. I maintain that the Khedive would be proud to reside on Troödos during the summer, and personally take a warm interest in the island.

R. G. CAVENDISH BENTINCK.

Paris, September 8, 1912.

A PLEA FOR ARMENIA.

To the Editor of THE NEAR EAST.

Sir,—I ask the favour of your columns to discuss one of the latest telegraphic despatches which has reached us here in Japan. I feel that the subject particularly requires to be discussed in a newspaper published in London, therefore I ask you to kindly allow me space in your columns for the purpose. The telegraphic despatch which I would discuss runs thus:—

> "London, August 16.—Sundry opinions are advanced as to the Powers' Concert on the Balkan question initiated by the Austro-Hungarian Minister for Foreign Affairs. It is generally believed that the object of Austria is to confer autonomy upon all the Turkish States in Europe. The general public doubts Austria's sincerity, and questions whether Turkey and all the other Powers will agree to the Austrian proposal."

That there are grave reasons for doubting Austria's sincerity must be admitted; but we are told, and very wisely, that reformers should be opportunists, and there is no doubt that the proposal of Austria presents one of the best opportunities for reformers.

There can be no honest dissentient on the opinion that by substituting the Treaty of Berlin for the Treaty of San Stefano Great Britain has become responsible for this terrible Near Eastern question. I do not concern myself with the argument generally brought forward that the Near Eastern question has become a menace to the peace of Europe, because I consider that as far as Europe is concerned "the menace" is very trifling punishment for the enormous crime of having created (as Europe has done) the

Digitized by Google

Near Eastern question; but I say that since the Treaty of Berlin has created the Near Eastern question in all its hideous anguish, tribulation, and martyrdom for the peoples who are the victims of that Berlin Treaty, the six signatories to that treaty should now come forward to make some atonement (although very late in the day) for the evil for which they are responsible.

This is a crisis in the Near Eastern question which is calling out loudly to all reformers in Europe, and particularly in Great Britain, to act.

If there is one fact that is known more than all others to Europe, it is that the countries under Turkish dominance are suffering in every phase and condition of life, and that all this hideous suffering of innocent peoples is kept up by the jealousies of the great nations of Europe. Of all these countries there is not one that has suffered and is suffering to the extent of Armenia, where at the present time threats of wholesale massacre are proclaimed with gusto and bravado by Turkish officials, and murders sanctioned by the authorities are of daily occurrence; where whole villages are raided and plundered by armed Kurd and Circassian robbers, whose arms are supplied through official sources. We are told scarcely a week passes that the Greek and Armenian patriarchs do not lodge protests to the Central Government at Constantinople for the abductions of young girls and young married women, whose fathers, brothers, and husbands are imprisoned by the authorities for protesting against the abductions of their daughters, sisters, and wives.

When the Armenians have appealed to Great Britain they have asked no favour, but they have only demanded atonement for the terrible wrong of the Berlin Treaty, since many of the greatest and best successes of the Russian arms during the Russo-Turkish war of 1877-8 were won by Armenian generals; and by the Treaty of San Stefano, which Great Britain substituted for the Treaty of Berlin, our unhappy nation would have received their rights and their liberty as the Bulgarians did.

Now, whether Austria's proposal is brought forward in sincerity or insincerity, it is an opportunity for reformers to seize.

Autonomy of the States under Turkish dominance should be followed by neutralisation of those States, and there is no doubt that not only is this the one remedy for the hideous sufferings of innocent peoples, but it is also the only means for bringing about the peace of Europe.—Yours faithfully,

DIANA AGABEG APCAR.

Yokohama, August 19th, 1912.

THE JEWS IN THE BALKANS.

To the Editor of THE NEAR EAST.

Sir,—In your issue of August 23 I see, under "The Press on the Near East," an extract from the *Jewish World* on "Jews in the Balkans," and must take strong exception to the passage: "In Bulgaria the Jewish population enjoys a freedom of movement and an enlightened protection from Czar Ferdinand which stands out as a grateful contrast to the mediæval treatment to which the Jews are subjected in neighbouring Roumania." There has always been a most mistaken idea as to Jews being badly treated in this country, whereas (and I speak after years of experience) they are far better treated than in Germany and most other European countries, the best proof of which is that they crowd here from that country, Austria, Hungary, Russia, etc., in thousands.

There are, as in all countries, Jews and Jews. One-tenth about of those here are of long residence and undoubted respectability, and have in most cases thereby earned and possess all the rights of citizenship. The others are, as are those for whom not long ago at home it was necessary to pass the Aliens Bill, in the words of Sir J. Mandeville, "right foul and felonious and of an accursed nature." They come to this country, and, with only a few years' residence and absolutely no patriotic feeling or any love for Roumania, demand all the rights of citizenship, their only object being to obtain the vote for its mercenary value. That not one-tenth (except that already mentioned) are fit to be citizens of this or any other country is proved by the criminal lists. Except for murder and crimes with violence, of which their natural cowardly nature is the only deterrent, the lists of crimes show eight-tenths Jewish names. I think I need say no more.

There is no country, Great Britain not excepted, where the alien, be he Jew, Christian, Mohammedan, or what not, is more freely welcomed and given every necessary social and commercial liberty than in Roumania. I know there will be an explosion at what I say, but I repeat that it is after years of experience in this and many other countries, and I have ample proofs and data for all I say.—Yours truly,

Bucharest, September 3, 1912. FAIRPLAY.

NEAR EAST BOOK NOTES.

Mr. Murray is the publisher of a new book on the Turco-Italian Campaign—"With the Italians in Tripoli," by Chevalier Tullio Irace. This is a perfectly genuine and trustworthy account of the war, although written, of course, from the Italian point of view. The statement that this book has been composed under the auspices of the Italian Government is, we understand, incorrect. The work has not yet appeared in Italy.

Mr. E. B. Soane has written a book, entitled "Through Mesopotamia and Turkestan in Disguise," which Mr. Murray has on his list. In this book the author gives a graphic and interesting account of a really remarkable journey from Beyrout *viâ* Diarbekr, Mosul, and Kurdistan to Baghdad. Taking the character of, and disguised as, a native of Shiraz returning home from travelling in Europe, Mr. Soane succeeded so well that nowhere was his disguise suspected, or his real nationality discovered—a feat which many people who know Turkish Arabia and Kurdistan have, in the past, believed to be impossible. In this, however, Mr. Soane, owing to his exceptional knowledge of local language and dialects, succeeded.

The Cambridge University Press is about to add to the Cambridge Archæological and Ethnological Series an illustrated volume on "The Tribes of Northern and Central Kordofán," by H. A. MacMichael, of the Sudan Civil Service.

Among the books to be published by Messrs. Methuen in the autumn will be "The Ancient History of the Near East, from the Earliest Period to the Persian Invasion of Greece," by R. H. Hall, of the Department of Egyptian and Assyrian Antiquities at the British Museum.

"The Man Who Saved Austria" is the title of a biography of Baron Jellacic, written by M. Hartley, and published by Messrs. Mills and Boon. A description of life in the frontier districts at a time when raids and counter-raids exchanged with the Turks in Bosnia were regarded as everyday occurrences will doubtless appeal to many of our readers. The account of the racial troubles that distracted the Hapsburg dominions in the middle of the nineteenth century is also interesting.

"Among the Heretics in Europe" is down for publication by Messrs. Cassell and Co., and has been written by Mr. J. A. Packer. The book is an unconventional record of a journalist's tour through Russia and other parts of Europe, and more particularly among the "heretics" of the Greek and Roman Churches. An introduction to the volume has been written by Dr. John Clifford.

The fourth volume of Prof. Gomperz's history of ancient philosophy, entitled "Greek Thinkers," which has been in preparation for a good number of years, is now practically complete, and Mr. Murray expects that it will be published very soon. It deals especially with Aristotle, and has been translated by Mr. G. G. Berry, of Balliol College.

From Mr. Henry Frowde we have information of one or two books likely to interest our readers: "Greek and Latin Palæography," by Sir E. Maude Thompson, and Prof. George Adam Smith's "The Early Poetry of Israel in its Physical and Social Origins."

The announcements of Messrs. Smith, Elder and Co. include "Palestine," by Sir Frederick Treves, and "Arabic Spain," by Bernard and Ellen M. Whishaw.

A new edition—the sixteenth—of Baedeker's "Southern Italy and Sicily" was recently published by Mr. Unwin. The volume contains excursions to Sardinia, Malta, and Corfu.

Messrs. Chatto and Windus announce "Spanish Islam: A History of the Moslems in Spain," by Reinhart Dozy; translated, with additions and corrections, by Francis Griffin Stokes.

Miss E. S. Stevens's new book, "My Sudan Year," is promised by Messrs. Mills and Boon this month.

THE PRESS ON THE NEAR EAST.

Pacification of Macedonia.

Commenting on the reported lines of Count Berchtold's proposals and other suggested schemes for the pacification of Macedonia, the *Manchester Guardian* (September 9), in a leading article, states:—

Count Berchtold looks merely to decentralisation of a modest type. A larger scheme is that suggested by Sir Edwin Pears, who would have Turkey form three provinces out of Macedonia and Albania, giving each a kind of self-government, but requiring each to send members to the Turkish Parliament. Beyond that, again, comes the autonomy on which Bulgaria is now insisting. There is little doubt that this would be best for Macedonia, however difficult it might be to set the new scheme in working order, but it is not this that Count Berchtold has in view. His anxiety and that of some other Powers—Russia, for example—is at present to keep things pretty much as they are. Full autonomy for Macedonia could only be extorted from Turkey by compulsion, nor is it a solution which Austria is supposed in any case to view with favour. A slight measure of decentralisation, on the other hand, might be obtained from Turkey with a little pressure. But the Austrian Chancellor must have known that it would not be sufficient to satisfy any of the Macedonian sections, and would certainly arouse resentment in Bulgaria and Servia. This is why so many have wondered why he has chosen to raise the question at all, and whether any undeclared motives lie beneath his action.

The Buchlau Meeting.

The *Times* (September 9) contains a leading article on the meeting of the German Chancellor and Count Berchtold at Buchlau, from which we extract the following comments on the proposals initiated by the latter:—

The truth is that, if Austro-Hungarian proposals are intended to be so innocuous as we have been told, rather too much energy has been displayed in announcing them. Even if Count Berchtold means nothing more than to remind everybody of the legitimate claims of the Dual Monarchy to play a prominent part in the affairs of the Near East, he has acted with a vigour which seems to be superfluous. The diplomatic machinery put in motion has been of the most impressive kind. The activity exhibited has been not merely conspicuous, but well-nigh ostentatious. The effect produced upon opinion, whether designedly or not, is that the apparatus employed is altogether out of proportion to the objects professed. If there is to be no intervention in the old sense of the term, no proposal to the Porte of special reforms, and no marking out of special spheres of interest in the Balkans—nothing, in short, but "organised European encouragement" to the Turks, and organised good advice to the lesser Balkan States—why is it necessary to make such an exhibition of diplomatic agitation?

The Future of the Ægean Islands.

A correspondent of the *Morning Post* (September 9), writing from Rome with regard to the speculations current regarding the future status of the Ægean Islands, states:—

An eminent writer on foreign politics some months ago stated in the Italian Press that there was a clause in the Treaty of the Triple Alliance providing that, in the case of any one of the parties to the Alliance taking Turkish territory, the other contracting parties were at liberty to recompense themselves from the same source. Special exceptions were made, however, for Austria in the case of Bosnia and Herzegovina, and for Italy in the case of Tripolitania. No provision could be made, therefore, for such an unforeseen case as that of the Ægean Islands. Should Italy therefore occupy them by right of conquest, Austria and Germany would, the writer said, be entitled to recompense themselves to the same extent in other parts of the Ottoman Empire. The only possible way for Italy to remain in possession of the islands, therefore, without precipitating the desires of Germany and Austria for territorial aggrandisement, is to administer them by private arrangement with Turkey, but replacing them under Turkish sovereignty.

Austria and the Slavs.

From an article entitled "Along the Turkish Border," in Monday's *Manchester Guardian*, we take the following. The article is dated August 28, and is written from Agram:—

The distinction between Serb and Croat is not racial or linguistic. It is religious and alphabetic. Roughly speaking, the Serb belongs to the Eastern Church and uses its alphabet, while the Croat is a Roman Catholic and writes as we do. Here at Agram, and indeed in the whole of Croatia and Slavonia, the Croats and Serbs are just now acting together in protest against Hungarian coercion. Stung by opposition and criticism, the Magyars, who control the Executive of Croatia through a ban or governor whom they appoint, have suspended the Croatian Diet and most of the civil rights. The press is under a censorship which precludes criticism. Every public-spirited Croatian patriot is liable to be arrested at any moment and thrown into gaol. Certainly Budapest has been doing its best to make a compact and united nation on its south-western frontiers. If this system of coercion is continued, the dream of a triple monarchy—Austrian, Hungarian, and South Slav (Serbo-Croatian)—may be realised. But I should rather expect to see a change of policy. The Magyar oligarchy is already yielding to the demand for franchise reform in Hungary. In the struggle to retain political power at home it will probably remedy some of the grievances of Croatia.

There is another reason why every real statesman in Austria and Hungary is especially anxious just now to avoid friction with the Slav nationalities. Ever since the Albanians began to move on Uskub the fear that Turkey will break up has become acute, and everyone is asking whether Macedonia can be partitioned without war. I went the other day from Serajevo to Visnegrad, close to the Servian and Turkish frontiers—only a few miles from the famous sandjak of Novi Bazar. There were signs of military activity all along the route, and one noticed that most of the little railway stations were fortified in a simple but effective style.

Albanian Origins.

"Who are the Albanians of whom so much has been heard lately?" asks the *Manchester Guardian*. And it supplies the answer thus: "They are the purest descendants of the ancient Pelasgians, and therefore first cousins to the ancient Greeks. They gave to the world Alexander the Great, and under Pyrrhus, King of Epirus, shook Rome to her foundations. Conquered by the Roman legions, however, the Albanians survived in their primitive bloodthirstiness and gallantry to the time when the Turks invaded the Byzantine Empire, and made common cause with the Sultan Murad in the great war of extermination against the Serbs which ended in the battle of Kossovo Polie of 1448. But when the Turks wanted to exterminate them they found a nut much harder to crack than they had expected. Under the famous George Castriot, better known by his Turkish name of Scanderbeg, they fought like lions, and when at last, on the death of their hero, they had to give in, they merely acknowledged the Sultan as suzerain, but by no means as master. They bore the Turkish yoke ill. Most of them adopted the Islamic religion, but many preferred to emigrate to Italy and Sicily rather than remain under the Turk. To this day a large number of Sicilian families piously cherish the memory of their Albanian origin. Crispi was a direct descendant of the old Albanian immigrants. But in Turkey, too, Albanians continued to play a prominent part in history. There were several Albanian Grand Viziers. During the wars of Greek independence a great number of them, like Marco Botzaris and Condouriotis, fought on the Greek side, and at Souli the entire population, men, women, and children, all Christian Albanians, threw themselves over a precipice rather than submit to the tyrant Ali, Pasha of Yanina. Yet both this monster and Moustafa Pasha, the nephew of the famous Mahmoud, Pasha of Scutari and suppresser of the Greek revolt, were themselves Albanians."

Articles to Note.

"On the Montenegrin Frontier," in the *Manchester Guardian* (September 5).

"What Bulgaria Wants," in the *Daily Mail* (September 6).

"Railway Projects in Africa and the Near East," by Sir H. H. Johnston, in the *Nineteenth Century* (September).

"Omar, the Policeman of Beyrout," in *Blackwood* (September).

"Die jungtürkische Krisis," in *Die Grenzboten* (September 4).

"Die ägyptisch-arabische Perle in der britschen Krone," in the *Tägliche Rundschau* (September 4).

"Die Praxis der Graf Berchtoldschen Initiative," in *Marz* (August 31).

PRAYERS FOR THE MOSLEM WORLD.

The World's Evangelical Alliance has issued a "call to a day of prayer for the Moslem World" on October 16, the centenary of the death of Henry Martyn, "pioneer in the evangelisation of Moslem lands." Prayers are suggested for Moslem Governments and for Christian rulers in Moslem lands; for the wider circulation of the Word of God and Christian literature among Moslems; for those engaged in the ministry of healing in all hospitals and dispensaries throughout the Mohammedan world; for all preachers and evangelists among Moslems, and for their message of reconciliation, for converts; and for the arrest of Mohammedan progress in Africa; the success of missions on the border-marches of Islam; and for all Christian societies in these regions that they may realise the need of working also for Moslems. The "call" is signed for the British organisation by Lord Kinnaird as chairman and Mr. H. M. Gooch, general secretary, and for the Lucknow Missionary Conference Continuation Committee by Mr. S. M. Zwemer, chairman, and Mr. R. S. McClenahan, secretary.

CURRENT COMMENTS.

H.H. the Khedive's recent remarks with regard to the present-day education of their children by Egyptian parents were very much to the point, and the rebuke implied by them well-merited. Young men are sent to London and Paris ostensibly to perfect and complete the education they have received in Egypt. The idea is excellent, but it fails utterly in its realisation. Beyond a correct knowledge of the language, very few of them acquire anything that can be of use to them in after-life. Indeed, it would be no exaggeration to say that the only things they become proficient in are extravagance and fast living—and, in many cases, seditious intriguing.

***

The whole fault entirely lies with the parents. Many of them send their sons to London, Paris, or Berlin, and provide them with an income far in excess of what they should require if they stuck to their studies. The writer has known wealthy fellah-landowners who have made a monthly allowance of three figures to their sons, and who, when expostulated with, retorted that Hussein was mixing all day with "lords," and so he must have sufficient money to keep up with them. Whether their boys were deriving any useful knowledge or not did not seem to trouble them. The main thing was that their sons were frequenting the highest circles.

***

Then, again, perhaps we ourselves are somewhat to blame. The young Gyppie is *fêted* and lionised on his arrival in England. He is admitted to the society of Englishwomen from whose sisters in his native country an irremovable barrier separates him. He finds his full purse procures him hitherto untasted pleasures and a crowd of friends with fine-sounding names. This sudden liberty of action, this increase in self-importance, have the worst effect on the young Egyptian when his course of "education in Europe" comes to an end. When, on his return to Egypt, he finds himself debarred from the liberties and the privileges he enjoyed in Europe; he either becomes a malcontent and an intriguer, as in the case of the central figure in that powerful story, "The Broken Road," or he loses contact with the tenets of his religion and becomes profligate. In neither case is he of any use to his country. Surely, the number of times young men bearing well-known Egyptian names have figured of late years in the metropolitan police-courts is sufficient indication of the harm that is being done?

***

Far better would it be if no students were sent to "study" in Europe. The development which educational facilities in Egypt have undergone during the past decade should render such a step as completing education in Europe unnecessary. But since it is, perhaps, impossible to stop this habit altogether, a beneficial effect might be obtained by an announcement that scholarships would be reserved for a deserving few, who would be chosen from those who could not otherwise afford to go abroad, and that Government appointments would only be open to those who during their stay in Europe conduct themselves to the entire satisfaction of a local committee, who would be entrusted with the supervision of all young Egyptians studying or supposed to be studying in their respective countries. The institution of such supervising committees on the basis of that recently formed for students from India has become imperative, and the sooner it comes into effect the better. This would counteract the bad effect which the more affluent Egyptian youths have on their less favourably circumstanced fellow-students; and if their parents only take to heart the wise words of admonition addressed to them by their Sovereign, and the English and French stay-at-home people would only try to understand the peculiar social position in their native country of the young fellows whom they have hitherto delighted to honour in such an extravagant fashion, the short sojourn of Young Egypt in Europe might really be of utility to their country instead of as at present constituting a serious menace to its future welfare and to the existence of the Moslem religion.

***

Tuesday and Wednesday of last week saw Roumania visited by torrential rains, which did immense damage both in town and country. Her rivers became torrents, and overflowed their banks in many parts. What might have been a terrible accident was prevented near Sinaia by the presence of mind of a rural gendarme. He was in the neighbourhood of the iron railway bridge on the line between Sinaia and Valea Larga stations, when he was startled by a loud crash, and turned to see the bridge collapsing, the torrents rushing down the swollen Prahova having undermined the centre piles' foundations. The morning express from Bucharest was just due, and, seeing the great danger it was in, he rushed up the line, and by means of frantic gesticulations caught the attention of the driver, who managed to pull up his engine within 150 ft. of the fallen bridge. The passengers, alarmed at the abrupt halting of the train, crowded out to see what danger they had so providentially escaped, and one or two of them took the initiative in making a collection as a reward for the presence of mind of the gendarme, promising him, at the same time, that his superiors should be informed of his conduct. The morning express bound for Bucharest had crossed the bridge only some ten minutes before its collapse.

***

Wednesday was the thirtieth anniversary of the battle of Tel-el-Kebir, the engagement which was fraught with so much political significance to Egypt since it may be said to have laid the foundations of the British occupation of the country. The actual battle only lasted for about twenty minutes, but at the expiration of that brief time of fighting Arabi's power had departed, and henceforth the British were to remain. But, as events have proved, the two countries and their peoples were to become close friends, linked together by the bonds of a prosperity which had been unknown in Egypt in pre-occupation days. Wolseley and Arabi, protagonists in the field of battle thirty years ago, are both dead, and with them are buried all the tumultuous ill-feeling of the past. Of this there can be no return.

***

Sir William Willcocks was the contributor of a paper on "Irrigated Canada" at the British Association meetings at Dundee this week. "Children may be 'encumbrances' in crowded towns," he said, "but in places like Canada they mean prosperity." The substance of his remarks was to the effect that it was the duty of farmers to marry and to train their children to the working of the land. The Garden of Eden, he pointed out, was an irrigated farm, and "It is not good for a man to be alone" was as true to-day as it was in the time of the famous garden. One of his proposals will be regarded by many as being retrogressive, though it is undoubtedly worthy of consideration by parents in England. He advocates the retention of money which is now spent on the education of girls and boys in expensive schooling; give, instead, the boys a thorough agricultural training; endow the girls with the money saved in school fees, inter-marry them, and send them off to Canada. He holds out hopes that this method would check the militant suffragism which "is making England the laughing stock of the world," and it would also serve to mitigate the unemployment evil in England. Perhaps Sir William was thinking of the peaceful land of Egypt, where women work happily side by side with their husbands in the fields; but then Egypt has not yet had to cope with the pernicious effects of an indiscriminate system of education which robs its recipients of contentment without endowing them with marketable knowledge. The West has still much to relearn from the East.

***

Another address which is of interest to residents in the Near East was that delivered by Colonel Watson to the Geographical Section of the association. The Colonel chose the Sudan as the subject for his presidential address, and dwelt upon the exploration achievements of recent years. So popular has the Sudan become as a tourist resort recently that it will come as a surprise to many to learn that not only is a great portion of the country still unmapped; there are still enormous districts which have never been even properly explored! Of the districts which lie in the upper reaches of the Blue Nile especially we have no comprehensive knowledge, and there is a wide field for explorers generally throughout the country. Apart from the geographical interest of exploration conducted in the Blue Nile regions, it is considered by many authorities that new specimens of the fauna of the country exist in some of these districts. The natives of the upper Blue Nile provinces are stubborn in their assertion that an animal horned like a rhinoceros, but of the antelope tribe, has been seen by wanderers off the beaten track. It may be the child of too fervid imaginations, but it may be the unicorn of mythology! And a close knowledge of the hunting tribes of these districts leads us to believe that their legends usually have at least a substratum of fact.

***

"Sun heater steams fine, run engine Monday." Such is the message cabled by the engineer in charge of the new sun-power plant which has been erected for pumping water for irrigation purposes in Egypt. It is perhaps unnecessary for us to remark that the gentleman in question is an American. If the new plant proves the success that is anticipated it will be invaluable in Egypt and the Sudan, and, indeed, in all tropical countries where the power of the sun is sufficient to generate the required steam. This is, of course, done by a clever disposition of sheet glass and mirrors, which concentrates the full power of the sun to a desired point upon the heater. Like most of our great inventions, the thing is simplicity itself, and one wonders why the system has never been tried before. It is estimated by the designer that when his new plant is in full working order as a commercial concern he will be able to successfully compete with fuel at 10s. per ton. If the preliminary trials are not deceptive, it really seems as though there was no limit to the usefulness of the new invention.

PERSONAL & SOCIAL.

Lord Kitchener is expected to leave England about the end of the month on his return to Cairo.

H.E. Mohammed Said Pasha, the Egyptian Prime Minister, is expected at Alexandria from Europe on the 23rd inst.

Saad Pasha Zagloul, ex-Minister of Justice, embarked at Marseilles on the 11th inst., on his way back to Egypt.

Prince Paul of Servia, the nephew of King Peter, will next month enter Christ Church College, Oxford, where, it is expected, he will study for at least two or three years. He is now on the Continent, but returns to England at the end of the month. He arrived in England in July, and was presented to the King and Queen at the Windsor garden party.

The Turkish Ambassador arrived at the Embassy on Wednesday from Scotland.

Ishmail Bey, son of the Turkish Ambassador, has arrived at the Embassy from the Continent.

Mr. Oscar S. Straus, ex-Minister to Turkey, has been nominated by acclamation as candidate for the Governorship of New York at the Progressive State Convention.

It is stated that Count Siciliani, Italian Consul-General in Cairo, will most probably return there this winter, although it was at one time thought that he would be appointed to a post elsewhere.

H. E. Joseph Cattaui Pasha paid a short visit to London this week, leaving again for the Continent to-day.

Mr. C. P. Rodocanachi, of Alexandria, is among the visitors at the Carlton Hotel.

M. Michel Salvago left the Carlton Hotel on Monday for the Continent.

Earl Curzon of Kedleston has returned from the Continent.

Sir William Garstin is at present on a visit to Canada.

Miralai Fielden Bey, Governor of the Bahr el Ghazal Province, arrived in Khartoum on the 1st inst.

El Miralai E. A. Dickinson Bey, Governor of Blue Nile Province, arrived at Wad Medani on the 22nd ult., returning from leave, and Mr. Huddleston, who had been Acting-Governor during Dickinson Bey's absence, left Wad Medani the next day on leave.

Rear-Admiral Robinson, Director-General of the Egyptian Ports and Lights Administration, has returned to Alexandria.

Archdeacon and Mrs. Ward have returned to Alexandria from England.

Maître Carton de Wiart, whose health has considerably improved during his stay in England, is leaving Oxshott, Surrey, on his return to Cairo, about the middle of October.

Sir Joseph Saba Pasha and his family will embark at Marseilles for Egypt on the 17th inst.

Prince Omar Toussoun Pasha has presented the Arabic poet Abdel Halim Hilmi Effendi with a gold pin set with a pearl, as a mark of admiration for his poem in honour of Islam (Magd El Islam).

It is announced that M. Poklewski-Koziell, the Russian Minister in Persia, will be succeeded by M. Klemm, whose place at the Foreign Office will be taken by M. Müller, the Consul-General at Tabriz.

Mr. P. M. Tottenham, of the Sudan Irrigation Service, has returned from leave and is now at the Ministry of Public Works in Cairo.

The King has given instructions for the appointment of Mr. W. A. Russell, King's Advocate, to be a Member of the Executive Council of the Island of Cyprus.

Lord Ninian Crichton-Stuart, M.P. for Cardiff, who is a regular visitor to Egypt in the winter, will be nominated as president for the ensuing year at the annual meeting of the Glamorgan Society in London next week.

M. Vassil P. Kravareff, formerly Third Secretary to the Bulgarian Legation in London, has been recalled to the Ministry of Foreign Affairs in Sofia.

El Bimbashi H. V. V. Kyrke, 3rd Battalion Sudanese, has been transferred to the 15th Battalion, dating from August 18.

The *Journal Officiel*, Cairo, announces that Kaimakam E. J. F. Vaughan Bey, Assistant Private Secretary and Deputy Assistant Adjutant-General, has been struck off the strength of the Egyptian Army, dating from August 17. It is also announced that the Khedive has been pleased to confer on this officer the third class of the Osmanieh Order, in recognition of valuable services rendered.

Mr. Robert Williams, F.R.I.B.A., of Alexandria, has arrived in London after a lengthy tour in the Near East.

We regret to record the death of Major-General Sir William Henry Rodes Green, which took place on Monday at Harrogate. Sir William Green, who was in his ninetieth year, served with distinction in India, Persia, and the Crimea. He was also known as a writer on various matters connected with the defence of the North-West Frontier of India.

Sir Raymond West, K.C.I.E., LL.D., who in 1884 was Procureur-General in Egypt, and prepared the way for complete reform of the Egyptian judicial system, died at his house in Upper Norwood on Sunday last in his eightieth year.

On September 5, at the meeting of the Anthropological Section of the British Association, the chair was taken by Professor G. Elliot Smith, who delivered his presidential address on "Steps in Human Ancestry." Professor Elliot Smith counts many friends in Cairo, where he was for many years professor of anatomy in the Government School of Medicine.

The Rev. Père Cotêt, the headmaster of the St. Francois Xavier College in Alexandria, has been transferred to Beyrout, where he is to be the head of the Jesuit Medical College.

Mr. and Mrs. Harry Suter and daughter left England by the s.s. "City of Cambridge" on the 10th inst. on their return to Egypt.

Orkhan Bey has been appointed Secretary to the Turkish Embassy in London.

M. Michel G. Holban, Commercial Attaché to the Roumanian Legation, and Mme. Holban have arrived in London from the Continent.

Lieutenant Von Ridder has been appointed military attaché to the German Agency in Cairo, and will take up his new duties on October 1.

The death occurred at Portsmouth on Tuesday of Deputy Inspector-General George Kell (retired), of the Naval Medical Service. Entering the Navy in 1864, he saw service in many parts of the world, including the Persian Gulf, and in the repression of the slave trade in Zanzibar.

The late Dr. Thomas Scott, of Rumbold House, Ilkley, who went through the Crimean War with the Turkish Army as surgeon, left property amounting to £51,993.

The death occurred at Hemel Hempstead, on the 8th inst., of Stella Louise, the younger daughter of the late Sir James Mackie, K.C.M.G., who was for so many years physician at Alexandria.

Major-General Sir John Slade, who is lying seriously ill at his residence in The Close, Salisbury, is slightly better.

The aviator M. Karamanlakis, who left Athens on Wednesday morning on a flight for Patras, fell into the sea near Corinth, and was drowned.

Our Roumanian correspondent writes that Mr. Take Jonescu, accompanied by Madame Jonescu, returned to Roumania on September 3, and was received at Bucharest Station by a number of the leaders of his party, who gave him a most enthusiastic reception. Asked as to his future political movements, the head of the Democratic-Conservative Party stated that he could say nothing until he knew what course politics had taken during his absence abroad.

Mrs. E. M. Drower, better known as Miss E. S. Stevens, and author of "The Veil" and other novels on the East, will accompany her husband to Khartoum for the winter season.

Mr. and Mrs. H. Ward Boys are returning to Egypt by the P. and O. steamer "Maloja," which leaves London on the 27th inst.

Lieut.-Colonel A. J. W. Dowell, who has just severed his connection with the Royal Berkshire Regiment on vacating the command of the 1st Battalion, was with the regiment during its service under Viscount Wolseley in Egypt in 1882, and was present at the surrender of Kafr Dawar (medal, Khedive's star). He also took part in the Sudan Expedition, 1884-85, including the Nile Expedition (Nile clasp), and the operations of the Sudan Frontier Force, 1885-86, including the Battle of Giniss (clasp), when he was aide-de-camp to the Brigadier-General commanding the 2nd Brigade.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

BOYD.—On September 7, at Potterspury, Stony Stratford, the wife of Fielding Boyd, Egyptian State Railways, of a daughter.

MARRIAGE.

JOB—HUNTER.—On Tuesday, September 10, 1912, at St. James's Church, Hampton Hill, Middlesex, by the Rev C. R. Job, vicar, father of the bridegroom, assisted by the Right Rev. the Bishop of Khartoum and the Rev. Prebendary Prosser, Rural Dean of Hampton, HERBERT SHIPLEY JOB to MARION ELIZABETH, elder daughter of Mr. and Mrs. Percy Hunter, of Teddington.

FRIDAY, SEPTEMBER 13, 1912.

TURKEY AND THE POWERS.

Though not so acute as represented by the scaremongers, the present situation in the Near East is certainly strained, and Turkey's position is one of great anxiety. The Bulgarians are clamouring for war with her; a similar desire on the part of the Servians has probably led to a change of Cabinet; popular excitement in Greece has very nearly reached the boiling point, and Montenegro, if not conspicuously active at the present moment, is obviously not disposed to stand aside should any movement actually be made by her neighbours against the Turks. Fortunately, however, the responsible leaders of these peoples seem to be still bent upon keeping their bellicose agitation within limits if possible, and if only the European Powers act up to the professions that have been put forward with so much fervour of late, the long-threatened "trouble in the Balkans" may still be kept smouldering instead of breaking out into the flame of actual and open warfare. We may be regarded as unduly optimistic, but we still have hope that peace will be preserved. Nevertheless the situation is a grave one, and there is small cause for wonder if the nerves of Europe are badly tried by the strain to which they are being subjected. But if Europe cannot find a means of settling the Balkan question she must pay the price of her inability to do so. Certain Continental Powers, it seems, are quite prepared to pay the price because they hope eventually to obtain substantial compensation for the present inconvenience. And being willing to put up with such discomfort themselves they are, of course, no less willing to see others, who have no prospect of compensation, put up with it also. The consciences of nations being proverbially dull, such a point of view is perfectly comprehensible, if hardly admirable. But it is not a little remarkable that the Powers that have no ulterior motives for so doing should continue to tolerate the existing state of affairs. This country, for instance, has absolutely nothing to gain and much to lose by its continuance. She has not—and the fact cannot be too frequently or too plainly stated—any desire to deprive Turkey of any territory whatsoever; nor does she desire to see any alteration at all in the boundaries of any of the Balkan States. As far as the Near East is concerned her ambitions are purely commercial. She desires to see Turkey and Turkey's neighbours peaceful and prosperous for her own sake as well as for their sakes, since they are good customers to her already and might become much better ones under more settled conditions. And though she is anxious to co-operate loyally with the other Powers, she is bound to remember that her interests and theirs are not quite on all fours.

The two causes at the root of nearly all Turkey's troubles are the rivalry between Islam and Christianity and the lack of men experienced in modern methods of administration and government. In no respect, perhaps, is the difference between the position of Great Britain and those Continental Powers that cherish hopes of ultimate territorial aggrandisement in connection with the Near Eastern Question more marked than in relation to the friction that most unhappily—and, as we hold, unnecessarily—exists between Christianity and Islam. It is therefore a hopeful sign that public opinion in this country is beginning to take a more active interest in all questions bearing upon the subject of the beliefs held by the followers of Mohammed, and to recognise that Great Britain, as the sovereign power with the greatest number of Moslem subjects under Christian rule, must necessarily regard such questions from a different standpoint from that of Powers who have comparatively few Moslem subjects, or none at all. The more closely Englishmen study the subject the more clearly will they realise that Christianity and Islam have much in common: that if only the adherents of the two creeds would endeavour to find points of agreement rather than points of disagreement their search would be well rewarded, and that friction would be greatly diminished. And if, for the reasons referred to above, it is not to the interests of some nations that that result should be brought about, it is certainly one greatly to be desired by England. Englishmen should, therefore, surely make an earnest endeavour to study this important subject seriously, and to bring to bear upon their consideration of it more impartiality than has, it must be admitted, been the case in the past? The alleged incompatibility between Christianity and Islam has been, and is, consciously or unconsciously, exploited for political purposes. It is time that such exploitation should cease, and that an attempt should be made to explode the theory, utterly false, of fundamental and insuperable differences between the two creeds. They are, in fact, divided only by what is ephemeral and transitory in character. The greater part of the apparent differences between them are the product of a differing degree and rapidity of evolution. And if we read aright the signs of the times, the new spirit that is manifesting itself amongst the more progressive Turks to-day will lead ere long to an advance, along lines appropriate to the nation's requirements, which Europe should be anxious to assist.

A sympathetic attempt at understanding, made simultaneously by Christian and Moslem, would almost certainly provide a solution of at least half the troubles that beset Turkey and the Balkan States at the present time. But the second difficulty mentioned above calls hardly, if at all, less urgently for consideration. In a letter which we publish on another page a singularly well-informed correspondent, who subscribes himself "Mushavir," points out a direction in which England could render invaluable service to the Turks. As he justly remarks, Turkey is thoroughly in earnest in her desire to make progress along the lines which Europe professes such anxiety to see her follow; but, with the best of intentions, she lacks experience, and one of her most urgent requirements at the present time is advice—of the right kind. That means, not the "advice" that has been so freely tendered by well-meaning theorists—which, when it is not simply foolish, generally errs by partaking of the nature of "counsels of perfection"—but the practical advice of skilled administrators, men who are prepared to face facts squarely, to deal with each fact on its merits, and to consider the interest of Turkey first and foremost. Many of the leading Turks themselves fully realise the need of such advisers. They recognise, for instance, that the Turkish official, however honest and however capable he may be in other respects, can seldom bring himself to dismiss a subordinate who is inefficient. This is due to a weakness—amiable in itself, but still a weakness—which leads the superior to subordinate his sense of right to his sense of pity. "Poor Ibrahim," he will say; "he is an incapable, no doubt, but how can we turn him adrift when he has a large family dependent upon him?" So Ibrahim stays, a weak spot in the administrative machine, and the government of the district or province suffers accordingly. With European advisers of the right type such weak spots would speedily disappear entirely, as they have already disappeared in some departments where the strong man has had his way; and if only Turkey had a sufficient number of advisers in whom she could put her trust, the gain to her would be immense. British advisers, as our correspondent points out, are more popular with the Turk than those of other nationalities, because the Turk usually finds them more easy to work with and more ready to identify themselves closely with his interests. And as England, thanks to her large supply of highly trained officials used to working with Orientals and with Moslems, is in a position to supply any number of helpers and mentors that Turkey may require, it would surely be to the advantage of both countries if the latter were to ask for and the former were to lend sufficient advisers to help towards the end that both so much desire.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

"To post or not to post?" appears to be a question that a good many traders are asking themselves just now with reference to sending goods ordered from certain countries abroad to be forwarded on the C.O.D. system. In some cases it seems that when these orders have been accepted and the goods have been forwarded, the parties ordering them have declined to accept delivery, with the result that the goods have been returned to the sender, thus putting him to needless trouble and expense.

***

This is, of course, distinctly annoying for the traders. At the same time, just as one swallow does not make a summer, the existence of one dishonest—or changeable—customer does not surely mean that the C.O.D. system is a failure? I fail to see why certain trade papers should dwell on such cases—which are, after all, only in the nature of the exceptions that prove the rule—and thus convey the impression that it is better to have nothing at all to do with the C.O.D. system. In the ordinary course of business every trader has to take a certain proportion of risks; if he is not prepared to do so he had better give up business and emigrate to Utopia. And in the case of goods forwarded on the C.O.D. system, the trader stands no chance of losing his goods; his loss is confined to postage and incidental expenses. If the British trader is not prepared to face that chance he must surely be a poor creature compared with his predecessors—and his foreign rivals.

***

But I do not for one moment believe that he is anything of the kind. His fault, it is notorious, is his conservatism. He has not yet got used to the C.O.D. system; he has not yet grasped its possibilities; he has not realised what a magnificent advertisement it may be made for his business in out-of-the-way parts that he would find it difficult to reach by other means. When he does this he will avail himself of the system, in spite of grandmotherly warnings from pessimistic people who look on "foreigners" as a band of rogues bent on fleecing the poor, simple Briton.

***

On another page the attention of our readers is again drawn to the openings for oil and petrol motors in the Near East. This is a branch of trade in which English manufacturers have gained a world-wide reputation. English power motors are, on the whole, the best machines produced in the world, but it is not sufficient that our engineers should rely on their acquired reputation. A very important market is gradually developing in Turkey, Asia Minor, and the surrounding regions. Industries are growing up and are receiving fostering care at the hands of enlightened Governments. This, in countries where coal is expensive and difficult of transport, gives opportunity for the increasing employment of simple, well-built motors running on oil or petrol.

***

It must not be forgotten that all round the Black and Caspian Seas there are huge oilfields, while in Persia and Arabia large quantities of petroleum will certainly be produced in the future. Coal can have but a secondary place in the industrial development of these countries. I would draw attention, further, to the great possibilities open to self-contained electric lighting and power plants. The perfecting of petrol and oil motors and the invention of the metallic filament lamp have placed electric light within the reach of the most isolated and benighted communities. Recently, we reported that the ruler of Lahej, a small sultanate near Aden, had ordered an electric lighting plant for his palace. On another page will be found an account of a similar plant which is to be installed by the Sultan of Oman, at the other corner of Arabia. I am convinced that thousands of such self-contained plants could be sold throughout Turkey and other countries of the Near East.

***

A correspondent writes me as follows with regard to my remarks last week on the liquidation of the Bank of Egypt:—"It is very evident that the unfortunate shareholders in this concern are becoming more restless on account of the interminable delays in the progress of the liquidation, regarding which no details are vouchsafed to them, while they are nevertheless called upon to provide the bulk of the funds. Almost a year ago the Official Receiver informed the shareholders that in all probability they would not be called upon to pay any—or, at least, only a small part—of their liability, and that the assets, even after writing off a very liberal proportion indeed, would still, in his opinion, be ample to pay the creditors in full. It would be interesting to know why this prediction has been so thoroughly falsified, and it would be still more interesting to be informed how the original estimate was arrived at, and to get at the particulars of the outstanding debts as *then* specified as good, bad, or indifferent, and how they figure in the liquidator's accounts at present. It is doubtful whether, in the existing state of the law, directors can be made liable for losses sustained by the shareholders unless fraud can be alleged against them. Culpable negligence (and even misrepresentation) are not legally punishable.

***

"But what is of real practical importance to the shareholders is that the liquidation of the assets should be carried out in the manner which will ensure them the most favourable results. On this point they have no assurance whatever. The official liquidator and his 'special manager' (his partner in the firm) are *resident in London*, and their knowledge of matters Egyptian—and, incidentally, of the bank's debtor accounts—are derived solely from the information which their correspondents in Egypt choose to impart to them. Moreover, when it is added that the realisation of the assets is being superintended by a firm of chartered accountants in Egypt, who are probably anything but practical business men, anyone who is familiar with the Egyptian native will appreciate what chance the poor shareholder stands of getting his money back! Naturally, the liquidator need not hurry unduly, as he is not working for nothing by any means, but if the shareholders do not want to throw good money after bad—and be treated like children as well—they should certainly combine and investigate not only the true state of affairs as regards the debtor accounts, but also ascertain the sums of money which have been and are being expended by the liquidators, and what results the latter are able to show for this expenditure."

***

The death is announced from Egypt of Mr. George Zervudachi, the once famous financier, whose bankruptcy in the autumn of last year constituted an event which rivalled in importance even the failure of the Bank of Egypt. The firm which bore his name was one of the most important in the commercial world of Egypt, but the failure of the bank precipitated a crash which even the credit of Zervudachi was powerless to avert. Many painful details were brought to light at the subsequent inquiry, and as the result of certain irregularities Mr. Zervudachi was sentenced to a term of imprisonment. A pardon was, however, granted him on Sunday last, and when death came to him on the following day he was a free man. As a free man, and as one who did much for Egypt, it is well to remember him now, when the shadow of death has fallen between him and the criticism of man. The evening of his days was troubled, but his errors expiated under the law, it is possible to regard his memory now with something of the charity which was characteristic of the dead man himself in the days of his zenith.

***

In a recent issue I pointed out the extent to which English dealers participate in the illicit arms trade in the Persian Gulf. I now notice that Reuter's Agency states that the British firms interested are being adversely affected by the repressive measures whch have been adopted by the East Indian Squadron in conjunction with the Sultan of Oman. The statement further asserts that the Government has no intention of compensating the interested traders for any losses sustained by them in this connection. I imagine that the French case for compensation has now received its quietus.

***

I believe it is a common saying in Russia that the defensive services are supported by the peasants' consumption of vodka, and there is, undoubtedly, more than a modicum of truth in the popular assertion, especially since the State monopolised the distillation and sale of the fiery and demoralising liquor. An official report just issued gives the gross revenue from the manufacture and wholesale and retail sale of vodka last year as 782,076,591 roubles, showing an increase of 17,652,500 roubles compared with 1910; and the net revenue as 597,645,785 roubles, showing an increase of 23,190,130 roubles as compared with the previous year's net profits. The Government maintains in sixty-five governments and ten extra-gubernatorial districts 2,935 vodka distilleries and 564 refineries; the number of sale-stores throughout the Empire is 26,234, and they are steadily increasing—to the openly expressed disgust of the Temperance Reform Party.

COMMENTATOR.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, September 7.

Trade Returns.

From the Annual Statement of the Trade of the United Kingdom for the year 1911, with comparisons over a period of five years, just issued, we find that Great Britain's exports to Turkey during that period have increased in nineteen enumerated classifications, and have only decreased in six. The increase amounts to almost two round millions sterling, or just over 25 per cent. in volume. The volume of the whole of Turkish imports has increased in about the same ratio during this period. The exports from Italy have decreased in volume and considerably in percentage during the same period, those from France and Austria have increased in volume, but have slightly decreased in percentage, while Germany's exports have increased both in volume and percentage.

The following tables will show at a glance those articles in which increases have occurred in Great Britain's exports to Turkey. The figures represent thousands of pounds:

	1907.	1909.	1911*
Cotton manufactures:			
Piece goods	4,497	4,383	5,417
Other than piece goods	250	316	376
Woollen and worsted manufactures:			
Piece goods	511	570	638
Other than piece goods	47	46	66
Metals:			
Copper	55	115	144
Iron and steel manufactures	168	152	274
Machinery	174	193	375
Leather and manufactures thereof	22	34	94
Ships and boats (new)	42	10	89
Arms, ammunition, and military and naval stores	4	22	87
Apparel	24	36	63
Chemicals:			
Soda compounds	18	23	21
All other sorts	35	24	38
Oilcloth	39	37	59
Linen manufactures	18	26	49
Hardware	35	39	41
Oil: Seed	24	91	61
Silk manufactures	17	22	29
Painters' colours and materials	19	20	23
Parcel post	33	35	46
All other articles	394	397	585
Totals	6,426	6,591	8,549
Decreases have occurred in the following articles:—			
Cotton yarn	544	524	437
Coal and Coke	415	354	353
Tin (unwrought)	58	49	46
Jute manufactures:			
Piece goods	58	52	38
Bags and sacks	31	29	28
Caoutchouc manufactures	15	12	12
Grand totals	7,547	7,611	9,463

A study of the above figures will show manufacturers in what particular classes of goods our trade with Turkey is expanding. I cannot at the present time enumerate the articles in which the trade of our competitors has increased, but may have occasion to refer to this at some later date. It may not, however, be out of place to briefly mention the most important articles of their trade with Turkey.

Austria exports principally sugar, cotton goods and yarns, woollen goods, paper, wearing apparel and underclothing, iron and ironware, glass and glassware, mineral oils, leather and leather goods, and flax and jute manufactures. Sugar forms almost one-third of her total exports to Turkey; cotton and woollen goods, wearing apparel and underclothing, account for another third.

Germany's principal exports are iron and ironware, cotton goods, woollen goods, copper and manufactures, skins and hides, machinery, vehicles and instruments, leather, silk, hardware, drugs and chemicals, porcelain and earthenware, ready-made clothing, and paper. Ironware, cotton and woollen goods account for one-half of her total exports to Turkey; copper and manufactures, skins and hides, machinery, and leather account for another quarter.

France's principal articles of export are skins and furs, silk goods, woollen goods, cotton goods, sugar, toys and fancy goods, flour, oils, metal manufactures, silkworm eggs, chemical products and specialities, pottery and glassware, and paper. Skins and silk goods form a quarter of her total exports to Turkey; woollen and cotton goods and sugar account for another quarter; fancy articles, flour, oils, metals, silkworm eggs, pottery and glassware account for another quarter.

Italy's principal articles of export consist of cotton goods and yarns, silk goods, woollen goods and yarns, wax matches, and thread and twine. Cotton goods and yarns and silk goods account for more than one-half of her total exports to Turkey.

I had intended to analyse in detail Great Britain's imports from Turkey during the same period, but lack of space prevents me. There has been little change in the volume of imports from Turkey in 1911, as compared with the years 1907 and 1909. They are a little over a quarter million less than in 1907, and are about £400,000 more than in 1909. At the same time, there are increases in seventeen enumerated classifications and decreases in twenty-nine. I will only mention the important articles in which this movement has taken place, but without quoting figures, although they are interesting. Increases occur in the following: Oats, opium, tobacco, carpets and rugs, wool, sponges, licorice, nuts, and oranges. Decreases in the following: Mohair, figs, raisins, dried fruits, wheat, beans, maize, valonia, olive oil, galls, and leather (undressed).

Tender for Coal.

The Chirket-i-Hairié Steamship Company invites tenders for 55,000 tons of Newcastle, Turkish or Russian coal, or for any portion of this quantity. For the English coal it specifies the following qualities:—Ryhope, Lambton Davisons, Cowpen, Bothal. Monthly shipments of about 5,000 tons, commencing from October, 1912, delivered alongside its depots in the outer harbour. Customs duty at its charge. Offers to be accompanied by a 10 per cent. guarantee, stating quality if possible with certificate of analysis, total quantity tendered for and minimum monthly deliveries. Offers will be received by the Council at its meeting of September 18, at 2 p.m., under sealed cover or by telegram.

GERMANY AND RUSSIA IN THE PERSIAN GULF.

From the Consular report on the trade of Basra, which is just published, we extract the following interesting particulars:—

Fifteen German steamers of the Hamburg-America Line called at this port in 1911, consigned to a German firm. The aggregate registered tonnage of these vessels was 41,249 tons. Two British vessels were also chartered by the same firm and despatched to the United Kingdom. German returns give the value of goods imported in these steamers as £397,961, compared with £315,563 in 1910, an increase of £82,398, or about 26 per cent. The increase consisted chiefly of sugar, glass, candles, steel and brass ware, copper sheets and liquor; 27,289 more bags and cases of sugar were imported than in the previous year.

German returns give the value of exports by the same steamers as £294,142, compared with £170,220 in 1910, an increase of nearly 73 per cent. This increase consists chiefly of barley, wheat, paddy, dari seed, and rice. The quantity of grain exported was 24,048 tons larger than in 1910.

The number of Russian steamers of the Odessa Steam Navigation Company was five in 1911, with an aggregate tonnage of 10,189 tons.

The estimated value of goods imported in these steamers was £60,199, as compared with £51,584 in the previous year. The goods imported consisted chiefly of 3,524 cubic metres of wood from Odessa, 30,000 cases petroleum, as against 73,000 cases in 1910, 1,932 bags of Russian sugar, 219 cases of military clothing, and 185 cases of ammunition for the Turkish Government from Constantinople. Other imports of Russian origin were glass, porcelain, and cement.

The estimated value of exports in the same vessels was £113,368, as compared with £78,920 in the previous year, an increase of 43 per cent. The exports consisted chiefly of 6,236 tons of dates, 13,797 cases of clarified butter, 599 tons of rice, 1,557 bales of skins and hides, and 858 tons of barley.

BULGARIAN IMPORTS.

Rustchuk.

The *Austro-Hungarian Consular Correspondence*, of Vienna, states that trade in Rustchuk is just now in a very healthy condition, and is giving satisfactory results in all branches. Import trade in woollen and cotton goods has been particularly animated. Prices generally have fallen, notably for printed cotton tissues on account of exceptionally advantageous offers from Italian manufacturers. Woollen goods are imported largely from Germany, but also from Austria-Hungary. Women's dress materials of French manufacture are preferred. Cotton yarns are bought in fairly large quantities. As regards sugar, the local refineries having exhausted their stocks, purchases have been made from foreign sources. Contracts have been made principally in Austria-Hungary for deliveries in October and November, 1912, and even up to May, 1913. Purchases of coffee are important, and are made chiefly from Trieste and Antwerp. Sesame oil of French production is delivered at 73s. 7d. for 25 kilos at Varna. At the present time large quantities of aniline dyes from Germany, candles from Belgium, and household soaps from Turkey and Great Britain are bought. The activity in the building industry offers an uninterrupted market for iron and ironmongery. Galvanised iron of English manufacture is in increasing demand. Numerous orders have been placed in Austria-Hungary, and some in Germany, for enamelled iron articles.

Philippopolis.

The general condition of affairs in Philippopolis is very favourable, and goods are easy of sale. All branches of trade were more active during the spring of this year than in previous years. In regard to clothing, in particular, a preference is observed in this district for articles of foreign manufacture. Iron is imported from Germany. Italian competition is manifesting itself in the trade in iron nails. The trade in colonial produce, spices, sugar, and coffee has been restricted.

Burgas.

The state of trade in Burgas is reported to be satisfactory, as is evidenced by numerous and important orders having been passed. A particularly active feature has been the electric light installations effected by German firms. Writing paper has recently been received from Switzerland, a fairly good article being supplied at 28s. per 100 kilos c.i.f. Burgas. Important orders for sheet copper have been given in Austria.

Viddin.

In Viddin the demand for cloth for men's and women's clothing and for ready-made clothing is very active just now. Stocks are becoming exhausted, and supplies are obtained both from the interior and from abroad. During the month of March last 40 quintals of iron and ironmongery were imported from Austria-Hungary, 15 quintals of window glass, 8 quintals of leather and leather goods, and 400 quintals of salt. From Germany during the same month 80 ploughs were imported, and from Russia 600 cases of petroleum.

TIGRIS NAVIGATION.

In his report on the trade of Busreh and district in 1911, Mr. Consul Crow states that the number of river steamers now plying on the Tigris between Busreh and Baghdad is eleven. Of these, five belong to Idare Nehrieh, or Turkish Government River Administration, three to Messrs. Lynch Brothers (who have also a fourth steamer in reserve), and three to the Arab Steamship Company.

The Euphrates service, established in 1910 by a native merchant, has been maintained, but under great difficulties. A steamer proceeds regularly to Kufa, and a launch is occasionally sent to Hindieh. Both tow barges. The insecurity on the Euphrates offers great obstacles to navigation, and vessels are frequently blackmailed and otherwise interfered with by the Montifik Arabs on the river banks. Messrs. Lynch Brothers have also sent up light vessels on several occasions with material for the irrigation works, now being carried out at Hindieh and elsewhere by the Turkish Government, but the sailings are irregular and the journeys are undertaken at great risk to life and property.

Openings for Business.

BOOTS IN PERSIA.

According to the *Handelsmuseum*, Vienna, the Italian Consul at Teheran draws the attention of Italian boot manufacturers to the outlet offered by Persia, which country now obtains her supplies of footwear from Austria-Hungary and Germany. The forwarding of these goods is effected in postal packages of 5 kilogs. The price of a pair of boots varies from 3.75 frs. to 21 frs. wholesale. The expense of packing, transport, customs, etc., are borne by the buyer. Next to black boots, fancy and coloured footwear are most in demand. Woollen slippers are also much appreciated by the Persians. Orders for such goods are generally made at this time of the year for winter delivery.

Perhaps certain British firms that make a speciality of supplying boots and shoes by post would find it worth their while to test the Persian market. The Parcels Post facilities make it easy for them to do so; and British leather goods are highly thought of in Persia.

THE PALESTINE MARKET.

Some hints on the requirements of the Palestine market reach us from our Roumanian correspondent, who writes as follows:—

"Mr. Raducanu Poppescu, the Roumanian Commercial Attaché for the Orient, states that Roumania exports to Palestine annually 5,500 to 6,000 tons of timber, which is used almost entirely for the manufacture of orange boxes. He also mentions that the packing paper and nails for the above come principally from Belgium, which British manufacturers of these articles might note.

"Roumanian flour, the Attaché says, is also unknown, Russia and Bulgaria supplying the want. Considering the extremely difficult and expensive transport between the latter and Palestine, there is no reason why Great Britain should not give more attention to Palestine as a market in general. Cement comes in large quantities from Marseilles and Belgium—also worthy of note."

FACTORIES IN THE TRANS-CAUCASUS

The Russian *Official Messenger* (St. Petersburg) of August 11 publishes an article giving the number of industrial factories and works in the Trans-Caucasus as 11,354, representing an annual production valued at 157,822,521 roubles, and finding employment for 87,226 workpeople. In comparison with the small number of works (543) the value of the annual production of the township of Baku is enormous, viz., 130,615,785 roubles, which is principally accounted for by the following industries:—Animal products, 31 works, value of production 660,900 roubles; vegetable products, 70 works, value of production 7,661,960 roubles; minerals, 276 works, of which 151 produced naphtha value 50,229,595 roubles, 29 works produced kerosene value 36,812,000 roubles, and 23 works produced pir iron value 23,281,450 roubles; 78 engineering works, with a production worth 4,211,505 roubles; and 22 works generating electric energy valued at 1,702,674 roubles.

SPECIFICATIONS FOR PIPE-LINE.

The Director-General of the State Railways of Roumania, M. A. Cottesco, who will have entire control of the pipe-line from the Roumanian oilfields to Constantza, is busy in preparing the first documents essential to the construction of the line. As will be realised from the details already published, these will be very complicated. Just now M. Cottesco is preparing the quantities and specifications for the three separate lines of pipe, and these may be expected to be made public within the next week or two. The survey of the route for altitudes is at once to be begun, under the charge of three engineers-in-chief, who will each be responsible for one section of the length, and immediately on the conclusion of this the specifications will be got out for laying the lines, erection, and equipment of pumping stations and building of reservoirs. Contracts for these will probably be dealt with next February, so that a large portion of the work can be completed during the summer of 1913. As we stated, it is expected to have the whole line completed before the end of 1914.

OIL AND PETROL ENGINES.

Every day reports are reaching us confirming the advice we have repeatedly given regarding the openings, all over the Near East, for oil and petrol motors for industrial purposes. This business is at its commencement in Turkey, Asia Minor, Southern Russia, Persia, and other countries of that region, and there is no doubt at all concerning the very important future before it. We trust that our motor manufacturers are paying due attention to these Near East markets. In this connection the U.S. Consul at Aden reports that gasoline (Spratt's motor spirit) sells in that market at 35 cents a gallon, c.i.f. Aden (ex ship), or 3.50 dols. per case of 8 gallons (delivery charges extra). Kerosene sells for 1.25 dols. to 1.95 dols. per case of 8 gallons. The only reduction is 4 cents per case on White Rose (Standard Oil) if more than 400 gallons are taken. There is no crude oil and fuel oil on sale in Aden.

Aden at the present time has one kerosene engine made by Ruston Proctor and Co., Limited, Lincoln, England. It consumes 8 gallons daily, at a cost of 1.20 dols., in operating two to three small oil mills which have a capacity of only 7 maunds (196 lbs.) a day. The native in charge speaks very highly of the engine, although its fuel consumption seems rather high considering the little power furnished. An economical machine should find in this district a small but enthusiastic market.

THE TRADE OF EGYPT.

A writer in the *Bulletin de la Chambre de Commerce d'Alexandrie* states: "It is not necessary to exaggerate nor to believe that the Egyptian market is no longer worth the attention of French manufacturers because its credit has been temporarily disturbed. That more prudence is required, and, without wishing to deny or attenuate the seriousness of matters, it is permissible, nevertheless, to say that the crisis appears to have been overstated in France, which may have an adverse effect on French trade there. Our merchants refuse to grant credit, and certain French houses even demand cash for goods immediately on delivery to intermediaries, the result being that the latter contract loans, and, as the interest on money in Egypt is about 7 per cent., whilst it is only 3 per cent. in France, they stand to lose 4 per cent. This method of working has been the cause of decreasing French imports into Egypt, whereas those of other countries in Europe have greatly increased their share of the trade." The writer urges French suppliers to endeavour to regain their position by more carefully studying the requirements of the Egyptian market and by granting facilities to enable this object to be attained.

MACHINERY AT BAGHDAD.

There is a fair demand for agricultural machinery in Baghdad, according to a French Consular report, motors and pumps, with accessories, for irrigation work being especially required. England has the best share of these orders, and she is closely followed by Germany, India, France, Belgium, America, and Austria. The Consul points out that there is every reason to believe that the demands for these motors will increase in view of the measures taken by the Government to improve the economic situation of this region.

Machines of 6 h.p., 8 h.p., and 10 h.p. ought to be of very simple construction so as to be easily handled, and, if necessary, repaired by persons with only slight experience. The cost of transport, insurance, and other minor expenses as far as Baghdad are about 420 frs. for motors of 6 h.p., 460 frs. for motors of 8 h.p., and 550 frs. for motors of 10 h.p.

Attention is also drawn to the fact that the region of Baghdad also offers an excellent market for spinning machinery, motor launches, ice and mineral water machinery, printing machines and those known as "auxiliaries" in printing works, etc.

The Board of Trade are in receipt, through the Foreign Office, from H.M. Legation at Athens, of a translation of the regulations and tariff of the two new docks at the Piræus, which are now nearing completion.

TENDERS INVITED.

EGYPT.

Supply of Envelopes.—Tenders are invited for the supply of envelopes required by the Printing Department during the years 1913-1914-1915. Conditions of contract may be obtained at the Secretariat of the Ministry of Finance and at the Printing Department, Bulaq. Tenders should reach the Director, Printing Department, by noon on September 26, 1912.

Supply of Drugs and Materials.—Tenders invited by the War Office for the supply of drugs and materials, including the preparation of prescriptions, during the year 1913, at the military hospital, Abbassia. Conditions of contract at the Financial Secretary's office, Cairo. Date, October 2 (11 a.m.).

Supply of Drugs, etc.—Tenders will be received at the Central Administration, Department of Public Health, Cairo, for the supply of drugs, medicines, articles for wound dressing, etc., necessary for its Central Stores and Prisons Department, during the year 1913. Forms of tender and all other information may be obtained on application to the Director of Stores, Department of Public Health, Cairo. Tenders should be made on the proper forms accompanied by a stamped paper of 30 milliemes, and the prices must be shown (rates and total cost) in Egyptian Pounds and milliemes against each article entered in the forms referred to. Tenders should be addressed to the Director-General, Department of Public Health, Cairo, and marked in left-hand corner: "'Tender for supply of Drugs, etc." Date, September 25 (noon).

SUDAN.

Supply of Patent Fuel.—Tenders invited by the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, for the supply of 12,200 tons of Crown brand patent fuel (briquettes). 2,550 tons will be required to be delivered at Khartoum during January, 1913, the remainder at stations and times mentioned in the special conditions. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, during working hours, or from the Agent, Sudan Government Railways, Alexandria, and Mr. A. L. Webb, Queen Anne's Chambers, Westminster, S.W. Tenders must be on the stamped Sudan Government form and submitted in sealed envelope marked on the outside: "Tender for patent fuel." Date, October 14 (noon).

TURKEY.

Supply of Coal.—Tenders are invited by the Chirket-i-Hairié s.s. Company for the supply of 55,000 tons of Newcastle, Turkish, or Russian coal or for portions of the quantity. Fuller particulars will be found in our "Constantinople Business Letter."

ROUMANIA.

Lead.—Tenders are invited by the Ministry of War in Bucharest for the supply of 92,000 kgs. of lead in bars, and for 730 kgs. lead in laminated bands 19 x 0.8 and 18-15. Date, September 23.

Construction of Bridges.—Tenders invited by the Ministry of Public Works for the construction of two bridges, over the Argesh and Doamnei rivers. The bridges to be in concrete, of seven spans of 25 m. Estimated cost, £31,000. Particulars from the Ministry of Public Works, Bucharest. Date, September 25.

DELICIOUS COFFEE.
RED WHITE & BLUE
For Breakfast & after Dinner.
Wholesale, of Hanson's, London, England.

Engineering Notes.

Electrical Enterprises in Turkey.

Upon the completion of the city power station now being erected in Constantinople the thirty miles of lines of the Constantinople Tramways Company (La Société des Tramways de Constantinople) are to be electrified. A German company has secured a concession for the installation in connection with some twelve miles of tramways to be laid at Galata, and another concession for electric tramways and lighting at Broussa has been granted to a French concern. Commenting on this, an American Consul remarks that Turkey is evidently a profitable field for the electrical industry. We agree. But as far as Constantinople is concerned, it seems that only German firms have any chance of securing any large contract. The electric lighting and power supply of the city is in the hands of a powerful German syndicate, and firms other than German find so many difficulties put in their way when they endeavour to secure any contract of importance connected with electrical undertakings that it is hardly worth their while to tender for such work. Some interesting particulars of a remarkable example of the "put-up job" that is perpetrated in such cases will be found in our issue of May 31 (p. 129). And, we understand, it is by no means an isolated instance.

Electricity in Oman.

Some time ago we reported the purchase of an electric light generating plant by the Sultan of Lahej for the illumination of his palace. We now notice that U.S. Consul Brett, of Muskat, Sultanate of Oman, states that the installation of a 500-lamp electric lighting plant in the residence of the Sultan has just been completed by N. S. Bayanker, formerly with the Deccan Electric Company, of Hyderabad, India. This is the first instance of the operation of any sort of electric machinery in Oman. Mr. Bayanker has also secured permission to operate a commercial lighting and power plant, and will proceed to erect the same at once, his intention being to use two 30-kilowatt dynamos capable of supplying current for 6,000 lamps. One set of machines will be run at night and the other in the day, principally for the purpose of driving fans which, on account of the great heat and the difficulty of securing energetic punkah pullers, are much needed. Power will be furnished by oil engines, and direct current will be used. All equipment will probably be of German manufacture, American not being considered on account of the greater time necessary to procure it and the desire of having the system in operation before the close of the hot weather.

Drilling Machinery.

It appears that the only system of drilling used in the Maikop fields for oil is the Austro-Canadian, the same as is in use in Galicia. It is also the one employed—with slight modification—in Grozny, where there are more than 358 wells, and where it gives excellent results. The old Russian Freefall was formerly tried there, but proved too cumbersome and expensive. In the Baku fields this latter rig is still the only one in use, nothing else having ever been found suitable, owing to the peculiar nature of the strata; but in exploration work it is intended to a give a trial to the new system, starting with as wide a diameter as possible. It is less expensive and capable of going down 4,000 to 5,000 ft., with only three or four strings of casing. It gives excellent results in Maikop, where the strata are by no means easy to drill, and there is no reason to doubt its sucess in Baku.

River Works in Roumania.

The construction of dyke walls along the banks of the Danube in Roumania at points where floods are liable to occur will be started in a few months, according to the *Times*, the work being carried out by means of bucket excavators, of which two are now being erected at Jigalia. The first wall to be erected, on Borcea Island, will have a length of 82 km., and will be 2 m. higher than the maximum level of the Danube recorded in 1907. The width at the crown will be 6.50 m., and at certain places the base will be not less than 27 m. thick. It is expected that the land on Borcea Island will be increased in value by from 12 to 16 millions of francs after the completion of the works, which are estimated to involve an expenditure of about eight million francs.

Architectural Competition in Sofia.

Prizes—of £400, £280, and £100—are being offered by the Bulgarian Government for designs for the Royal Palace, and four also—of £240, £160, £100, and £50—for designs of the Law Courts for Sofia. In addition, sums of £160 for the first and £100 for the second competition are placed at the jury's disposal for the acquisition of such designs as may be deemed of sufficient merit, though not obtaining a prize. Designs will be received up to December 1 next by the Minister of Public Works, Sofia, Bulgaria, from whom particulars may be obtained.

A New Petrol Engine.

A new petrol engine has been brought out which, it is said, has given very good results. Although possessing only a total cubic capacity of under 400 c.c., this engine—in size slightly larger than the ordinary lightweight, twin engine rated at 2¾ h.p.—pulled a duo-car with two passengers, weighing over 11 stone each, with double the power of an 8 h.p. twin. With it, it is estimated that a motor-bicycle should easily obtain a speed of 100 miles per hour. Further experiments to prove this will be awaited with interest.

Road-making in Turkey.

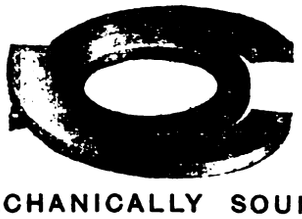
Our Odessa correspondent writes:—"I met here the other day an official of the French syndicate which has undertaken the building of chaussées in European Turkey and in Anatolia; his mission is to purchase 500 Russian draught horses for the syndicate's service. He told me that the total length of the chaussées to be built is 15,000 kilomètres. The syndicate started operations in 1910, and has already completed about 1,500 kilomètres. It should surely stand to the everlasting credit of the Young Turk régime that it initiated this superlatively important work of creating an elaborate network of properly and durably built highroads. Facility of good and easy communications is a primary desideratum of a country like Turkey."

Roumanian Pipeline.

In connection with the Roumanian State pipeline three Diesel oil-engines, of 150 h.p. each, will be installed at the two pumping stations, Ploeshti and Tzandarei. At Buzau, which is not to be a regular pumping station for the main line at present, but only to handle oil coming from the oilfield in that locality, a like outfit will be erected. Two Diesel oil-engines, of 50 h.p. each, will be installed at Ploeshti and Constantza—the two terminals of the line—for electric light and other power requirements. An additional small motor pump at Constantza will be used for filling the oil-tank storage. Buzau is quite a good locality for an additional pumping station should extra power be required at any time for increasing the capacity of the crude oil line, as it is situate close to a rich oilfield which has not yet been developed. Test drilling has only been done so far on one of several anticlines known to exist there, but a good production has been obtained, and a conservative estimate places the capacity of the district under quite moderate development at 100,000 tons per annum, which could be largely increased by intensive drilling.

A "German" Railway Survey Staff.

"In connection with our comments on the methods which the Germans are adopting in the construction of the Baghdad Railway, it is interesting," says *Eastern Engineering*, "to note how the staff which has been entrusted with the extension of the line is constituted. Thus the surveys have been placed in the hands of a German engineer, but he has taken the precaution of appointing engineers of other nationalities than his own to all the more responsible subordinate positions. The staff includes, for instance, a French engineer-in-chief and an engineer-in-chief of the Ottoman Empire. Besides these there are six brigades of engineers, none of which are under the orders of German chiefs. They are led by two Austrians, a Dutchman, a Frenchman, a Turk, and a Moor. In fact, there are no Germans on the work except a few in minor positions, and the chief of the technical organisation at Baghdad."



Proposed Danube Bridges.

The *Mercantile Guardian* states that the question of bridge construction across the Danube, from Roumania to Bulgaria, is beginning to receive serious attention. The points under consideration for such a bridge (or eventually bridges) are from Kalafat to Vidin, Corabia to Gigen (Guiguen), and Turnu Magurele to Nicopolis. Roumanian railways already touch the Danube at Kalafat, Corabia, and Turnu Magurele. The Bulgarian line to Vidin is nearing completion, and the connection to Gigen and Nicopolis with existing lines is contemplated. Although the Roumanian bank of the Danube is generally much lower than the Bulgarian, it is thought that this difficulty can be readily overcome.

ON ADMIRALTY LISTS.

The "Lamrig" Washer.

An Absolutely Reliable Washer.

MECHANICALLY SOUND.
SELF FIXING. CHEAP.

Oil Topics.

British Maikop.

British Maikop is doing well, and the chairman will have an encouraging report to make to the shareholders when he meets them next month. Two wells are baling on the Maikop Victory boundary, and a third is now on the oil and waiting for the baler to be fixed on. It is placed just opposite to the Victory Well No. 3—a fourth well is being drilled and another is to be put down in the centre of the plot. The company has now about £8,000 to £10,000 in hand and will not need much more money. But some of the shares have been sold at par to members of the Stock Exchange, so that British Maikop should be able to drill vigorously. It is selling all its oil at £2 a ton to Tweedy, and though the production last week showed a slight falling off, this is due to one of the wells having stopped baling for half a day. It is a pity that the company could not have commenced upon its present plot earlier, for it could then have pumped more oil and made bigger profits, and it can hardly continue at 37½ copecks.

Central Cheleken.

The Central Cheleken prospectus is now issued, and in spite of large advertisements we do not think that the public will subscribe. The profits of the promotion are enormous. The purchase price is fixed at £253,000, but as the Russian vendors only get £126,400, the intermediate profits are £106,400. Presumably this goes to the United Investment Corporation, who also get a further £18,650. The public is asked to provide £75,000, but exactly how much of this goes to working capital and how much to the vendors depends upon the directors, who are more or less interested in the promotion. There are various statements in the prospectus that are open to grave criticism. For example, great play is made with the quality of Cheleken oil, and we are told that the oil is eagerly competed for by buyers in Baku. Yet Mr. Drury, at a meeting of the Cheleken Oilfields, apologised to the shareholders for the low price obtained for the oil, and said that as there was only one refinery in Baku that could handle paraffin the company was obliged to sell its valuable oil for fuel. Cheleken is a very remarkable island and has produced large quantities of oil. But it is not fair to the public to float oil properties so carelessly and so overburdened with capital.

Schibaieff.

There has been some inquiry for the shares in the Schibaieff Company, and it is said that a good many people have sold shares that they do not possess. Therefore, not only may we expect a good rise in the price, but also various letters in reply to that published in the financial papers and signed by Mr. G. Grinnell Milne, chairman of the Schibaieff Company. He points out that though the concern is still in the hands of the Receiver, he has reason to know that the company is making large profits, and that a satisfactory statement will be rendered at the end of the financial year. The annual meeting will not be held until October or November, and no doubt the board will have before then considered a scheme of reconstruction or amalgamation. All the Baku oil companies must have been doing well with oil at 37½ copecks, and Schibaieff better than most, for it has a splendid refinery, and this has been running at a good profit all the year. There are tales that this refinery will be sold shortly at a handsome figure.

Premier Oil and Pipe Line.

Premier Oil and Pipe Line has declared an interim dividend at the rate of 10 per cent. on the ordinary shares, and shareholders are notified that the preference dividend will be payable half-yearly on December 1 and June 1. This news is welcome, for it cannot be denied that a good many shareholders were getting extremely nervous at the silence of the board. The capital is now very large, and the shares are distributed all over Great Britain in small lots. The price has fallen and tales went round of trouble about the dividend. These tales prove unfounded.

Roumanian Consolidated.

The Roumanian Consolidated Oilfields, Limited, a combine of some excellent properties, which have been often mentioned in these columns, would appear to be doing well. It is now producing oil upon a large scale, and is proceeding with an important drilling scheme upon a greater portion of its lands. This scheme calls for a large expenditure, but Roumanian Consolidated has £300,000 working capital guaranteed and in hand. This should be sufficient to largely increase its production. The six companies which formed the combine held together about 7,000 acres of land. This was well and carefully chosen by Mr. Van Sickle, the Roumanian manager, and it will pay for drilling. It is claimed that the oil lands now in possession of the combine are worth £5,000,000 sterling. This is a big figure, but if the company can strike one or two gushers such as those struck by the Astra or the other big oil companies working in the same field, then the boast will be justified. Roumanian Consolidated has its own refining and pipe line. Its present output is about 6,000 tons a month, but this will be gradually increased until the maximum output of 1,000 tons a day is reached. This is what the company aims at. It is well managed and in good hands. But whether the thousand tons a day will be reached quickly and whether, if reached, it could be disposed of is another matter. Roumania is badly off for transport, and the great companies are holding back until the pipe line is completed.

Central Carpathian.

A good many people are wondering when the Central Carpathian will be finally merged in Premier Oil and Pipe Line. We can say that every effort is being made to expedite the business, and then it is expected that the final liquidation will be completed about the end of November.

Roumanian Production.

Our Roumanian correspondent writes:—"The production of petroleum for the first six months of the present year, reckoning the companies only, was 821,075 tons, in comparison with 669,291 tons in 1911, an increase of 151,784 tons. Together with the smaller private concerns, the output was 864,901 tons, a general increase of 171,548 tons."

Roumanian Pipeline.

M. T. Constantinesco, one of the Roumanian envoys to America for the purpose of studying pipeline questions in the United States, who has now returned, states that the problem of transporting different qualities of crude oil in the same pipe has been solved with complete success by the Americans, and that in a way which could be easily applied in Roumania. He adds that different grades of refined oil may also be sent through the same pipeline without alteration of their respective quality, colour, or flash-point. M. Constantinesco also brings back some valuable hints as to the variation of oils with temperature, and the necessity for deep laying of pipelines and their protection where they cross bridges, so as to prevent the thickening of the oil from cold.

NEWS FROM ALL SOURCES.

The *Cologne Gazette* states that the Bulgarian Army has decided to abandon French in favour of German aeroplanes, and has ordered a number of Albatross biplanes.

Mr. C. Xippas, general agent in the Near East for the Vacuum Oil Company, is at present in London, and leaves to-morrow for New York in order to attend the congress of American Chambers of Commerce as delegate of the Egyptian Government.

Mr. Constantin Meimarachi, managing director of Messrs. Walker and Meimarachi, Limited, paid a flying visit to London this week to attend the meeting of his company, and returned to Paris on Wednesday.

We are informed that a firm has been established at Beyrout by Messrs. Norman Leslie Petrides and Nasib Khalaf, under the style of Petrides, Khalaf, and Co. The new firm will undertake export and import commission business, principally with England. The London agents of the firm are Messrs. D. N. Petrides and Co.

Mr. de Lancker, the manager of the Cairo Tramway Company, was last week presented by the company's staff with a magnificent vase and set of goblets. The presentation was made as a mark of esteem and appreciation of the honour conferred on Mr. de Lancker by the King of the Belgians, who recently decorated him with the Order of Leopold.

African Engineering states that Mr. Edmond Beshara, of the Public Works Department of Egypt, has been appointed by the Turkish Government to take charge of the irrigation projects in Mesopotamia already designed by Sir William Willcocks, and also to investigate and carry out all other works necessary for the irrigation and defence of the country against floods.

The name of the Imperial Ottoman Bank does not appear in the list of contributors to the Turkish Earthquake Fund opened in London, but we learn that the Bank has contributed £650 in Constantinople towards relief of the sufferers.

The British steamer "Cape Antibes," lately ashore at Alexandria, is reported to have left there after reloading the cargo which had been discharged for lightening purposes; and the Italian steamer—identified as the "Roma"—also lately ashore at Alexandria, was refloated after discharging part of her cargo.

The Armenian Church Council of London on Wednesday passed a resolution protesting most strongly against what is described as "the revolting indifference and inactivity of the authorities" as regards the alleged "continual atrocities to which the Armenians are being systematically subjected, especially in the Armenian provinces, and demand respectfully that immediate steps should be taken to put an end to this state of things."

Prince Mohammed Ali, the Khedive's brother, has just completed a book in Arabic on his tour in the United States, which he has given over to Osman Bey Mourtada for publication. The book contains the most minute descriptions and observations of American life, as well as pictorial sketches of phases of Western existence.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondent.)

Alexandria, September 6.

In consequence of the abundant Nile flood maize, which forms the staple food of the fellah, has been cultivated on a large scale. Rice presents good prospects in spite of the anxious outlook of a month ago, and it is hoped that prices, which increased 60 per cent., will return to a more reasonable level.

The fresh fruit trade with Turkey and Russia is going through a grave crisis in consequence of the Turco-Italian war, and the means of communication are infrequent and irregular. On the other hand, the island of Chios is sending us large quantities of fresh grapes, which find an easy market here.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

Busreh. Aug. 17.

Imports.—The alternating good and bad news which arrives from the neighbouring country hampers the market from becoming definitely satisfactory, although the tendency is favourable. Fairly constant orders are given for cotton goods and produce, but they are relatively unimportant, as importers are only disposed to cover the immediate local requirements

Exports.—The cereal market is very calm Occupied by the date business, exporters have momentarily abandoned the cereals market, and holders of stocks are obdurate. Moreover, in consequence of low water, the arrivals have become insignificant, and operations are, therefore, of necessity limited. We are informed also that the Karoun farmers abstain from selling until the crop results are known. In every respect, therefore, the cereal market is unlikely to show much movement before December.

Since the 3rd instant about 4,000 tons of cereals have been loaded, of which 3,000 tons were for Hamburg, per s.s. "Persepolis," and the balance for Jeddah, per s.s. "Naseri."

Stamboul. Aug. 31.

Wheat.—The market is well maintained, although the millers are endeavouring to lower prices.

Rye.—Maintained; millers offer good prices, wishing to use rye for admixture with Roumanian and Russian wheat.

Barley.—Also well maintained. The European crops being reduced, buyers for export pay good prices.

Opium.—Good market. Prices same as last week.

Mohair.—Although sales have not been very considerable, the market is still fairly active, and the demand maintained.

Sugar.—Estimates of the coming crop being favourable, prices for all sorts are gradually falling.

Mitylene. Aug. 31.

Export.—For various Turkish ports, and principally Salonika, 400 barrels of oil, value about £2,300; and 600 sacks of soap, value £1,200.

Crop.—The olive crop in Mitylene, as well as on the Anatolian coast, is rather below normal. Consequently, sellers of oil are pretentious, and exports are difficult.

ROUMANIAN GRAIN TRADE.

The Direction of the Roumanian State Railways is making great exertions to facilitate the grain transport traffic. New special trains for this traffic are to be run during the exporting season. At the beginning of August twenty locomotives, out of the seventy which were ordered, were put into use. Besides, many old locomotives were patched up with great labour and employed for grain haulage.

CONSULAR AND OTHER REPORTS.

Beyrout.

H.M. Consul-General at Beyrout (Mr. H. A Cumberbatch, C.M.G.) reports that the silk cocoon production in the Lebanon and the vilayet of Beyrout has been somewhat of a failure this year, yielding only 3,750,000 kilogs. (about 75,000 cwts.) against 5,000,000 kilogs. (about 100,000 cwts.) in 1911. The yield has also been unsatisfactory in other parts of Syria where there are mulberry plantations, the failure being attributed to unfavourable climatic conditions, especially unseasonable rains. Prices, too, were lower than last year, ranging between 1s. and 1s. 2d. per lb. this year, as compared with 1s. 3d. to 1s. 5d. per lb. in 1911.

Sudan Dura.

Prices of dura have risen again at Kassala reaching 9 and 10 piastres per ruba', says the *Egyptian Mail* of the 5th inst. The quantity of dura available is very small, which accounts for the rise. This is expected to continue to be the case until the end of September, when the new crops are harvested.

Rains continue and the Gash flood is in excellent condition. Large areas of land have been irrigated in the Hadendowa district.

Prices of dura at Wadi Medani market are as follows (per large ardeb):—Feterita, new, 200 P.T.; feterita, old, 185 P.T.; gassabi, 200 P.T.

Sudan Gum.

A report, dated June, received from Kassala province, and published in the July monthly report of the Sudan Central Economic Board, just received, states that the exports of gum from Gedaref for the year amounted to 23,305 kantars (of 50 kilos) Hashab and 2,761 Talh. Prices gave a little at the close, but, on the whole, were excellent. Gum exports from Mafaza for the season amounted to 39,574 kantars (of 50 kilos) Hashab and 3,194 kantars Talh.

PRODUCE REPORT.

London, September 12.

The markets have shown little animation during this past week, but quotations are fairly well maintained. Sugar is dearer for beet; refined is irregular. Coffee is in great demand at stiffer rates. Currants to arrive are dearer, but common currants and sultanas are cheaper. Seeds are firm. Linseed steady. Corn easier. Linseed and rapeseed oils are easy inclined; other oils firm. Petroleum oil steady.

Sugar.

Old crop beet is 1s. 3d. higher, but refined is rather easier. The chief interest is now centred upon new crop, which promises well, but a spell of sunny, dry weather is necessary to increase the saccharine contents of the roots. In America prices are above the parity of new crop European beet, and if Java sugar is not obtainable in sufficient quantity, European beet may be called upon to supply certain needs there pending the harvesting of the Cuban crop. It was reported this week that 25,000 tons German 88 per cent. beet, prompt shipment, had been sold to United States on the parity of 11s. c.i.f., or equal to 10s. 4½d. f.o.b. Hamburg. Beet sugar:—Closing prices of German 88 per cent. are 1s. 3d. higher for September, and about 3d. up for new crop—September, 12s. 5½d.; October, 10s. 2½d.; November/December, 10s. 1½d. f.o.b. Hamburg. Refined sugar:—English, Tate's No. 1 cubes, spot, 21s. 9d.; first half of October, 21s. 3d.; November/December, 18s. 6d. Foreign:—French, cubes, September, 17s. 10½d.; October/November, 15s. f.o.b. Paris. Dutch cubes, prompt, 17s. 1½d., November/December, 14s. 3d. f.o.b. Amsterdam. German and Austrian, November/December, 14s. 1½d. f.o.b. Hamburg.

Coffee.

There has been a good demand, and the tone of the market is generally firm. Higher prices from Brazil, New York, and the Continent, caused by the reports of severe frost in the coffee districts in Brazil, which must lead to considerable damage on the eve of the September flowering, led to much covering on the part of the bears. Prices current are:—For East Indian, small to mid., 76s. to 82s.; good mid. to bold, 82s. to 86s.; Mocha, 85s. to 90s.; Costa Rica, 75s. to 85s.; Mexican, 75s. to 86s.; Brazil, 70s. to 85s.

Currants.

The demand is very limited for spot fruit, and Pyrgos bags are a little easier, some being sold at 24s.; ½-cases, 26s. 6d. to 27s.; Patras, 27s. 6d.; Gulf, 28s. to 30s.; with Vostizza, 32s. to 34s. New arrivals are about 6d. to 9d. dearer, but with little selling at the advance.

Sultanas.

Some 400 or 500 tons of new Smyrna fruit that arrived last week show a good quality, but rather lacking in size. Business has been done for good colours from 52s. to 62s., also fair is quoted at 46s. to 50s. Old sultanas for the moment are neglected. Samarkand and Persian are slow of sale.

Figs.

Bags naturals are firm, with a little business passing at late rates. Good layers are quoted 38s. to 42s.; common layers, 32s. to 35s.; naturals, bags, 19s. to 25s.

Stocks.

The stocks of dried fruit in London on August 31 were as follows:—Currants, 1,333 tons, against 3,766 in 1911; sultanas, Smyrna, 453 tons, against 1,316 in 1911; Greek, 9 tons, against 88 in 1911; Persian, Afghan, and Indian, 1,172 tons, against 701 in 1911; figs, Turkey, 7,895 packages, against 20,483 in 1911; Faro, Greek, and Malaga, 2,367 packages against 4,128 in 1911.

Seeds.

The heavy rainfall and absence of sunshine have caused great damage to crops and farming interests in Western Europe generally. It is believed that the potato crop will be considerably reduced by disease, and this will throw an unusually large demand upon haricot beans, split peas, etc. Turkish canary seed: It was reported some time ago that the yield would only be about 60,000 bags, and it was difficult to obtain offers even at high prices, but now that the harvest is nearing completion it is reported that the yield will amount to nearly 100,000 bags. This will make a lot of difference, as prices at one time reached 60s. to 62s. per quarter, c.i.f., and now have been reduced to 56s. c.i.f. for September/October shipment. Linseed is rather quiet, but generally steady; Russian, 71s. to 73s.; Calcutta, 63s. to 64s.

Oils.

Linseed oil: Closing rates are: Spot pipes, £33 15s.; barrels, £34 5s.; September, £33 12s. 6d.; September/December, £33 5s. Cotton oil: Ordinary pale refined, spot, £26s. 10s. to £27 10s.; sweet edible, £29 15s. to £31 10s. Olive oil: The tendency is for higher prices to come along, as the new crop is expected to be short; Spanish, etc., £47 10s. to £52. Petroleum oil: American, 8¼d. to 8½d. per gallon of 8 lbs.; Russian, 8¼ lbs., 7⅝d. to 7¾d.; Roumanian, 8⅛ lbs., 7¾d. to 8d.

Oilcakes.

There is a fair inquiry going on, and values of all descriptions are steadily maintained. Linseed cake, London-made, £9 to £9 5s.; Russian, £8 17s. 6d. to £9. Cottonseed cake, American, decorticated, £8 2s. 6d. to £8 5s.; Liverpool, £8 10s. to £8 15s.; undecorticated, £6 to £6 12s. 6d.; Egyptian, both on the spot and forward, is steady at £6 7s. 6d.

Corn.

Only a moderate demand is experienced for wheat, and late quotations are barely maintained. Oats are firm, and in seller's favour. Other cereals are without change.

Gum.

Animi, Zanzibar, washed, £12 to £14 5s.; bean and pea, £3 15s. to £9 10s. Arabic, East India, £1 15s. to £2 5s. Kowrie, common, 50s. to 75s.; scraped, 95s. to 250s.; selected, 280s. to 345s.; Olibanum, drop, 35s. to 50s.

Various.

Beeswax, per cwt., £5 15s. to £8 5s. Cream of tartar (including Greek) powder, 89s. per cwt .Almonds, per cwt, Jordan, finest, £10 to £11; good fine, £9 to £10; small, £7 to £8; Sicily, sweet, £5 to £5 10s. Walnuts, per cwt., 22s. to 33s. Haricot beans, per 504 lbs. Danubian, hand picked, 62s. to 64s.; split lentils, per 100 lbs. 11s. to 13s.

Cotton and Cotton Goods.

EGYPTIAN COTTON MARKET.

(From Our Own Correspondent.)

Alexandria, September 6.

As a result of the fall in American prices and the brilliant outlook before our own crop, prices receded here, but export purchases induced a change. The market tone to-day is more cheerful, and although the bills will soon have to face a persistent and large seller, in the person of the grower himself, it does not seem as if prices will weaken further. Nevertheless, our market will closely follow the American lead, being unable to itself influence future prices.

Crop News.

The 1911-12 campaign has just ended. The last crop attained the figure of 7,272,670 cantars, against 7,851,870 cantars in 1910-11. The exports of last year amounted to 7,347,223 cantars, as compared with 7,477,522 cantars in 1910-11. Stocks remaining in Alexandria on September 1, 1912, amount to 241,000 cantars, against 316,414 cantars on September 1, 1911. Last year's production of cotton seed was 4,386,616 ardebs, against 4,603,726 ardebs in 1910-11. Exports of cotton seed amounted to 3,934,420 ardebs, whilst in 1910-11 the figure was 4,056,548 ardebs, of which two-thirds went to England and one-third to the Continent.

A crop of eight million cantars seems now assured. We have received the Upper Egypt cotton, which is of quite satisfactory quality.

EGYPTIAN COTTON FIGURES.

For 1st week, ending September 6.

Supplied by Reynolds and Gibson.

MANCHESTER REPORT.

Messrs. Reynolds and Gibson, Manchester, telegraph that during the week the Near Eastern markets for cloth have been steady, without much business passing. There have been rather more inquiries for Egyptian spot during the week, but the business result has not been large. The demand has consisted chiefly for F.G.F. Brown and Nubari, and there has been small transactions in Sakelarides. Joannovitch and Upper are neglected. Quotations for Brown and Upper are raised 3-16. Estimated sales, 1,700 bales.

The *Manchester Guardian* says:—Manufacturers of grey and striped drills report a falling off in the demand for their standard qualities, the limited inquiries being mainly for outside makes to come in at low and fixed rates. Makers are, as a rule, exceedingly busy with old contracts, and in Rochdale and Todmorden districts overtime with men weavers is adopted to expedite deliveries where Eastern orders are concerned. The pressure is especially marked in goods for fancy and khaki dyeing. Buyers, especially for the export trade, are not anxious to enter into fresh engagements at the present range of prices, and the home trade houses still complain of the difficulty of obtaining deliveries against orders placed at lower prices. China shows some slight improvement, especially in the lower grades of 29-in. drills made from about 18's-20's. A few orders have been secured at comparatively low prices, and merchants state that the recent clearances in Shanghai have been somewhat more satisfactory, but the prices realised there are less than shippers are prepared to pay for speculative business. Striped finished drills are in little request for India, and buyers are anxious regarding the delivery of their overdue contracts. Heavy tape-sized goods are rather more in demand for Constantinople and the Levant ports, but buyers for this market are more interested in stock lots than in placing orders for future delivery. The Persian trade is practically at a standstill as regards drills.

Cotton Cultivation in Turkey.

H.M. Vice-Consul at Adana (Mr. W. D. W. Matthews) reports that the Ottoman Government have granted a concession to a French syndicate of a farm of 45,000 hectares (111,150 acres) in the eastern portion of the Cilician Plain (Chukur Ova) for seventy-five years. It is probable that the syndicate will undertake the cultivation of American and Egyptian cotton on a large scale.

Packing of Cotton.

The U.S. Bureau of Manufactures has in press a monograph by Commercial Agent John M. Carson on the "Packing and Marketing of Cotton," in which this important subject is very fully covered. The report contains illustrations showing the carelessness with which this crop is handled from the farm to the mill. The very general dissatisfaction of the trade at home and abroad with present methods of handling American cotton and the immense money loss involved induced the Department to undertake an investigation to ascertain if anything might be done by the Government to aid a reform in methods.

The report is devoted in part to a description of present methods of handling cotton, gathering the crop at the farm, conveyance to the ginnery, compression, sampling, grading, etc. It is shown that by adherence to antiquated methods the cost of marketing a bale of cotton in Europe is about $18, and that it is about the same for conveying a bale to the New England markets. This cost, it is contended, could be reduced about 50 per cent. by the use of modern compresses, by which cotton would be baled at the ginnery, and by the introduction of a system of authoritative grading that would not only establish the character, quality, and value of the cotton, but would do away with the present practice of cutting the covering to extract samples. This practice is primarily responsible for the dilapidated and ragged condition in which American cotton reaches the market. This is said to entail a loss of $4,000,000 or $5,000,000 annually.

AGRICULTURE IN ASIATIC TURKEY.

Reporting on the trade of Busreh, Asiatic Turkey, for 1911, Mr. Consul Crow states that many adverse circumstances attended the commercial year under review, the most remarkable of which were the severe outbreak of cholera, several financial failures due to the closeness of the money market and restricted credit resulting therefrom, tribal disturbances on the Euphrates, and the war between Italy and Turkey. Nevertheless, the trade of Busreh has been constantly in the ascendant, and shows large and important developments. Any restrictions due to the unfortunate events which occurred were largely neutralised, if not altogether outweighed, by the beneficent effects of an abundant harvest, leading to important transactions in grain by which all who approached this article profited to a large extent.

The rainfall of 1910-11 was abundant, and lasted throughout the winter season, resulting in excellent crops. Floods occurred before and after the harvest and caused considerable loss in some districts, but the crops generally were very satisfactory, and those of barley and paddy surpassed all records.

From May onwards large quantities of barley were shipped, and grain arrived freely. Owing to a short paddy crop in Burmah there was great demand for Mesopotamian paddy in Europe, and large quantities were shipped during the last few months of the year. Dari and millet proved disappointing in consequence of the rapid fall of the river. A good crop of dari seed was anticipated, but the quantity fell short and shipments were on a small scale.

Owing to a scarcity of food-stuffs in Europe prices ruled high throughout the year, and farmers must have reaped large profits. The first arrivals of grain from up-river were clean, but, as the year advanced, the margin of profit expected disappeared owing to the unusually large admixture of dirt and consequent loss in weight on cleaning and winnowing.

The only effective remedy for this abuse would seem to be the exercise of close supervision by the Government at the places of shipment up-river, where dirt is wilfully mixed with the grain. If a systematic official control were established both up-river and on arrival at Busreh, and raftiehs or passes refused for grain containing an abnormal percentage of dirt, or penalties imposed, some improvement might be possible. The question is a delicate one for buyers to deal with unaided, as, with freight engagements and sales to fulfil, they are not in a position to decline delivery of grain, however dirty, when tendered in fulfilment of contracts made locally.

The best markets for barley, paddy, and millet are found on the Continent, and large shipments were made to Antwerp and Hamburg during the latter part of the year. Tribal disturbances continued to occur on the Euphrates, but their adverse effect on the grain market was largely neutralised by the abundant harvest.

The date crop was generally less than that of the previous year. Hallawees and Khadrawees fell short, but Sayers showed a fair increase. The fruit was very late in ripening. Prices opened higher than in 1910, but were less stable. Owing to the presence of cholera throughout the summer great difficulties were experienced in finding packers. The departure of London steamers was even postponed in order to enable shippers to fulfil their engagements.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending August 30, 1912:—We have to report again a very active week in opium, th esales amounting to about 145 cases at gradually advancing prices, bringing up our quotations 17s. to 19s. for old and new common current talequale 9 per cent. to 10 per cent., and 20s. to 23s. for Carahissar druggists and Yerli as to quality, crop, and appearance. The general opinion is that these higher figures have come to stay, and if this active demand continues we may soon have to quote two or three shillings higher. Salonika and Constantinople have also advanced this week, bringing up their quotations on a parity with Smyrna. The arrivals amount to 1,024 cases against 534 at same date last year.

Shipping Intelligence.

BRITISH SHIPPING IN THE BLACK SEA.

(From Our Own Correspondent.)

Odessa, September 1.

It becomes every day more convincingly evident that, in their consensus, the official reports of the "fair middling yield" of the South Russian crops were erroneous and misleading. As a matter of fact, there is an all-round shortage, except, perhaps, in barley. For the last two or three weeks the grain stocks on spot have been so small that none of the very few British steamers here have been able to complete their cargoes in less than fifteen days. This was officially explained by the impassability of the roads owing to continued rains, but that explanation is exploded. At this season it is usual to have every available port berth occupied and as many more steamers awaiting turn at the breakwater; as it is, there are no steamers awaiting berth turns, and only one-half of the available berths are occupied. To-day there are only five British bottoms in port; last year at this time there were twenty-five, all receiving quick despatch. Even with so small a number of ships the demand for prompt tonnage is very meagre, and as a result freight rates are declining. One of the leading local British shipbrokers tells me that an active autumn business was looked forward to, but now there is little or no prospect of any improvement of the existing slack condition. Things are no better in the two neighbouring ports of Nicolaieff and Kherson, although the Bug port is the more active of the three. The grain export trade at Taganrog is just now only a mere tithe of that transacted last year at this season.

In Siberia the harvest has given an abundant yield of all cereals.

BRAILA NOTES.

(From Our Own Correspondent.)

Braila, September 9.

The inactivity of corn markets abroad and the fall in prices have stopped the impetus that our freight market had received last week. There is, therefore, no advance in rates to record; in fact, it is mainly on account of the support received from the Black Sea and the Sea of Azov that our spot market remained steady at 14s. Antwerp, 13s. 6d. Rotterdam. The position is, however, very sound. There is scarcely any open tonnage in port, supplies of grain are plentiful, and as soon as the least demand sets in it will be followed by an immediate rise in freights.

There is, again, a good demand for tonnage for the Mediterranean, and as there are practically no steamers on the berth, the first to arrive will be able to command high freights. It is difficult to name a rate, as no actual business has been effected, but 15.50 frs. for Marseilles, Genoa, or Venice is already being offered.

The porters went on strike on Tuesday morning at Galatz, and the loading of all steamers with grain was entirely stopped until yesterday noon, when work was resumed. The men objected to a merchant using the new grain elevator, which the authorities have put up at the quay, and want to force the Government to desist from putting up five more, as they have the intention of doing. The Government have not given way; in fact, they are anxious to introduce mechanical appliances as soon as possible, in order to avoid the labour troubles which have recently been getting very frequent.

The Sulina market has been fairly active at 13s. Antwerp, 12s. 9d. Rotterdam, and 13s. 4½d. London.

The depth of water in the Danube has remained unchanged since last week; steamers can load at Braila or Galataz down to 23 ft. 3 in., and can cross Sulina Bar drawing 23 ft. fresh water.

There are at present sixteen steamers at Braila, eleven at Galataz, and twelve at Sulina.

NATIONAL BANK OF TURKEY

ESTABLISHED 1909 BY IMPERIAL FIRMAN.

CAPITAL - - £1,000,000 Sterling.

BOARD OF DIRECTORS.

CONSTANTINOPLE.

SIR HENRY BABINGTON SMITH, K.C.B., C.S.I., Chairman.
SIR ADAM BLOCK, K.C.M.G.
F. EDWIN WHITTALL.
H.E. AHMED DJEMAL BEY.
HUSSEIN DJAHID BEY.
RECHID SADI BEY.

LONDON.

HON. SIDNEY PEEL, Chairman of London Committee.
HON. HUGO BARING.
HENRY BIRCHENOUGH, C.M.G.
C. S. GULBENKIAN.
R. H. MACAULAY.
E. N. MEYER.

Head Office: CONSTANTINOPLE (KENADJIAN HAN, STAMBOUL).
MANAGER - - H. P. KINGHAM.

London Agency: 50, CORNHILL, E.C.
MANAGER - - - R. HECHT.

The National Bank of Turkey undertakes every description of Banking business. It opens current accounts according to the custom of Bankers. Customers have the facility of discounting approved bills and of obtaining advances upon negotiable securities. The Bank will undertake the purchase and sale of bonds, shares, etc., on the London Stock Exchange, on the local and on all Continental Bourses, the safe custody of customers' securities and valuables, and the collection of drawn bonds and coupons when due. The Bank issues drafts and telegraphic transfers payable in all principal towns in the world. Letters of credit for the use of travellers are also issued. Advances made on merchandise. The purchase and sale of coupons, foreign bank notes, coin and bullion are undertaken. Bills negotiated or sent for collection. Mercantile credits opened.

Deposits received for fixed periods at rates of interest which can be ascertained on application.

BANK OF ROUMANIA, Ltd.

Head Office: 7, GREAT WINCHESTER STREET, LONDON, E.C.
Branch: 94, STRADA LIPSCANI, BUCHAREST.

CAPITAL (fully paid), £300,000. RESERVE FUNDS, £169,688.

DIRECTORS:

THE EARL OF BESSBOROUGH, C.V.O., C.B.
SIR R. HAMILTON LANG, K.C.M.G.
THE VISCOUNT GOSCHEN
E. W. H. BARRY, ESQ.
P. NAVILLE, ESQ.

The Bank was originally incorporated in 1869 under Roumanian law, but in 1903 was transformed into an English Company under the Companies Acts. It is the oldest bank in Roumania, and the only one with a London office.

A general banking business is carried on. Correspondence is invited from those doing business with Roumania, and should be addressed to THE MANAGER in LONDON or BUCHAREST.

ANGLO-EGYPTIAN BANK, LIMITED,

Subscribed Capital - - £1,500,000.
Paid up Capital - - 500,000.
Reserve - - - - - 640,000.

The Bank undertakes every description of Banking Business on most favourable conditions.

BANK OF ATHENS.

(Incorporated in Greece.)
CAPITAL FULLY PAID - - Dr60,000,000
RESERVE FUNDS - - Dr10,480,000
Head Office: ATHENS.
London Office: 22, Fenchurch Street, E.C.
Branches:

GREECE: Piræus, Patras, Syra, Calamata, Tripolitza, Volo, Larissa, Agrinion and Carditza.
CRETE: Canea, Candia and Rethymo.
TURKEY: Constantinople (Galata, with Agency at Stamboul), Samsoun, Trebizonde, Kerassunde, Bafra, Mersina, Smyrna, Adana, Tarsus, Salonica, Serres, Cavalla, Xanthi, Janina, and Chio.
EGYPT: Alexandria (with agency in the quarter of Midan), Cairo (with agency in the quarter of Mousky), Zagazig, Mansourah, Mit Ghamr, Tantah and Beni Souef.
SUDAN: Khartum & Port Sudan. CYPRUS: Limassol.
HAMBURG: Domhof, Mönckebergstrasse 18.

Special facilities for Banking, Exchange and Commercial Business of every description with Greece, Egypt, Turkey, Crete, Cyprus and the Levant generally. Most favourable rates for Deposits, Collections, Cable Transfers, &c., on application.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £650 000
RESERVE - - - - - £210,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Tabriz and Yezd.

The Bank is prepared to transact Banking business of every description in and connected with Persia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia.

IONIAN BANK, LIMITED.

INCORPORATED 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - - 65,000

Head Office—LONDON.

BRANCHES—

Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, and Nauplia, in Greece; and at Alexandria, Tantah, Fayoum, Minieh, and Mansourah, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

NATIONAL BANK OF EGYPT.

Paid-up Capital - £3,000,000 (In 300,000 Shares of £10 each, fully paid). **Reserve Fund - £1,500,000**

Governor—F. T. ROWLATT, ESQ. **Head Office**—CAIRO.
London Committee—HON. HUGO BARING, SIR CARL MEYER, HON. ALGERNON MILLS, HON. SIDNEY PEEL.
London Agency—4 and 5, KING WILLIAM STREET, E.C.
Manager—J. T. BEATY-POWNALL, ESQ.
Asst.-Manager.—A. F. GILLBEE, ESQ.

Branches in all Principal Towns in Egypt and the Soudan.

Deposits received for a fixed term. Current Accounts opened. The Purchase and Sale of every kind of Stock and Shares undertaken. Bills discounted. Every kind of Banking Business transacted. Full information can be obtained at any of the Offices of the Bank.

Stock and Share Markets.

Bank Rate 4 per cent. (August 29, 1912.)

SETTLING DAYS.

CONSOLS.
Monday, September 30.
STOCKS AND SHARES.

In Mining Shares the next carry-over is September 24.

Continuation Days.	Ticket Days.	Pay Days.
Wed., Sept. 25.	Thurs., Sept. 26.	Fri., Sept. 27.
Wed., Oct. 9.	Thurs., Oct. 10.	Fri., Oct. 11.

LONDON, September 12.

There is a much better feeling in the Stock Exchange this week, and in some departments brokers are distinctly busy, but no real business is expected until the Jewish holidays are over. In the meantime promoters are getting ready numberless schemes. There is plenty of money for investment both here and in Paris, and we think it is certain that a continuous upward movement will take place in the Stock markets from now until the end of the year. Money will, of course, remain dear, and dealers had to pay a ¼ per cent. more than they paid the last account.

Internationals Idle.

Very little business has been done in the Foreign market; indeed, the only movement of any importance has been the continuous buying of Peru prefs. on account of Paris. It is said that the 6 per cent. debentures are to be redeemed at 105, and that a new issue of either 4½ or 5 per cent. debentures will be made. Bulgarians remain unchanged, but Egyptian Unified are up to 101. It is doubtful whether they will retain their advance as there is a good deal of stock to be sold. Hungarians have not moved. Italians are quoted at 96, which is a shade better than the make-up price of 95½. Greeks made up at 55 and Turks at 91. They now look a shade harder.

Home Rails and Americans.

All the business in the Home Railway market is in connection with the Undergrounds, where everybody believes that an amalgamation is certain. However, the public is picking up the heavy stocks, and North-Westerns, after carrying over at 133¾, were dealt in at 135. Underground Electric shares also had a jump and could not be bought under 4¾. They are talked to par. The American Railway market is, however, resting, and the bankers are busy preparing for the big crop, and they are not inclined to help speculators. There is talk of trouble with Denver. Atchison and Union Pacific are firm, and Eries are said to be making themselves ready for a big jump.

Oils and Rubber.

Very little business has been done in oil shares, but Shells are firm, and Egyptian Oil Trust A shares have been dealt in at 3¼. Roumanian Consolidated and Urals are also strong. There is some talk about Anglo-Tereks, which have been a tip for a long time past. Rubbers are very quiet, and business seems to have died down. The fact that 1,000 tons of plantation rubber has to be sold seems to have taken the nerve out of the market.

In the Kaffir market prices remain more or less unchanged. City Deeps and Village Deeps are promised a rise; both are good mines and seem undervalued at the moment. The Rhodesian boom does not come off, but it is said that everything has now been got ready and that all land shares will be marked out. We must wait and see.

Egyptians Still Strong.

The Egyptian market has shown continued strength during the whole of the week. The rise here is due in the main to the fact that many of the Egyptian speculators sold to London with the idea that the advance in prices had been manipulated, and was not a genuine improvement. When Egypt found that London readily absorbed all the shares that were offered, it became nervous and bought back in a hurry. Beheras are now dealt in at 16. This is a great improvement on the quotation of a month ago. Delta Lands made up at 19s., and Delta Light Railway at 8¾, and they immediately hardened up. Egyptian Investment and Agency, after having made up at 10s., hardened 6d. Markets are firm; but Salt and Sodas show little change. Gharbieh Lands are talked much higher. Khedivial Mail ordinary have been dealt in at 12s., but a few weeks ago they were friendless and almost unsaleable. Land Banks are 7¼. National Banks of Egypt made up at 18½, New Egyptians are now about 11s. 3d., and Sida Salem are 1⅞. Union Foncière are said to have made arrangements for the funding of their big debt; but, although this news is common talk in the Street, the shares are weaker at 2¾. United Egyptian Lands—probably the best gamble in the whole of the market—made up at 4s. 4½d., and look like going higher. We have steadily advised our readers to purchase Egyptian shares, and we are glad to see that our advice has been taken. The rise, in our opinion, has only just begun.

Egypt's Improved Prospects.

Dealing with the revival of interest in the Egyptian share market the Cairo correspondent of the *Pall Mall Gazette* says:—"The general condition of the fellaheen and of the commercial element has considerably improved. In banking circles, it is considered that a different complexion has come over the face of the land. Money is far easier, there is less difficulty in collecting bills, and credits are being far more readily extended. Indeed, the financial institutions express themselves as very satisfied with the present situation, which is better than it has been for several years, and with the prospects for the coming months. Indeed, the latter are excellent."

MR. W. F. SARJEANT'S FAILURE.

At a sitting of the London Bankruptcy Court on Tuesday the public examination took place of Mr. Walter Fermor Sarjeant, lately a director of the Rosherville Pier and Steam Packet Company, Limited. The receiving order was made on the petition of the London Graving Dock Company, Limited, creditors in respect of repairs to the s.s. "Mermaid," two of the other directors of the Rosherville Company being examined at the same time. Mr. Serjeant returned his liabilities at £779 and assets nil. The debtor stated that in 1911 he was invited by the directors of the Rosherville Pier and Steam Packet Company to survey the s.s. "Mermaid" and to advise them what repairs and alterations were necessary in order to obtain the Board of Trade's certificate. He subsequently became a director and at the request of the board he joined in the guarantee given to the London Graving Dock, Limited.

The witness was questioned regarding certain accounts for Stock Exchange differences which he had incurred at Alexandria, and undertook to amend his statement of affairs by entering them in the list of creditors. He agreed that he lost £2,000 in 1907 on the Alexandria Bourse. The sitting was adjourned for three weeks to enable the accounts to be amended.

FUSION OF GREEK SHIPING COMPANIES.

A message to the *Deutsche-Orient Korrespondenz* from Athens reports that a fusion of the National Shipping Company with the Greek Trans-Oceanic Shipping Company will take place in the near future. The joint capital is to be increased to 25 million drachmæ. French capital will be largely interested in the operations, for which reason it is said that the new shares will be admitted to the Paris Bourse.

FINANCIAL NEWS IN BRIEF.

The receipts of the Egyptian Delta Light Railways for the ten days ended August 20 amounted to £E6,150, a decrease of £E714, as compared with those of the corresponding period of last year.

An interim dividend of 50 frs. per share is payable on the shares of the National Bank of Roumania at the head office at Bucharest or at any branch office.

Inclusive of the balance brought forward, amounting to drachmæ 52,857, the net profits of the Commercial Bank of Greece for the first half-yearly period of 1912 are drachmæ 311,674, of which drachmæ 49,189 are applied to writing down various accounts, while drachmæ 175,000 are devoted to payment of a dividend of drachmæ 3.50 per share. The carry-forward is drachmæ 61,342, and the balance is represented by allocation to the reserve, taxes, and bonuses to the management.

The numbers are announced of 770 bonds of the Bulgarian 5 per cent. gold loan of 1902, which have been drawn for repayment at par on and after the 14th inst., at the Imperial Ottoman Bank or at the offices of Messrs. Stern Brothers.

The Regie Co-intéressée des Tabacs de l'Empire Ottoman (Turkish Tobacco Monopoly Company) give notice that their ordinary meeting of shareholders will be held on October 2 in Constantinople, and that shareholders in London wishing to attend the meeting should deposit their shares by September 21 at the office of the Imperial Ottoman Bank, 26, Throgmorton Street, E.C.

The Council of Administration of the Ottoman Public Debt give notice that on and after 14th inst. six months' interest, at the rate of 4 per cent. per annum, will be paid against coupon No. 18 of the Unified Converted Debt.

The accounts of the Pétroles de Roumanie Company for the year ending April 30, 1912, show a profit of 12,579 frs., which is utilised in writing off part of the former loss of 1,378,600 frs. resulting chiefly from depreciation of investments and from the Alpha debt.

The receipts of the Piræus, Athens, and Peloponnesus Railway for the month of July amounted to 617,403 drs. (increase, 85,162 drs.), while the aggregate from January 1 amounts to 3,864,638 drs. (increase, 333,470 drs.).

The Council of Administration of the Ottoman Railway from Smyrna to Aidin have declared a dividend of 8s. per ordinary share for the half-year to June 30, carrying forward a balance of about £50,000.

The directors of the Barramia Mining and Exploration, Limited, recommend a dividend for the year ended June 30, 1912, of 14 per cent. on the preference shares and of 4 per cent. on the ordinary shares, both less income-tax.

Messrs. A. F. P. Roger, of Dashwood House, 9, New Broad Street, E.C., and A. T. Cruickshank, of 16, Bridge Street, Aberdeen, have joined the board of the Egyptian Investment and Agency, Limited.

POOK, BROS. & CO., Ltd., Merchant Bankers, Brokers and Contractors,
1, METAL EXCHANGE BUILDINGS, LONDON, E.C.,
BUY, FINANCE and PROMOTE Estates, Plantations, Metalliferous, Oil and Industrial Concerns IN ANY PART OF THE WORLD.

NOTES FROM ALEXANDRIA.

(From Our Own Correspondent.)

Alexandria, September 6.

Share Market Activity.

The improvement has continued during this week. The rise has been less rapid than last week, but it has had the time to gain firmness. The banks, which have until now refused to make advances on the greater part of our shares, are now becoming more reasonable. Indeed, they are making large advances on those securities which represent solid guarantees, in spite of the approach of the cotton which will drain all the gold from the treasuries of the banks.

The principal financial institutions are taking steps to provide the thirty or thirty-five million pounds of gold necessary for the purchase of the cotton crop, as the fellah will accept only coin in payment. An exhaustive study of the gold supplies on the Egyptian, French, and English markets tends to show that the efforts made by the Egyptian banks will to some extent ease the financial situation, but a monetary crisis in November seems inevitable. Under these circumstances we expect that the rise in share prices will experience a momentary check during the first few weeks of the cotton season; but as soon as the crop has been disposed of the rise will recommence.

Customs v. Chalons Stores.

The Egyptian Customs Administration, as is known, some time ago obtained a summons against the Grands Magazins Châlons for payment of £16,000, alleging that the latter had defrauded the revenue to the amount mentioned. The Alexandria Mixed Courts ordered an inquiry into the allegations, and we now learn that a compromise has been arrived at between the parties, under which the Grands Magazins Châlons are to pay £9,000 to the Customs Administration.

Failures.

The members of the firm Haïm and Ishak Cohen have taken flight, leaving behind liabilities to the extent of £6,700. The assets amount to scarcely £200, but the bankrupts have private furniture valued at £1,000. This proves once again the carelessness with which the import houses open credits to insolvent and unknown individuals. H. and I. Cohen came originally from Salonika, and established themselves in Egypt without capital, doing business in sugar and rice.

We learn with pleasure that J. Marini and the firm of Raghab Hassan el Sabbagh, who were declared bankrupt, will pay 20s. in the pound, as their assets exceed their liabilities. Thus the assets of J. Marini amount to £E8,481 and the liabilities to £E4,782, while the assets of Raghab Hassan el Sabbagh are £E4,623 and the liabilities £E2,182.

The old wine and spirit firm of F. G. Cotsiomiti has stopped payment, in consequence of unfortunate speculations.

Egyptians Abroad.

As a result of the increase of their business, the Italian banks have commenced to recruit their higher officials in Egypt. The powerful Banca Commerciale Italiana has selected as general manager for Italy Mr. Camerini, formerly sub-manager of the Crédit Lyonnais in Alexandria. Mr. Eugenio Mieli, manager of the Egyptian Investment and Agency Company relinquishes this post in October in order to become inspector of the Banca Commerciale Italiana in Milan; while Mr. Polzi, formerly manager of the Comptoir Financier and Commercial in Cairo, has just been appointed to a high position in the Societa Coloniale Italiana in Florence. These three gentlemen are all Egyptian-born.

New Companies.

The formation is announced of a company to take over the business of Spathis and Company, of Cairo (manufacturers of mineral waters), and another for the exploitation of gold mines on the Egyptian coast of the Red Sea. In connection with the latter project Mr. E. L. Holmes, the delegate of an Australian group, has arrived to study the gold deposits worked by the ancients, and has expressed the opinion that Egypt will in future become one of the most important gold-producing countries of the world.

NOTES FROM ATHENS.

(From Our Own Correspondent.)

Athens, September 7.

The Currant Question.

Since August 18 the currant-producing provinces of Greece have been in a disturbed state, and for a time serious riots were threatened. Large, numerous, and turbulent demonstrations were held, trains conveying currants to ports of lading were stopped, and on every hand such signs of excitement were exhibited that the Government was obliged to draft troops from various garrison towns for the maintenance of order and security.

The cause of all this agitation has been the decision of the Société Privilégiée pour favoriser la production et le commerce des raisins de Corinthe that the "retention" tax should be paid by the producers in kind until the amount of currants exported should reach 160 million pounds, and in cash, at the rate of 115 frs. per 1,000 lbs., as soon as the exports exceeded that amount.

The history of "the currant question" is briefly as follows: Upon the destruction of the French vineyards by the phylloxera, Greek currants were largely utilised for wine-making, and rose enormously in price; consequently in the greater part of the Morea currants were grown to the utter exclusion of everything else. Even the sacred olive tree was uprooted to make room for vines. It was a case of Bacchus v. Minerva, and soon there was a sing-song shanty in almost every village, where beer and vile drinks were sold at prices ensuring a profit of a thousand per cent., and the peasants, finding the money coming in faster than they could spend it, used five and ten-franc notes as wads for their fowling-pieces, and thought nothing of tossing a 100-franc note to the fiddler at a wedding or village feast. But very soon the French vineyards were renovated, and for the protection of her own produce France imposed a heavy duty on currants. The immediate result of this measure was a drop in price from 350-500 frs. to 60, 50, and even 40 frs. per 1,000 lbs.—a price insufficient to cover the expenses of cultivation.

Genesis of the Societe Priviligiee.

Threatened by a serious financial crisis, a system of "retention" was invented, *i.e.*, each grower was to deposit a certain percentage of his produce in Government depots in order to reduce the total amount available for export, and thus keep up the prices. But soon the storekeepers began to sell a great part of the currants secretly, mixing the remainder with earth and rubbish to make up for their peculations, and thus defeating the object of the scheme, which failed, as did also the "Currant Bank." Then a monopoly was suggested; but this, too, fell through, and in 1905 the Director of the Banque d'Athènes, Mons. Pezmazóglou, proposed forming the Société Privilégiée. This proposition, on being laid before the House, became law.

The principal points of this scheme are that 40 per cent of the produce of the Ionian islands and 35 per cent. in other parts of Greece should be "held back" in kind by the Société Privilégiée, which has the right to sell the whole amount of this retention to Greek distillers at a price not exceeding 60 frs. per 1,000 lbs., but may not export it. On the other hand, it is bound to spend a certain sum annually in advertising the currants and finding new markets abroad for their sale, and to buy all currants which may be offered it at a fixed rate of 135 frs.

So far all worked smoothly, but now, the company, taking advantage of an ambiguous article in the concession, has fixed the "retention" as above, and this decision, which is regarded as arbitrary and unjust, has been the cause of all the trouble.

The total production for this season is estimated at about 340 million lbs., which, all deductions made, would leave about 240 million lbs. available for exportation.

The Greek Government placed the matter before the Athens Court of Appeal for arbitration, and after sitting for a week this court has delivered its decision against the company, and has fixed the "retention" in kind up to a total exportation of 210,000,000 lbs., and after that in kind or cash (at 115 frs. per 1,000 lbs.) at *the producer's option.*

The immediate result of this decision was a drop of 12 points in the company's shares, although it is said that the company even now will have a clear profit of £60,000.

Lectures on Wine-Making.

At the Ministry of Agriculture, Commerce and Industries, a course of thirty lectures on practical wine making is being delivered gratis, principally for the benefit of small wine producers and with the object of teaching them how to produce a good and sound wine that will keep without the addition of any noxious preservatives.

Amalgamation of Candle Factories.

The amalgamation is announced of the Athens candle factory "Phoebus" and Margaritte's candle factory at Corfu, under the name "Apollo" and with a capital of 2,000,000 frs. (£80,000).

Athens-Larissa Telephone.

The installation of telephonic communication between these two towns has been decided upon and will be produced with immediately. The existing telegraph posts will be utilised and it is expected to have the line ready in a month.

Emigration to America.

This has steadily increased during the last few years. In 1910, 25,838 Greek emigrants landed at New York, in 1911, 25,266, and this year up to the end of July, 34,105.

The Government intends taking serious measures against this exodus, which, on a total population of 3 millions, is a terrible drain.

THE ZERVUDACHI FAILURE.

The receivers in the Zervudachi failure have obtained an authorisation from the Egyptian Government regarding the drainage of the Cherbine Estate along the lines suggested by Mr. G. Choremi, the manager of the estate. A lawsuit was pending between the Government and Messrs. Zervudachi at the time of the latter's failure, which has since been determined in favour of the Government, who have now offered the land to the receivers at three-fifths of the original price.

The receivers summoned a meeting of creditors for September 11 to discuss the question of the Lattakia asphalte factories. These have been seized by the Banque de Metelin, who are creditors for £E42,000, and the receivers have made vain efforts in the Turkish courts to have the seizure set aside. The creditors were to be asked (according to the *Egyptian Gazette*) whether, as Messrs. Zervudachi have been declared bankrupt by an Egyptian court which is not recognised in Turkey, and, therefore, Zervudachi and Co. is still considered solvent there, it is expedient to summon the Banque de Metelin in Turkey to raise the seizure.

The factories in question are said to be very valuable, and the receivers have informed the creditors that they have already received an offer of £100,000 for them from an English syndicate.

ITALIAN CAPITAL IN SERVIA.

The *Deutsche Orient-Korrespondenz* learns from Belgrade that it is expected that the Bancodi Roma will shortly open a branch in that city. In order to convey the impression abroad that the new institution is a national Servian undertaking, a name will be chosen for the bank which will conceal its connection with the Banco di Roma. The new bank will have the task of encouraging Italian trade with Servia, but above all it is to serve for pushing forward the Danube-Adriatic railway.

COUNCIL OF ADMINISTRATION OF THE OTTOMAN PUBLIC DEBT.—The Council of Administration of the Ottoman Public Debt give notice that on and after September 14, 1912, six months' Interest at the rate of four per cent. per annum will be paid against Coupon No. 18 of the Unified Converted Debt. The payment of this Coupon will be made in all towns mentioned on the Coupons up to February 13, 1913, after which date they will be payable in Constantinople only.

Constantinople, September 2, 1912.

Company Notes and Reports.

Kodak (Egypte), Societe Anonyme.

A company has been formed, in accordance with the Egyptian Codes, in Cairo, under the above title, for the purpose of carrying on the business of photographic dealers, formerly conducted by Onnik Diradour, under the style of The Cairo Photographic Stores. The capital is £E12,000, divided into 3,000 shares of £E4 each. The founders are: Kodak, Limited, 1,300 shares; Onnik Diradour, 510 shares; Archag Ferman, 510 shares; Yervant Ferman, 225 shares; Herant Nassibian, 225 shares; William Jones Williams, 100 shares; Armand Notté, 100 shares. One-fourth of the nominal share capital has been paid up. The directors are: Messrs. W. S. Gifford, F. C. Mattison, H. M. Smith, and O. Diradour. Qualification, 20 ordinary shares.

Stein's Oriental Stores, Ltd.

Registered August 9, by Herbert Smith Goss King and Gregory, 62, London Wall, E.C. £320,000, in £1 shares. Business: To take over that of a retail general stores carried on by Doro Stein at Alexandria, Cairo, Tantah, Mansourah, Constantinople, and Salonika, as La Grande Fabrique S. Stein, to carry on that of merchants, drapers, outfitters, furnishing and general warehousemen, silk mercers and weavers, cotton spinners, cloth manufacturers, haberdashers, hosiers, furriers, waterproofers, dealers in indiarubber goods, garden requisites and agricultural implements, manufacturers of and dealers in leather goods, ironmongery, turnery and household fittings and utensils, cabinet-makers, publishers, printers, grocers, dealers in provisions, drugs, chemicals, stationery and fancy goods, motor and cycle manufacturers, confectioners, ball furnishers, caterers, etc. The signatories are:—S. A. Sharpe, 205, Friern Road, Dulwich, S.E.; J. Barnes, 7. Walcot Gardens, Kennington, S.E.; E. J. Burrows, 44, Heysham Road, South Tottenham, N.; F. W. Bailey, 10, Empress Avenue, Chingford, Essex; C. A. Ellerslie, Sylvan Road, Snaresbrook; F. D. Billett, 5, Blurton Road, Lower Clapton, N.E.; W. R. Smith, 6, Lawley Street, Lower Clapton, N. (one share each). Minimum cash subscription, seven shares. The first directors (to number not less than two nor more than nine) are Doro Stein (governing director), Maximilian Stein and Siegfried Stein, all of Vienna, and Ladislaus Birnbaum, of Budapest. Qualification, £1,000 shares. Remuneration, £100 each per annum (£100 extra for the chairman). Directors' borrowing powers restricted to the amount of the nominal capital. Registered office, Salisbury House, London Wall, E.C.

Piræus-Athens Larissa Railway.

The arbitrators in the differences between the Société des Chemins de Fer Helléniques (Piræus-Athens-Larissa Railway) Company and the Greek Government have just issued their award. Of the sum of 6,000,000 frs. claimed by the company from the Government 584,478 frs. has been allowed, with 70,137 frs. as interest. In addition, the Government is to repay to the company the sums deposited by the latter as guarantee, and to pay the outstanding construction instalments. Settlement is to be made on October 1, and after this date amounts not paid will bear interest at 6 per cent.

Walker and Meimarachi.

The annual general meeting of shareholders of Walker and Meimarachi, Limited, was held at Winchester House, E.C., on the 10th inst., Mr. H. A. Rau in the chair. The Secretary (Mr. Frederick W. Wicks, F.R.I.S.) having read the notice convening the meeting and the auditors' report, the Chairman, in proposing the adoption of the report and accounts, said that the first item which called for remark was in reference to the mortgage debentures. During the year under review they had found it necessary to issue debenture bonds to an amount of £5,260, thus adding that amount to the indebtedness under this heading as compared with the previous year's figures. Under the provisions of the trust deed, however, it was incumbent upon the board to redeem a fixed amount. £5,160 of debentures were thus purchased, and the net result was that the debenture indebtedness had been reduced by £500 net, leaving outstanding the sum of £29,840. As regards the item of sundry creditors, the total indebtedness on April 30 last was £14.230, as compared with the previous year's figure of £33,472, which meant that during the year the company had liquidated the whole of its indebtedness as far as trade creditors were concerned, and that at the date of the balance-sheet all goods received had been paid for. Referring to the loan account, the Chairman said that this showed considerable reduction on the figure appearing in last year's balance-sheet. The accounts showed £3,189, while last year it was £21,121, and it had still further been reduced to a very small amount. The company's goods on hand represented a sum of £72,718, after allowing for depreciation written off to trading account. With regard to sundry debtors, amounting to £39,502, after deducting £2,268 for bad debts due in Alexandria and Cairo, and after deducting a reserve of £27,838 previously made, the chairman was inclined to think that the amount which had been provided in the past in respect of bad and doubtful debts amply met the situation, and consequently there should be no difficulty in ultimately encashing this figure. The profit and loss account showed a total debit of £51,532, which included the whole of the writing-off of previous years and of this year, and did not necessarily demonstrate a trading loss. Nevertheless, the year's trading had been an exceedingly bad one for the company. Since last year considerable economies in the management of the business had been introduced. Branches which were unprofitable had been closed and the upkeep charges saved. The chairman stated that the present accounts did not reflect the total saving of the economies, as some of them would naturally only appear in the following balance-sheets. Although the figures were so unsatisfactory, the company itself was not in an insolvent condition. The financial position of the company had improved and the value of its assets was considerably in excess of the liabilities. The total amount due to debenture holders and creditors figuring in the balance-sheet was approximately £48,000, and to-day it was still further reduced, while the value of the assets, including land, stocks, and book-debts, but exclusive of any goodwill which still exists, represented a sum of £190,000. The great handicap of the company had been the fact that a considerable portion of its capital had been for many years locked up in land, part of which could not be obtained possession of. A further incubus on the company had existed for many years in the shape of the litigation that had been going on with Messrs. De Vries and Boutigny, who had contracted to purchase part of the land, but had not kept their engagements. He was pleased to say that at last the company had regained possession of the land in dispute, and they were now in a position to negotiate for the realisation of this asset. This, the chairman said, brought them to a consideration of the future policy of the company. Without funds it was impossible for them to continue. The finances of the company did not permit of large purchases. He did not wish the shareholders to imagine that they had closed down; they were still one of the most important firms in Egypt, their clientèle was good, and their good-will of value, but unless they could keep pace with their competitors, established in more modern and better-situated premises, the present value of their good-will would be considerably diminished. Negotiations were already completed for the purchase of the business by a local firm, and, in the absence of further funds, this would be the only alternative to a gradual sale of their assets at best, which would be a tedious as well as a costly process. Consequently it was the intention of the Board to effect a sale as soon as practicable on the best possible terms.

After some discussion, a resolution empowering the directors to dispose of the business as a going concern on the best terms possible was put to the meeting and carried with three dissentients. A motion that the meeting should be adjourned for a month to enable the Egyptian shareholders to be consulted was lost on a show of hands.

THE EGYPTIAN LOANS BANK CASE.

After the fire which destroyed the warehouses of the Loans Bank in the Tewfikieh district of Cairo, the insurance companies arrived at a compromise for the payment of the indemnity for the losses sustained by the bank in the fire. Later, following information given to the companies by M. James Adda, an employee of the Loans Bank, accusing M. Gallet and M. Segré, the manager and the sub-manager of the Loans Bank, of having falsified certain entries in the bank's books, whereby the value of the property destroyed was made to appear greater than was actually the case, the insurance companies laid a complaint with the Consular authorities against the two above-named gentlemen.

M. Gallet got the charge set aside on the ground of insufficient evidence by the Aix Court, and in turn laid a charge of defamation of character and attempted blackmail against his erstwhile employee Adda with the Austrian Consul, but as Adda's nationality was not established, the matter was delayed while the Austrian Consul referred it to the Trieste Imperial Court. The latter court has now issued an order for Adda's arrest, and he will be tried before the court at Trieste on September 10. Meanwhile, being unable to furnish bail, he remains in the Consular prison here until the trial.

The charge against M. Segré will be heard before the Italian Consular Court at Cairo on September 16.—*Egyptian Gazette.*

PERSIAN POSTAL CLAIMS.

With reference to the paragraph on page 373 of our issue of July 26, relative to the new regulations issued by the Persian Government respecting postal claims, H.M. Legation at Teheran reports that the Persian Treasurer-General has stated that claims arising out of postal robberies perpetrated on the high roads will only be paid when he has sufficient funds at his disposal to satisfy all claimants.

THE EASTERN BANK, LIMITED.

Head Office: 4, CROSBY SQUARE, LONDON, E.C.

Subscribed Capital, £1,000,000. Paid up, £400,000. Reserved Liability of Shareholders, £600,000.

Branches:

BAGDAD. BOMBAY. CALCUTTA.

Board of Directors.

The Right Hon. LORD BALFOUR OF BURLEIGH, K.T. (*Chairman*).

Sir JACOB E. SASSOON, Bart. EMILE FRANCQUI, Esq.

J C. GEORGES BOUILLAT, Esq. J. S. HASKELL, Esq.

NOTES OF THE WEEK.

With the present state of the peace negotiations between Italy and Turkey we deal elsewhere in this issue. It may be of interest, however, to record here what is known of the various attempts that have been made to put an end to the Turco-Italian war. The initiative was first taken by Russia, and led to a request by the Powers in Rome for information regarding the terms on which the Italian Government would accept offers of mediation. Before the tenour of the Italian conditions could be communicated officially to the Porte the latter had instructed its Ambassadors in the capitals of Europe to inform the respective Governments that the Italian terms, as far as the Porte had cognisance of them, were unacceptable. On March 25 the Emperor William and the King of Italy met at Venice, but in spite of the hopes formed in Italy of this meeting, which was clearly not altogether unconnected with the war, no further step was then taken in the direction of peace. In the second week of April Russia again undertook to sound the Turkish Government on the subject of mediation, but her efforts were unsuccessful. The first direct *pourparlers* date from June, and were begun "unofficially," according to the information of the *Temps*, between Signor Modiano, a Salonika lawyer of Italian origin, and Naby Bey, a former Chancellor of the Turkish Embassy in Paris and Turkish Minister in Athens. After the fall of the Turkish Cabinet Naby Bey was joined by Fakhr-ed-Din Bey, Turkish Minister at Cettinje. At Caux they met Signor Fusinato, a former Under-Secretary of State for Foreign Affairs, Signor Volpi, Financial Adviser, and Signor Bertolini, a Deputy. The first definite proposals presented by the Turkish Government were rejected by the Italians, and it was not until the beginning of September that the draft scheme, to which we refer on another page, was submitted. These terms are supposed to constitute a basis of agreement that is acceptable to both parties, and it is said that plenipotentiaries to carry through the final negotiations have already been chosen.

In view of the advanced stage claimed for these peace negotiations, it is not a matter for surprise that a prolonged lull should have to be recorded in the military operations in North Africa. The possible limitations of a declaration of peace between the Turkish and Italian Governments, however, is well illustrated by the news of a serious engagement that took place on Tuesday at Derna. The Arabs, led by Enver Bey, and supported by artillery, attacked the Italians on two sides in the direction of Casa Aronne. Hard fighting continued for eight hours, but the Italians report that the enemy was eventually repulsed, with the estimated loss of a thousand killed and a large number wounded. The Italian losses are set at sixty-one killed and 113 wounded. This engagement is regarded in Rome as the second most important battle during the war, and it has served to bring home to the Italians the possibility of having to cope with serious opposition and subsequent guerilla warfare on the part of the Arabs, even when peace has been officially ratified with the Porte. The inclusion in the alleged terms of agreement of a stipulation that Arab goodwill should be placated by Italian *douceurs* shows that this aspect of the situation has not been overlooked by the respective Governments. But the ratification of peace would at least impose upon the Porte the necessity of making a whole-hearted attempt to secure Arab neutrality. Provided Italy is content with a narrow zone in Libya, and the relations of the Sultan to the Moslems of the Hinterland are not disturbed, the Arab problem should not present insuperable difficulties. Trouble would then only be likely to arise if the Italian occupation were found to clash with the preconceived ideas of the Arabs regarding the latitude that ought to be allowed to their trade, particularly the contraband traffic in arms. In the territory now occupied by the Italians there is no reason to suppose that the Arab population has much cause to be dissatisfied with its lot. The Italian efforts to confer upon it the benefits of a strange civilisation may not be invariably appreciated; but the introduction of ordered government with security of property and person speaks for itself, and, in the absence of an excessive competition from too great an influx of poor Italians will make for a contented populace.

Each week that passes without a declaration of war in the Balkans sees the prospects of an outbreak more remote. Bulgaria, Servia, and Turkey in Europe are agricultural States, and the constraint would have to be very severe that would cause any one of them to risk a challenge to hostilities during the harvest. The interval between the harvest and the time when campaigning loses all attractions owing to the severities of winter is short. That period is now rapidly passing, and with it, we may hope, the "war fever" that the Bulgarian and Servian Governments have been watching anxiously, but skilfully, in their respective patients. The massing of Turkish troops on the frontier may also have contributed to wiser counsels among the firebrands of the Balkan States. But the causes of the dangerous excitement produced in these countries remain, and the Turkish Government would be ill-advised if it were to

Digitized by Google

suppose that troops alone can effect a permanent settlement of the Balkan question.

In view of the conflicting intelligence from Albania, it becomes necessary to revise the popular conception of that territory as a homogeneous unit of the Ottoman Empire, and to accept the Turkish view of a congeries of by no means harmonious elements. According to the latest reports, the situation in the north-west is critical. Communications have been interrupted for some time, and the Malissori are represented as being in a state of general insurrection and threatening to besiege Skutari and Durazzo. A week ago a member of the Government Commission of Inquiry declared that the condition of things in the province had been seriously exaggerated. The loyalty of the Albanians to the Empire, he contended, was above suspicion, and, although they had been agitated by a long spell of misgovernment, they would at once subordinate their grievances to the interests of Turkey, if the integrity of the latter were threatened. Any arms that might have been taken from Government depôts, he was confident, would be returned, and, in any case, the number of insurgents was relatively small, while the Turkish troops were in considerable force in the country. He believed that the coming elections would be held under normal conditions and that all the Albanians would go to the polls. "The remaining task of the Commission of Inquiry is merely to give the reforms a start, and then leave the complete application of them to the regular officials." While there may be many elements of truth in the official view, it hardly does justice to the intensity of feeling among the Albanians. The demands, however, of the responsible leaders would not seem to be excessive, and may be said to have been covered already by the promises of the Turkish Government. But, as an Italian organ has well expressed it, "the trouble is that Turkey has the habit of promising on a large scale, but paying with short measure."

Signs are not wanting, however, that the Turkish Government is making an effort to profit by its experience. Last week we referred to the practical advantages that Turkey could derive from the employment of British advisers in the various Departments of State, and we expressed the hope that the Porte would see its way to avail itself of such assistance. Only a few days later a telegram from Constantinople announced that the Council of Ministers had resolved to engage six Britons in the quality of advisers to the Departments of Public Safety, Police, Posts and Telegraphs, and Statistics. Advisers belonging to other nationalities, it is understood, will subsequently be engaged for other Departments. As the success of the most perfect system of reforms depends on the qualifications of those who are employed to administer it, we may hope that the Porte will allow its officials in Albania and Macedonia to benefit from any expert supervision that may be available. It cannot be too often repeated that Great Britain has no territorial ambitions in Turkey, while many generations of experience in administration has evolved a *genus* of British official of recognised ability who is capable of identifying himself with the interests of the country with which he may be associated without sacrificing his independence of judgment. This type of official is not well known in Turkey; but there is no reason why, after some years of close acquaintance with it, Turkish officialdom should not itself evolve a similar class. The operation of the leaven, however, may be slow, if not used in sufficient quantities.

With the suppression of the state of siege in Constantinople it is to be hoped that Ghazi Mukhtar Pasha's Cabinet is acquiring greater confidence in its capacity to direct the destinies of Turkey without recourse to extreme measures. The inclusion of Djavid Bey, an ex-Minister of Finance, among those who were sentenced to short terms of imprisonment for the sins of the Committee's organ, the *Tanin*, would seem to be regarded as a tactical error on the part of the Government, which should be at pains not to give occasion for accusations of party spite. The crucial test of the new Cabinet will consist in its ability to direct the coming elections in such a way that, while eliminating undue influence on the part of the Committee, it avoids giving them a partisan bias in its own favour. Any prospect of a political truce in the face of the dangers threatening the Empire appears to have been eliminated by the result of the congress of the Party of Union and Progress. As far as the election of officers serves as an indication, the extremist element remains in the ascendant. The new head of the Committee is the Egyptian Prince Said Halim, who was President of the Council of State, with the rank of Minister, in Said Pasha's Cabinet. He is said to be invested with considerable authority in the exercise of his functions, and his foreign experience may tend to introduce a spirit of moderation in the counsels of the Committee.

A cordial welcome is assured to the Russian Minister for Foreign Affairs on his approaching visit to England from all those who are connected with or follow at a distance the course of events in the Near and Middle East. While there is no room for any striking developments in the policies pursued by the British and Russian Governments, the relations of the two Powers in the countries dealt with in these columns are so close that a personal exchange of views between those who are charged with the conduct of the foreign affairs of their respective States cannot fail to exercise some influence, whether for good or for ill. In the Near East there is much to occupy the attention of the two Governments, but in no respect could M. Sazonoff's visit be put to greater profit than if it were to result in a definite and satisfactory *modus operandi* for the two Governments in Persia. The subject has been discussed at length in these pages, and expression has been given to the very general feeling that the united wisdom of the two Governments ought to be able to make a greater success of their co-operation than has been achieved hitherto. We believe that M. Sazonoff in Russia stands for the school of thought that has some regard for the comity of nations, and recognises the responsibilities of power. He will have been able to dissociate himself from much that has been done in Persia in the past, and is probably as eager as Sir Edward Grey to agree upon a line of action that is more in keeping with the prestige of Great Britain and Russia among the nations. We trust, therefore, that this visit to England will strengthen M. Sazonoff's hands in his own country, that the two Governments will be able to decide upon a definite constructive policy for the promotion of Persia's interests, and that the shortest possible time will elapse before that policy takes effect for the betterment of the country and its people.

The report of a tour of inspection undertaken by Colonel Asser, Adjutant-General and Acting Governor-General of the Sudan, up the White Nile and the Sobat and Pibor rivers serves to indicate the readiness with which the natives in Egypt and the Sudan avail themselves of the advantages of firm government. Colonel Asser inspected the Akabo post, but being prevented by the lowness of the river from reaching the new Pibor post, he visited Gambella, on the Abyssinian frontier. The natives in the district covered by the recent Anuak expedition were found to be returning to the villages and to the cultivation of the fields.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)

Constantinople, September 14.

The Peace Negotiations.

During the last few days rumours of peace have been in the air, and reports from well-informed sources indicate that the latest proposals made by Nabi Bey and Fahreddin Bey, the Turkish delegates, are regarded as containing the elements of a settlement. It may be that this belief is over-optimistic, and that the Italian decree of annexation will still stand in the way of peace, but there can be no doubt that the present difficulties, both financial and political, of Turkey have rendered her statesmen, with the exception, perhaps, of Kiamil Pasha—who continues to utter the formula, "Peace when the Italians have *conquered* Turkish Africa, but not till then"—more ready to come to terms with their Italian opponents. The report is current, and may be well founded, that the latest Turkish proposals involve the surrender of the entire administration, civil and military, of Tripoli to the Italians, provided that the latter agree to recognise the suzerainty of the Sultan and the appointment of a "Vekil" (representative) of his Majesty by Imperial firman, who will be titular Governor-General of the country. His position will resemble that of the present Bey of Tunis if he is some ordinary Arab notable or old Turkish functionary; but if, as has been suggested, the Sheikh es Senussi becomes the Padishah's representative, the "Khedive of Tripoli" will have to be reckoned with by Italians as well as Turks.

The Situation in the Balkans.

The amount of diplomatic activity to which Count Berchtold's apparently very anodyne proposals have given rise is having a disturbing effect on the nerves of Near Eastern politicians, especially in Bulgaria, where Article xxiii. of the Treaty of Berlin is being brought to the front again by the supporters of the Government, who probably feel that, unless something can be done, and done quickly, for the Macedonian Bulgars, the war party may get the upper hand. In Greece the not unnatural fear of the partisans of the "Great Idea" that the nascent nationalism of the Albanians may be directed against the Greeks and the Hellenic propaganda in Epirus has resulted in the convocation of numerous public meetings, and, one regrets to add, in an increase of activity on the part of the Ethniki Hetaireia, whose agents have murdered several prominent Tosk Albanians. Servia has also felt the influence of the general *malaise*, and the horrible cruelties committed by some Nizam troops from Anatolia, who got out of hand at Berane, have left a very bad impression at Belgrade. It would seem that an extension of the reforms promised to the Albanians and to the Macedonian peoples would pacify the Balkan States, but any such reform would be bitterly opposed by the Turkish ascendancy party in Roumelia (European Turkey).

The C.U.P.

The Congress of the Committee of Union and Progress has terminated with the election of the Secretary-General for 1912-1913, and of the Central Committee of Union and Progress. Prince Said Halim of Egypt is the new Secretary-General. He is a wealthy and well-educated man, who is believed to have some business ability and is certainly energetic. He knows his Europe much better than most of the Committee leaders, whose horizon was distinctly limited, has not a few European friends, and is believed to be a Progressive by temperament. But it is doubtful whether he knows anything worth mentioning of the provincial problems of Turkey. The Central Committee contains all the members of the old "Camarilla," as it was unkindly called, except Rahmi Bey, with an infusion of men of more liberal and moderate views, such as Suleiman Eff. Bustani, Hadji Adil Bey, Hussein Kiazim, late Vali of Salonika, and others. The Central Bureau, which is presumably composed of the leaders of the Central Committee, contains five members—viz., Talaat Bey, ex-Minister of the Interior; Ismail Hakki Bey, late Vali of Van; Abdullah Sabri Eff., Zia Bey, and Midhat Bey, late M.P. for Seres. Talaat and Midhat are generally termed extremists. Of their colleagues of the Central Bureau nothing is known, but it is presumed that Talaat will remain the dominant force in the Committee, which professes to look forward with much confidence to the result of the elections.

Earthquakes.

A sharp earthquake shock was felt here last night at about 1.30 a.m. No damage seems to have been done, but the motion was very violent during the brief time it lasted, and the population, though it did not give way to panic, was much alarmed. Readers of The Near East will be delighted to hear that the Commission formed by the Greek Patriarchate for the relief of the sufferers from the recent severe earthquake in the Gallipoli region has done excellent work already, and will do more. Over £T70,000 have been collected, and clothes, food, and other necessaries of life continue to be shipped to the scene of the disasters. An architect has been appointed to supervise the construction of large wooden barracks for the villagers who are homeless, and over £T15,000 worth of wood has been purchased for the purpose, half of which has already arrived on the spot. £T10,000 worth will be purchased during the ensuing week. The great majority of the sick and wounded who are being cared for in the Greek hospitals here are doing well. As they recover they are given clothes, a small sum of money, and a ticket to the port nearest their village. Of the orphan children, some have been adopted by childless persons, while others are being looked after at the Greek Orphanage. The head of the Commission, the Archbishop of Trebizond, believes that all the sufferers will be under roofs in three weeks' time, *i.e.*, well before the weather breaks.

THE EARTHQUAKES IN TURKEY.

The Ottoman Embassy has informed the Lord Mayor that the following figures briefly represent the damage caused by the recent earthquakes on the shores of the Sea of Marmora and in the districts of Gallipoli and Rodosto. There are in these districts 109 villages and 24,612 houses, and a population of 106,618. There have been wrecked 32 Government buildings, 10,591 private dwellings, 316 shops, 35 mosques, and 11 churches. In addition 4,920 private dwellings were partly destroyed, while 1,115 persons were killed and 2,122 injured, and 1,249 head of cattle were destroyed. The number of people requiring assistance exceeds 29,000.

STATE OF THE SUDAN.

Under date of the 12th inst., Reuter's Khartoum correspondent reports that Colonel Asser, Adjutant-General and Acting-Governor General of the Sudan, returned to that city on the preceding Sunday fro ma tour of inspection up the White Nile and the Sobat and Pibor rivers, including the Akobo post. The natives are returning to the villages and to the cultivation of the fields. Being prevented by the lowness of the river from reaching the new Pibor post, Colonel Asser visited Gambeila on the Abyssinian frontier. He was gratified to observe that there was a large export trade in coffee to the Sudan.

The feast of Bairam at the end of the fast of Ramadan was celebrated to-day, adds the correspondent, by a review of the troops at Khartoum, Halfa, and Omdurman. A levee was held at the palace in Khartoum by Colonel Asser. The officers, officials, sheikhs, principal residents, and Zobeir Pasha attended.

ENGLISH BOYS' SCHOOL,
CONSTANTINOPLE.

The New School Building will be opened on September 15th. The School House has accommodation for forty boarders. Resident staff, six English masters and English matron.

Healthy situation on Nishantash Hill, facing open country; drainage sanitary fittings, bath and lavatories by English sanitary engineers

Preparation for Commercial Education Examination of London Chamber of Commerce. French and Turkish visiting masters. SPECIAL ATTENTION TO FRENCH. Turkish and Latin optional. English games. Fees moderate.

PROSPECTUS can be had on application to the Chairman of the School Committee—

A. T. WAUGH, Esq., *British Consulate-General*, Constantinople.

ENGLISH SCHOOL,
NICOSIA, CYPRUS.

Preparation for Public Schools and for Commerce
Modern Languages. Turkish and Arabic if desired

ENGLISH GAMES.

Complete charge taken. Very healthy climate. Boys remaining for the summer holidays are taken to the Mountains. Moderate Terms.

Apply REV. CANON F. D. NEWHAM, B.A.Cantab., Director.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, September 14.

The Doiran Outrage.

Looking at the situation from all sides, it, unfortunately, cannot be said to have improved during the last fortnight. There are certainly some who cry "Peace, peace! when there is no peace," but such do harm to their country instead of good. Far better were all to face the position courageously, and, putting aside personal aims, ambitions, and hatreds, unite in a supreme effort for the common weal—if it is not already too late. The last few days have given us the bomb outrage in the market-place at Doiran, by which over thirty lives have been sacrificed and some sixty people grievously wounded. As far as is at present known, there was no sequel in the way of a general riot, but as nobody has been allowed to leave that town and no telegrams accepted to or from it, full and authentic details have not yet reached us. Meanwhile soldiers have been sent from here, but with what object still remains to be seen. There are also persistent rumours of troubles in Krushevo, but here again information is lacking. One thing is sure—such outrages will still go on. For, with or without just cause, the people have become desperate, and have made up their minds to bring things to a head. They see the Albanians have got all they want by intimidating the Government and terrorising the country, and so, as they have neither the arms nor the same advantages, they have decided to once again adopt what they consider the only course open to them, being prepared to sacrifice everything and everyone to draw the attention of Europe to their grievances. This was the prevailing feeling that had been steadily and surely growing at the time of the granting of the Constitution from which so much was hoped. It then toned down in the anticipation of brighter days, bu' it is now more intense than ever, and is daily growing stronger, Ishtip, Kotchana, Doiran being the outcome of it. To outsiders it is a most barbarous policy, one to be utterly condemned and abhorred, but its adherents are desperate men, who consider themselves justified in using any and every means that good may ensue in the end.

The Kotchana Inquiry.

In your last letter from Salonika it was said the Kotchana inquiry having brought out a good deal of the truth, the Council of Ministers had decided to try by court-martial the civil and military authorities of that town. It was also suggested that much depended on the finding of the Court; but it would seem that, unfortunately, procrastinating counsels have prevailed, and Shukri Pasha, together with Arthur Effendi, President of the Criminal Court of Appeal in this town, have been appointed to hold a further inquiry.

Albanian Affairs.

Meanwhile, is even the Albanian question in a hopeful way of settlement? Not a day passes without some acts of illegality and outrage being committed. For more than a week the mails have not been able to pass between Mitrovitza and Ipek; while in the former town the Albanians have sent off the Mohammedan Judge, the Vice-Procureur, the Commissary of Police, the Chief Accountant, the head of the telegraph office, and others. Assassinations, the raiding of cattle and sheep, the taking of arms by force are of daily occurrence; and it is said Ibrahim Pasha has at last been authorised, should he find it necessary, to take military measures against that famous chief, Issa Boletin. He is considered to be in favour of the old régime, and to be, together with Idriss Sefer and Riza Bey, at the head of a party which wants ex-Sultan Abdul Hamid to be set at liberty and a return to the situation existing before 1908, this being the group eager to march on Salonika to carry out that purpose. And what does Ibrahim Pasha himself think of the outlook? In a report to the Government he says:—"I am now busy seeking capable, trustworthy men devoted to public affairs. This search is by no means easy, all the less so as the good men—those who would make model officials—reject my proposals owing to the present situation, which would, they think, render all their labour sterile." In fact, everywhere there is trouble, from Albania to Kurdistan and on to the Yemen; while Bulgaria and Montenegro are straining on the leash and Servia is excitedly on the watch. And are coming events casting their shadows before them? The last-mentioned country has now prohibited the export of wheat and barley for a certain time, and the large Vienna firm of Stein, clothiers, haberdashers, etc., with branches in Turkey and Egypt, has been turned into a British limited liability company. Of course, people say this change is in view of a move on the part of Austria which might lead to a renewal of the boycott of three years ago. But Salonika is famous for its gossip!

TROUBLES IN THE LEBANON.

(From Our Own Correspondent.)

Beyrout, September 3.

In some recent notes on the Lebanon I ventured to criticise the Organic Law as being framed too much on religious and racial lines, the apportionment of Government offices being determined more by considerations of party and sect than by personal qualification and merit. The consequence is that after about half a century of such a régime the old spirit of racial, or rather religious, animosity which culminated in the memorable massacres has scarcely diminished, in spite of the spread of education and general enlightenment. Only a few days ago a case of murder, laxly dealt with by the authorities, threatened to degenerate into a conflict between Druses and Christians that might have recalled the days of 1860 but for the timely intervention and wise action of Mr. Cumberbatch, the British Consul-General. It must be owned that an ugly spirit of lawlessness has lately been manifesting itself among the Druses. Cases of robbery and assault have for some time been committed by them at Aley, that very important summer resort, where Christians are in the summer in an overwhelming majority, but where the Mudir has to be a Druse in conformity with the prescriptions of the famous Organic Law. And quite lately there occurred at Ain Sofar an incident which, although unimportant in its actual results, was yet very serious in that it involved potentialities of great danger.

On August 24 two or three Lebanese gendarmes were sent out from Ain Sofar to Sharoun, a neighbouring Druse village, to arrest some men for having robbed a Bedouin sheep dealer. The men being recalcitrant, the gendarmes had to fire on them, killing one and wounding the other, while one of the gendarmes was seriously wounded. The Druses of Sharoun already had a grudge against the gendarmes for having previously arrested the wrong offenders among them, and now the killing of one of their number by those very gendarmes brought matters to a head. A party of over twenty-four men, well armed, proceeded to Ain Sofar and clamoured for the gendarmes to avenge their dead. Having been told that one of them was hidden in the Grand Hotel Casino, they surrounded the building, keeping up a fire in the meantime in the direction of the Caracol; and it is said that a stray bullet struck the window of one of the apartments occupied by an Egyptian lady. This gave rise to the alarming rumour that the Druses were making a general assault on Ain Sofar. The conduct of the officer in command on this occasion was deserving of the highest praise. Alone he advanced on his horse, and, without making use of force, but merely by the exercise of cool courage and an air of authority, succeeded in dispersing the angry, armed crowd, not, however, till his horse had received a bullet in the leg. Soon afterwards there came on the scene, with a few gendarmes, Nessib Bey Jemblatt, the Kaïmakam of the district, and the wealthy chieftain of the larger camp of the Druses (the other party having for chief Emir Mustapha Arslan). Nessib Bey was at first subjected to severe criticism for having sent a man to parley with the people of Sharoun instead of investing their village and making wholesale arrests. But he chose the wiser course, for the force with which he arrived was inadequate to cope with the excited people of a whole village notorious for their bad

Digitized by Google

character; but by exercising his double authority, first as their chieftain and then as the representative of the Government, he succeeded at last in getting about twenty-four of the manifestants to deliver themselves into the hands of justice.

On August 23 a Christian was murdered by some Druses in the village of Abadieh, and, thanks to the laxity of the authorities, the murderers remained at large. Before the corpse was taken away for burial the brother of the murdered man, in the course of a frenetic lamentation, discharged his gun. Thereupon the Druses, taking the shot for a challenge, prepared themselves for the fight, and some desultory shooting on both sides was actually started, but happily without any casualties. Meantime the British Consul-General, in going up by train to his mountain residence, perceived an unusual commotion at Jamhour and Araya, the nearest places to the scene of trouble. On his arrival at his house near Araya he found that Naoum Bey Shoukair, of the Sudan Intelligence Department, who is on leave, and happens to live next door to him, had, with his professional "flair," scented trouble in the air, and through skilful inquiries had learned that the Christians of the neighbouring villages were preparing for a general rising and that not less than 800 men were up in arms and ready at a moment's notice to march against the Druses. The latter were making similar preparations, and not less than 1,000 men were ready for action. Secret emissaries were being continually employed to keep the different centres well informed of the development of events.

British Consul's Action.

The British Consul-General was not slow in gauging the importance of the situation, and realised that prompt action was necessary. It was about 10 p.m. when he set out with Naoum Bey to the scene of trouble. On his arrival at Araya he found in the outer court of the Maronite Church a large and excited crowd, and yet, strange as it may seem, no gendarmes were to be seen near by nor on the road to Abadieh. The authorities seemed to have no eyes to see or ears to hear. Presently two young men, who had been in the United States, came forward and told the British Consul that, as they could speak with him without the aid of an interpreter, they had been delegated by their people to explain matters to him. They spoke in very excited language, and, after indulging in a tirade against Government apathy, they bluntly declared that the people had no other alternative but to take the law in their hands and act as the self-constituted guardians of public security. The British Consul showed them, of course, the dangerous consequences of such a rash decision, which could not fail to react on them later. He then assured them that if they forbore from any further hostile demonstration and dispersed at once he would undertake to satisfy their demands by causing the arrest of the murderers to be effected without delay. Such an assurance, coming from the representative of a Power renowned for its veracity and justice, and supposed to have a claim on Druse sympathy and obedience, quickly exercised a calming effect. The British Consul then proceeded to Abadieh.

The Miralai (commandant of the Lebanon Militia) had arrived with a supplementary force of about two dozen Turkish dragoons. The Kaimakam had also arrived. But instead of grappling with the initial cause of the trouble—the arrest of the murderers—they were busying themselves with side issues. They were making arrests of those that took part in the disturbance following the firing of the shot by the brother of the murdered man, and chiefly among the Druses. It was then that Mr. Cumberbatch saved the situation. He called a few of the leading Sheikhs of the Druses, and informed them that, as he knew they looked to the British for protection and guidance, he expected them in this instance to entrust their case to him, otherwise he would wash his hands of them all. He then told them plainly that he expected them to deliver up the murderers at once. Some secret parleying ensued, and the Druses did not seem disposed to come to a decision. Then Mr. Cumberbatch told them that if they could not tell the whereabouts of the men he would, and he startled them by the declaration that two were hidden in the Khalwe (the Druse prayer-house), while the third was on his way to a village near by. He added wisely that, if the men were delivered they would not be imprisoned right away as convicted criminals, but should have the chance of a proper legal trial. This put an end to any further hesitation on the part of the Druses. Mr. Cumberbatch then counselled the Miralai to arrest only the ringleaders, and in equal numbers on both sides, so as to give no cause for ill-feeling or any suspicion of partiality. And thus a general conflagration was averted, thanks to vigilance, promptitude, and calm judgment. May our Lebanese authorities derive some benefit from the lesson. Meantime it is satisfactory to learn that the Maronite Acting-Governor-General has shown his appreciation by addressing a letter of thanks to the British Consul-General.

NOTES FROM CYPRUS.

(From Our Own Correspondent.)

Nicosia, September 8.

Communications.

His Excellency the High Commissioner, accompanied by Lady Goold-Adams, has been visiting the Paphos district. He took the opportunity of informing a deputation that he had arranged for the mail steamer between Cyprus and Egypt to include Paphos as a port of call once a week in its summer itinerary, and once a month during the winter season. The idea of linking up Paphos by motor service, which was generally thought likely of fulfilment, has had to be abandoned for the present, owing to financial difficulties in the way of subsidising the motor-car company.

Goats v. Sheep.

His Excellency referred to the serious obstacle to reafforestation caused by the depredations of goats, and said that the Government on that account contemplated encouraging the breeding of sheep and decreasing the number of goats. A draft Bill dealing with this subject had already been prepared. The native breed of sheep was good. He had had two sheep sent from the Government farm at Athalassa to Africa, and he had been requested to send twenty more. Wool had been sent from the Athalassa flock to England, and had been reported on in a very encouraging manner. The annual export of wool from Cyprus should be a matter of £40,000 instead of, as at present, only £14,000.

Co-operative Credit Societies.

I understand that Mr. Th. Theodotou, member of the Legislative Council, who, as your readers will remember, has recently been in England, has been visiting Italy on his return journey with a view to informing himself in regard to the system of co-operative credit societies in that country. There is a strong feeling in Cyprus in favour of establishing this type of village banks, and it is probable that legislative measures will be considered in next year's session for providing the necessary legal machinery for their establishment.

ALLIANCE

ASSURANCE COMPANY, LIMITED.

Head Office: BARTHOLOMEW LANE, LONDON, E.C.

Assets Exceed £23,000,000

Chairman: The Right Hon. LORD ROTHSCHILD, G.C.V.O.

Among the classes of Insurance Business transacted by the Company are the following:—

(1) **LIFE INSURANCE**, with and without Profits, with special provisions for the payment of Estate Duties.
(2) **FIRE INSURANCE** of every description.
(3) **INSURANCES TO COVER LOSS OF RENT, INTEREST AND PROFIT** consequent upon Fire damage to property.
(4) **MARINE INSURANCE.**
(5) **BURGLARY, THEFT, and PLATE GLASS INSURANCE.**
(6) **ACCIDENT**, including Personal Accident, Motor Car and Employers' Liability Insurance.

Fidelity Guarantee and Sinking Fund Policies are also granted.

Applications for Agencies are entertained, and Prospectuses with other papers may be had on written or personal application.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 11.

Conspirators' Appeal Dismissed.

The appeal lodged by Imam Wakid, Mahmoud Taher El Arabi, and Mohammed Abdel Salam against the sentence of fifteen years' imprisonment passed on them by the Assize Court for their complicity in the recent conspiracy, came before the Cassation Court on Sunday. The grounds for the appeal were: That the proceedings were not in reality public, as only the police and the Press were admitted; that the inquiry was not carried out in the period fixed by the law; and that in the judgment, the offence was not clearly proved or the case exposed in accordance with the requirements of the law. The Cassation Court, over which Yehia Pasha Ibrahim, the President of the Native Court of Appeal, presided, made short work of the case, and after hearing the Government's representative dismissed the appeal. This result was quite expected; for the grounds, raised in the "recours," were obviously untenable and only given as a matter of form.

The Arrival of Sheikh Shawish.

The sensation of the week has been the arrival under police escort from Constantinople of Sheikh Abdel Aziz Shawish, who had been arrested by the Turkish authorities at the request of the Egyptian Government. The Khedivial Mail s.s. "Saidieh," by which the celebrated Extremist Nationalist was travelling, was due to arrive in Alexandria at about nine o'clock on Sunday morning. The authorities feared that some sort of demonstration would be organised, and so the most elaborate precautions had been taken, and a special detachment of police had been drawn up at the landing quay. By nine o'clock an unusually large crowd had foregathered, including a very fair sprinkling of better-class Egyptians, but time went on and no "Saidieh" appeared, so gradually the people moved away. Even those whose patience had triumphed were doomed to disappointment, for when the "Saidieh" eventually steamed in and stopped at her moorings no Sheikh Shawish disembarked from her. The authorities, fearing possible trouble, had stolen a march on the crowd. The steamer stopped, as usual, in the outer harbour. Immediately Bimbashi Ingram, the head of the Alexandria Public Security, and Bimbashi Giovannini, the chief of the secret police, accompanied by some police officers, went on board in a motor-launch, and took charge of the Sheikh and the documents which had been seized at his house and offices by the Turkish Government. The party then proceeded in the launch to the quarantine station at Gabbari, where the Sheikh was landed, and was conveyed in a motor-car, which had been held in readiness, to the central prison. The Sheikh was subjected to a formal interrogatory, but the inquiry proper did not commence until yesterday. The authorities evidently attach supreme importance to the case against the Extremist arch-plotter and seditionary; for Abdel Khalek Pasha Sarwat, the Procureur-General, who had sought in Cyprus a well-earned rest after the strain of the conspiracy inquiry, was urgently recalled from leave as soon as it was known that the Sheikh had been arrested. He arrived on Monday, and immediately took charge of the dossier and the inquiry.

The authorities have been quite right to insist on the Procureur-General conducting the inquiry. The documents seized by the Turkish Government are exceedingly important—they will most probably lead to more arrests at Constantinople—and they undoubtedly throw further light on past political incidents, in which the hand of the talented Sheikh has been suspected. Since Sarwat Pasha has either conducted or had to advise the Government in most of those inquiries, he is, quite apart from his ability, unquestionably the man to handle the present case and tackle the chief accused, who is as astute as he is eloquent.

The Seditious Posters.

Meanwhile seditious posters have been raining thick on the land. On Saturday the police discovered placards affixed on the walls of the Governor's house, the Mudiria, the Wakfs' offices, and other Government buildings in Tantah. The posters were headed, "A Holy War," and were signed "La Mano Nera." In them the populace was called upon to rise and avenge Sheikh Shawish. Similar placards were found on Monday on the principal buildings at Mansurah. The police are making great efforts to trace the authors, but although extensive searches have been made, so far they have not been successful in securing any clues. There is a theory that these posters are the work either of practical jokers or maniacs; but no matter who is responsible for them, these incidents must be regarded as serious, for they constitute, to say the least of it, a flouting of the Government before the eyes of the ignorant masses, and for that reason alone stern reprisals must be made. The three youths, who were retained in custody out of the five that were arrested at Boulac last week, have been set free, as there was not sufficient evidence against them. The authors of the Cairo posters are, therefore, still undiscovered. In addition, Hamed El Meligui, who was re-arrested on suspicion of having affixed the inflammatory poster close to the British Headquarters in Alexandria, has been released for a similar reason. Only four men remain in custody now, Ahmed Mukhtar, who brought the circulars over from Constantinople; Mohammed Abdel Shaffar Metwalli and Hussein Effendi Ali Mortada, students—on both of whom lists containing the names of other students chosen to carry into effect the projects mentioned in the circulars, were found—and lastly Sheikh Shawish. It is expected that the inquiry and the case will very shortly be transferred to Cairo.

The Death of George Zervudachi.

On Monday evening a figure, which up to a year ago was one of the most influential in the financial world in London, Paris, and Alexandria, passed away in the person of George Zervudachi. One can still remember the amazement with which the news of the suicide of his brother Ambroise Zervudachi in October last, and of the filing of the balance-sheet of the firm of G. C. Zervudachi and Sons and of George Zervudachi a few days later, were received. The name of Zervudachi had been one to conjure with. Scarcely an Egyptian company of any importance but had one of the family on its board of directors. Despite the rumours which had been circulated, the firm and its partners had managed to keep above water, although the rumours were but too well-founded; but the failure of the Bank of Egypt, followed by that of the Banque de Métélin, proved too much for the Zervudachis; and the shock to the financial world in general, and to Egypt in particular, was all the greater in that the true state of affairs had been so long concealed.

At the conclusion of a long inquiry, which, by reason of the high position previously held by George Zervudachi, was as painful to his interrogators as it was to him, he was declared bankrupt, and was sentenced to two years' imprisonment. A month or so later he began to ail, and the symptoms became so serious that he had to be transported to the Greek Hospital. There two operations for abscess on the liver were performed, and the result was apparently successful, for the patient improved. But a third abscess formed on Sunday last. George Zervudachi was in too weak a state to undergo another operation, and he succumbed late on Monday night.

One is glad to say that shortly before his death he was informed by letter that the Minister of Justice had decided to set him forthwith at liberty. When immediately after sentence had been passed on him a movement was set on foot to appeal to the Khedive to pardon George Zervudachi, The Near East condemned this action in no uncertain terms. Such a step on the part of his Highness would have done more harm to Egypt in the eyes of the world than all the failures that had taken place since the boom. In the presence of Death, however, such an act of clemency becomes fully justified, and if it conduced to softening the last moments of the once famous but erring George Zervudachi, who is there so hard of heart who would gainsay him that consolation?

THE ARREST OF SHEIKH SHAWISH.

(By Our Cairo Correspondent.)

The arrest and delivery to the Egyptian authorities of Sheikh Abdel Aziz Shawish has aroused a great deal of comment in Egypt. While it was known that the Porte had been requested to search his domicile and those of other Egyptians (including Mohammed Bey Farid) resident in Constantinople, it was thought that the preference of such a request was waste of time and energy, since the Ottoman authorities would most likely only institute a perfunctory search, if indeed they paid any attention to the application at all. The arrest and despatch to Egypt of the redoubtable Sheikh came, therefore, as a surprise to most of us, and certainly as a shock to the skeleton Nationalist party. The latter are crying out at the perfidy of Turkey in transgressing all the rules of international law dealing with political offences. We have yet to learn the exact motives and arguments which prompted the Porte to arrest and surrender Sheikh Shawish without any of the formalities usually necessary for extradition.

There seems to be a consensus of opinion out here—and for my part I am in agreement with it, that the new Turkish Cabinet seized the opportunity of killing two birds with one stone. Owing to Sheikh Shawish's close connection with the Union and Progress Committee and his attack on the new régime, he had become a thorn in the side of the prevailing party. Further, the present Ottoman Ministry is very Anglophile, and wants to stand well with the British Government, which alone can assist it, morally and materially, to negotiate the broken water through which it will have to steer its course during the next few months. Therefore, when the Egyptian (and British) authorities made their application, it was immediately acquiesced in, and it is quite possible that the Porte was strengthened in its attitude by the nature of the documents which came into its hands in the course of the search of the Sheikh's home and the offices of the *Hilal el Osmani*.

The Sheikh is, comparatively speaking, a young man. Born in 1874, he passed through El Azhar University, and became Arabic Lecturer at Oxford. After that he was appointed Inspector in the Egyptian Ministry of Education, and in 1904 was sent as Egyptian delegate to the Oriental Congress at Algiers. About 1908 he was appointed editor of *El Lewa*, and later on, when the split in the party came, he joined the *Alam* in the same capacity on its foundation. Always an enthusiastic Nationalist, and a fluent and powerful writer, Shawish at once gave an impetus to the movement, and caused it to develop into a violent Extremist, anti-Christian, and anti-English one. He is a Tunisian, but repudiated by the French authorities, as he found out to his cost, when he invoked the Capitulations as a protection against prosecution by the Egyptian Government for his seditious writings. Twice he has had to undergo imprisonment for libellous and seditious acts. The first time on August 24, 1909, when he was prosecuted for a defamatory article in the *Lewa* directed at Boutros Pasha Ghali and Fathy Pasha Zaghlul, and the second on August 6, 1910, for the preface he wrote to the seditious book of poems written by Sheikh El Ghaiyati. In January last he fled to Constantinople to escape prosecution for the breach of neutrality which he made by organising a large convoy of arms for the Turks in Tripoli. In Stamboul he founded the *Hilal el Osmani*, whose articles were so anti-English and inflammatory that its entrance into Egypt was forbidden. His arrest has been most welcome to all serious-minded Egyptians, and it is felt that if only the authorities can prove his guilt—and there seems every reason to expect them to be able to do that up to the hilt—the one element which has been in the main responsible for all the trouble and unrest will be removed, and Egyptian politics will return to the condition which characterised them a decade or so ago, which may be monotonously dull, but is so essential to the country's progress.

LETTRE D'ATHENES.

(De Notre Correspondant Particulier.)

Athenes, le 30 septembre.

L'Agitation a Athenes.

L'effervescence qui se manifeste depuis quelques semaines dans les autres capitales des Balcans n'a pas tardé, comme on devait s'y attendre, à se produire même à Athènes. En effet, si les Bulgares se révoltent, fort justement d'ailleurs, contre les massacres de Kotchana et les Serbes contre les actes arbitraires commis à Kossovo, les Grecs ont des raisons bien plus importantes de s'agiter à leur tour. Il convient d'avouer, en effet, que ce sont les populations grecs de Turquie qui ont souffert le plus depuis la proclamation de la constitution. La presse d'Athènes, rappelant les épreuves que le Comité "Union et Progrès" a fait subir aux Grecs pendant les trois années qui se sont écoulées depuis lors, cite l'assassinat de l'évêque de Grévéna et l'impunité de ses asssasins, les outrages faits à la personne du patriarche, les tortures qu'on a fait subir au drogman du consulat grec à Constantinople, le *boycott* prolongé contre le commerce et la navigation grecs qui a causé de si graves pertes, les exactions et vexations ainsi que les tortures exercés contre les jeunes Grecs forcés de servir dans l'armée turque, les basses intrigues commises aux dernières élections, enfin les fréquentes menaces de Schefket Pacha d'envahir la Thessalie.

L'empressement qu'a mis la Turquie à favoriser les tentatives d'empiètement des Albanais sur l'Epire et les excès commis dernièrement par leurs bandes étant venu s'ajouter aux autres causes de réprobation énumérées plus haut, a provoqué l'explosion d'une indignation mal contenue jusqu'à présent. Car il faut remarquer que l'Epire, dont une seule partie a été unie à la Grèce, est restée de tout temps indissolublement liée au reste de la Grèce dont elle forme une section intégrante et que le sort de cette province est pour elle d'un intérêt encore plus vital que celui de la Crète. Ce sont les Epirotes qui ont fait pour la Grèce les plus grands sacrifices de sang et d'argent et qui ont rendu les services les plus signalés à la cause grecque depuis l'époque de la révolution, et ce sont encore des Epirotes qui figurent au premier rang parmi les plus généreux donateurs nationaux de ces derniers temps. Une partie considérable de la population stable et flottante d'Athènes, du Pirée, des îles ioniennes et des autres villes de Grèce se compose d'Epirotes que l'on rencontre dans toutes les branches de l'activité sociale, dans tous les métiers et professions, comme dans les administrations publiques et jusque dans l'armée. Dans ces conditions on peut facilement comprendre que si les Albanais réussissaient à s'emparer d'une partie de cette province dont la future annexion à la Grèce est toujours considérée ici depuis le traité de Berlin comme chose absolument certaine, il se produirait un soulèvement général beaucoup plus impétueux que s'il s'agissait de la Crète.

Le grand meeting de dimanche.

C'est sous l'influence de ces conjonctures qu'après la réunion des Epirotes, les autres associations des Grecs de Turquie résidant à Athènes et au Pirée organisèrent à leur tour un meeting pour protester contre cet état de choses. Les corporations professionnelles se sont empressées de s'y joindre et le nombre des manifestants s'est élevé à environ 30,000 hommes. Un Macédonien, professeur de l'Université d'Athènes, a prononcé un discours dans le sens indiqué plus haut, insistant particulièrement sur la question de l'Epire et accusant les Turcs d'avoir livré aux "Arnaouts" toute une province éminément grecque depuis les temps les plus reculés. Puis, après avoir énuméré les régions sur lesquelles s'étendent les droits de l'Hellénisme, en faisant mention spéciale de Rhodes et Stampalia, l'orateur a conclu en déclarant qu'il est grand temps que le gouvernement grec abandonne l'attitude irréprochablement correcte qu'il a gardée jusqu'ici. Ces paroles ont été accueillies par des cris de "Vive la guerre!" Une résolution a été ensuite votée par acclamation, à l'effet de protester contre l'état d'anarchie et le régime de terreur qui affligent les populations chrétiennes de Turquie, contre le manque de justice et de sécurité qui y règne partout, ainsi que contre la violation des privilèges dont jouissent

Digitized by Google

ab antiquo certaines provinces habitées par des populations helléniques, enfin contre la déloyale application de réformes que les Jeunes Turcs avaient promises sous le prétexte d'améliorer le sort des Chrétiens. En conclusion on exige du gouvernement qu'il agisse de la manière qu'il jugera la plus opportune: 1° pour faire accepter par la Porte les demandes légitimes qui lui ont été présentées par le patriarcat œcuménique à l'effet d'obtenir des garanties positives en ce qui concerne la reconnaissance définitive et irrévocable pour les Chrétiens du droit de vivre dans l'empire comme des nationalités indépendantes et de pouvoir exercer les droits de l'homme et du citoyen; 2° pour que l'application de toute réforme soit assurée par la garantie des puissances afin que la vie de ces populations congénères soit tolérable et qu'elles ne soient plus poussées à des résolutions désespérées, ce qui créerait des embarras au royaume libre. Une commission a ensuite été déléguée pour remettre copie de la résolution adoptée au president du conseil. M. Vénizélos, après en avoir pris connaissance, déclara partager entièrement la manière de voir du peuple, disant que le gouvernement veillerait à la sauvegarde des droits de l'Hellénisme.

La proposition du comte Berchtold.

Dans certains cercles bien informés on parle d'un échange de vues entre le cabinet d'Athènes et ceux de Sofia et de Belgrade à l'effet d'entreprendre une démarche collective auprès des puissances pour demander l'introduction et la garantie par les puissances de réformes dans le sens de la proposition du comte Berchtold, c'est-à-dire à peu près conformes à celles qui ont été formulées dans le meeting de dimanche. Les réformes à demander auraient pour objectif de diviser au point de vue administratif les Chrétiens habitant la Turquie par unités ethniques suivant leur nationalité avec centres pour chacune à Constantinople, au lieu de les diviser par districts autonomes et de leur reconnaître et assurer par des garanties européennes la jouissance des droits généraux émanant de la constitution et des privilèges spéciaux acquis à leurs nationalités respectives. Des négociations sont encore poursuivies activement à ce sujet.

L'agitation a Samos.

Profitant de la présence des deux bâteaux de guerre français et anglais, qui, comme je le disais dans ma dernière lettre, ont été expédiés à Samos à la suite des événements qui en faisaient l'objet, le sénat des Samiens a remis, le 30 août, aux commandants des dits navires ainsi qu'au consul général de Russie à Smyrne, qui a été envoyé dans le même but, un mémoire leur demandant d'intervenir auprès de leurs gouvernements pour faire partir les troupes turques et restaurer les privilèges garantis par ces trois puissances leurs protectrices. Dans ce mémoire les Samiens demandaient en outre la révision du statut organique de l'île afin d'améliorer leur situation dans le sens d'une véritable autonomie et faisaient entendre que, dans le cas contraire, ils seraient décidés à pousser les choses aux extrêmes. En même temps des meetings ont eu lieu dans toute l'île où des plébiscites ont été votés dans le même sens.

Le consul de Russie a répondu aux Samiens que les troupes ne pourront partir que lorsque la gendarmerie locale aura été organisée. Le prince Vegleris Effendi prétend d'autre part que c'est l'antagonisme des partis qui en empêche la formation. L'intérêt témoigné en l'occurrence par les puissances protectrices a néanmoins ranimé en eux l'espoir de voir leurs vœux exaucés. En effet on mande de Vathy que les consuls des puissances, auxquels on avait remis aussi copie du mémoire, leur donnent l'assurance que leurs gouvernements ne manqueront pas de donner satisfaction à leurs revendications après la conclusion de la paix italo-turque.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, September 15.

A Russian journal lately published an article of an alarmist nature, commenting on the fact that an English newspaper had announced that Roumania intended greatly strengthening her fleet by the construction of several torpedo boats and submarines. This is the news sent to The Near East a good many weeks ago, and I believe it was not published in any other paper. The general idea here is that the Government is considering the question of strengthening its sea power because it believes that the opening of the Dardanelles will be agreed to ere long, which, of course, would make coast defence necessary to all countries touching the Black Sea. Russia has no need to be alarmed! It will be remembered that some months ago a Roumanian paper of a "yellow" nature published the news that it was intended to strongly fortify both Constantza and Sulina. This was immediately contradicted by the Government, but not before it had caused a storm in the Russian tea cup.

German Compliment to King Carol.

On September 30 King Carol will complete the fiftieth year of his military career. On this occasion a delegation of the second regiment of the Prussian Dragoon Guards, headed by Lieutenant-Colonel Baron von Zedlitz, is to come to Sinaia to present the regiments's congratulations to his Majesty.

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, September 15.

A third consignment of rifles and cartridges invoiced as ordinary merchandise and addressed to the firm of Messrs. Schünemann, in Tabriz, was held up the other day on the Russo-Persian frontier and confiscated. Messrs. Schünemann are, by the way, about to erect a new store-house in Tabriz. It is being constructed, in parts, by an engineering firm in this city. From the nature of the sections one would imagine that the Tabriz firm were about to build a fortress. They are all of iron, cast-iron and steel—even the doors and window frames are of iron. Messrs. Schünemann are evidently preparing for eventualities, for their new store-house will be able to withstand an attack by any besieging pogromists lacking the aid of artillery.

A laconic despatch forwarded a few days ago by the Viceroy of the Caucasus to the Council of Ministers in St. Petersburg stated that the numerous herds of cattle captured by the punitive expeditions under Generals Fidaroff and Tolmatcheff from the Shahsevans had been sold by auction, and had realised 3,000,000 roubles. Such is one of the methods of what is euphemistically described as "civilised war."

Minatory Situation in the Balkans.

Telegrams from the Sofia correspondents of the *Odesski Listok* and the *Yuzhnaia Myssl*, of yesterday's date, say that the daily increasing war clamour among the Bulgars must eventually, and shortly, constrain King Ferdinand and his Cabinet to abandon their pacific attitude and address a categorical ultimatum to the Porte. The peace of the Balkans, says one of these correspondents, hangs by a hair, and the popular exasperation against Turkey is rapidly becoming irresistible. A complete agreement, it is stated, has been arrived at among the Balkan States. Bulgaria, Servia, Greece, and Montenegro can together place an army of 650,000 in the field, and each of these constituent forces is already mobilised for immediate action.

Russia's influence in Sofia is being exerted for the maintenance of peace, but, according to some of the leading Russian organs, that influence is no longer paramount in the Bulgarian capital. Austria-Hungary has of late years become the confidential counsellor of King Ferdinand and his Cabinet. The declaration of hostilities on the part of the Balkans, it is said, hangs on a hint from Austria-Hungary or Russia. That signal may come from Austria-Hungary, but it is extremely unlikely to be given by this country.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, September 14.

The Kara Tepe Incident.

Throughout the past week a feeling of disquietude has prevailed. Just at the moment when there seemed to be a little hope of a change for the better a new incident on the frontier again aroused bellicose agitation in Bulgaria, which still persists, and is causing some doubt whether the Gueshoff Cabinet will be able indefinitely to resist it. It is felt here that an end must be put to such provocations on the part of Turkey, and that the Powers should use their influence at Constantinople in that sense if they are sincerely interested in the preservation of peace in the Balkans.

According to trustworthy reports, the incident on the frontier happened in the western part of the Rhodope Mountains at a place called Kara Tepe, lying thirty-six miles south of Ishtiman, and almost the same distance west of Pazarjik, both cities on the railway line uniting Sofia with Constantinople. On the morning of the 8th inst. two Bulgarian corporals, named Ilia Ignatoff and Pentcho Tcholevsky, from the 5th Frontier Company, belonging to the Kara Tepe post, started on their customary inspection of the frontier. On their return, at 8.30 in the morning, they fell into an ambuscade prepared by the Turkish frontier guards. Ignatoff was killed instantly, and Tcholevsky was mortally wounded. Hearing the firing and noting that the two corporals had not returned when expected, the Bulgarian soldiers from the post of Kara Tepe hurried to the place whence the firing had come, and found Tcholevsky lying wounded. The victim, who was still conscious, told his friends that Ignatoff was dead, and that he had seen his body dragged by the Turkish soldiers to the frontier. The wounded corporal was then raised by his comrades and brought up to the post, where at three o'clock in the afternoon he expired.

The Turkish frontier guards, having received reinforcements from the adjacent posts, now opened fire against the post of Kara Tepe. At this time also the Bulgarian post asked for and received reinforcements, and the fusillade continued until eight o'clock, by which time it was dark. The night passed quietly; but at noon on September 9 a Turkish company arrived from Tacourida, and, helped by the 120 Nizams and 50 Bashi-bazuks, who were already engaged, tried a second attack. The Bulgarian force at Kara Tepe numbered at this time only 60 men; but was well entrenched and ready to meet any eventuality. The second attack proved very unsuccessful for the Turks; for their right flank happened to be exposed to a raking fire, and was forced to retire with heavy losses. A party of Bulgarians, numbering only ten, undertook the pursuit; and by pure chance they discovered the body of the corporal, Ilia Ignatoff, lying very near the Turkish frontier. They at once brought it back to Kara Tepe.

In the evening about eight o'clock the Turkish commander, Neshad Effendi, sent a message asking for a cessation of the firing and requesting the Bulgarian frontier officer to discuss the situation. The meeting of the two officers took place the next day at ten o'clock, and orders were given from both sides to cease firing. With the exception of the two corporals no other casualties have to be deplored on the Bulgarian side; but on the side of the Turks many killed and wounded were seen, especially during the attack on the 9th, when they were taken unexpectedly by a raking fire. The exact number of the victims is not fixed yet.

No doubt this new incident on the frontier will provoke an exchange of notes; and it is said that Mr. Sarafoff, the Bulgarian Minister at Constantinople, has been instructed to draw the attention of the Turkish Government to the deplorable facts. But what is the use of all such diplomatic notes when the orders and directions issued from Constantinople with the best intentions are not obeyed in the provinces or on the frontiers of the Turkish Empire? Here lies the real danger and the true cause of disturbances that may happen in the near future, and surely not in the bad intentions of the two Governments.

Memorandum to the Powers.

Many reports have been current lately in the local Press that the Bulgarian Government is preparing a Memorandum for the great Powers signatory to the Treaty of Berlin, in which, it is said, will be exposed the intolerable condition of the Christians in European Turkey. This Memorandum, we are told, will ask for the full application of Article 23 of the Treaty of Berlin, by introducing autonomous government in Macedonia and the Vilayet of Adrianople. The semi-official papers deny the fact that such a Memorandum has been delivered to the Great Powers, but they do not deny that it is in preparation, nor that it will be delivered at the right moment.

LETTER FROM MALTA.

(From Our Own Correspondent.)

Valletta, September 13.

The Mediterranean Question.

There are fresh indications that the decision of the British Admiralty to make up for the withdrawal of the battle fleet from the Mediterranean by considerably strengthening the cruiser squadron is not to be regarded as final. The last word on the all-important question of the Middle Sea, which commands what has justly been described as the "bread route" of the British Empire, has not yet been uttered. So much, at all events, may be argued from the announcement that the First and Second Cruiser Squadrons are to proceed for lengthy cruises in Scandinavian and Russian waters, for as these squadrons comprise the four battle cruisers of the "Invincible" type which were to be sent to Malta this winter, it is evident that these vessels will not be available for these waters for some time to come. On the other hand, the detachment of a strong battle squadron from the Home Fleet—consisting of the eight battleships of the "King Edward VII." class which were recently formed into the Third Battle Squadron—for temporary service in the Mediterranean, is full of significance. In well-informed circles it is believed, in fact, that the provision will not only be temporary, but that after their return from the cruises the battle cruisers destined for Malta will be retained in the Home Fleet, and the "King Edwards" will remain permanently in the Mediterranean. Orders just issued with regard to the cruisers "Suffolk" and "Lancaster," at present forming part of the Mediterranean Squadron, as well as rumours of impending changes now afloat, suggest that the reorganisation of the Mediterranean Fleet will be effected much earlier than was at first anticipated, probably during the coming month.

The Emigration Question.

Interest in the burning question of emigration has been suddenly rearoused by the news that a party of Maltese emigrants were "cold-shouldered in Sydney," as the "Australian workmen showed a dislike to working with them," and even more by the unpleasant announcement that "the Premier, in reply to Mr. Fisher, the Prime Minister of the Commonwealth, stated that the New South Wales Government considered it undesirable to encourage the immigration of Maltese into New South Wales." This announcement has evoked considerable comment in the local Press, as the Maltese have so far always been considered a most desirable class of emigrant. The incident is all the more deplorable inas much as emigration to Australia was looked upon as our only hope of relieving the island of its surplus population. A letter, addressed to a Maltese gentleman (Dr. A. Bartolo) by Mr. H. E. Easton, the hon. secretary of the Sydney Branch of the British Immigration League of Australasia, and published the other day in the *Daily Malta Chronicle*, places the whole matter in its proper light. It seems, in fact, that the party, numbering fifty, obviously unacquainted with the conditions of the labour market in the Commonwealth, were "without means, unable to speak English, and expressing a desire to work any hours and at any rate of pay offered." It is understood that the matter has already been taken up by the local Government.

LETTERS TO THE EDITOR.

FOREIGN POLICY AND THE NATION.

To the Editor of THE NEAR EAST.

Sir,—I can understand the reluctance with which diplomacy must regard the democratising of the Foreign Office, which has hitherto maintained an historic association with Royalty and prerogative. But "Autre temps, autre mœurs." Thrones themselves are, if successfully occupied, "broad based upon the people's will," and it is an anachronism that the representatives of a sovereignty vested in the people and only symbolically expressed by the illustrious occupant of the throne should be limited to a highly eclectic and debatably expert class.

I note with satisfaction the affirmation of "Diplomaticus" himself that "it would be easy to suggest modifications in the system of recruiting and training the staff of the Diplomatic and Foreign Office Services"; by admitting that there has been "no change for generations" in their organisation he implies that reorganisation is required. Are we to understand that in objecting to the "democratising of our Foreign Office organisation" he is averse to the casting of a wide net precisely in the "system of recruiting," so that the State could avail itself of the best intelligences, regardless of financial or social considerations? After all, such selection must be based upon an educational qualification wide enough to secure such qualities of mind and manners as constitute what is known as a "gentleman" in these days. Science does not confirm the principle of inherited character, and the special qualifications desirable in a plenipotentiary can only emerge under the test of life itself, and can by no possible system be standardised for selective purposes.

As to the second and yet more important question of consulting the people's representatives in regard to matters involving "delicate and confidential negotiations," but which equally involve, as I wrote in my earlier letter, "the well- or ill-being of the people at large," I have two suggestions to offer. The first is that the people represent the horse, and the Foreign Office the cart. If the people were more frequently consulted there would be less occasion for the "delicate and necessarily confidential negotiations." Secondly, in extreme cases, where secret negotiations are indispensable, the responsibility of the Secretary of State for Foreign Affairs should be shared by a select committee of the House of Commons acting in a consultative capacity, which would consider, from the point of view of the people, what policy should be pursued.—Yours obediently,

SYDNEY SCHIFF.

Devonshire Club, September 17.

THE EGYPTIAN MAIL SERVICE.

To the Editor of THE NEAR EAST.

Sir,—Cairenes are once more murmuring against the present mail service, and I must own that I consider they have justice on their side. Indeed, instead of being an improvement, the existing mail communications from Europe to Egypt are in many respects less favourable than they were some years ago. When the Austrian Lloyd started its new fast service to this country everyone was most satisfied, for it gave us five mails per week from England and the Continent. On Sunday night we received the papers of the previous Monday and Tuesday; on Tuesday that of the preceding Wednesday; the large P. and O. delivered Thursday's paper on Wednesday morning; the same afternoon Friday's paper arrived per the ferry boats "Isis" and Osiris"; whilst the Saturday's editions usually came to hand on the following Friday night or Saturday morning. I refer to the London dailies, as they give an easier idea of the nature of the service than if I recorded the latest time for posting at the G.P.O. in London.

It will thus be seen that whilst the time in transit never exceeded a week, on only one occasion did two papers, *i.e.*, letters posted on two consecutive days, arrive together. The system was, therefore, most satisfactory. Then all of a sudden all the arrangements were upset, and we were given three instead of five mails per week. The excuse offered us was that the Austrian Lloyd had altered and improved its service, but, although that is perfectly true, it has resulted in an overlapping and concentration of mails which are highly unsatisfactory. Thus the ferry boats bring Friday's paper on Wednesday afternoon; Saturday's paper arrives by the intermediate Austrian Lloyd steamer on the following Saturday morning; whilst the remaining five papers of the week all arrive in one lot by the fast Austrian Lloyd, due at Alexandria early Monday afternoon, but for some unfathomable reason are rarely distributed in Cairo before Tuesday morning.

Under the present arrangement there is no mail out to Egypt from London between Saturday night (the intermediate Austrian Lloyd) and Wednesday night (the fast Austrian Lloyd). It is all very well to say that letters posted on Wednesday in the metropolis arrive in Cairo under the new system a day earlier; on the other hand, letters posted on Sunday and Monday (and sometimes Tuesday) reach here some thirty odd hours later than before. But at times the condition of things is even worse, for the intermediate Austrian Lloyd is not always to be relied upon. Thus this past week no mail arrived in Cairo between Wednesday afternoon (the P. and O. ferry boat) and Monday evening (the fast Austrian Lloyd), whilst for some unaccountable reason the mail posted in London on Monday evening arrived after that posted on the following Thursday.

Considering the number of first-class steamers that ply between Europe and the Egyptian ports and the very close commercial relations that exist between Egypt and the Continent, it should surely be possible to arrange a better and more frequent service. The prime fault may, of course, lie with the European postal authorities, but one cannot entirely absolve the Egyptian Post Office from all blame, for it is, after all, the servant of the local population, whose interests in the postal line it should watch over. If the Egyptian authorities were to take up a strong attitude in the matter the service could undoubtedly be ameliorated.—Yours, etc.,

BRITISH RESIDENT.

Cairo, September 11.

SIR W. WILLCOCKS ON CANADA.

To the Editor of THE NEAR EAST.

Sir,—In your last issue you give a friendly and compressed account of an already compressed epitome of something I said at Dundee. I seem to be greatly overstating my case, and should deem it a favour if you would kindly publish the sentences as I said them:—

"If the money spent on extraordinarily expensive schools for boys, such as we have in England, were confined to the boys who have genius for such learning as books can give, while those who have little genius for book learning were taught practical farming and the use of hands as well as heads; and the money thus economised were put by as dowries for the girls, the girls might be married and sent out to Canadian farms with a little capital. We should not then see the spectacle we see to-day of so many young men hanging about for odd jobs, with all the professions crowded out like so many ant-hills; and then so many militant Suffragettes making Britain the laughing stock of the world."—Yours faithfully,

W. WILLCOCKS.

London, September 14.

EGYPTIAN RESEARCH.

To the Editor of THE NEAR EAST.

Sir,—In my letter recently published in the *Birmingham Daily Post* I drew attention to the need of substantial subscriptions towards the exploration fund, in order that Professor Blackman may again visit Meir, in Middle Egypt, and continue the interesting investigations of the ancient tombs in that locality. Professor Blackman, who is the Nubian Research Scholar at Oxford, desires to copy all the frescoes and inscriptions in these tombs, and to do this thoroughly well will require at least two seasons. All Egyptological expeditions undertaken by English are due to private enterprise, and the Government gives little help. It seems a disgrace to our country that the State takes little interest in such things, and these explorations are very often abandoned through want of funds. Other great nations are ahead of us in recognising the importance of modern Egyptological researches, and the State organises and supports such enterprises liberally. Is it not time that the English State showed that it valued the honour of the nation, and was determined that we should not rank below France and Germany?

I think, if I remember rightly, that the first important exploring expedition was organised by the French, under Napoleon the Great. I do not think that any of our eminent Egyptologists have received the honour they merit. Few, if any, have been knighted, and the Society of Biblical Archæology, one of the most erudite institutions in Europe, has not yet been made a Royal society.

Some writer has lately deplored the mischief caused by private Egyptological enterprises, and that they are often done in an unscientific manner. That criticism might have been just twenty years ago, but since that time all explorations have been done in a thoroughly systematic and exhaustive manner. Each basketful of earth has been carefully sifted under the eye of the explorer, and all objects found have been photographed and tabulated. There is still much work to be done in Egypt. Information about the early dynasties, where there are gaps, requires new discoveries, and doubtless many buried inscriptions will eventually be recovered which will help to clear up many disputed points in the history of the oldest civilised nation of the world. I hope that those wealthy gentlemen who love all that appertains to Ancient Egypt will come forward and give liberal donations to Professor Blackman's expedition.—Yours faithfully,

SYDNEY HERBERT.

Carlton Lodge, Cheltenham.

THE PRESS ON THE NEAR EAST.

The Muskat Arms Traffic.

Last Friday the *Pall Mall Gazette* devoted its first two "Notes of the Day" to the Muskat arms traffic. They were much to the point, and we are glad to see such a plain statement of certain facts that have been somewhat gingerly handled in the past:—

We are glad that the Government have formally notified British firms that they will not be compensated for "any inconvenience" which they may suffer as a result of the new regulations for controlling the arms traffic at Muskat. In other words, if British steamers are searched for alleged contrabrand arms off the coast of Oman actions will not lie in the law courts. We shall have no repetition of a certain preposterous trial before Mr. Justice Grantham about a decade ago. The British gunmakers are always careful to explain that they do not know the destination of the arms they sell. The actual exporters generally shelter themselves behind the plea that Belgium and France are doing the same thing. The result is that any day, in British ports, one may see steamers being loaded with rifles which, to the knowledge of all concerned, will be used by the frontier tribes of India to shoot down our troops. The new warning is a step in advance, but the ultimate remedy for the present flooding of the East with rifles and morphia alike is to stop the traffic at the European end.

A later development of the situation, recorded this morning by the Paris correspondent of the *Times*, is that two French firms at Muskat have been protesting vigorously against the confiscation of shipments of rifles by the Sultan of Oman. The name of M. Goguyer at last figures in public in this connection. We trust that the dignity of France will not be impaired by further efforts to shield the nefarious traffic in which M. Goguyer and his associates are engaged. We would advise the *Temps* to inquire very carefully into the circumstances under which M. Goguyer left Harrar, and afterwards Tunis, some years ago, before he blossomed out as a gun-runner on the Arabian coast. Investigations in the proper quarter would probably convince the *Temps* that if the French nation seriously espouses the cause of M. Goguyer some rather ridiculous revelations must follow.

Mourning for Philæ.

The *Times* (September 17) contains an elegiac leading article, occasioned by an account in the same issue, of the effects of past submersions of the Temples of Philæ:—

Thus we may regard the completion of the dam without any overpowering feelings of regret for the Philæ which has already faded. The time for regret was ten years ago, when there was a real loss and it was fresh upon us. The present may rather be regarded as a merciful submersion of the melancholy and discoloured mementoes of what had once been beautiful. Philæ, as the artists knew her, died when the dam was built; all this time she has lain in state amid a perpetual lamentation. In January the last funeral rite will be accomplished, and further mourning will be in vain. The flooding of Philæ had as its alternative the risk of the starvation of Egypt, and the building of the dam is not the act of vandalism which in some quarters it has been asserted to be. Let us now remember the common weal of Egypt and steel our hearts into a happy Philistinism. The time has come to rejoice with the engineers, the agriculturists, and the Government of Egypt over a great work well done, an increased prosperity on the verge of realisation, a financial success splendidly achieved. For such a work, in former days, we might have counted upon the approval of the tutelary deities of Khem, and have been sure that Isis herself, the beneficent Lady of the Marshes, would not have grudged one of her innumerable shrines, had it then been sacrificed for the enhancement of the prosperity of her people in the Upper and the Lower Land.

Turkey's Fate: A Gloomy View.

The *Nation* of the 14th contained an article headed "The New Combination Against the Turks," the writer of which takes a distinctly gloomy view of the situation. He concludes thus:—

The meeting of Count Berchtold with the German Chancellor at Buchlau sheds no illumination upon the future. The official announcement merely states that the meeting resulted in complete agreement upon a policy, but no hint as to the policy itself was given. One remembers that when Count Aehrenthal and M. Isvolsky met four years ago, they made a similar announcement about the policy of Austria and Russia, and Austria's annexation of Bosnia followed at once. Is the present agreement a preliminary to another grab—say the Sandjak and the concession of the Salonika railway at last? Or is the Congress designed to avoid solution once more, allowing the subject races under the Turk to stew yet a while longer in their misery, until the Great Powers are ready to apportion his bone to every dog among them? Or are Bulgaria, Montenegro, and the rest to be allowed to advance on the terms "Sic vos non vobis," the Powers behind them reserving for themselves the main spoils of victory? In any case, in spite of the Turk's long habit of surviving, this year is one of the worst he has seen.

Great Britain and Turkey.

The current *Review of Reviews* contains an article entitled "The Lords of Islam," which points out that the fate of Turkey is a question of vital interest to Englishmen. We can only quote briefly, but we advise our readers to read the article for themselves. The writer says:—

For good or for ill the destinies of the British Empire are closely bound up with the rise or fall of the Turkish Empire. It is no exaggeration to say that we should be as anxious for the welfare of the Sultanate as any Turk or any Mohammedan, wherever he may be. The Sultan of Turkey is not only a temporal ruler, good or bad as may be, but he is the Caliph of the Mohammedan world, the keystone of the whole structure of Islam throughout the world. As temporal monarch we could pretend to ignore his well-being, we might even aid in his destruction, but it is in no way possible for us to differentiate between the Sultan of Turkey and the Caliph of the Faithful.

And again:—

We must not forget that, next to the sacred cities of Islam, all our Mohammedan citizens cherish the thought of the Caliph, and the belief that England desires to be on the friendliest terms with the Caliph spurs them on in their loyalty and work for the Emperor-King. At the present moment, however, it would seem as if the British Government had completely forgotten that we are a Mohammedan Empire, or that it behoves us to stand well with the centre and direct control of Islam. They remain still under the hypnotism of Mr. Gladstone, who led the nation to think of the unspeakable Turk, and whose ideas have caused a generation to grow up holding as a fixed tradition that the Turks are models of iniquity. What suited Mr. Gladstone in his time is, however, far from being the best policy to-day, and no time should be lost in changing the British policy of indifference towards Turkey into a warm friendship and *rapprochement*. No two nations have more cause for joint action, and it would be untrue to say that British friendship for Turkey would be only to the advantage of the latter.

Articles to Note.

"A Near Eastern Journey," and "From Novi Bazar to Uskub," by "Ben Kendim," in the *Morning Post* (September 17 and 19).

"A propos des Iles de la Mer Egée," in *L'Orient* (September 5).

NEAR EAST BOOKSHELF.

AN IMAGINATIVE TALE.*

Why, we wonder, do some writers—lady novelists, in particular—insist upon marring their work by crude descriptions of the physical deformities of their characters? Miss Dora Langlois is to be congratulated upon the originality of her plot in the book before us; but for the almost repulsive passages in which she enters into details of Mr. Copperas' infirmity there can be no excuse. The first part of the book is excellent. Macmurty, an inventor, has placed his new wireless instrument, sensitive only to messages transmitted from others of its kind, at the service of Mr. Copperas, a rich and unscrupulous financier. Suddenly the calm of their fancied security is disturbed by a code message—unintelligible to the operator—received in England, and which evidently does not emanate from the only other machine known to exist. Gradually the supposition grows that this message has been quivering through the ages in search of a resting place since the time of ancient Egypt, and it is in the following up of this theory that the interest of the book lies. Miss Langlois is inclined to be a little tedious at times, and the book might have been considerably shorter without destroying its interest, but the originality of the plot goes far to make up for these defects. The love interest is comparatively a small one, but it is well portrayed.

* "In the Shadow of Pa-Menkh." By Dora Langlois. Illustrated. (London: Sampson Low, Marston, and Co., Ltd. 6s.)

NOW READY AND OBTAINABLE OF ALL BOOKSELLERS.
MYSTICISM AND MAGIC IN TURKEY
AN ACCOUNT OF THE RELIGIOUS DOCTRINES, MONASTIC ORGANISATION, AND ECSTATIC POWERS OF THE DERVISH ORDERS
By LUCY M. J. GARNETT, AUTHOR OF "TURKEY OF THE OTTOMANS."
Crown 8vo. Cloth Gilt, with Illustrations. 6s. net
The Times says:—Miss Garnett's intimate knowledge of the manners, folk-lore and life of Turkey is turned to good purpose in this instructive study of a widespread but somewhat hidden phase of Islam.

CURRENT COMMENTS.

In referring to Turkey's need of competent advisers who would serve as a stiffening, so to say, for the home-bred officials, reference was made in our leader last week to the Turk's amiable weakness in the matter of retaining incapables and superfluous hangers-on out of consideration for those dependent upon such employees. The proportion of officers to men in the Sultan's navy well illustrates this weakness. In round numbers there are some 4,700 officers to about 2,000 men; so that each Turkish "Jack"—or whatever may be the equivalent in Turkish for our "Jack"—has 2.35 officers to look after him and keep him up to the mark. The situation is truly Gilbertian. But can Turkey afford such luxuries? One almost despairs of a country that can tolerate the existence of such a state of affairs.

***

In justice to the Young Turks, however, it must be admitted that when they came into power they did make some sort of effort to tackle the situation. A wholesale reduction of the number of officers was seriously contemplated. But it was thought that such a step would be dangerous, because it would result in the creation of a large number of malcontents, and so nothing was done. The problem, we believe, was one that vexed the spirit of Sir Douglas Gamble not a little; and it is tolerably certain that Admiral Limpus also holds "views" on the subject. But the fact—the solid fact of the 4,700 officers—remains. As soon as Turkey is granted breathing time it is to be hoped she will face this problem squarely and deal with it manfully. In the meantime, we can only offer her our congratulations on being free at least of all risk of a "shortage of officers."

***

A Salonika correspondent writes:—"Under the old régime our police (zaptiehs they were then called) were a badly paid and shabby-looking lot. They are now smartly dressed, wear white gloves, and carry a short sword and a revolver. But when will they be taught that the arresting of a man does not justify his being kicked, cuffed, and otherwise maltreated? It seems quite a recognised thing that the moment a man is, rightly or wrongly, made a prisoner he may be knocked about and beaten without any compunction whatever. Of this we had a typical instance last week, when a quiet and inoffensive professor of the Bulgarian lycée for girls went to the railway station to meet his mother. Of late people have not been allowed on the platform to meet their friends or see them off; but possibly the professor did not know of this new arrangement. At any rate, for some reason or other, he found himself arrested, knocked about, abused, marched off to the police-station, and locked up. At first there was a talk of sending him before the court-martial. But perhaps this was considered to be a little too strong, for, after some days' detention, he was released on bail, and is to be tried in the ordinary courts. Such cases of ill-treatment of those under arrest—and they are far too common—give cause to wonder whether our Constitution is a genuine one or only a make-believe."

***

The current month is full of historical associations for the Maltese. The anniversaries of the most brilliant events in the island's history fall in September. The 2nd inst. marked the 114th anniversary of the Maltese revolt against the French after a three months' spell of republican government. After a siege and a blockade (effected by the British and allied fleets) of two years, the French surrendered, the memorable event occurring also in September—the 4th, 1800. When it is stated that the result was the entry of Malta, the island bulwark of the Mediterranean, into the British Empire—which was ratified by the Treaty of Paris fourteen years later—further comment would be superfluous. Recent events have fully confirmed the significance of what took place in the island over a century ago.

***

September 7 recalls one of the most remarkable episodes not only in Malta's annals, but in the history of Europe—the unforgettable victory of Malta over the Turks in 1565, after a three and a-half months' siege, in which the Ottoman Sultan, then "Suleiman the Magnificent," lost the flower of his up to then unconquered army. According to contemporary chroniclers, the victory of Malta outshone the brilliance of Salamis and Marathon, and saved the whole of Christendom from being overrun by the Turks. It is interesting to note that foremost amongst the European Sovereigns of the time to bear testimony to the truth of history was Queen Elizabeth of England. The glorious anniversary is still annually celebrated in Malta, especially in the so-called "Three Cities," which bore the brunt of the siege, and which still recall in their respective names—Vittoriosa, Cospicua, Invitta—the heroic achievements of long ago.

***

A Khartoum contemporary, while congratulating the Government upon the excellence of the design upon which the City is planned, voices a complaint which is surely worthy of the closest attention of the authorities. The rapid growth of the European community has, it appears, overrun the accommodation which was originally intended for the white man and his belongings, and has forced him into rather objectionable proximity to the native quarter. This is not all. Exigencies of space cannot always be dealt with in a moment, and in so far as this alone is concerned the European is content to bide his time, but there can be no possible reason why the quarters bordering upon his residence should be given over to the proprietors of native beer shops and cafés. For the native in pursuit of pleasure is noisy to the extreme.

***

The Egyptian Sudan is known the world over as a hunting field. An article which Mr. A. L. Butler, Director of the Game Preservation Department at Khartoum, contributes to the current number of the *Field* opens up a new form of sport. He records his various experiences in hawk catching in the country, and though the practice must need even more patience than fishing, the fascination it offers would appear to make it well worth the while. Mr. Butler, armed with a decoy, has succeeded in catching some of the wildest specimens of Sudan hawks. On one occasion the decoy pigeon was armed with nooses tied to its back, but the hawk scored heavily, as it disappeared to an island in the middle of the river with its captive attached to one of its legs. Eventually, however, Mr. Butler succeeded, and caught a fine specimen. In the old days the children of the Sudan were deputed to catch the larger birds by spreading corn in their vicinity, and then half burying themselves in the sand. As the bigger cranes came down to devour it, they were seized by the legs and held fast by their small captors until such time as their cries attracted the elders of the village. There are wonderful tales still told in the country of small children having been raised from the ground by birds which were too strong for them to hold, and who were carried off into distant countries where they were treated as princes by the inhabitants. But the old days are past and gone, and the modern generation goes forth with cunningly set nooses and traps of modern manufacture. The Sudan, however, remains the same: it is a sportsman's paradise.

***

If credence may be attached to the story, recorded in an Alexandria contemporary, of a criminal at present incarcerated in Tourah prison, his patience and his ingenuity surely place him high among the most celebrated of his profession! Committed to penal servitude for some crime which is not named, this enterprising gentleman profited in his leisure by inventing and constructing an instrument for the coining of spurious five-piastre pieces. Not only had he perfected an instrument which is described as a model of simplicity and ingenuity; he had also managed to secure the material—silver bullion mixed with mineral ore—for the manufacture of his coins, and but for the unlucky chance of discovery would doubtless have left the prison a rich man! He now declares that he had not worked single-handed, but had been aided by a fellow prisoner, a former army officer who, like himself, was serving a term of penal servitude. This gentleman denies the allegation in toto, but admits that he had seen the other constructing his instrument in the smithy. As, however, a quantity of mineral powder was discovered in the soldier's room, he will probably find it difficult altogether to acquit himself of the charge laid against him. The matter is now in the hands of the Procureur-General. We trust that the punishment meted out to the first offender may not be too severe. He has shown wonderful resource and energy in the face of very adverse circumstances, and given an opportunity of exercising his talents in the right direction, he should accomplish great things in the world.

***

It is highly probable that the present decade will bring more changes to the East than have been wrought even in the strenuous years of the immediate past. An experiment which is to be tried during the next dry season of transporting mails by hydroplanes on the principal reach of the Congo river, will, if successful, almost certainly lead to the same mode of transport in those districts of the Sudan which are not served by railway, and to which access during the time of low Nile is at present both arduous and slow. Despite the lamentable accidents which from time to time darken the history of aerial endeavour, difficulties are one by one being overcome, and a regular system of transport by means of the air is no longer a mere possibility, but a probability which we confidently expect to see realised in the Sudan in the near future. The dangers of possible risings are now so remote as to be scarcely worth considering, but even so the possession of a few areo- or hydroplanes in a country where natural means of communication are difficult must be obviously of great advantage.

***

"It is not generally known," says the *Egyptian Gazette*, "that Signor Marinetti, the founder of Futurism, was born at Alexandria. He is now between thirty and forty years old. One of his novels led to his being imprisoned. He took part in the early operations in Tripoli, and has just published a terrifying description of what the capture of that town looked like to a Futurist." We have not read the description referred to; but if Signor Marinetti has really succeeded in making it "terrifying," the Futurists must be almost as skilful artists (!) in words as they are with brush and pencil. For the event itself, thanks to the humanity of the Ottoman commander, was hardly a terrific one.

PERSONAL & SOCIAL.

Lord Kitchener arrived at Balmoral Castle on Friday and left on Monday. He will leave England for Egypt next Tuesday, travelling overland. On Wednesday his lordship called at the Foreign Office, and in the evening witnessed the performance of "Drake" at His Majesty's Theatre.

Sir Gerard and Lady Lowther have arrived at Claridge's Hotel from Kelso, where they have been the guests of the Duke and Duchess of Roxburghe.

Sir Rennell and Lady Rodd have returned from Rome to England on leave. Their address is 17, Stratford Place, W.

The members of the British Legation have returned from Sinaia to Bucharest, and Sir George Barclay has taken up his residence in the Legation.

Lord Milner sailed by the "Virginian" from Liverpool for Canada last week.

Sir Edward Grey has sent the Lord Mayor a donation of £25 towards the fund for the relief of the distress caused by the earthquake in Turkey.

Major-General the Hon. J. H. G. Byng will take up his new appointment as commander of the British troops in Egypt early in November.

Lord Wodehouse embarks at Marseilles to-day on the P. and O. steamer "Persia" for Aden.

Sir William and Lady Willcocks are among those who have passages in the P. and O. steamer "Persia," which leaves Marseilles to-day.

M. Defrance, the French Agent and Consul-General in Egypt, with Mme. Defrance and Mlle. Defrance, have arrived in London from the Continent on a short visit.

Mr. G. Maitland Edwards, F.G.S., A.I.M.M., of Messrs. North and Edwards, has been appointed Technical Adviser to the Ministry of Mines and Forests of the Imperial Ottoman Government of Turkey.

Aly Bey Tewfik and his brother, Ismail Bey, sons of the Turkish Ambassador in London, have arrived in town on a visit to England. They will probably remain in this country for about a fortnight.

Mr. G. Bie Ravndal, U.S. Consul-General at Constantinople, left that city on the 7th inst. for the United States. He is attending the International Congress of Chambers of Commerce in Boston (September 24-28).

The Khedive left Alexandria last Thursday on board the "Helouan" for Vienna, Constantinople, and Dolman.

Captain the Hon. Horace Hood, who has lately purchased East Sheen Lodge, formerly the residence of the Princess Royal and the Duke of Fife, served with the Nile gunboats in the Sudan campaign, and subsequently fought in Somaliland. He was mentioned in despatches in both campaigns.

The *Morning Post's* Alexandria correspondent states that General Mahmoud Shevket Pasha is expected in that city, where, for reasons connected with his health, he intends to make a stay.

It is rumoured that Raouf Pasha, Ottoman High Commissioner in Egypt, will retire on pension shortly, when Nazim Pasha, Vali of Damascus, will take his place.

Dr. and Mrs. Llewellyn Phillips have returned to Egypt.

Reuter's Constantinople correspondent states that according to the local newspapers King George has addressed a cordial telegram of congratulation to the Sultan on the occasion of the feast of Bairam, while Sir Edward Grey has telegraphed his felicitations to Kiamil Pasha, adding a wish for the success of the Government policy.

Writing on the 13th inst., our Malta correspondent says:—Sir Leslie Rundle, the Governor and Commander-in-Chief, will leave the island about the 25th inst. for a holiday in the Austrian Tyrol. On the 17th inst. his Excellency will give a garden party at his summer residence, the Verdala Palace, in honour of the officers of the German and the Dutch war vessels that are expected here. Other entertainments in honour of the foreign vessels are also being organised.

Our Bucharest correspondent writes:—Prince Nicholas of Roumania, who has lately been the guest of Sir John Kennedy, a former Minister to the Roumanian Court, will shortly leave England for Munich, where he will meet his mother, the Princess Marie, and accompany her back to Roumania. The little Prince, who is somewhat delicate, is said to have benefited greatly from the change of air.

The *Gazette* contains the announcement that the King has been pleased to grant Colonel Lord Edward Herbert Cecil, D.S.O., Under-Secretary of State for Finance to the Egyptian Government, authority to accept and wear the insignia of the First Class of the Imperial Ottoman Order of the Medjidieh, conferred upon him by the Khedive in recognition of valuable services rendered by him.

The King has given Rear-Admiral Lionel Grant Tufnell, C.M.G., Naval Adviser to the Greek Government, his authority to wear the Cross of Grand Commander of the Royal Order of the Redeemer, which has been conferred upon him by the King of the Hellenes.

Amongst the military attachés who are attending the Army manœuvres and who were received at the War Office on Wednesday, were:—Lieut.-Gen. A. Averescu, Roumania; Lieut.-Col. K. Smilyanitch, Servia; Commandant Omer Lutfi Bey, Turkey; Major G. Kolokotronis, Greece; and Captain Kosta Dotcheff, Bulgaria.

Our Sofia correspondent writes:—The German Emperor has specially invited Prince Boris, the Heir-Apparent, and Prince Cyril, his brother, to be present at the German Autumn Manœuvres. The young princes, accompanied by Colonel Gécoff, the president of the Military School in Sofia; Major Kourtouclieff, aide-de-camp to H.R.H. Prince Boris, and Captain Kouumdjieff, aide-de-camp to H.R.H. Prince Cyril, started at the beginning of the present week for Dresden, where the Bulgarian military attaché at Berlin, Major Gantcheff, met them. On their arrival in Dresden they were received as guests at the Court of Saxony.

A marriage has been arranged between Thomas Edward Fyers, Sudan Civil Service, son of the late T. Edward Fyers, director of the Anglo-Ceylon Sugar Estates, and grandson of General T. E. Fyers, R.E., and Hannah Oxendale (Nan), elder daughter of the late T. Oxendale Robson, Low-Fell, County Durham, and Mrs. Robson, Marske-by-the-Sea, Yorkshire.

Amongst the passengers by the "Gloucestershire," which leaves Marseilles for Port Said on the 27th inst., is Mr. H. A. MacMichael, Inspector, Darfur Province, who is returning to the Sudan off leave.

A marriage will shortly take place between John M. E. Langton, Egyptian State Railways, eldest son of the late John Langton, F.R.C.S., of Harley Street, Cavendish Square, and Olive, second daughter of Lieutenant-Colonel Walter J. Boyes, late Suffolk Regiment.

The death occurred on Tuesday, at Hardingham Hall, Norfolk, of Major William Mordaunt Marsh Edwards, V.C., who served in the Egyptian Expedition of 1882, and was present at the battle of Tel-el-Kebir, where he was severely wounded. For his services in this campaign he received the medal with clasp, the bronze star, and the Victoria Cross. The official description of the action which won for Major Edwards the Victoria Cross states that it was awarded "for the conspicuous bravery displayed by him during the battle of Tel-el-Kebir on September 13, 1882, in leading a party of the Highland Light Infantry to storm a redoubt. Lieutenant Edwards (who was in advance of his party) with great gallantry rushed alone into the battery, killed the artillery officer in charge, and was himself knocked down by a gunner with a rammer, and only rescued by the timely arrival of three men of his regiment."

The death took place on Sunday at Southsea of Colonel Pulteney Henry Murray, who served through the Egyptian War of 1882 as captain and adjutant in the K. O. Shropshire Light Infantry. He was awarded the medal and the Khedive's bronze star.

The performing rights of the opera "Redenta," by the young Maltese composer, Charles Fiamings, who is described by our Malta correspondent as a budding musical genius, have been acquired by Messrs. Ascherberg, Hopwood, and Crewe. It is expected that the opera will soon be produced on a London stage.

Reuter's Khartoum correspondent reports that the Fourth Class of the Osmanieh Order has been conferred on Captain Wise, commanding the Arab Battalion; Captain Teacher, commanding the Third Battalion; and Captain Symes, Assistant Director of Intelligence, Sudan.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

WILSON.—On the 16th inst., at Riverside, Taplow, Bucks, the wife of Major Cyril Wilson, attached Egyptian Army, of a son.

MARRIAGES.

BUTTERWORTH—LITTLE.—On September 17, at the Garrison Chapel, Abbassia, Cairo, by the father of the bride, assisted by the Rev. E. W. Green, M.A., C.F., Geoffrey Scholfield Butterworth, I.F.S., Belgaum, India, only son of the late Rev. T. G. Butterworth, vicar of Great Ouseburn, and Mrs. Butterworth, Marshfield, Settle, to Doris Daisy, youngest daughter of the Rev. J. Harwood Little, B.A., Senior Chaplain H.M. Forces, and Mrs. Little, Cairo.

CARTER—QUENTIN.—On September 4, at Shipdham Church, by Rev. A. T. Hodgson, John William Carter, of Heliopolis, Egypt, to Guilhermina, eldest daughter of the Rev. G. A. F. Quentin, rector of Shipdham, Norfolk.

DEATHS.

ROUTH.—On the 1st inst., at Salonica, Turkey, Richard de Lusignan Routh, eldest son of the late Augustus Routh, of the Imperial Ottoman Bank, Salonica, aged 44 years.

VAGLIANO.—On the 10th inst., at Leeds, Mme. Vagliano, wife of Alcibiades Vagliano, of 28, Hill Street, Berkeley Square, London.

PEACE PROPOSALS.

According to the statement of the *Temps*, the negotiations for peace that have long since taken the place of the "preliminary conversations" initiated unofficially between Italian and Turkish spokesmen in Switzerland have now made such progress that the termination of the Turco-Italian War is believed to be within sight. Many interests in Europe are anxious for peace, and it is natural that the desire should from time to time beget the statement that peace is about to be concluded; but in the present instance the detailed account of the course of the negotiations is so circumstantial and tallies with information received from other quarters that there would seem to be no reason to doubt its general accuracy. At the same time it is not contended that any treaty has yet been ratified by the two Governments, and further complications over one point or another are still within the range of possibility. Moreover, political considerations in Turkey may tend to delay the signature of the terms of agreement until after the elections. It will, however, be a sufficient cause for satisfaction if the two countries at this stage find themselves in such general agreement on the main lines of a treaty of peace that the adjustment of details is regarded by both as merely a question of time. Credit for this position is due to the delegates who initiated the *pourparlers*, and to their respective Governments, which were wise enough to accept their preliminary labours as a basis for formal negotiations. In view of all the circumstances, the Turkish Government is deserving of special praise for grappling so successfully with an unpleasant task, and in this matter we do not forget that both the present and the late Cabinets showed themselves ready to consider the possibility of peace at a time when the arbitrament of war had still failed to pronounce decisively on the subject of Turkey's differences with Italy. In the eyes of Europe Turkey will have acted well and will have sacrificed none of her prestige in recognising that her military honour has been satisfied, and that political honour called for some solution of the Tripoli *impasse*. Accordingly, we may hope that the Moslems throughout the Empire will view the action of the Constantinople Government in the same favourable light, and will find consolation for any modification of the status of an unimportant part of the Empire in the material benefits likely to accrue to their co-religionists in North Africa.

The way leading to peace was revealed by the Italian Premier when he announced that by annexation was meant not that Libya became thereby an integral part of the kingdom of Italy, but that Italy proclaimed her sovereign rights over the two Turkish provinces in question. These sovereign rights, we are to infer from the alleged basis of peace, will be retained by the agreement to be ratified between Italy and Turkey, although the latter will not be called upon to record her recognition of the annexation. Libya, like Egypt and Tunis, will pass into other hands without any formal acquiescence on the part of Turkey. A second clause, it is stated, will leave to Turkey a port at one end or the other of Libya, in order that the Turkish Government may have a means of communication with the interior. Tobruk has been mentioned in this connection, but here is one of those points that in the opinion of one party or the other requires further consideration. Turkey at this stage would seem also to have expressed the desire to have a base on the Red Sea ceded to her, but Italy is understood to have demurred to the surrender of Massowah, the port indicated. For the rest the Turks' religious susceptibilities, in accordance with an undertaking that the Italian Government has always expressed its readiness to grant, will be safeguarded by the maintenance by the Sultan of a spiritual connection with his Mussulman subjects in Tripoli and Cyrenaica, and the Arab population is to be won over to the Italian protectorate by "a considerable contribution ostensibly for religious and philanthropic purposes." The delimitation of the Italian zone in North Africa is to be left for friendly settlement between the two countries at a later date. No treaty is complete without a financial clause, and in the present instance Italy is prepared to make good the annual income that the Ottoman Debt receives from Tripoli and Cyrenaica. But the more important arrangements bearing on this subject are said to have been reserved for separate negotiation. A semi-official statement issued in Rome denies, it is true, the report that the Italian Government is negotiating with foreign banking groups with a view to obtaining a loan of £24,000,000 for Turkey. The fact, however, remains that financial stringency is a prominent feature in the situation in Turkey, and that the declaration of peace will be robbed of some of its advantages, if the Porte is not speedily placed in a position to obtain money for administrative purposes and in order to reorganise its finances. The Italian Government has frequently announced that it bears Turkey no ill-will, and it will not have a better opportunity of proving the truth of this declaration than by assisting the Porte in its next loan.

If the forecast of the terms of agreement between Turkey and Italy prove to be correct, both sides may claim to have secured peace with honour. That this result will not have been achieved without considerable difficulty is shown by the length of the "unofficial" negotiations. It was only in the last week in August that the Turkish Government appears to have decided that a determined effort must be made to put an end to the war. The threatening aspect of affairs in the Balkans, no doubt, contributed towards the change of attitude, but the financial strain produced by the indefinite prolongation of hostilities must also have influenced Ghazi Mukhtar Pasha and his Cabinet. While the former danger has in some measure been removed, the latter factor in the situation remains. Financial reorganisation and administrative reform must go hand in hand in Turkey, and it is to be hoped that, if Italy is unable single-handed to see that provision is made for the Porte's financial needs, she will urge upon the Powers, who have still to produce something from Count Berchtold's proposals for an exchange of views, the necessity for friendly attention to this feature of the situation in Turkey. The Powers' good offices may also be required in connection with the question of the Ægean Islands, now in the occupation of Italy. In the recorded version of the basis of agreement between the Italian and Turkish Governments no reference is made to these islands, but it is inferred that they are to be handed back to Turkey with a guarantee for the recognition of some of the claims of the inhabitants. On this point the Italian Government may well wish to be relieved of further responsibility, and will be satisfied to commit the islanders to the care of the Powers. If this should be done, the object to be achieved would be a settlement that would offer an effective compromise between the ambitions of the Greek inhabitants and the views of the Turkish Government. Neither the Powers nor the Porte can wish to have reproduced a dozen or more Cretan questions in miniature. The declaration of peace between Italy and Turkey should leave the latter absolutely free to give the long-promised administrative reforms a fair trial. If under favourable conditions these should prove a complete failure, then even Turkey will realise that its days of peace in Europe are numbered.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Germany is likely to score a further enginering success in Turkey; for it is reported that the Nürnberg-Augsburger Maschinenfabrik is on the point of concluding a contract with the Constantinople city authorities for the erection of a second bridge over the Golden Horn. The fact that the firm in question constructed the Stamboul Bridge, and the urgent need for additional road-traffic connections between Stamboul and Galata, give the reported contract every ground for probability.

***

A correspondent in Smyrna informs me that shipping is booming in that port at present, and the war appears to have had very little effect on the export trade. Importers, naturally, have cause for complaint, but it is some consolation for them that there have been no failures of any importance and no more of any kind than in ordinary times. There is a scarcity of money with buyers of imported goods, but peace is expected to bring with it a boom in trade and, as Smyrna is at present free from any of the epidemics that often visit it, next year should see a great improvement all round.

***

With regard to the Halaka reforms instituted by the Egyptian Government in the interest of the fellaheen, I am glad to note that the *Egyptian Gazette* reports that the revival this year of the cotton halakas controlled by the Government is proving to be a real boon to the farmer who had hitherto been at the mercy of cheats and swindlers. The fruits of this new institution are already showing, for news comes from the provinces that several cases of deceit in the weights by non-Government weighers have been brought to light. In one or two cases the swindlers publicly owned to their dishonest dealings. Though the cotton season has hardly started, some 200 bags are daily weighed in the cotton halakas of the mudirieh of Minieh. Daily bulletins are put up containing the prices of cotton in dollars and piastres. These prices are communicated daily by telephone to the omdehs of out-of-the-way districts.

***

The *Daily Telegraph* of the 18th inst., in a leading article, says:—"As to Cyprus, few things are stranger than the silence which has fallen on it since our occupation of the island. At that time it was regarded as the great coming health resort of two continents, but for some reason this expectation has not been realised, and Cyprus, with its perfect climate and wonderful scenery, remains a revelation of the future." The principal obstacle, which has kept in all probability thousands of visitors from the island, has been the lack of direct steam communication of a suitable kind. The fact that the new mail contract has just been given to the Khedivial Steamship Company may at last help to bring Cyprus into the beaten track of tourists. The island has many attractions besides that of climate. The subject is one to which I shall return, as being of no little importance in respect of the development of the "colony."

Last week on another page we noticed the formation of a limited liability company, under the English Companies Act, with the title "Stein's Oriental Stores, Limited," to take over the old-established clothing business known as La Grande Fabrique S. Stein. Commenting on this, our Salonika correspondent now writes me:—"It is somewhat curious that we have four or five such limited liability companies in this town, with never a Britisher in them; just as we also have steamers regularly coming here flying the red ensign of which not one of the officers and crew speak a word of English. Is there any other nation on the face of this earth so hopelessly idiotic?" Although there is, to my mind, no objection to the constitution by foreigners of joint-stock companies under English law, I do heartily agree with our Salonika correspondent when he laments the apparent ease and insouciance with which the protection of the English flag is accorded to all sorts and conditions of mendicants of the seas.

***

At the same time, I would point out that the absence of an English-speaking crew in a vessel sailing under the red ensign does not necessarily signify an unjustifiable extension of the protection afforded by the flag. The owners are quite likely English in such cases; while, if the objection is against the employment of foreign crews, I would suggest that the Levantine sailor-man is more suitable for the work to be done and less expensive than a British hand. Be that as it may, I would infinitely rather see British-owned ships sail with foreign, and even non-English speaking, crews than see them, as an alternative, withdrawn from the Levant trade.

***

Apropos of the remarks I made last week upon the sale of vodka in Russia, it may be of interest to add a few more particulars. The amount of vodka sold last year was 91,650,236 vedros. The Russian vedro is approximately equivalent to eight quarts English. The largest consumption of vodka per capita of the population was 1.593 vedros in the government of Moscow, a fact which goes to show that the Muscovites still maintain their premier status as the hardest drinkers in Slavdom. The Polish governments of Lomsha, Plotzk, Suvalki, Lublin, Radom and Kielze are the more sober, their average consumption of vodka per head per annum being 0.210 vedro. The Government monopoly also includes the manufacture and sale of rectified spirit for lighting and heating purposes. The gross revenue from this branch last year was 3,599,025 roubles, and the net income 448,961 roubles. It is the vodka that pays the military and naval pipers!

***

On another page reference is made to a proposal that has been laid before the Turkish Government for the construction of a ship canal to link up the Mediterranean and the Persian Gulf by way of the Euphrates. This scheme, it seems to me, is very unlikely to materialise. To start with, even if it could be constructed, such a waterway would almost certainly find the Suez Canal far too strong a rival to compete with successfully, and I fancy that capitalists will share this opinion and decline entirely to put their money down for the purpose of financing such an undertaking, though backers might, perhaps, be found for a modified scheme for a barge canal.

***

But what strikes me as a fatal blemish about the proposal is that such great play is made with the fact that when Sir William Willcocks's plans for the irrigation of lower Mesopotamia have been carried out, there will, owing to the vast area of land brought under cultivation, be huge quantities of agricultural produce for shipment from that area to Europe. If I understand Sir William Willcocks's proposals aright, they will inevitably lead to the closing of both the Euphrates and the Tigris to navigation, at any rate during the greater part of the year. All the water of both rivers will be required for irrigation, and will be spread over the surface of the land by an intricate network of canals and water-courses, and though it is true that locks are provided for at certain points, they would certainly not be capable of accommodating any "ships," even if water enough were left in the Euphrates to float such craft. In a word, the Euphrates cannot, I take it, be used for the purposes of a "ship canal" and of irrigating the Chaldean plain at the same time. And if that be so, one of the chief arguments of the ingenious promoters of this scheme falls to the ground at once.

***

The outward flow of passengers to Egypt has begun in earnest, and it is now becoming difficult for travellers to find berths on the boats of the leading lines. Several passenger lists are published in another column.

***

A correspondent informs me that "not long ago the representative of a German engineering firm visited Smyrna, and, being accommodated in one of the largest hotels, asked the manager where the telephone was, as he wished to communicate with a firm to which he had letters of introduction. In reply, the manager informed him that there was no such thing as a telephone in Smyrna. Thereupon the visitor inquired blandly if the people of Smyrna went about clothed—meaning, of course, to suggest thereby that the town was in a very backward state of civilisation."

***

If this tale be true, I venture to suggest that the German gentleman's sense of humour was not very acute; for, when all is said and done, there have been in this world of ours one or two periods of advanced civilisation, which knew neither the telephone nor the aeroplane. But the moral of the story lies in the fact that the Teuton "hastened, however, to submit proposals for the installation of telephones in Smyrna and its suburbs." That was business. And I am inclined to suspect that the German gentleman, knowing his ground well, was merely preparing the way for his proposals when he asked for the 'phone box in the first place; and that it would have been a big—and far from welcome—surprise to him if the manager had quietly directed him where he might ring up the firm he wanted. But, as my correspondent points out, if Smyrna is to have telephones British firms may, perhaps, have a chance of securing the concession. *Verb. sap.*

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, September 14.

Great Britain's Trade with Turkey.

The total exchanges of enumerated articles between the two countries, according to the Board of Trade returns for the month of August, 1912, show an increase of £80,000 compared with the same month in 1911, and are £360,000 greater than during the month of August, 1910.

The enumerated exports to Turkey during August, 1912, are less by £50,000 than during the same month in 1911, but are £200,000 greater than during the corresponding month in 1910. The principal decrease occurs in cotton piece goods, the shipments of which amounted to £556,159 in 1912, £631,272 in 1911, but only £370,014 in 1910. The principal increase is in cotton yarns, the shipments of which amounted to £60,226 in 1912, £34,336 in 1911, and £25,816 in 1910. Small increases occur in the exports of coal, tin, and bags and sacks. Compared with the month of August, 1910, there were increases in the same month in 1912 in all the enumerated exports with the exception of copper and woollen and worsted tissues.

Great Britain's enumerated imports from Turkey during August, 1912, are greater by a little over £130,000 than during the corresponding month in 1911, and by almost £160,000 than in 1910. The principal increases in this instance are in the shipments of barley, which amounted to £159,318 in 1912, as compared with £76,280 in 1911 and £16,343 in 1910, and mohair, which amounted to £160,012 in 1912, as compared with £99,505 in 1911 and £135,546 in 1910.

The total enumerated exports to Turkey during August, 1912, were £735,583, which is again above the average, as compared with £789,853 in 1911 and £530,297 in 1910. The total enumerated imports from Turkey during the same month were £357,079, also above the average, as compared with £223,774 in 1911 and £198,618 in 1910.

For the eight months ended August, 1912, the total enumerated exports from Great Britain to Turkey amount to £4,349,503, as compared with £4,901,990 during the corresponding period in 1911 and £4,142,787 in 1910.

In a survey of the eight months' trade we find decreases in almost all the enumerated articles. In cotton piece goods this amounts to nearly £600,000 as compared with 1911, although in the same line of goods we are almost £400,000 in excess of 1910. The only increase is in cotton yarns, the shipments of which amount to £439,900 in 1912, as compared with £274,582 and £258,883 during the corresponding periods of 1911 and 1910 respectively.

The total enumerated imports from Turkey into Great Britain during the seven months ended August, 1912, are £1,501,711, as compared with £998,689 in 1911 and £944,875 in 1910. The principal increases to date are in barley, the imports of which are £769,420 in 1912, as compared with £341,280 in 1911 and £141,483 in 1910, and wheat, which amount to £92,178 in 1912, as compared with £63,300 in 1911 and £5,719 in 1910. The shipments of mohair are £170,000 ahead of last year, although still below 1910 by £50,000. There are considerable decreases in the imports of oats, beans, wool, and raisins, the last article having fallen from £113,945 in 1910 to £67,110 in 1911 and £38,832 in 1912.

In the total exchanges of enumerated articles between the two countries to date there is only a shrinkage of £50,000 as compared with 1911, and we are over three-quarters of a million in advance of 1910, both of which were record years. All things being considered, this is a most satisfactory showing.

Railway Traffic Receipts.

The published traffic receipts of the several Ottoman railways for the seven months ended July, 1912, record a marked increase over those for the corresponding period of the preceding year, as the following table will show :

	1912. frs.		1911. frs.
Oriental Railways	9,612,745	..	6,329,814
Salonika-Constantinople Junction	3,229,252	..	2,480,000
Salonika-Monastir	1,990,100	..	1,925,000
Haidar Pasha-Angora	5,119,609	..	4,501,743
Eski Chehir-Konia	2,758,135	..	2,581,536
Baghdad Railway	431,954	..	375,882
Smyrna-Cassaba	2,470,586	..	2,235,339
" " Prolongation	851,006	..	696,009
Damascus-Hama and Prolongation	2,401,769	..	2,245,978
Rayak-Aleppo	1,707,576	..	1,581,146
Aidin Railway	6,551,145	..	4,155,858

Later figures for the Anatolian Railway show that to August 19 the kilometric receipts on the Haidar Pasha-Angora line averaged 15,352 frs., as compared with 13,778 frs. during the corresponding period of the preceding year; and on the Eski Chehir-Konia line they averaged 10,615 frs., as compared with 9,465 frs. for the same period during the preceding year. The total receipts of the Oriental Railway to September 1 amounted to 11,562,329 frs., as compared with 9,805,151 frs. during the corresponding period of the previous year. One cannot help remarking how little effect the war has had on the economic situation of the country as represented by the above traffic receipts.

Scutari-Kadikeui Electric Trams.

The Ministry of Public Works has declared the Franco-Ottoman group, represented locally by M. Bensaçon, to be the concessionaires for the Scutari-Kadikeui electric trams, they having offered the most favourable conditions. The convention and cahier des charges will now be submitted to the Council of State for its approval.

Samsoun and Trebizond Harbours.

Messrs. Sir John Jackson, Limited, working with the National Bank of Turkey, have, I learn, completed the surveys for these ports, and the plans are in course of preparation for submission to the Government.

The Prefect of the City.

The new Prefect, H.E. Djemil Pasha, the well-known surgeon, has many projects for the improvement of the city which have been adopted in principle by the municipal council. Amongst these are the establishment of stations at different points of the city for the rendering of first aid in the case of street accidents, of some 50 "cabinets de toilette," a park and aquarium at the Old Serail, a zoological garden, and the building of a quay in the Golden Horn. It would appear that the "ways and means" for the carrying out of these schemes are the most serious obstacle to their realisation, and these are at present under consideration. The Prefect has just left for a visit to Budapest, Bucharest, and Sofia, to study the municipal organisations of these capitals.

ROUMANIAN RAILWAY DEVELOPMENTS.

The Frankfort-on-Main correspondent of the *Financial News* states that the German Consul at Bucharest reports that for the year 1912-13 further Roumanian railway developments have been planned. The total revenue is estimated at 100,630,000 lei, and expenses are budgeted at 66,330,000 lei, thus foreseeing a probable surplus of 34,300,000 lei. Of the extraordinary credit granted by the Chamber, and amounting to 64,000,000 lei, 20,100,000 lei are intended for railway purposes, and of this latter amount 6,200,000 lei are to be devoted to new locomotives. The consular report does not omit to point out that, generally speaking, the railway development in Roumania has not quite kept pace with the progress of economical, commercial, and industrial life of that country. As the movement of commodities extended the clearer it became that transport facilities were insufficient. This is considered, at least, as one of the contributory causes for the decision to construct pipe-lines to Constantza, one of which is intended for lighting petroleum, whereas the other line, with the assistance of several intermediate pumping stations, is to be solely devoted to the transport of crude oil.

MEDITERRANEAN-PERSIAN GULF CANAL PROJECT.

Last Monday's *Journal of Commerce* contained an interesting article upon a scheme which, it is understood, has been submitted to the Turkish Government for the construction of a ship canal from the Mediterranean to the Persian Gulf. "This proposal," says our contemporary, "is of interest in view of the great irrigation schemes which Sir Wm. Willcocks has prepared for Mesopotamia, and which, when completed, will, it is expected, have a decided effect on the world's wheat supply. The river Euphrates, which, according to report, would form the greater part of the waterway for this Mediterranean-Persian Gulf Canal, has for an immense distance from its mouth a very gentle inclination, and so would lend itself to a scheme of canalisation, and in the irrigation scheme prepared by Sir Wm. Willcocks provision was made for navigation locks at the different barrages. Doubtless, when this extensive scheme of irrigation has been brought into operation, traffic on the Euphrates must become very extensive, and the idea of direct shipments to the Mediterranean without transhipment charges and without navigating from the Persian Gulf through the Red Sea and the Suez Canal would offer considerable inducements. But it must be borne in mind that the cost of maintaining depths in a canalised river, unless this is naturally of ample depth, and of cutting the necessary connecting links of canal of such dimensions as to accommodate the modern large freighter has become practically prohibitive if such an undertaking is to be carried out on a commercial basis and not at the cost of a Government which, for strategical reasons, may desire to possess a short cut for its warships. Of successful ship canals, the Suez is perhaps the best example, but it occupies quite a unique position on the high road to the East, and any suggested ship canal from the Persian Gulf, whilst being in direct rivalry with the Suez Canal, would possess overwhelming disadvantages from the point of view of any vessel proceeding to the East. River and canal navigation at the best of times is not by any means a period of freedom from anxiety for those responsible for the safe navigation of a vessel, and to encounter hundreds of miles of such navigation as would be the case in this proposed Mediterranean-Persian Gulf canal would prohibit anything except local traffic to the interior making use of it.

The writer of the article is of opinion that if a canal is ever constructed at all it would be better to have one only for barges of the Rhine type. The great saving of cost involved would, he considers, more than counterbalance the advantages of the more ambitious scheme; and we think he is right. "Assuming," he continues, "that large quantities of wheat and barley are likely to be consigned to the Mediterranean from the land which Sir Wm. Willcock's scheme will irrigate, it appears possible that, given a suitable terminal port on the Mediterranean, the proposed scheme might be financially successful if modified into a canal capable of dealing with barges carrying between, say, 3,000 and 4,000 tons, such as are now used on some of the inland waterways of Europe, because such barges may be constructed with a draft of only about nine feet when fully loaded, and might have even a lesser draft if the depths available rendered this necessary and a canal to accommodate such boats does not present any great elements of expense. . . . The great advantages of a scheme for only providing for traffic of the 3,000-ton barge type are even more patent in the cases where a river of only moderate depth can be utilised for the great part of the proposed route. . . . With modern machinery the transfer of bulk cargoes, such as grain, from a 3,000-ton barge to a large ocean-going vessel is by no means a prohibitive item, and if the future wheat cargoes from Mesopotamia are to come by water to the Mediterranean by a more direct route than that through the Suez Canal it will probably be found that from a commercial point of view the formation of a barge canal to link the upper reaches of the Euphrates to the Mediterranean will be a much more reasonable project than a ship canal."

Openings for Business.

IMPORTS AT ERZEROUM.

In his report on the trade of the consular district of Erzeroum for the year 1911, Mr. Consul Monahan writes:—

"Imports from the United Kingdom appear as having increased by £16,700 in the year, the articles showing an increase being textiles and tea. The United Kingdom is, however, losing its preponderating position in the market, owing to the great increase in imports from Russia, which now surpass the British. Russia, however, does not seriously compete with the United Kingdom, except in copper and iron. No iron bars or copper sheets are now imported here from the United Kingdom. In cotton goods, except flannelette, the United Kingdom holds the market. Almost half of the flannelette imported is really the 'bazen,' a cotton print with one side a little fluffy, mentioned in the report for this consulate for 1907. The import of flannelette, including 'bazen,' has greatly increased of recent years.

"As heretofore, Erzeroum merchants do little direct trade with Europe. Practically all British goods, except a little tea from India, are ordered from Constantinople firms. To the question, for instance, why the flannelettes, including the above-mentioned 'bazen,' all come from Germany and Italy, the answer given is that no other similar goods suitable for the market are to be found in Constantinople. The system of obtaining goods on credit has been extended since the Constitution has allowed Armenian traders to travel freely to Constantinople, where they can see the goods that they want in the stores of their relations and acquaintances, and can arrange for payment on easy terms.

"The Agricultural Department has continued to supply these implements from Germany and Austria-Hungary at cost price, but I hear that only about £250 worth have been applied for, while on the other hand about £750 worth were imported by Erzeroum traders from the United States and from Russia, and have been sold in the market.

"The Agricultural Department has also imported in 1911 a first-class threshing machine and a straw-chopping machine. Both of these machines are British and worked by steam, and are being used in the small Government model farm about seven miles from the town, but I hear with only moderate success for want of a competent engineer. A sowing machine (from America) and a reaping machine (from Germany), both horse-drawn, were also imported in the year for the same model farm."

ALCOHOL IN BAGHDAD.

According to the Bulletin de la Chambre de Commerce français of Constantinople, the average annual importation of alcohol at Baghdad is valued at 100,000 frs., about 60 per cent. of which is supplied by Germany, 25 per cent. by Austria, and 15 per cent. by France, England and Russia. The consignments are generally made in cases containing four cans each of 22½ litres. Shipments in barrels of 200 to 300 litres, or in demijohns of 25 to 45 litres, are rare.

The original average price varies between 40 and 46 frs. per case, cost, freight and insurance Busreh. As a rule, the can is sold retail at about 22.95 frs. The quality varies between 90 deg. and 95 deg.

About 75 per cent of the importation is used for the manufacture of brandy; the remainder is utilised for paint, pharmacy, and domestic needs.

LEATHER IN ROUMANIA.

The *Oesterreichisch-ungarische Konsular Korrespondenz*, Vienna, states that the leathers now most in demand in Roumania are polished calf, as also kid and their imitations. The tastes of the Roumanian buyer have completely changed during the past few years. The rural and labouring classes, who previously wore only heavy and thick shoes, are to-day purchasing calf leather shoes and even those made of kid; in fact, the latter are in such favour that they are rapidly taking first place amongst imported leathers in Roumania. Sheep leather is produced in the country but the coloured variety is being increasingly imported. Germany, England, Austria-Hungary, and France are the principal sources of supply.

TENDERS INVITED.

EGYPT.

Supply of Manual Fire Engines.—Tenders will be received by the Under-Secretary of State, Ministry of Interior, Cairo, for the supply of two manual fire engines required for the Police Stores. Conditions of tender and specification can be obtained, on application to the Personnel and Equipment Department (Nizam and Ghafir Office), Ministry of Interior, Cairo, or to the Stores Department, Ministry of Interior, Bulaq. Samples at the Stores Department, Bulaq. Tenders must be submitted on the printed form provided for the purpose, with a covering letter on stamped paper of 30 milliemes, and should be addressed to the Under-Secretary of State, Minister of Interior, Cairo, enclosed in sealed envelopes marked: "Tender for the supply of fire engines." Date, October 15 (noon).

Supply of Zinc and Aluminium Sheets for Photo-mechanical Processes.—Tenders will be received by the Survey Department, Giza (Mudiria), for the supply of zinc and aluminium sheets for photo-mechanical processes for the year 1913. Copies of the condition of contract, specification, and samples, can be obtained from the Director-General, Survey Department, Giza (Mudiria). Date, October 15 (noon).

Supply of Map-mounting Calico.—Tenders will be received by the Survey Department, Giza (Mudiria), for the supply of map-mounting calico required by this department for 1913. Copies of the conditions of contract, specification, and samples, can be obtained from the Director-General, Survey Department, Giza (Mudiria), Egypt. Date, October 15 (noon).

Supply of Pipes.—Tenders invited at the office of the Inspector of Irrigation, 4th Circle, Beni Suef, for supply and delivery at Beni Suef Station of: (1) 18 metres wrought-iron pipe, 1 metre diameter; (2) 12 metres ditto, ditto; (3) 15 metres ditto, 0.80 metre diameter; and (4) 15 metres ditto, 1 metre diameter. Quote rates per linear metre; rates per ton will be rejected. Rates to include delivery of pipes free of all charges at Beni Suef Station. Thickness of plates should be ⅜ inch. Tenders to be on stamped paper. Specification at office of Inspector of Irrigation, 4th Circle, Beni Suef. Date, September 30 (10 a.m.).

Construction of a Metal Shed.—The Administration of Ports and Lights invites tenders for the construction of a metal shed in the Arsenal, in accordance with specification, of which a copy may be obtained (P.T. 30) at the office of the Administration. Certificate of 2 per cent deposit, or guarantee from bank approved by Government, to accompany tender. Tenders, accompanied by stamped paper of 30 m., to be forwarded in two sealed envelopes, the outer one addressed: "M. le Directeur-Général des Ports et Phares, à Alexandrie"; the inner one inscribed: "Offre pour la construction d'un hangar métallique dans l'Arsenal." Date, October 31 (noon).

BULGARIA.

Supply of Copper Wire and Rods.—Tenders invited at the District Finance Offices, Sofia, for the supply of copper rods and copper wire. Estimated value, 77,275 frs. Date, October 3.

Supply of Sheet Iron.—Tenders invited at the District Finance Offices, Sofia, for the supply of sheet iron and boiler plates for the Bulgarian State Railways. Particulars from Direction of State Railways. Date, October 4.

ROUMANIA.

Supply of Lead.—Tenders invited at the War Office, Bucharest, for the supply of (1) 92,000 kg. of lead (pig); (2) 570 kg. of ditto (tape), 19 x 0.8 mm.; and (3) 160 kg. ditto, 18 x 15 mm. Particulars from the Ministry of War. Date, September 23.

GREECE.

Motor Omnibus Service.—Tenders are invited by the Home Office, Athens, for the establishment of a motor omnibus service for goods and passengers between Megalopolis, via Karytena, to Andritzena, and 12 routes on the island of Cephalonia. Particulars from the Ministry of the Interior. Date, November 30.

NEWS FROM ALL SOURCES.

The new Servian Government has cancelled the prohibition of the export of grain from Servia.

The report of the Sudan Central Economic Board for July contains detailed particulars as to the occurrence of the "usher" fibre (*Calotropis procera*) in the Sudan. A sample of this fibre, which was forwarded to the Imperial Institute, was valued (May, 1912) at £24 per ton, with Mexican sisal hemp at the same price.

The production of olives in Greece appears to be very moderate, as was expected after last year's great crop. Moreover, owing to the lack of rain in Crete, the next harvest of olives will probably only reach 15,000 tons, that is to say half of the yield of a good crop.

Direct telephonic communication has now been instituted between the towns of Cairo and Zagazig.

Messrs. J. M. Mezger, of Liverpool and 5, Rue Adib, Alexandria, announce that Mr. Hugh Clotworthy, who has had many years' experience in the Egyptian cotton business, has been admitted into partnership. The Liverpool office of the firm is being removed to No. 6, The Albany, Oldhall Street, where a saleroom for spot cotton is to be opened.

It is stated that Messrs. Cazuli have bought fifteen feddans of land at Kafr Zayat, whereon they intend to erect a cotton-ginning factory. They are also going to enter the export market.

The first gatherings of the Egyptian cotton harvest reached Mansourah last week. The branch of the Ottoman Bank there received five sacks of Joanovitch cotton from the Aga district. They were sold immediately for P.T. 479 per cantar.

It is reported that the Sudan Government is proposing to assist its officials and employés to build their own residences, by lending them the necessary money at a favourable rate of interest—that is, 3 per cent. The loans would be repaid by a system of monthly repayments, extending over a period of six years.

The contract for the mail service between Cyprus and Egypt has been signed by the Government and the Khedivial Steamship Company.

Russian Imperial sanction has been given to the contracts concluded with Mr. Charles Stewart, an Englishman, for the lease of Crown lands in the neighbourhood of Lake Gokcha, in the Caucasus, for the purpose of establishing a hydro-electric station.

The Turkish Council of Ministers has decided to allocate a sum of £20,000 to each of the five Armenian Vilayets to enable them to bring about a settlement of the land question between the Armenians and the Kurds.

The Ottoman Provincial Council has authorised the Municipality of Cordelio to lay down an electric light installation in that suburb.

Messrs. J. Compton and Sons, Messrs. T. W. Peterson and Company, Messrs. Thos. Hinshelwood and Company, Messrs. A. Mayer and Company, and Mohammed Effendi el Baroudi were the successful tenderers for the supply of uniforms required by the Egyptian Ports and Lighthouses Administration for the years 1913, 1914, and 1915.

The Cairo police made a raid on Monday evening on a house in Clot Bey Street, the result being that 54 young Egyptian girls and the men connected with the house were escorted to the police station.

Engineering Notes.

Turkish Railway Schemes.

According to rumours emanating from Brussels, the Deutsche Bank is stated to have made an offer to the firm Lenz and Co., G.m.b.H., to refund the security of £T35,000 deposited by Lenz and Co. with the Turkish Exchequer, and also to repay all initial expenses thus far incurred, provided that Messrs. Lenz and Co. agree to refrain from carrying out the construction of the Bosphorus Railway, for which this firm is the licensee, says the Frankfort correspondent of the *Financial News*.

These negotiations, however, are said to have miscarried, and the formation of an electric railway company, with a capital—mostly French and Belgian—of about 40,000,000f., seems to be regarded as a certainty. The Brussels correspondent of the *Frankfürter Zeitung*, however, contends, on the best authority, that an offer of this nature has certainly not emanated from the Deutsche Bank; besides, it is quite unknown that the management of the Brussels branch of the Consortium Constantinople ever made such a proposition. After all, the project of Messrs. Lenz and Co., in which the Allgemeine Elektrizitäts-Gesellschaft is interested, has, according to information from the same source, not yet outgrown the preliminary state of preparation. Consequently it is as yet too early to put forth a definite estimate of costs.

According to further reports from Brussels, the Turkish Minister for Public Works appears to retard the concession for the construction of the underground railway Taxim-Bajadiz, for which the Consortium Constantinople have applied, a French group, headed by Messrs. Perier and Co., for the Omnium Consortium, having interposed. The possibility of this latter assumption being correct is admitted. The change of Cabinet may likewise have contributed to the delay; but, according to latest reports, the granting of the concession to the Consortium Constantinople, the preliminary representative of the new Union Ottomane, may be looked forward to in the near future.

Turkish Mining.

There were practically no mining operations carried out in the Erzeroum district last year, says a recent consular report, except the digging up of about 600 tons of lignite, as against about 2,400 tons in 1910. The military authorities, who consumed most of the lignite extracted in 1910, could not be tempted to take any in 1911. There is still much unconfirmed talk of coal mines in this district. A local holder of several prospecting licences is understood to be still in search of capital in Paris and Constantinople. A concession for lignite mining over an area of 250 acres near the town of Baiburt has been granted to six local traders. The mine is not considered to be of much importance.

Mines in Crete.

A recently issued consular report on Crete states that iron-ore deposits are fairly plentiful in the island, but up till now no proper surveys have been made, nor have any of the mines been exploited. In the Canea district iron-ore deposits are to be found at Ravdoucha, Melissourghio, Fourné, Skiné, Kakopetro, Keramia, and Kourna. The only one of these, however, which has been at all seriously looked into is that of Ravdoucha (province of Kissamo, situated one mile from the sea-coast and some twelve miles to the north-west of Canea). In the Rethymo district there are also several iron-ore deposits, the most important being at Agiropoli, and another at Fodeles (Mylopotamo). That so little interest has been shown in mining enterprise in Crete may be traced to the fact that the deposits are almost always at a distance from the coast, and, as there are no railways and hardly any good roads in the island, one is faced with the difficulty of total lack of communication and transport facilities. Other disadvantages, reported upon by interested persons at various times, are that the deposits lie in very broken strata, and contain considerable quantities of silex and phosphoric acid. It is reported from Rethymo that there are three coal (lignite) mines in the province of St. Basile, but no very definite information is obtainable on the subject.

Lighting of Tripoli.

Notwithstanding the war and the unsettled state of affairs in general, Tripoli is being quite brilliantly illuminated. Besides a large number of Autolux lamps, 100 acetylene lamps have been placed in different parts of the city, and the Banco di Roma is furnishing power for 50 electric lights. The Italian authorities have made a contract with the Societa Generale per il Commercio del Carburo di Calcio to light the city of Tripoli for one year for the sum of £2,400; and the Government has invited the Thomson-Houston Company, Siemens-Schukert Werke, Societa Generale per il Commercio del Carburo, and the Societa Orientale to study the problem of lighting the city by electricity. The restaurants, cafés, and bars that have been opened during the last few months have created a large demand for lights, and the agency for the Kitson system has placed several orders. The Wakefield acetylene system is used by different Goverment departments, the portable lamp made of galvanised iron being much in evidence. The International Marine Signal Co., Limited, of Ottawa, has secured the contract to instal the lights for the new port of Tripoli. A lighthouse will be erected on the Spanish fort. The light at the top of the tower, 100 ft. above the sea, will have 1,100 candlepower. It is claimed by the company that the lamp is self-feeding for a period of 20 months, and the cost will not exceed 22 cents per day if the light is cut off during the daytime. At the entrance of the harbour there will be two lighted buoys and another at the head of the channel; the first two will contain enough carbide to last six months.

Improvements in Jerusalem.

The municipality of Jerusalem is showing praiseworthy activity in improving the condition of the town. The lighting of the streets has been greatly improved, and a number of modern water carts have been obtained from the United Kingdom; a motor road roller and stone crusher have also been imported from the United States. By the way, road rollers using oil as fuel are preferred in Near Eastern districts, where oil is cheap and easier to obtain than coal. American makers were quick in studying the matter and offering a suitable machine which now supplants the ordinary steam roller; and as the use of road rollers is greatly increasing throughout the Near East it is a question worthy of special attention on the part of British makers.

Artesian Boring in Cyprus.

Our Cyprus correspondent informs us that for a long time past the Government has been carrying out artesian well boring experiments in various parts of the island, but so far no results have accrued. The plant is now to be set up at Morphon, where fresh borings will be commenced. These experiments have been disappointing and more or less costly, but if eventually successful (and there seems to be no reason to abandon hope) the outlay would undoubtedly be justified. The local Press appear to wish that a special expert be sent out to advise and superintend the work.

Seed Drills.

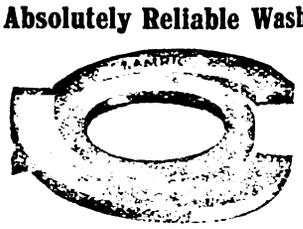
The sowing of corn and other seeds is still carried on by hand in most of the large agricultural districts of the Near East, and where machinery is adopted for such purpose the broadcast sowing machine is commonly in use. This class of machine, however, is not quite suitable for that soil, and many buyers having been disappointed with the results put them aside and returned to the original way of sowing by hand. Here the American engineer manufacturers stepped in again, and after a study of the soil and local atmospheric conditions, they offered to the Near Eastern farmer a sowing machine which evidently gives satisfactory results since its sale is increasing every year. The great advantage of this machine is that by its use the seed is uniformly and rather deeply pressed into the ground, so that the moisture of the soil, which in hot climates is often deficient during the germinating period, is utilised in the best possible manner. Moreover, the saving in the quantity of seed required is generally recognised, and amounts to 20 to 25 per cent., compared with the broadcast sower. This American drilling machine has fixed in front of each drill funnel a concave and slightly slanting revolving screw, about 10 inches in diameter, which dislodges any weeds and clods, and opens up a 2 to 3 inch groove, in which the seeds drop. If British agricultural machinery makers would follow the example of the Americans, and adapt their machines to local conditions, many orders which now go to the States would come their way, for the Oriental buyer always shows a marked preference for anything English so long as it is suitable to him, even at a higher price.

ROUMANIAN RECLAMATION WORKS.

(From Our Own Correspondent.)

Bucharest, September 14.

For several years the question of reclaiming the various tracts of territory bordering on the Danube—which are to-day useless except for vegetable growing, etc., in summer, on account of their being inundated by the flood-waters of spring—has been under serious consideration by the Government. The reclaiming of so much land, running into many hundreds of square miles, will obviously be of great financial profit, apart from the question of putting so much territory under cultivation and the employment it will give to numbers of labourers, and a syndicate has been formed to undertake the work. This syndicate is meeting with every encouragement from the Government.



Certain formalities and arrangements have yet to be made between the syndicate and the proprietors of some of the land before actual work can be commenced. Meanwhile, the Government has purchased two dredgers of a pattern specially suited for the work in view, and these will commence operations in the month of October on some of the land which is domain territory.

As soon as the final formalities have been gone through the syndicate will also commence operations on the land known as the Borcia island, the whole of whose 70,000 hectares will be brought into cultivation. Dykes of over 6 ft. will have to be constructed to keep back the spring floods, this being 9 centimetres above the level of the highest known flood—that of 1897. In no part will the dykes be nearer than 100 metres to the normal river's edge, the intervening space being planted with willows, which, while acting as a breakwater, will of themselves become a valuable asset in comparatively few years. It is reckoned that the reclaimed land will quadruple its present value, which is approximately 675 frs. per hectare. One proof of the great financial and other advantages likely to accrue from this undertaking is that small portions on the St. George's branch have been successfully and profitably drained by a private company, the capital employed being partly British. Others are the crops grown in different parts in years in which the spring floods have been insignificant.

Oil Topics.

Steaua Romana Report.

The Steaua Romana is one of the most important oil propositions on the Continent. The well-known A. Von Gwinner, of the Deutsche Bank, is the president, and it has always held a very high position in the oil industries of Europe. Its report has just been issued. The gross profits are up two million francs, and the dividend has been increased from 8 to 9 per cent. The output was 420,767 tons of oil, as against 402,729 tons in the preceding year. The wells at Bustenari show a falling off, but those at Policiori have considerably improved. Indeed, the production has increased so fast that the company found itself compelled to stop baling in consequence of the difficulties of getting the oil away over the Roumanian railways. For the same reason the company has been compelled to reduce the output of its refinery, which during the past year only treated 466,427 tons, as against 501,454 tons in the previous year. But in spite of everything the profit has risen, mainly owing to the better price obtained by certain of the special products and by the fact that the oil pumped from the wells at Policiori is one of the finest oils found in Europe. The price obtained locally for the various products has increased during the year, but that secured for burning oils for exportation was considerably reduced in the first six months of the year owing to the oil war. This, according to Herr Von Gwinner, has now ceased without having attained any definite result, and the price of all petroleum products has sensibly improved. The sale of fuel oil and oils for motors has increased considerably. The company reports an increased demand from all the navies, and tramp ships are following the example of their Governments and using oil instead of coal. The report goes on to state that as far as the oil-bearing lands now in the possession of the company are concerned, it is able to report that an important, and they believe permanent and valuable, increase in both quality and quantity can be expected. The reservoirs and tanks at all their branches have been enlarged and new depots have been opened. In view of the large increase in the export trade, the company has decided to build some tank steamers, and the first, having a capacity of 4,000 tons and driven by oil engines, will be launched in a few months. The stocks of material have increased mainly because drilling rigs have been augmented in view of a more active policy in this direction. But a portion of the increase is due to the high price of tubes. In order to pay off the debt at the bank and provide funds for further development a call will be made on the shareholders and twenty million francs will be called up.

Last Year's Results.

The figures of the report show that the gross profit for the year was 14,567,173 francs. Ample depreciation has been written off, no less than 7,967,341 francs being deducted for depreciation on works and properties. This leaves a net profit of 4,120,169 francs, and with the amount brought forward of 118,326 francs there is available for distribution 4,238,496 francs. Five per cent. of this amount goes to the statutory reserve fund, and a dividend of 9 per cent. is paid on the capital of 40,000,000 francs. The directors take as their remuneration 151,416 francs, and the employés get 140,000 francs; 141,000 francs are carried forward. The balance-sheet is a very satisfactory document, and it is a pity that English oil companies do not follow the example of this well-managed concern and write off more for depreciation. English companies are in the habit of neglecting this important item, with the result that it always proves disastrous. The total value of the installations, reservoirs, and tank wagons now stands in the books at 38,874,829 francs, to which must be added additions made during the year of 8,780,894 francs, and, as we have stated above, almost one-seventh of this amount is written off for depreciation. The oil-bearing lands, including additions made during the current year, stand in the books at 11.985,059 francs. These figures are all extremely interesting. The present price of Steaua Romana shares is about 765 francs.

English Syndicate in Roumania.

An English syndicate, represented by Mr. Nathaniel Bromley and Mr. Richard Oreston, have purchased from M. Felix Ramult a producing well which was formerly in the possession of Mr. Dinopol, and the same syndicate has also purchased from M. Coriolan Popesco and Mr. Antoine Esser twenty hand wells at Bustenari, which had originally belonged to M. Singer. The syndicate proposes to deepen these hand wells and work them with the usual derrick. Mr. Graham Simpson will shortly arrive in Roumania to take possession of the well at Tzintia and the hand wells at Bustenari.

Locomotives for Roumania.

It will be good news to shareholders in Roumanian oil companies to hear that of the seven locomotives ordered in Germany for use on the Roumanian railways, three have arrived and four more (the balance of the order) will be sent to Roumania almost immediately. These locomotives will at once be put on the Constantza route, and before long we are promised seven oil trains a day to this port. In addition to this new rolling stock the Steaua Romana has lent the Government two locomotives, one of which will be used for the purpose of hauling the oil trains from Campina and the other will be used at the stations of Campina and Campinitza.

Oil Fuel for the Navy.

The fact that the Government have lately appointed a powerful commission, with Admiral Lord Fisher as the chairman, to study the question of oil fuel supply for the Navy, is a sign of the times. The day is not far distant when the shares of substantial oil companies will be regarded by investors in the same light as coal shares are at the present time. Those who are enterprising therefore will select oil shares now and hold them steadily, and they will reap an abundant reward before they are much older. As a contributor to the world's oil supply Roumania occupies a prominent position in the oil world. Great tracts of this country are still undeveloped. The principal British company in Roumania is the Roumanian Consolidated Oilfields, Limited, which holds 7,000 acres of oil land in the richest fields, including a great area of virgin territory of high value. The company, which is capitalised at £1,750,000, is producing about 6,000 tons of oil monthly, and by the drilling of new wells is rapidly increasing its ouput; its profits are on a large and increasing scale. Its assets have lately been valued at fully £4,200,000, and in view of the rise in the price of oil the shares are attractive.

Red Sea Oilfields.

Red Sea Oilfields will shortly be issuing the shares in the Anglo-Egyptian company that was formed by the Shell to work the properties on the Gulf of Suez. The Shell now have eleven wells drilled at Jemsa. No. 1 well is down 1,260 ft., No. 2 well is down 1,655 ft., No. 3 1,670 ft., No. 4 1,719 ft., No. 6 745 ft., No. 9 700 ft. No. 11 is down over 2,000 ft., but has not yet struck oil. No. 2 well is the best of the lot, and is giving from 60 to 70 tons of oil a day. No. 11 well is in another part of the field. The Shell people complain that the wells handed over by the Red Sea Company have not been well drilled and that it will be necessary to sink fresh wells in almost every instance. But No. 9 well has paid for itself. That the Shell people evidently think well of Red Sea is shown by the fact that they have built a refinery that is capable of treating 500 tons of oil a day. The oil is of excellent quality and has very little sulphur in it, and it is quite clear that the geographical position will put this refinery in a splendid position. It is now said that oil has been found on the other side of the Red Sea. The Eastern Petroleum Company, which is drilling some blocks adjacent to the Red Sea, is also drilling on a little island close to the headland of Jemsa, where it believes it will strike oil. It also, as we have before mentioned, is continuing its work at Jubal, and it denies emphatically that the war has interfered with its operations on the Fersan Islands, where it holds a concession from the Turkish Government.

BUSREH DATE TRADE.

H.B.M.'s Consul at Busreh, in his report just issued, states that the export of dates was 66,169 tons, valued at £457,795, as compared with 61,780 tons, valued at £423,233, in 1910, showing an increase of 4,389 tons in quantity and of £34,562 in value, or about 8 per cent. The average market price of dates exported at Basra was £6 18s. 4d. per ton.

Prices were higher for Hallawees and Khadrawees and somewhat lower for Sayers than in 1910, being fixed at the annual meeting of merchants and growers in September at 390 shamis (£22 15s.), 290 shamis (£16 18s. 4d.) and 190 shamis (£11 1s. 8d.) for Hallawees, Khadrawees and Sayers respectively per kara of dates of 40 maunds. The shami is equivalent to 1s. 2d. and the kara of dates to 54½ cwts. The purchase price of Hallawees, Khadrawees and Sayers was therefore at the outset 8s. 4d., 6s. 2d., and 4s. 1d. respectively per cwt. But none of these prices were maintained throughout the season. Khadrawees in particular were difficult to procure in large quantities at the price mentioned owing to the demand for early shipment to Australia. Prices, however, fell both for Hallawees and Khadrawees after the departure of the Australian and American steamers. The crop is estimated as considerably less than that of the previous year. A few shipments to London viâ Bombay prior to the departure of the direct steamers, which arrived in time for the Christmas trade, gave good results, but direct shipments and forward sales of dates in particular must have resulted in heavy losses. A few parcels of dates held over in London till the New Year were sold at good prices. Freight for dates by the direct London lines was fixed at £1 12s. 6d. per ton, as compared with £1 7s. 6d. in the previous year. Two steamers, one German and one British, were loaded direct for Australia, and the usual three steamers left for the United States of America. Shipments to the Levant and Mediterranean ports showed a considerable increase as compared with those of the previous year. This is due to the favourable prices offered in those markets compared with London prices during the season.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending September 6 :— The sales this week on our market amount to thirty-five cases, twenty-seven of which are for consumers and the balance for account of interior and local speculators, at 21s. to 23s. as to quality. Our holders firmly maintain the position, and will do so until fresh orders from the States, Japan, and other consuming markets come forward, in which case a much higher basis will be established. Most of our dealers expect again last year's figures of 25s. to 30s., and we much fear these expectations will be realised, for our crop is under 6,000 cases, and stocks are short in every consuming centre. Besides this, Japan will buy largely this season, as the Persian drug, owing to very high figures, is a closed door to them. The arrivals amount to 1,119 cases against 525 at same date last year.

SALONIKA AGENTS THREATENED.

Reuter's Salonika correspondent reports that agents for British, American, and Hungarian companies established at Cavalla have received threatening letters demanding large subscriptions to the funds of the Bulgarian revolutionary organisation. In view of the avowed inability of the Government to afford adequate protection, the correspondent adds, the business of the agents is at a standstill.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondent.)

September 8.

Cyprus.

The caroub and olive crop this year is good. In the Kyrenia district the yield of both crops is much better than last year both as regards quantity and quality. The price of olives, which a few months ago stood at 18 to 20 c.p. (2s. to 2s. 2½d.) per litre, is now 28 to 30 c.p. (3s. 1d. to 3s. 4d.). There is a rather large stock of last year's olives still in the merchants' hands.

Varna.

Sept. 14.

The wheat market is dull on account of the unending troubles in Turkey. Banks have limited their operations, and all railway cars are reserved for the transport of war materials for the manœuvres. Telegrams received to-day from abroad show high prices. Arrivals from the interior are fewer. To-day there arrived 34,000 kilograms which were sold at 17.80 francs per 57½ lbs., with 4 per cent. admixtures.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

Busreh.

August 23.

Imports.—The market remains unchanged, with a certain tone of animation. The stocks of produce are becoming exhausted, and arrivals are awaited with impatience. Prices for local deals are quite high.

Exports.—Some purchases of grain have been made this week at the following figures:—£T9¼-9½ for Karoun wheat (old crop), £T5¾ for barley (old crop); and £T6¼ for same (new crop).

About 2,500 tons have been shipped for Jeddah by s.s. "Koweit." This shipment comes from Baghdad.

The date market is quite firm. Everything hitherto points to a quite good date season.

Salonika.

September 13.

The intense drought which persisted during the whole summer has almost entirely compromised the crops. The market position is becoming more and more difficult. The requirements as regards fresh imports of Manchester goods become more imperative each day, as the stocks are very depleted.

The market generally is very calm this week in consequence of the Moslem and Hebrew feasts.

Smyrna.

September 4.

Opium.—As we foresaw, the market prices rose 12 to 14 per cent.. Buyers are eager, and the tendency is towards further rise.

Olive Oil.—Rise continues, and buyers are numerous.

Barley.—Each day prices are climbing, and demand is maintained. The arrivals from the high-lying lands are excellent.

Figs.—15,200 loads arrived during the week, and were all sold. The general opinion is that the prices of the good qualities will be maintained, but that those of the secondary qualities will fall.

Dealings in Manchester goods show a certain recovery. The villagers, having sold their produce, commence to make their purchases.

DELICIOUS COFFEE.

For Breakfast & after Dinner.
Wholesale, of Hanson's, London, England.

CONSULAR AND OTHER REPORTS.

Xanthi.

The *Board of Trade Journal* reproduces some particulars concerning the tobacco crop in the Xanthi district, contained in a report from Major L. L. R. Samson, H.M. Consul at Adrianople. The total yield of tobacco in the district for 1911 was, the Consul states, 2,293 tons, of which 30 per cent. was "Maxoul," 50 per cent. "Sirapastal," and 20 per cent. refuse or low grade. The prospects for the 1912 crop are good as regards quality, but it is estimated that the production will be 30 per cent. less than that of 1911. The area planted is 9,715 acres, compared with 9,150 acres in 1911. The prices for superior qualities of tobacco in the Xanthi district are 20 per cent. lower than they were last year; the prices of the lower qualities are, however, well maintained. The drop in prices is mainly due to the inferior quality of the 1911 crop and the large stocks on hand.

The chief European market for Xanthi tobacco is Dresden, where about 2,952 tons of the 1908-9-10 crops are computed to be in stock at present, whilst there are 1,476 tons and 492 tons of the same crops still in stock at Cavalla and Xanthi. According to the Xanthi dealers the rise in the price of tobacco during the last three years is responsible for excessive shipments to Dresden, and there is at present less demand for high-grade tobaccos than for some years past. The establishment at Xanthi, within the past two years, of new branches of banks has encouraged speculation in tobacco, the newly established branches offering particularly favourable terms to buyers.

Growers usually conclude their sales by the end of July, but this season buyers are restricting their operations, and sellers are holding back in the hope of a rise, so that about 246 tons of tobacco still remained in the growers' hands towards the end of August.

Tripoli (Syria).

The Acting British Vice-Consul at Tripoli, Syria, reports that, owing to a very mild and favourable winter, the orange and lemon crop in the Sanjak of Tripoli has matured without suffering any serious damage, and is estimated at about 500,000 to 525,000 cases, as compared with 360,000 to 375,000 in 1911.

Oranges and lemons are at present very much in demand at Tripoli for shipment to Odessa and Constantinople, where high prices are obtained. The first shipments will take place in October, and will consist of lemons exclusively for Odessa. The attempts of the local shippers to find other markets than Odessa have so far failed. Some years ago a trial shipment of bitter oranges to Liverpool realised 18s. a case, a very high price, but later shipments on a larger scale proved complete failures. The Tripoli oranges are very similar to those from Jaffa, and, like them, could be exported to the United Kingdom principally in the early days of the crop, at which period they stand the journey better. The absence of a special service of steamers for oranges appears to be the chief hindrance to the export of this fruit to the United Kingdom.

Merawi.

A report published in the *Sudan Times* of the 2nd inst. states that the date crop is excellent this year, and prices are high, so that the farmers are hoping to be compensated, in part at least, for their loss on the dura crop, which was infested with the Assal fly.

South Russia.

Mr. F. Watson, Acting Consul-General at Odessa, reports, under date of August 30, that the harvest for 1912 is very late, and though the bulk of the crop was gathered before the bad weather set in, there was still a considerable quantity lying in the fields. Owing to the rain, threshing is proceeding very slowly, and until that operation is finished no definite opinion can be given regarding the extent of this year's harvest. The grain is coming through to Odessa so slowly, however, that it is feared that previous estimates have been too high, and that the final results will show that the harvest in the district round Odessa is below the average.

PRODUCE REPORT.

London, September 19.

The markets have shown fair activity during the past week, and prices in most instances were well maintained. Sugar is irregular. Coffee steady. Currants firm to arrive, cheaper for common. Sultanas firm and in better demand. Seeds quiet. Linseed firm, but quiet. Linseed oil steady. Rapeseed oil, firmer; other oils easier. Gums firm and in better demand. Opium firmer, but quiet.

Sugar.

Beet sugar was steady in the beginning of the week, but after a moderate business became quiet. Closing prices: September, 12s. 2d. to 12s. 4d.; October, 10s. 1d. to 10s. 1½d.; November-December, 9s. 11½d., f.o.b., Hamburg Refined, English, more doing than of late. Tate's cubes, No. 1, prompt, 21s. 9d.; November-December, 18s. 7½d.; No. 2, prompt, 21s 3d.; November-December, 18s. 1½d. Foreign Say's, cubes, September, 17s. 10½d.; October-November, 15s., f.o.b., Paris. Dutch, 17s. 1½d.; November-December, 14 3½d., f.o.b., Amsterdam. German and Austrian, 14s. 1d., f.o.b., Hamburg. Russian crystals, ready, sold at 12s. 10½d., f.o.b., Dantzic.

Coffee.

Coffee supplies were offered at auction but met with less demand, and prices, in some instances, were barely steady. Washed Dumont, small to bold, 75s. 6d. to 80s. 6d. Guatemala, low mid. to mid., 78s. to 79s.; and bold, 80s. to 81s. 6d. Other kinds unaltered.

Currants.

The spot market is quiet. Stocks are being steadily reduced at slightly easier prices. The forward position is a little stronger, and higher prices are being quoted for shipment. Bags of Provincial, 24s.; ½ cases of Pyrgos, 26s. 6d. to 27s; Gulf, 27s. to 30s.; Panarits, 27s. to 28s; Vostizza, 30s. to 34s.

Sultanas.

There is no quotable change for sultanas on spot. Prices for the last steamer's load were a little lower than those obtained for the fruit brought by the previous one.

Figs.

Bags naturally continue firm. Good layers are 38s. to 41s. Common layers, 32s. to 36s. Comadras, 21s. 6d. to 23s.

Seeds.

Only a moderate inquiry is experienced for linseed, but River Plate is firmer in value. London-Calcutta, afloat, sold 62s. 6d.; September-October, 61s 3d.; La Plata, September-October, 56s. 6d. Rapeseed is firmer; September-October, 51s. 9d.; brown, 50s. Cottonseed, firmly held, London-Egyptian loading, £9 2s. 6d.; October, £8 15s.; November-January, £8 11s. 3d. per ton.

Oils.

Linseed oil, spot pipes, 34s.; barrels, 34s. 6d. Rapeseed oil, ordinary brown, 30s. 9d.; refined casks, 33s. 3d. Cottonseed oil, crude spot, 25s. 4½d.; refined sweet, 30s.; ordinary pale, 27s. Petroleum, American, 8½d.; water white, 9¼d.; Russian and Roumanian, 7½d. to 8¼d.

Gum.

There has been a better demand for all kinds, and prices are firmer with inclination in favour of sellers. Near East kinds meet with a better than the usual demand and good business has been done.

Opium.

The market is quiet, but prices are very firm, guaranteed 11 per cent. spot is quoted 21s. to 21s. 6d. per lb, and for shipment 19s. to 19s. 6d. Nobody can tell whether these prices will be maintained, and opinions differ; but there is a belief that at present there is no fear of reduction.

Various.

Almonds per cwt., Jordan, good to fine, £9 to £11; small, £7 to £7 10s. Barbary, sweet, 85s. to 90s.; bitter, 90s. to 110s. Onions are firm, 5s. 6d. for Valencias, and 7s. 6d. for Egyptian. Walnuts, 22s. to 33s. per cwt. Lemons, 300 in case, 8s. 6d. to 12s.

Cotton and Cotton Goods.

EGYPTIAN COTTON MARKET.

(From Our Own Correspondent.)

Alexandria, September 12.

The general tone here is firm. In spite of the bumper crop, it does not seem as if prices were to suffer any considerable fall. The somewhat unfavourable conditions of the American crop and the increasing demand for Egyptian cotton are factors militating against a decline.

On the other hand, it is reported that the boll-worm has made its appearance in several localities, but the damage is slight, and more or less confined to those regions where the cotton is of medium quality. The attacks of the boll-worm may perhaps become more general, but the damage cannot be anything considerable, because we are now on the eve of the first picking, which has even already commenced in the Charkieh and Gharbieh Provinces.

We have recently received from the Bank of England £100,000, and it is estimated that £10,000,000 will be necessary to move the crop during October and November. The local banks are already well provided with gold, but it is necessary to draw more gold from Europe, which will provoke a tightening of money in Egypt.

Cotton seed is rising. Stocks are almost exhausted, and the arrivals are quickly absorbed by the local oil industry. Export orders are in good volume.

COTTON CROP IN EGYPT.

The monthly bulletin of the Department of Agriculture, issued on the 8th inst., gives the condition of the cotton crop as on September 1 at 9 per cent. above the average for Lower Egypt, and 15 per cent. above the average for Upper Egypt. In contrast with the corresponding date of last year these figures are very satisfactory.

The cotton worm has now disappeared from the cotton areas; the boll worm is general, but not severe, in both Upper and Lower Egypt. The localities specially noted as attacked number nine, and, except where "oqr" cotton is cultivated, the attack is in isolated small areas, and is from 2 per cent. to 10 per cent.

In conversation with Mr. Dudgeon, Director-General of the Department of Agriculture, Reuter's correspondent learnt some interesting details of the intended experiments to be carried out for the future possible preservation of the cotton crop from damage by the "Prodenia Littoralis" (cotton worm) and the "Earis Insulana" (boll worm), the two pests which have wrought so much havoc to the crops of past years.

In the words of Mr. Dudgeon, the country is so essentially dependent upon agriculture that the effect of any general disturbance of the normal conditions under which crops are grown is felt by almost the entire population. The experiments, therefore, of the Agricultural Department, with the object of ensuring to Egypt a succession of good crops, will be followed with more than ordinary interest. Steps have been taken to introduce predatory insects from abroad, by the help of which it is hoped finally to check both the cotton worm and the boll worm.

The introduction was intended of a protozoan disease (microsporidium polyedricum), known to attack the caterpillars of a moth called "Die Nonne" in North Germany, which species is destructive to pine forests. The disease recurs every seven or eight years, and its effects are felt over two or three succeeding years; but, strangely enough, it was this actual disease that manifested itself this year in Egypt amongst the cotton worms, proving very destructive, and thereby greatly aiding the authorities in checking damage to the crop. Mr. Dudgeon is of opinion that this parasite is not new to the country, but that it had possibly been overlooked in previous years.

The boll worm in India has been found to be parasitised by three distinct insects—two hymenoptera and one dipteron. One of the former, Rhogas Lefroyi, is said to destroy a very large proportion of boll worms in normal years. Arrangements have accordingly been made for the importation of this insect to be bred for distribution in the Egyptian cotton areas.

EGYPTIAN COTTON FIGURES.

A DELEGATION TO EGYPT.

The London correspondent of the *Manchester Guardian* reports that an important delegation from the International Federation of Master Cotton Spinners is shortly going to Egypt to inquire into the conditions under which cotton is cultivated and handled on the banks of the Nile. It will consist of about one hundred delegates, representing twelve nationalities, and will make a thorough inspection of the various ginning factories, seed-crushing factories, etc., in the country. In addition to visiting the experimental and other plantations, the delegates will hold conferences with the Department of Agriculture at Alexandria, the Khedivial Agricultural Society, and the Alexandria Produce Association. This visit (says the writer) is intended to be complementary to the one made to Egypt last winter by the British Cotton-growing Association, and in view of the fact that the mission sent to the United States by the Federation in 1907 resulted in the introduction of many improvements in the handling and storing of cotton, similar benefits are expected to issue from the visit to Egypt.

The English Federation of Master Cotton Spinners, at a meeting held in Manchester a few days ago, under the presidency of Sir Charles Macara, adopted rules and arbitration for differences between cotton spinners and manufacturers in England, Austria, Belgium, France, Germany, Holland, Italy, Russia, Spain, and Switzerland. The rules remove points in dispute from the law courts to experts in the trade.

SHIPPING NEWS.

BRITISH SHIPPING IN THE BLACK SEA.

(From Our Own Correspondent.)

Odessa, September 15.

For the moment there are only two British steamers loading in this port, and that, too, at a season when, in ordinary years, there are some twenty British bottoms here. The new season's grain is arriving very slowly and in meagre quantities, and the average despatch given to ships of over 5,000 tons is from ten to fourteen days. In Kherson there are nine British steamers, in Nicolaieff seven, and in the Taganrog roads about fifteen. Notwithstanding the scarcity of cargo, freight rates are booming. Within the last week they have advanced about three shillings for L.H.A.R., that is, from 11s. to 14s., and in the Azoff ports from 13s. 6d. to 16s. 6d. The shipbrokers are reaping a harvest on the ships fixed previously at the then lower rates. On one of the two British bottoms now loading here the broker will clear at least £900. There is the danger, however, of a slump following the prevalent boom, and the brokers now chartering boats for the late autumn at the present rates may be faced with a sudden and considerable decline.

Of late years British shipping in these waters has been entirely speculative. No British owner now, as formerly, entrusts his ship to a Black Sea broker "to do best," that is, to accept current market rates. The charters are definitely fixed beforehand, and the chartering shipbroker stands to win or lose as the freight rates rise or fall by the time the ship arrives in port. And the competition among the brokers themselves is of a cut-throat character. Things might be very different if there were some kind of common agreement among the shipbrokers, who are all British firms, to regulate and maintain freight rates. But as it is, instead of being masters of the situation, they are more or less at the mercy of the Jewish grain exporters. In this great southern centre there is not a single Christian among the grain merchants and exporters; they are all Jews, and Jews of a class in which commercial morality and rectitude are conspicuously absent.

BRAILA NOTES.

(From Our Own Correspondent.)

Braila, September 14.

Our freight market, following the trend of the London market, has this week been rising rapidly and almost daily. On Monday morning last the rates quoted were 15s. from the Danube to Antwerp, 14s. to Rotterdam, and 15.50 francs to the Mediterranean, whilst since yesterday 17s. is being paid for either Antwerp or Rotterdam and 18.50 francs for Mediterranean ports. There is very little open tonnage in port—only about 2,000 tons for Antwerp and 500 tons for Rotterdam—so that fancy rates will be paid on Monday morning by such merchants as are obliged to ship.

Unless the present situation lasts for some considerable time, I do not anticipate that any berth steamers will be fixed in London from the Danube to the Continent at the very high rates ruling at present; business will necessarily be limited to the amount of tonnage that the regular lines provide. There is, however, a pressing demand for tonnage for the Mediterranean both from Sulina and from the Danube, and already 18.25 francs has been paid for a prompt steamer from the Danube to Naples and 18 francs from Sulina to Genoa. Sulina will also be in the market for a number of berth sizes to Antwerp and Rotterdam; a prompt steamer of 6,000 tons d.w., owned locally, has to-day been fixed at 17s. Antwerp or Rotterdam. Spot rates from Sulina are very firm, and there is a fair demand for room at 16s. 6d.

The depth of water in the Danube remains unchanged; steamers can load at Galatz or Braila down to 23 ft. 6 in., and can cross Sulina bar drawing 23 ft. fresh water.

H.M. cruiser "Talbot," which went aground in the south section of the Suez Canal, was towed off undamaged after lightening about 150 tons. She proceeded to Suez, where ammunition and coal were reshipped, and left for Aden.

MANAGER - - - R. HECHT.

The National Bank of Turkey undertakes every description of Banking business. It opens current accounts according to the custom of Bankers. Customers have the facility of discounting approved bills and of obtaining advances upon negotiable securities. The Bank will undertake the purchase and sale of bonds, shares, etc., on the London Stock Exchange, on the local and on all Continental Bourses, the safe custody of customers' securities and valuables, and the collection of drawn bonds and coupons when due. The Bank issues drafts and telegraphic transfers payable in all principal towns in the world. Letters of credit for the use of travellers are also issued. Advances made on merchandise. The purchase and sale of coupons, foreign bank notes, coin and bullion are undertaken. Bills negotiated or sent for collection. Mercantile credits opened.

Deposits received for fixed periods at rates of interest which can be ascertained on application.

BANK OF ROUMANIA, Ltd.

Head Office: 7, GREAT WINCHESTER STREET, LONDON, E.C.
Branch: 94, STRADA LIPSCANI, BUCHAREST.

CAPITAL (fully paid), £300,000. RESERVE FUNDS, £169,688.

DIRECTORS:

THE EARL OF BESSBOROUGH, C.V.O., C.B.
SIR R. HAMILTON LANG, K.C.M.G.
THE VISCOUNT GOSCHEN
E. W. H. BARRY, ESQ.
P. NAVILLE, ESQ.

The Bank was originally incorporated in 1869 under Roumanian law, but in 1903 was transformed into an English Company under the Companies Acts. It is the oldest bank in Roumania, and the only one with a London office.

A general banking business is carried on. Correspondence is invited from those doing business with Roumania, and should be addressed to THE MANAGER in LONDON or BUCHAREST.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, PARIS, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, and PORT-SAID.

Subscribed Capital - - £1,500,000.
Paid up Capital - - 500,000.
Reserve - - - - - 648,000.

The Bank undertakes every description of Banking Business on most favourable conditions.

NATIONAL BANK OF EGYPT

(Established by Khedivial Decree, June, 1898, with the exclusive right to issue Notes payable at sight to Bearer.)

CAPITAL - - - - £3,000,000.
(In 300,000 Shares of £10 each, fully paid.)
RESERVE FUND - - £1,500,000.

Governor: F. T. ROWLATT.

HEAD OFFICE: CAIRO.

London Committee:

HON. HUGO BARING,
HON. ALGERNON MILLS,
SIR CARL MEYER, Bart.,
HON. SIDNEY PEEL.

London Agency: 4 and 5, KING WILLIAM STREET, E.C.

MANAGER: J. T. BEATY-POWNALL. ASST.-MANAGER: A. F. GILLBEE.

Accounts opened with traders and private persons. Every kind of Banking Business transacted.

Offices in Egypt at Cairo (Head Office), Alexandria, Assiout, Assuan, Benha, Beni-Suef, Chibin-el-Kom, Damanhur, Fayoum, Keneh, Luxor, Mansourah, Minieh, Mousky (Cairo), Port Said, Sohag, Tantah, Zagazig; and in the Soudan at Khartoum, Port Sudan, Suakim.

Stock and Share Markets.

Bank Rate 4 per cent. (August 29, 1912.)

SETTLING DAYS.

CONSOLS.
Monday, September 30.
STOCKS AND SHARES.
In Mining Shares the next carry-over is September 24.

Continuation Days.	Ticket Days.	Pay Days.
Wed., Sept. 25.	Thurs., Sept. 26.	Fri., Sept. 27.
Wed., Oct. 9.	Thurs., Oct. 10.	Fri., Oct. 11.

LONDON, September 19.

The stock markets show a very undecided tendency. General business appears to be dull. At the same time, there have been some sharp gambles in Metropolitans and Peru Prefs. No doubt the high Bank rate is gradually beginning to affect business, and there is now talk of a further rise before Christmas. However, there is still plenty of money for Stock Exchange purposes, and until the crops begin to be moved in earnest we are not likely to see any serious stringency.

Internationals Inactive.

In view of the expected rise in money rates gilt-edged securities have been weak, and Consols have been as low as 74¼. Foreigners have been inactive, the only business in this market having been done in Peru Prefs., which have been bought in large blocks, and have gone well over 56. There has been some heavy gambling here, and the account is likely to disclose a big and rather weak bull operation. Bulgarians have not moved, but it is said that Le Credit Français intends to bring out a Bulgarian Loan in Paris. If so, they have not at present begun to move the market in London. Chinese remain firm, in spite of the threats of the six Great Powers that they will not permit the new bank to be established. Egyptian Unified show very little change. This stock keeps remarkably steady, and has hardly varied a point during the whole year. It is strongly held, but whenever it goes over 101 it is noticed that there are sellers in the market. Hungarians show no change. Here, again, the promised loan hangs fire. Russians are firm, and Paris is preparing for some big issues. Turkish Unified, after having been slightly better, have been offered, but the loss on the week is nominal.

Home Rails.

The Home Railway market has confined the whole of its attentions to Metropolitans, which, it is said, are to be taken over by the Great Western Railway. This is supposed, in some mysterious manner, to affect Districts, which have been offered. East Londons have also been gambled in with the idea that the Great Western will utilise the New Cross terminus for the purpose of a shunting yard. Great Central preference have been purchased, but there has been very little business in any of the Heavies. The Yankee market is rather dull. Southern Preferred have increased their dividend, and this has caused people to buy Eries. Erie Preferred have been bid for. Canadian Pacific have also been good, but Mexican issues have been very flat, Mexico North-Western having tumbled to 33.

Rubber and Oil.

The rubber market calls for no attention. Very little business has been done. The public appear to have quite lost their interest in these securities. The spurt died down when it was found that everybody was a seller. Oil shares are talked higher, without any business resulting. Insiders are saying that Shells are to be put up, and it is said that the Harmsworth division are buying Red Seas. Roumania Consolidated are also one of the market tips.

Mines.

Mines are quite out of favour. Very little business is done. There has been a certain amount of buying in Rhodesians, Tanganyikas having been inquired for. The shops do not seem inclined to support the market, and, as a result, dealers offer the shares. The latest tip in the tin market are Rayfield Cornwall, and this company proposes to issue a subsidiary, but the rest of the tin market shows no improvement. Copper shares have been good, and Anacondas are talked to 10.

Miscellaneous.

In the Miscellaneous market it is clear that the bears have succeeded in getting out of their difficult position, and to-day there appears to be a bull account, which is being carried by the insiders. This is a dangerous condition of affairs, and Marconis might easily slump. United Alkali are being bought by clever people, and Cements are also good.

Egyptians.

In the Egyptian market the event of the week has been the purchase of a block of 5,000 Beheras. It is understood that these shares were in the hands of one of the banks. They have now been purchased by various Trust companies, some of which are under the rule of Lord St. Davids. Evidently, Mr. Foster's arrival in England has put heart into the Behera market. At one time this share was as high as £16, but there has been a slight reaction. Salt and Sodas look a little stronger, but until the big blocks that were taken over at the time of the Zervudachi failure have been disposed of, this share will remain one of the cheap bargains in the Egyptian market. Aboukirs are steady, but do not show any change. Agricultural Banks were bought last week, and have improved their quotation. Delta Lands have been as high as 19s. 6d. Delta Light Railways have been neglected. But a fair business has been done in Investment and Agency up to as high as 11s. Gharbieh have improved to 3. Khedivial Mail ordinary at 12s. look an attractive purchase. Land Banks have hardly been mentioned. But New Egyptians have been purchased, although the latest quotation shows a slight decline on the week. There has been very little business in either Sidi Salem or Union Foncière, but United Egyptian Lands have hardened up to 4s. 6d., and look like going better.

TURKISH RAILWAY RECEIPTS.

The earnings of the Anatolian Railways for the week to August 19 amounted to 257,372f., or 85,315f. less than in the corresponding period of last year, says the Berlin correspondent of the *Financial News*. Since the commencement of 1912 the takings aggregated 8,711,047f., showing, despite the loss in the week under review, a total gain of 915,219f. as contrasted with the corresponding period of 1911. At the same time the Macedonian Railway (from Salonika to Monastir) reports for the week ended August 18 earnings of 68,026f., showing a slight improvement of 547f. over the takings of the same week of 1911. The earnings since January 1, 1912, total 2,163,917f., or 81,906f. more than in the corresponding period of last year.

THE BULGARIAN LOAN.

A message to the *Financial News* from Paris states that a telegram from Sofia has been received stating that the Bulgarian Government have decided to approach the French group of bankers, headed by the Banque de Paris, with a request that they will make an advance of 15,000,000f. on account of the projected 150,000,000f. loan.

FINANCIAL NEWS IN BRIEF.

The receipts of the Egyptian Delta Light Railways for the eleven days ended August 31 amounted to £E6,732, a decrease of £E712 as compared with the corresponding period of last year. Goods and sundries show an increase of £E84. The decrease in passenger receipts is attributed to the period of Ramadan, which has seriously checked traffic, also to loss of market and animal traffic on account of cattle plague restrictions.

A telegraph office has been opened at Jemsah, says an official notice of the Egyptian Railways and Telegraphs Administration.

The numbers are announced of Piræus, Athens and Peloponnesus Railway Four and a-Half per Cent. bonds, amounting to £700, drawn for repayment at par October 15 next, at the offices of Messrs. Raphael and Sons, Austin Friars House, E.C.

The coupons of the Greek Government Four per Cent. Loan of 1910, falling due on October 1, should be presented for payment, between the hours of 11 and 2, at the office of Messrs. C. J. Hambro and Son, 70, Old Broad Street, or of Messrs. Emile Erlanger and Company, 8, Crosby Square, E.C., where lists may be obtained. Coupons must be left three clear days for examination.

The coupons of the Greek Four per Cent. Rentes, falling due on October 1, should be presented for payment, between the hours of 11 and 2, at the office of Messrs. C. J. Hambro and Son, 70, Old Broad Street, for payment of 32 per cent. in gold of their face value, in accordance with instructions received from the International Financial Commission, Athens. Lists may be obtained, and coupons must be left three clear days for examination.

The coupons of the Greek Five per Cent. Funding Loan of 1893, falling due on October 1, should be presented for payment, between the hours of 11 and 2, at the office of Messrs. C. J. Hambro and Son, 70, Old Broad Street, for payment of 32 per cent. in gold of their face value, in accordance with instructions received from the International Financial Commission, Athens. Lists may be obtained, and coupons must be left three clear days for examination.

Messrs. N. M. Rothschild and Sons publish the numbers of 218 bonds of the Ottoman Four per Cent. Loan of 1891, amounting to £60,000, which have been drawn and will be paid off at par at their offices on October 10.

The receipts of the Egyptian Markets for the week ended September 12 amounted to £380, a decrease of £385, compared with the corresponding period of last year. The total receipts from the commencement of the year amounted to £36,032, a decrease of £3,598.

The Imperial Ottoman Bank opened an office at Sokia (Asia Minor) in the early part of this month. This new office will be under the branch office at Aidin.

An official mission despatched by the Egyptian Government (and composed, as a Roumanian paper informs its readers, of "MM. Greaves Dabel, chef du service des finances, et Roucoing chef du service de géologie") is now on a visit to Roumania, studying the oil industry in that country. It was received on the 7th inst by M. Dem. Nenitzesco, Minister for the Interior.

Company Notes and Reports.

Ottoman Railway (Smyrna to Aidin).

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended June 30, to be presented to the meeting on the 24th inst., states that the receipts on revenue account for the half-year amounted to £168,186, as compared with £139,420 in the corresponding period of 1911. The expenditure amounted to £75,747, as compared with £65,549, and the net profit amounted to £92,439, as compared with £73,871. The balance of net revenue, including the sum brought forward, amounts, after defraying all fixed charges and providing for dividend on the preference shares, to £69,686, out of which the Council recommend the payment of an interim dividend of 8s. per ordinary share, leaving £49,799 to be carried forward. It is stated in the report that the Egherdir extension works have been delayed by the withdrawal of men for military service, but it is expected that the extension will be completed and available for traffic during this half-year. The traffic prospects for the current half-year are very favourable. The general manager reports that the increase in coaching traffic receipts was £8,155 and in goods £20,611. The cotton crop proved 50 per cent. larger, and olive oil three times the quantity carried in 1911. The favourable condition of sowings in the upper country also liberated grain that would otherwise have been held back for local consumption. Working expenses were 42.92 per cent., against 44.52 per cent., and were adversely affected by the enhanced cost of coal. The rolling stock, permanent way, and works were maintained in good order. A pipeline has been laid from the pier to the creosote tank depot. The agricultural outlook appears to be fairly favourable; in the valleys the cereal harvest is estimated to be decidedly larger than last year, but rain has been lacking for cotton and other summer crops. On the high lands grain sowings were more extensive, but it is anticipated that the harvest there will be approximately the same as the previous one.

Barramia Mining and Exploration.

The report of the Barramia Mining and Exploration, Limited, for the year ended June 30 last, to be presented to the meeting on the 25th inst., states that 4,058 tons of quartz were crushed within the twelve months, yielding 6,274 ozs. of bar gold (ore 1 oz. 10 dwts. 22 grs. of gold per ton), and represented by 5,454.660 ozs. of standard gold, which realised £21,257. Upon this amount a royalty of £426 became payable to the Egyptian Government, leaving as the net value £20,830. Further receipts, consisting of interest and transfer fees, brought up the total revenue to £21,060. The ordinary expenditure for the year was £14,549 and the resultant profit £6,510. To the surplus of £500 brought forward must now be added the past year's profit of £6,510, making £7,058, which amount in turn has been subjected to the following deductions:—Depreciation of buildings, machinery and plant, etc., £627; tools, etc., in use, £332; motor lorry, spares, etc., £300; preliminary expenses, £300; and income-tax, £194; leaving available £5,303, and the directors have declared a dividend of 14 per cent on the ten per cent. non-cumulative preference shares of 2s. 6d. each (less income-tax), also a dividend of 4 per cent. on the ordinary shares of 5s. each (less income-tax), £4,614. The balance of £689 carried forward will be debited with the remuneration payable to the directors and managers on the dividends so declared. The expenditure on capital account during the year amounted to £2,896. The sales of gold during the year show an increase of £2,567, and the profit of £6,510 compares with £5,156. The tonnage of ore crushed was also greater by 2,197 tons, whilst the average yield of gold per ton was 1 oz. 10 dwts. 22 grs., as against 2 ozs. 18 dwts. 10 grs.

The Bank of Egypt.

In the annual report by the Board of Trade on matters within the Companies (Consolidation) Act, 1908, which has just been issued as a Blue Book, the Comptroller of the Companies Department makes the following observations on the failure of the Bank of Egypt:—"In the opinion of the official receiver, the failure of the bank is the result of Luzzatto's management of the business in Egypt, and the directors appear to have contributed to this result by allowing their general manager to have practically a free hand and by neglecting to exercise proper supervision in Egypt and in London over his management. The financing of the bank by means of the three months' bills when its funds became locked up was reprehensible, as failure to sell its acceptances would have caused its suspension at any time within the past few years. Having regard to the serious financial position in which the bank stood, there was no justification for the high rate of dividends and bonuses paid during recent years, which misled the shareholders and the public as to the true financial position, which was withheld from them. The audit appears to have afforded no protection to the shareholders. The statement of affairs submitted by the directors discloses gross liabilities £2,237,104, and estimated total assets, after payment of a secured creditor of £2,708,587. It is now apparent that this estimate cannot be realised, and although sufficient may be recovered from the assets to meet the liabilities to creditors, it is highly probable that the shareholders will lose the whole of the capital already paid by them (£625,000), in addition to having to meet a considerable portion, if not the whole of the uncalled capital, amounting to £625,000. It is, however, hoped that part of the capital called up in the liquidation may eventually be returned to the shareholders."

Ottoman Gas.

Colonel J. Le Geyt Daniell, presiding at the meeting of the Ottoman Gas Company, Limited, on Tuesday, said that, taking everything into consideration, the company had never been in a sounder position than it was at the present moment. Some evidence of its soundness was shown by the fact that, in spite of the adverse circumstances, the high price of coal, and the difficulties of labour, they were in such a position that the directors were convinced that the time had arrived when they could increase their dividend to the rate of 10 per cent. per annum for the past year. They were in a position to cope with all the business offered as soon as peace was restored between Italy and Turkey.

Austrian Lloyd.

The balance-sheet of the Austrian-Lloyd for 1912 will show a large increase in the book value of the fleet, as the company has taken delivery during the year of the Alexandria steamer "Helouan," the steamer "Abbaza," and the new the steamer "Abbazia," and the new second Bombay steamer, "Marienbad," will in all probability be commissioned early next year. These vessels, together with the other Alexandria steamer, "Wien," taken over last year, represent a value of more than 30,000,000 kronen.

Alexandria Tramways Company.

The receipts of the Alexandria Tramways in August amounted to 249,542 frs., against 236,051 frs. in August, 1911, which brings up to 1,667,363 frs. the receipts for the first eight months of 1912, as compared with 1,609,539 frs. in 1911, an increase of 57,824 frs., or 3.59 per cent. The Ramleh railway receipts for the first eleven months of the 1911-12 financial year amount to 1,816,473 frs., and exceed by 86,621 frs., or 5 per cent., those of the corresponding period of the previous year.

Oriental Railways.

The gross earnings of the Oriental Railways for the week to September 8 amounted to 367,453 frs., or 50,826 frs. more than for the corresponding period of last year. Since January 1 the takings aggregate 11,949,770 frs., an increase of 1,828,001 frs.

Ghezireh Estates.

The ordinary general meeting of this company will take place on Saturday, September 28, at three o'clock in the afternoon, at the offices, 11, Rue Leys, Antwerp, to receive the reports of the directors and the balance sheet to June 30, 1912, and to approve the statutory nominations.

Baghdad Tramways and Electric Lighting.

The Baghdad Tramways and Electric Lighting Syndicate, Limited, has been formed with a capital of £3,105, divided into 3,000 "A" shares of £1 each and 600 "B" and 1,500 ordinary shares of 1s. each. The offices of the company are at 3, Laurence Pountney Hill, London, E.C.

Bosphorus Electric Railway.

The *Financier* states that it is understood in Brussels that the German Bank has offered to return to the firm of Lenz and Co. a guarantee of £T35,005, paid to the Turkish Financial Office, if they will abstain from constructing the Bosphorus Electric Railway, for which they had got the concession. The negotiations not having succeeded, the construction of such undertaking with £1,600,000, chiefly French and Belgian capital, is now said to be assured.

Asiatic Petroleum Co. (Egypt).

Reporting on the trade of Egypt for the past year, Mr. Consul-General Blech says that during 1911 the Asiatic Petroleum Company (Egypt), Limited, imported at Port Said 6,843 tons of liquid fuel from Roumania, of which 2,381 tons were re-exported, and 810 units, amounting to eight imperial gallons per unit, of benzine from Sumatra. At Port Tewfik (Suez) the company's imports were:—Liquid fuel from the Dutch East Indies, 10,529 tons, of which 10,448 tons were re-exported, and about 10,000 cases or their equivalent from Sumatra. At the new installation built at Port Said in 1911, at kilometre 3 on the Asiatic side of the canal, the company has accommodation for 8,800 tons of liquid fuel. The stock usually kept amounts to about 3,000 tons. There are two tanks of equal size, both reserved exclusively for the storage of liquid fuel. At its Port Tewfik installation the company possesses four large tanks similar to those above mentioned, i.e., each to hold 4,400 tons of liquid fuel, but these are at the present time nearly empty pending a decision by the company as to their future use, according as the needs of the new oilfields at Jemsa may demand. No kerosene was imported by the company during 1911. Benzine is now being imported in large drums, instead of in cases and tins, the capacity of these drums varying between 50 and 65 imperial gallons. The stock kept in Egypt averages about 5,000 units of eight imperial gallons (say 160 tons).

COMPANY MEETING.

Société Générale de Tramways, de Transports et d'Electricité à Smyrne.—In Brussels, September 25.

GREEK DEBT.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to July 31, 1912 (New Style, January 14 to August 13, 1912):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross receipts, July.		Drachmæ.	Drachmæ.
1912		2,604,617·16	1,933,500·00
Ditto, 1911		2,561,288·11	1,945,000·00
Estimated receipts for 7 months (Law of Control		16,858,333·33	6,241,666·67
Actual Receipts ditto, 1912		20,837,919·56	14,562,433·40
Ditto, 1911		19,411,804·97	15,501,429·22
Difference between estimated & actual rec'pts for 7 ms.	1912	+ 3,979,586·23	+ 8,320,765·72
	1911	+ 2,553,471·64	+ 9,262,626·55

Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper and Naxos emery 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par.

NOTES FROM ALEXANDRIA.

(From Our Own Correspondent.)

Alexandria, September 12.

The Share Market.

The amelioration, which we were the first to predict, still continues. The revival is due partly to the improved tendency of Egyptian securities on the London, Paris, and Brussels Exchanges, but it must also be recognised that the activity manifested by our own market is due to the return of confidence, which had been so rudely shaken by the failures of last autumn.

Egyptian savings are no longer withheld from investment in local stocks and shares; the speculator, although still absorbed by the cotton market, has commenced to take interest in the share market in view of the increased scope which it now offers. Moreover, the Levantine capitalists are recommencing to look to Egypt as an investment field, especially in view of the somewhat precarious conditions prevailing in the Ottoman Empire.

This reconquest of favour is fully justified by the economic conditions of the country. The cotton crop has almost doubled, and the volume of the exports now exceeds that of the imports, so that the trade balance leaves each year a considerable surplus in the country. On the other hand, the surplus of the Railways, the Customs, the Post Office, and the budgetary surpluses show that the purchasing power of the fellah is increasing, and that the country enjoys unparalleled prosperity.

There is still some talk of the late crisis, but one forgets that the vital forces of the country were untouched. The 1907 crisis was originally due to excessive speculation, but was subsequently aggravated by the tightening of credit which resulted. This restriction of credit took place just at the time when the country had need of fresh capital for productive works of all kinds. This lack of capital produced a serious depreciation in all Stock Exchange securities, which were thrown on a market incapable of absorbing them. On the other hand, landed property also suffered similar depreciation, although in less degree.

A change has now come about, and European capitalists, having regained confidence, are commencing to interest themselves in Egypt. Stocks and landed property are consequently rapidly recovering ground. If this improvement should be continued, we might say that Egypt has completely recovered from the crisis, which has so unjustly discredited the country in European eyes. Thus will, we trust, disappear the crisis legend—and for ever.

However that may be, a country which produces cotton of the unique qualities possessed by the Egyptian variety can regard the future with equanimity.

The Death of Zervudachi.

Georges Zervudachi died on Tuesday. Some hours before he had been pardoned by the Minister of Justice.

This man leaves behind him both fortunes and ruins. He made the fortunes of several princes, who sold him, at enormous prices, the domains of Rodah and Gizeh, at Cairo. On the other hand, he dragged with him, into failure, the Mitylene Bank, the Comptoir Financier, Rodocanachi, Reynolds and Co., and others.

In spite of his faults, Mr. Georges Zervudachi was extremely popular in Alexandria. He was the most simple, modest, and charitable man imaginable, and is regretted by everyone.

The trustees of the bankrupt estate continue to realise the assets. An incident has arisen with the Bank of Mitylene. This latter creditor for £E42,000 effected a "saisi" on the Lattakieh mines, in Turkey, for which an English group is offering £E100,000. Now, the trustees in the bankruptcy are endeavouring to have the "saisi" annulled by the Ottoman Courts, but in view of the Turkish Codes the trustees will have the greatest difficulty in achieving their aim. Meanwhile, all the creditors will personally intervene in this suit at Constantinople, should the Ottoman Courts not recognise the validity of the bankruptcy decree pronounced in Egypt.

Land Bank of Egypt.

Mr. Maurice Romano will be appointed general manager of this bank. The shares are gradually rising, and far-seeing capitalists can still pick them up at remunerative prices.

Egyptian Public Debt.

The Public Debt to-day amounts to £94,411,220 exactly. The Government and the Caisse de la Dette Publique hold £5,452,720 invested, so that there are in circulation only £88,958,500 of Government securities. Amongst the credits recently opened by the Finance Ministry are £E79,000 for the construction of the railway from Zifta to Zagazig, and £E20,000 for improvement of the auxiliary lines in Upper Egypt. A credit of £E15,000 and one of £E10,000 have also been opened for the erection of the Native Tribunal and Government Building on the Alexandria Quay.

The Death of Gabriel Dabbane.

The merchant and capitalist, Gabriel Dabbane, died on Tuesday. He leaves a fortune of about £500,000.

SMYRNA-EUROPE TELEGRAPH SERVICE.

(From Our Own Correspondent.)

Smyrna, September 11.

The telegraphic service between Smyrna and Europe has never at any time been perfect, but in comparison with certain other public services it was not bad, and business was carried on fairly smoothly. The credit of smooth working was probably largely due to the good service afforded by the Eastern Telegraph Company, which has an important office here, and in view of recent events this certainly looks so. On the arrival of the Italian warships in local waters their first act was to cut all the cables linking Smyrna with the outside world, including the Eastern Telegraph Company's cable from Tchesme to Syra. The result was disastrous for business. All the telegrams were then forwarded by the Ottoman land lines to the Dardanelles, of which there are no less than four. Telegrams from England began to arrive with a day or two of delay. The delay then stretched into three and four days, and now they often arrive after letters posted in England on the same day as the telegram is despatched. These delays, of course, also applied to telegrams sent from Smyrna. Naturally they caused complaints, so the telegraph authorities stated that it was due to the large number of military messages handed in. Most of the troops were moved from Smyrna, but the delays still took place, and messages had to be paid triple rate to ensure delivery in two or three days instead of four or five. As matters did not improve, a meeting of business men was held under the auspices of the British Chamber of Commerce of Smyrna on Tuesday, and it was resolved that the Minister of Posts and Telegraphs should be petitioned to place one of the four Turkish land lines from Smyrna to the Dardanelles at the disposal of the Eastern Telegraph Company's officials. This will, no doubt, accelerate the despatch of telegrams if the request is granted, but it is doubtful whether the Turks will do so.

Mr. Francis E. Crow, H.M. Consul at Busreh, in his annual report to the Foreign Office, mentions that a severe and prolonged epidemic of cholera visited Busreh in the summer of 1911 and claimed many victims, both native and European. No reliable statistics are available, but there is little doubt (he remarks) that in the town of Busreh and outlying districts several thousands of persons succumbed.

THE EASTERN BANK, LIMITED.

Head Office: 4, CROSBY SQUARE, LONDON, E.C.

Subscribed Capital, £1,000,000. Paid up, £400,000. Reserved Liability of Shareholders, £600,000.

NOTES OF THE WEEK.

The extreme pessimism that characterises all the reports from the Balkan States regarding the general situation in the Near East is not a novel feature. The more critical the position, the greater the credit due to the various Governments for their self-restraint and the larger the debt of gratitude that they can enter up against the Powers. But pessimism in the official utterances of the Austro-Hungarian Government naturally commands attention, and in the present instance will undoubtedly tend to increase the anxiety felt in some quarters in regard to the Balkan outlook. The tone adopted both by the Emperor in his speech to the Delegations on Tuesday and by Count Berchtold in his subsequent remarks was in striking contrast to the usual tenour reserved for these occasions. The Emperor Francis Joseph referred to "the troubled situation in the Near East," while his Foreign Minister spoke of "the play of lightning in the Balkans betraying a heightened electric tension of the political atmosphere," and of "threatened conflicts" and "the dangers of a Balkan conflagration." At another season of the year such language might well augur ill for the continued peace of Europe's storm-centre, and we are far from suggesting that the Balkan States are not nearer an outbreak of war than they have been for many years. Nevertheless we believe in the possibility that practical considerations will cause the ominous clouds to pass, at least until the spring time invests a campaign with greater attractions even for the most warlike. Count Berchtold, it must be remembered, has to justify his invitation to the Powers to exchange views on the Balkan situation. The absence of any concrete outcome from this step renders it the more necessary that the polite answers of friendly Governments should acquire special virtue. The blacker the crisis that will have been weathered, the closer must needs be the co-operation of the Powers brought about by the exchange of views undertaken at Count Berchtold's initiative. At best the Austro-Hungarian Foreign Minister was only able to make out a retrospective interest for his proposals, and as he dipped his brush in earthquake and in storm the thought must have sprung unbidden to the minds of many of his hearers whether the situation would not have been far less critical if Count Berchtold had not played upon the fears and passions of all the Balkan nationalities by vague proposals which require such elaborate colouring to hide their ineffectiveness.

It is too early for the results of M. Sazonoff's visit to Great Britain to be reflected in British or Russian policy; but public opinion has made up its mind that the negotiations between the two Governments must lead to fresh developments in Persia. In a communication to the Press, in which it outlines its policy, the "Persia Committee" hastens to assure the Russian Foreign Minister that "any policy which involves an eventual partition of Persia between Great Britain and Russia can never prove acceptable to the people of this country." There can be no doubt that the Committee's policy would be well suited to a clean slate in Persia. Unfortunately, however, so much is already written there in the nature of essentials, whether palatable or otherwise, that statesmanship cannot possibly ignore it. The best service that can be rendered to Persia is to assist her in making a fresh start from where she is, not from where she ought to be.

The Turkish and Italian delegates in Switzerland are still seeking a settlement of the question of sovereignty over the Tripolitan provinces. The latest proposal is said to provide for the maintenance of the suzerainty of the Sultan, who is to be represented by a Turkish official, invested with the title of Pasha of Tripoli and Cyrenaica and entrusted with the administration of the Evkaf (Moslem pious foundations) and of the Moslem religious courts. By withdrawing its troops and conferring the fullest possible measure of autonomy on Tripoli and Cyrenaica the Porte would leave the Italians and Arabs to adjust their differences in regard to the administration of the territories, but would retain all the spiritual prerogatives of the Khalif. This proposal on the part of the Italians may be supposed to approach more closely to the views of the Turkish Government, and its acceptance would mark the closing stages of the negotiations. Agreement on all other points is held to be a comparatively easy matter, unless indeed the Arabs are capable of putting a spoke in the Turkish wheel.

The timing of the fierce attack on the Italian lines at Berana and the fact that the Turco-Arab forces were led by Enver Bey in person have not unnaturally given rise to the belief that the Turks had hoped that a success in Tripoli would be of assistance to them in the peace negotiations. If the extent of the disaster that overtook their arms is as great as it is reported to be by the Italians the result of the engagement may have more influence on the Arab attitude towards the Italian invasion than on the *pourparlers* in Switzerland. As usual, however, the Turkish version of the fight does not tally with the Italian reports. The former receives support from newspaper correspondents with the Turkish forces, but on the other hand the Italian commander

Digitized by Google

gives the number of the enemy's dead actually buried by his troops as 1,134, and it is difficult to suppose that he would allow himself to be misled on such an important point. Three days after the Berana engagement the Italians assumed the offensive in Western Tripoli, where after ten hours' hard fighting a force under General Ragni occupied the oasis of Zanzur and two neighbouring heights to the west and south. The battle, which began at half-past five o'clock in the morning, appeared to be nearly over at noon; but at this moment the approach of a strong Arab force from Suani Beni Aden was signalled from the airship flying between Zanzur and Gargaresh. Italian reserves were hurried forward to repel this attack, which is said to have been so fierce that "even the artillery had to charge with fixed bayonets." The Arabs were put to flight, and were pursued for several kilometres. General Ragni stated that his own losses were about 200 killed or wounded and that those of the enemy were "large." The Italians bivouacked on the positions occupied, which had constituted the objective of their advance, and set to work to entrench themselves.

It is difficult to gather from the mass of information hastily disseminated from all parts of Turkey a clear impression of the course of events in that country. That the general situation is causing the Porte considerable uneasiness is manifest, and the new Cabinet would seem to be much too occupied in coping with each fresh emergency as it arises to be able to deal on a comprehensive scale with the main problems confronting it. A sudden rising on the part of the Malissori has necessitated a further movement of troops. Martial law has been proclaimed at Skutari, and a mixed division of troops has been despatched to that town. Severe fighting is reported to have taken place, but the interruption of communication with the disaffected districts leaves the actual position uncertain. From the fact that two Montenegrins have been taken prisoners with some of the Malissori the Turkish Government has inferred that Montenegro is responsible for the outbreak, and is said to have requested the Powers to enjoin the observance of neutrality upon the Cettinje Government. But if the origin of the Malissori revolt is obscure, they seem to have established their connection with fresh demands on the part of the Christian Albanians for wider concessions than those already granted at Uskub. In the meantime discontent is reported to be rife among the troops stationed in Epirus and Salonika owing to the alleged weakness of the Porte in conceding the entire demands of the Albanians. Moreover, as a result of a conference between the Ulema and the leading Mussulmans of the Ghilan, Djakova, Ipek, and Prizrend districts a telegram has been sent to the Turkish Government to warn it against entertaining proposals of decentralisation, and threatening to meet any display of weakness on the part of the Government with a proclamation for a general insurrection.

In face of these complications in Albania the Porte last Sunday issued an official *communiqué*, in which it announced the extension to all the Ottoman nationalities and to all the provinces the concessions recently made to the Albanians. The preamble to this document stated that the Council of Ministers had adopted this measure in consequence of the steps taken by certain Ambassadors in Constantinople and of communications made by the Russian Minister of Foreign Affairs to the Turkish Ambassador in St. Petersburg. For the purposes of an emergency notice this rough and ready method of announcing reforms for Macedonia may suffice, but it is obvious that the conditions in the latter province differ so widely from those in Albania that the Uskub agreement will require considerable modification before it is capable of meeting all the Macedonian needs. Again, the peculiar wording of the announcement, with its reference to foreign suggestion, must have been intentional, and we are left to decide whether the Porte wished to disarm Turkish criticism by laying emphasis on the *force majeure*, or whether it wished to impress the Powers with its readiness to accede to their wishes. There is, however, no need to labour this point. The meaning of the announcement is that the Turkish Government undertakes to modify the system of excessive centralisation that constituted the main policy of its predecessor. This promise is made formally to the nationalities concerned and under guarantee to the Powers. The details of the reforms, even after the publication of the official text, have yet to be filled in, but if the Porte obtains sufficient respite from the domestic troubles that threaten it on every side it will have no excuse for failing to meet in great measure the legitimate requirements of the various peoples in Macedonia and in Kurdistan.

For the last three years the outrages committed by the Kurds on the Armenians have been the subject of repeated protests to the Porte. In 1909 the Patriarch, Mgr. Tourian, resigned in consequence of the failure of the Turkish Government to punish adequately the ringleaders in the Adana massacres, but the assurances of the Committee of Union and Progress that their wishes would be met placated the Armenians for the time being. It was soon realised, however, that the old order of things was being maintained, and protests were again made to the Porte. The new Patriarch has recently made the strongest possible representations to the Grand Vizier and the members of his Cabinet; but in view of the ill-success of his efforts he has resigned, together with the Lay Council. In a letter to the Armenian National Assembly Mgr. Arsharouni gives as his reasons for the resignation the Government's *démenti* of certain of his assertions regarding the outrages committed on Armenians, its failure to afford protection, and the continuance of attacks upon Armenians. In view of its difficulties elsewhere the Porte must be anxious to avoid complications with the Armenians; but, as may be gathered from the condition of the European provinces, the Central Government is virtually powerless to impose its authority upon some of its more unruly subjects.

In an interval between the despatch of deputies to Athens the Cretans have found time to send a force of filibusterers to Samos. The numbers of the landing party are variously given as from twenty to 350. They were under the command of M. Sophoulis, a former political leader in Samos, and were at once joined by some of the islanders. The combined forces advanced towards Vathy, driving back the Turkish garrison. The presence of the Samian leader suggests that the movement originated in Samos, and it is probable that overtures for help would meet with a ready response in Crete at this juncture. The Cretans, it will be remembered, had previously threatened to send an expedition to the island. Samos is self-governed, under a Christian Prince appointed by the Porte, and its status enjoys the guarantee of Great Britain, France, and Russia. In addition to political controversies among themselves, the inhabitants have a quarrel against the Porte owing to the strength of the Turkish garrison kept in Samos. The island has not been occupied by the Italians, and the present expedition is probably intended to place Samos in as favourable a position as the other islands for the consideration of its grievances when peace is declared between Italy and Turkey.

The death of Baron Marschall von Bieberstein removes a personality whose name will always be associated with the history of the Near East of recent times. For nearly fifteen years German Ambassador in Constantinople, Baron Marschall won for his country and for himself a dominant influence in Turkish counsels. His success was a tribute to his own gifts and an indication that the personal factor can still be made to count in diplomacy. He rendered a signal service to Germany, and testified to the advantage accruing from an able representative in Constantinople. If circumstances prove to be against the maintenance of paramount German influence in Turkey, the fact will only serve to enhance the work accomplished by Baron Marschall in winning a position that was open to one of his colleagues.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)

Constantinople, September 20.

Sheikh Shawish and the Young Turks.

The Committee Press continues to reproach the Government for its extradition of Sheikh Abdul Aziz Shawish and for its domiciliary visits to the dwellings of various Egyptian agitators, mostly medical students, at Kadikeui and on the Bosphorus, which have resulted in the seizure of numerous documents that have been, or will be, handed over to the Egyptian Government. The question of the guilt or innocence of Shawish is not raised by the majority of these journals, which criticise his extradition on the ground that Egypt, though a vassal State, whose Khedive ranks as the senior Governor-General of the Ottoman Empire, is not a Turkish province, in that judgments are not delivered in the Sultan's name by its courts. The fact is that a considerable number of the Committee Extremists have dipped rather deep in the waters of Egyptian Nationalist intrigue in the past, and are now naturally afraid that Shawish may have something to say concerning the assistance which they rendered him and his comrades. Wardani, the assassin of Butros Pasha Ghali, frequented the society of Young Turks during his visit to Constantinople some months before his crime. Mohammed Bey Farid was appointed Egyptian representative of the Grand Orient of Turkey—which was notoriously no more a Masonic Lodge from the British point of view than is the Grand Orient of France—by no less a person than Talaat Bey, who was then Grand Master of this avatar of the Committee of Union and Progress, and both the Pan-Islamic *Hilal-el-Osmanieh* and the *Minbar el Millel*, a journal of the same description, were notoriously subventioned by the Ottoman authorities. Furthermore, the Committee of Union and Progress, at each of its congresses in 1910 and 1911, passed resolutions in favour of the linking up of the bonds which united Egypt with the Ottoman Empire, and took note of the report issued by the "Central Bureau," wherein the despatch of emissaries to Egypt and other "Moslem lands," such as India and Afghanistan, was mentioned. Should the Young Turks return to power, it is to be hoped, in their own interests, that they will abandon such dangerous pyrotechnics, which can but win them and their country the ill-will of some of the most formidable European States.

The Situation in Albania

The situation in Northern Albania has been complicated by an outbreak among two sections of the Catholic Malissors, viz., the tribes near Tuzi, north-east of the town of Skutari and close to the Montenegrin border, and those of the Alessio-Kroya district, with whom certain Moslem clans are allied. Sharp fighting, in which the troops lost some ninety and the Malissors over 200 men, is reported from the Tuzi district, while several skirmishes have taken place near Durazzo.

The Coming Elections.

Party politics continue to be the subject of a vast amount of rather profitless speculation. The theory that the Committee of Union and Progress will presently return to power and chastise its opponents with scorpions is being extensively aired by those who disbelieve in the Army's fixity of purpose and in the power of the Union and Liberty party and the other groups hostile to the C.U.P. to organise. On the other hand, we have the out-and-out partisans of the present Government, who consider that the imprisonment of Djavid and Djahid Beys, which seems to Europeans a foolish imitation of the Committee's methods of dealing with Press criticism, will terrify the partisans of the (present) Opposition, and express the belief that the Committee will be lucky if it has forty deputies in the next Chamber. In the opinion of your correspondent, the Committee will be defeated, though not so decisively as the last-mentioned theorists profess to believe, and a new Ministry, over which Kiamil Pasha may preside, will replace Ghazi Mukhtar's Cabinet. But it is quite impossible to look more than a few months ahead in a country where political principles are as rare as political ambitions are common, and where the Army, which does not always know its own mind, is the one organised force which can make and unmake Governments in a few days' time. Public opinion, save in Albania, has been, and still is, lacking among the Moslems of the Empire. The Turks of many parts of Anadol complained as bitterly of the gerrymandering of the last elections as the Arnauts; but while the latter were ready to take the field the Anatolians waited till Albinia and, above all, the Army had given them a lead. On the other hand, there is this to be said: What the Committee Left describes as "reactionary Clericalism," and what foreigners who know the country best describe as "Conservatism," is growing more powerful, or, at all events, more watchful in certain districts, and may, if organised, force even a triumphant Committee into unexpected compromises. Meantime the events of the last three months have furnished those who doubted the permanence of Committee rule with an additional reason for distrusting "the outside of things." It is to be hoped that they will also furnish those who blamed British statesmen for their policy of "aloofness" as regards Turkey with reasons for revising their ideas. Had the British Government attempted to supplant Germany as the patron of the Committee Government, Heaven knows what our position here would be to-day. The mistake was not made, most happily, though evil counsel was not lacking; and we are now not indeed in a position to "commit" ourselves, but sufficiently well placed to reap the benefits of our obvious policy of friendly opportunism—always provided that the Turk can be prevented from cutting his own throat by a repetition of the policy towards the non-Turk elements which Abdul-Hamid inaugurated and which the Young Turks of 1909-1911 unsuccessfully attempted to carry out to its logical conclusion.

NOTES FROM SMYRNA.

(From Our Own Correspondent.)

Smyrna, September 20.

Return of the Italians?

A few days ago the local papers announced the return to Constantinople of several Italians who had been expelled in accordance with the general order issued by the Turkish Government. The news probably encouraged one or two Italians to return to Smyrna, one of them being a well-known merchant, Mr. Antoine Solari. Mr. Solari called on the Governor-General and on the Chief of Police, and it is reported that they at first assured him that he could remain. This news naturally produced a good effect, and we should probably have soon seen the return of a number of Italians from Greece, where many of them are residing during their enforced absence. But it is apparently too premature yet for the return of the Italians; for Mr. Solari has now been officially notified that he must quit Smyrna by the first steamer.

The Government and the C.U.P.

The recent circular issued by the Cabinet insisting on members of the municipal councils making a declaration that they will not openly belong to any political party has been greatly resented, and several of the local councillors have refused to comply with the circular. Several other moves on the part of the new Cabinet have caused considerable dissatisfaction amongst the native population, especially the dismissal of certain officials and the substitution in some cases by former well-known adherents of the old régime. This policy is a doubtful one, as it will have the effect of increasing the returning popularity of the Committee. The late Chief of Police, for instance, was one of the best officials in Smyrna; but, for political reasons, he has been recalled and replaced by an official in whom no one has any confidence.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 17.

The Khedive's Trip to Europe.

Bairam was celebrated with great zest this year. The coincidence of the Coptic and Jewish New Years with the Moslem feast probably accounted for the unusual animation. On the first day of Bairam H.H. the Khedive held his customary reception at Ras-el-Tin Palace. In the afternoon he embarked on board the Austrian-Lloyd s.s. "Helouan" for Trieste, where he will meet Mohammed Pasha Said, the Prime Minister, who will act as Regent during his absence. It is expected that His Highness will be away for about a month. He will visit Geneva, Neuchatel, Paris, Vienna, and Constantinople, and on his return journey he will stop at Dolman in order to inspect his Anatolian estates.

The Defence of Egypt.

Admiral Breusing's speech at the annual congress of the Pan-German League at Erfurt, wherein he declared that in case of war with Great Britain, Germany's first object would be to make, with the assistance of Austria and Italy, a land attack on Egypt in order to stop the British food supply, is considered out here to be an important contribution to the controversy that has raged around the question of our naval and military position in the Mediterranean. It bears out in an extraordinary manner the views expressed in the London Press—and especially in The Near East in some of the more recent of its letters from Egypt.

With Italy at Tobruk, it was plainly obvious that in the event of hostilities Germany would use her ally's position as a "point d'appui" and as an invaluable means of attacking her opponent at one of her most vulnerable points. Mr. Winston Churchill, in withdrawing the Mediterranean Fleet to Gibraltar, was merely playing into Germany's hands, and Admiral Breusing's candid declaration only serves to show what a narrow escape we ran and how grateful everyone ought to be to Lord Kitchener and to the other naval and military experts for the stern opposition they offered to this weak move. Even now the danger is not passed. The torpedo-boat station at Alexandria is, so we understand, not to come into being until next year, and even then it will only be a palliative. What is wanted—and general opinion out here will bear me out—is a strong cruiser squadron stationed nearer East than Malta, so as to counteract the Italians at Tobruk and the Austrians at Pola, and a strong garrison in Egypt. Until those two alterations shall have been made in our naval and military position in the Levant, the threat made by the German admiral will be possible of realisation. It is generally hoped that Mr. Churchill, who during his short stay at the Admiralty has shown such remarkable receptivity, will in this instance take the hint and make such arrangements as will relieve the Empire with all speed from the danger of Admiral Breusing's Sword of Damocles.

The Five Feddan Law.

On Saturday last the period of three months during which any Power could demand that the project of the Five Feddan or Homestead Law should be re-submitted to the Legislative Assembly of the Mixed Courts lapsed. The law was submitted to that Assembly in June last, and was approved by it, with certain modifications, on the 14th of that month, on which date it was published in the *Journal Officiel*. According to the new arrangement made last autumn with the Mixed Court of Appeal, if within three months of the acceptance by its Legislative Assembly of a project of law intended to be binding on foreigners no Power has submitted amendments and has requested that the law with those amendments be referred again to the Mixed Courts, the Egyptian Government is fully empowered to promulgate the law. In the case of the Five Feddan Law, it is as yet not known whether any Power has availed itself of this arrangement. As your readers are already aware, the law has aroused a deal of comment and active discussion locally, and delegations from the various communities have waited on the British Agent and the Minister of Justice, and are understood to have wrung from them certain concessions in regard to the application of the conditions. If, in consequence of these representations, any alterations are made in the law by the Government, the amended draft will have perforce to be re-submitted to the Mixed Courts. At the earliest, therefore, the law, unless it is to be enacted in its original form—which is to be very much doubted—cannot finally be promulgated until the end of the year.

The Seditious Circulars.

The inquiry into the seditious circulars and the case of Sheikh Adbel Aziz Shawish, which is being conducted now by the Procureur-General in person in Alexandria, still continues. A slight delay was incurred owing to the Bairam holidays. Two more suspects have been arrested at Constantinople, and arrived on Monday by the s.s. "Osmanieh." They were taken charge of by the Mamur Zapt, and were at once confronted with Sheikh Shawish. These two new arrivals are Mohammed Effendi Lutfi El Baroudi, who went to Constantinople four months ago in order to enter the Military School, and a student named El Rafehi. Both of them were connected with the *Hilal El Osmani*. So far no trace has been found of the authors of the Tantah and Mansurah placards. It is hoped to conclude the inquiry before the end of the month, and then to transfer the affair to Cairo. No information has so far been vouchsafed the public as to the progress of the inquiry or the motives underlying these arrests. As a result the most fantastic rumours are going the rounds. According to some who are supposed to be behind the scenes, the evidence so far obtained does not at all prove Sheikh Shawish's complicity in the matter of the seditious circulars brought over by Mukhtar, and the latter's statement that they were composed and given him by the Sheikh is said to be the sole evidence against him.

No doubt it is very necessary that the inquiry should be conducted as secretly as possible, but it would appear that the authorities are going a little bit too far in the matter of reticence. Although this affair of seditious posters and circulars has now been in progress nearly a month no communiqué of any description has been issued by the Government, and even the details regarding Sheikh Shawish's arrest and surrender to the Egyptian authorities had to be obtained from Constantinople from the official statement issued by the Ottoman Government. I certainly think the Egyptian public is justified in complaining.

The Porte's Communique.

The statement issued by the Porte, and referred to above, has aroused a considerable amount of comment. The Turkish Government gives as its reasons for handing Sheikh Shawish over, firstly, that Egypt forms an integral part of the Ottoman Empire; secondly, that the Sheikh is an Ottoman subject; and, thirdly, that, being accused of conspiring to murder, the legal demand made by the Alexandria Parquet for his surrender had to be complied with, owing to the fact that the orders of the tribunals of Egypt and Turkey are always mutually recognised and executed. To the two first motives little or no exception is taken, but it is remarked that they contribute rather a humorous touch seeing that the very people—the Nationalists—whose one cry has all along been that Egypt formed part of the Ottoman dominions, are now suffering from the inconveniences of that situation.

Echo of the Conspiracy Trial.

The two witnesses, Hassan Noureddin and Abdul Hamid Metwally, accused of perjury in the conspiracy trial, were each sentenced to four months' imprisonment on Monday by the Saida Zenab Court.

NOTICE.

With each number of this week's issue of the "NEAR EAST" is presented FREE a 32-page Illustrated Supplement, entitled: "SERVIA OF TO-DAY," dealing with the History, Economics, Finance, Literature, Religion, and Customs of Servia.

NOTES FROM THE SUDAN.

(From Our Own Correspondent.)

Khartoum, September 14.

Bairam Celebrations.

So Ramadan is over. The long Mohammedan fast is a memory—but a vivid memory when we think on servants' delinquencies! Still, it is past, and as we write all Government officials are enjoying a holiday; for all offices are closed for three days for the lesser Bairam and one day for the Wakfa. After that we hope to settle down to work again for the weeks which intervene before the big Bairam brings another break.

The first day of Bairam was celebrated in the traditional manner. Reviews of troops were held at Khartoum, Khartoum North, and Omdurman. Then, after breakfast, the usual levée was held at the Palace by Colonel J. J. Asser, Adjutant-General and Acting Governor-General and Sirdar during the absence of Sir Reginald Wingate on leave. We all struggled into our "levée" kit, which is of varying grades of picturesqueness, but of a uniform discomfort under a hot September sun. The proceedings opened with an address from the Acting Governor-General, in which he announced, among other matters, the bestowal of the Fourth Class Osmania on Captain A. Wise, officer commanding Arab Battalion; Captain N. McD. Teacher, officer commanding 3rd Battalion; Captain G. S. Symes, D.S.O., Assistant Director of Intelligence. Cheers were then given for H.H. the Khedive, and the Khedivial Anthem was played. Afterwards, all those present filed past and shook hands with the Acting Governor-General. It was a picturesque sight, kaleidoscopic in colour, varying from the plain frock coat of the unofficial civilian to the gorgeous red and gold robe of honour of some faithful Sheikh. Most striking of a.. the figures was Zobeir Pasha, now a very old man, whose chequered career has been so bound up with the Sudan.

Acting Governor-General's Tour.

Colonel Asser has only just returned from a tour of inspection up the White Nile, Sobat and Pibor rivers. He left Khartoum on August 14, accompanied by Bimbashi S. S. Butler, Assistant Director of Intelligence; Bimbashi F. de W. Harman, 12th Sudanese; Bimbashi B. de L. Forth, Camel Corps; and Mr. K. Cornwallis, acting private secretary. He proceeded in the S.G.S. "Atbara" up the White Nile, stopping at Dueim, Kosti, and Kodok. At Taufikia he inspected the headquarters of the 13th Sudanese, and proceeded up the Sobat; after paying a visit to the American Mission station under Messrs. Tidrich and Guthrie, he reached Akobo Post on the 23rd, where he was received by El Kaimakam Logan Bey, who is the officer commanding this post, and also in administrative charge of the district. Near this post the natives are returning, it is satisfactory to note, to their villages, and resuming the cultivation of the land.

The Acting Governor-General got within twenty miles of Pibor Post, a new post established on the Pibor River in the Beir country, but the lowness of the river then forced him to return to Akobo Post without reaching the Pibor Post. Then he went on to Gambeila on the Abyssinian frontier. In an interview with several merchants he expressed his satisfaction with the large quantity of coffee exported from the Abyssinian coffee districts to the Sudan during this year. He left Gambeila on September 2, and reached Khartoum on September 8.

Personalia.

Major Drake, who has received the brevet rank of Lieut.-Colonel, and who was in command of the Beir patrol this winter, has left the Sudan after a good period of service, and will go back to the Royal Artillery at home. He was given a farewell dinner at the Sudan Club on September 10.

Captain Stafford, who, as we mentioned in our last letter, was injured in an elephant hunt near Fort Bruce, is making progress. Mr. Bolton, who was with him, and was only slightly hurt, has left for England on leave. Captain Pearson, Director of Surveys, who has been on a survey tour, and who was with Captain Stafford on this shoot, has also returned to Khartoum.

September has not been very hot so far, and we have even had rains and sandstorms in Khartoum within the last few days. There is a steady stream of people returning from leave. Sir Reginald Wingate is expected in Egypt about the middle of October.

SUDAN RAILWAY CHANGES.

We understand that an important change in Sudan administration is to come into effect on November 1 next, when the steamer service of the Shellal-Halfa reach of the Nile will be transferred to the Railways Administration of the Government. Hitherto the shipping of this reach has been under the control of the Steamers Department at Khartoum North, but the moment is now considered opportune to hand this particular reach over to the railways. Passengers will now be enabled to book their luggage straight through from Cairo to Khartum, and *vice versâ* viâ the Valley of the Nile.

The Railways Administration, which already caters in the most efficient manner on its own system, will undertake a similar service on this reach of steamers, and they will be enabled to deal with all goods at first hand. Under former conditions, although the service was excellent, the fact that it was under different control to that of the railways gave rise to a good deal of unnecessary departmental work. The coming change will obviate all this, and the river service between Egypt and the Sudan will work in with the railways in the same manner as the Dover-Calais boats between England and France.

THE FUTURE OF THE SUDAN.

Sir R. Slatin Interviewed.

Before leaving England on Wednesday for the Sudan Sir Rudolf Slatin granted an interview to Reuter's representative. Replying to questions, the Inspector-General said that it had not yet been decided whether another expedition against the Anuaks would be necessary. "Only recently," he added, "news has been received of the submission of further Anuak chiefs, and it now remains to be seen how far the promises made by them will be carried out. If they are not, further steps will have to be taken. The danger resulting from the arms traffic is very serious, for every Abyssinian possesses a rifle, and these are sold, with the result that our tribes become exposed to the violence of neighbouring armed natives. Representations have been made to Abyssinia on the subject, and the British Minister at Adis Abeba is doing his best to explain the situation to the Abyssinian Government, and to point out the danger thus created, not only for the Sudan but also to Abyssinia. It is hoped, therefore, that a satisfactory arrangement will result. As regards the attitude of these frontier tribes, there is no combination against the Sudan Government, and any trouble arises from fighting among themselves."

In reply to a question regarding the proposals for settling the Darfur frontier, Sir Rudolf said: "It is hoped that this question will be arranged during the winter, for the British and French Governments have agreed to a conference on the subject. Steps will be taken to settle the whole western frontier of the Sudan, including the Bahr el Gazel. When or where this conference will take place has not yet been settled, but an arrangement ought not to present much difficulty."

"The future of the Sudan," continued Sir Rudolf, "is very promising. It is hoped that the Government will soon get the necessary money to carry out a scheme of cotton-growing on the Ghezireh, as the Thaibia experimental farm has proved such a great success and has shown that cotton grows extremely well in the Sudan. It is hoped, therefore, that a big movement will be inaugurated, and that the necessary money will be found for a comprehensive scheme, assisted by the Government. The development of the Sudan is dependent upon the money available. There are plenty of opportunities to invest capital. As regards railways, there are no extensions in view for the moment, but the lately constructed line through the Ghezireh and Kordofan, besides being of great strategical value, is already paying well."

Asked in conclusion regarding the Senussi and the effect of the Turco-Italian War on the Mohammedans, Sir Rudolf Slatin said: "The Senussi appears to be holding a neutral position. The conclusion of peace is, however, much to be desired, for discontent grows among the Moslems as this war goes on. They cannot understand why no European Power intervenes. They fail to realise the actual situation, and, not understanding the international position or the difficulties in the way, are always waiting for England to do something."

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, September 21.

The Balkan Entente.

The negotiations, open and secret, carried on between the governments of the different Balkan States seem at last to have ended in an *entente cordiale*, or even in an offensive and defensive alliance between Bulgaria, Servia, Greece, and Montenegro. Memories of the annexation of Bosnia and the present fear that Austria seriously contemplates a descent upon Salonika in the near future has helped largely to accelerate this understanding.

The exact terms of the entente are not yet known, but reports emanating from various sources tend to show fairly conclusively that the principal features are:—

1. If Turkey attacks any member of the allied States the rest are obliged to come to the assistance of the attacked party; and should one of Turkey's neighbours be obliged by circumstances to move against Turkey the rest must follow.

2. The improvement of the lot of Christians who are now under Turkish rule is to be regarded in future as a cause common to all the Balkan States. Macedonia, which has been up to the present an apple of discord, must receive a separate autonomous government, with a Christian Governor, a national army, and a separate existence for herself. In the other European provinces of Turkey, where the Christians are yet under Turkish rule, a separate sphere of influence is reserved for each State; but this provision does not in any case preclude joint action on their part to help their kinsmen and each other.

3. The four States agree for the above cause to put in the field an active army 680,000 men strong, in which number the reserve army and the Landsturm are not to be considered. Bulgaria must furnish 300,000; Servia, 200,000; Greece with Montenegro, 180,000 against the common enemy, whosoever he may be.

4. Joint diplomatic action will be undertaken by a special memorandum to ask the Great Powers signatory to the Treaty of Berlin to force Turkey, after a long term of thirty-six years to fulfil Article XXIII. of the Treaty under the control of the Great Powers. In case Turkey refuses or cannot be induced to grant the concessions which alone can put an end to the ferment in the Balkans, then they will overcome her by force.

Naturally, with the few data at present at our disposal, it is very difficult to judge about the correctness of the four points set out above, but the political evolutions which have taken place in the Balkans during the last month, and the manner in which the political questions have been treated and discussed by the local Press, give us the right to say that they are not very far from the mark. In any case, the tendency of the Balkan States at present is to localise the Near Eastern question as far as possible, and by so doing to make it lose a great deal of its pungency for the great European Powers.

THE PERSIAN MEJLISS.

A London commercial firm having large interests in Persia received a telegram from Teheran on Tuesday announcing that the holding of the elections for a new Parliament had begun in the Persian capital. This news is somewhat puzzling, for there had been no previous statement as to the holding of elections. The *Manchester Guardian* thinks it possible that "the Constitutional party are holding elections on their own account with a view to forming some sort of provisional representative assembly, and so making it more difficult for Russia and England to partition the country, if they are contemplating it." The theory is at least a plausible one.

NOTES FROM SERVIA.

(From Our Own Correspondent.)

Belgrade, September 21.

Warlike Feelings.

For the last two weeks the excitement over the question whether this country will shortly be engaged in war has been daily increasing. It began when the Government prohibited the exportation of wheat and hay, and although within a few days, on the coming into power of a new Cabinet, this order was rescinded, the impetus given to these war fears was by no means diminished.

At first, with the exception of a few inflammatory papers, the Servian Press was remarkably circumspect; but yesterday and to-day long leading articles appear in every paper discussing the Government's taking action in seeking an amelioration of the state of Servians inhabiting European Turkey, and even the semi-official organ *Samouprava* urges immediate action on the part of the Government.

The European Press, when treating of the Turks' misrule in their European provinces, and of the sufferings of the Christian population, speaks generally of Macedonia, whereas Servia is anxious that Western Europe should discriminate between the different Christian nationalities in those provinces. For instance, those of Servian nationality are not numerous in Macedonia proper, but they compose almost entirely the population of Old Servia, consisting of the Vilayet of Kossovo, the Sanjak of Novi-Bazar, the Sanjak of Debar in the Vilayet of Bitoli, and the Sanjak of Skutari, of approximately 20,000 square miles, with a population of 750,000, nearly all orthodox Servians.

Servia's View-Point.

It is hoped that the Government will make an appeal to the Great Powers to redress the grievances of the people of Servian nationality in Old Servia, and insist on needed reforms. Servia's pretensions are that these kinsmen suffer every kind of lawlessness, that during the last two months their situation has been more intolerable than ever, that their extermination has become a political creed, and that nothing will satisfy Servia except the granting of autonomy to the people of Old Servia, with a Christian governor elected by a national assembly under the guarantee of the Great Powers and also of the Balkan States.

As long as it was feared that we were on the eve of an insurrection in Turkey, eventually backed by the active and open support of the Balkan States, the esteemed part of the Servian Press, in obedience to the Government's wishes, wisely refrained from any action that might hasten the breaking out of war; but now it may be inferred, especially as the semi-official organs are also writing in the same sense, that the object is to induce the Great Powers to use pressure so as to obtain by peaceful means the desired amelioration of the lot of the Servians and others in Old Servia, as well as that of the Bulgarians, Greeks, and others in Macedonia.

The War Party.

Yet it must not be thought that the people of Servia are more resigned to the present state of things in Old Servia and Macedonia, and disposed to let things go on as they are. There are many hot-heads in Servia willing to run all risks, people whose patience is exhausted and whose feelings are overwrought. The fear of an Austrian occupation, they say, does not daunt them, if the Great Powers are inclined to permit any amount of miscarriage of justice.

There have lately been false rumours of mobilisation of the troops, and people speak of the throwing up of earthworks near Posherevatz, on the Austrian frontier.

The authorities of the Servian railways are keeping in reserve trucks and wagons, the agio on gold has slightly risen, the banks are limiting the discounting of commercial bills, and other precautionary symptoms are noticeable. But doubtless, like the flickering of a dying candle, all this is the last blaze before settling down in obedience to the imperial will of the united Great Powers of Europe!

Belgrade, September 22.

A long article appears to-day in the *Politika*, headed "War or Peace," in which, referring to the anarchy

Digitized by Google

and sufferings of the Servian population in Turkey, it says:—

Only through war can the Servian race, now under the yoke of a foreigner, be freed—that is the conviction of every Servian, and we desire war. It is the wish of the people; it is the constant dream of our army; but our diplomacy does not respond to the situation. The last Cabinet resigned because it was too weak, and a stronger Cabinet that ought to be capable took its place; but the present Government appears to be as incompetent as its predecessors to meet the urgency of the case.

In a critical stage of diplomacy diplomatists are not in the habit of betraying State secrets, yet there is every reason to believe in the sincerity of the Prime Minister's reply to a deputation of Belgrade merchants who have just waited on him. The spokesman of the deputation said that trade in every department was completely stagnant in consequence of the persistent rumours of an impending war in the Balkan States, and that the deputation was anxious to obtain authentic information respecting the actual situation.

M. Pashitch, Prime Minister and Minister for Foreign Affairs, replied, assuring them that at the present time there was no danger of any interruption of peace taking place in the Balkans, that they could allay their fears, and, without care of the future, quietly continue to attend to their usual mercantile occupations.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, September 21.

Political Parties.

Politics seem flat just now. There was talk of great doings in the autumn, the Liberals prophesying that the Conservatives would have to "go out" by then; but autumn is here, and there is no sign of any change so far. There are rumours of a split in the Liberal camp, whilst the relations of that party with the Democratic Conservatives are not nearly so friendly as they were six months ago. Every combined effort against the Conservatives, commencing with the tramway question, followed by the withdrawal of the Opposition from Parliament, has missed fire.

Before the commencement of the summer holidays it was whispered in more quarters than one that M. Take Jonesco had put out feelers towards the Conservative party to ascertain whether some arrangement could not be come to, one condition being a post of importance, if not, indeed, the Premiership, for the leader of the Young Conservative party. This was denied on both sides, but that meetings took place between the heads of the two parties, though non-official, is well known. Several meetings of the heads of the Conservative party, including those who resigned their portfolios not long ago in order to strengthen their government, have taken place lately, but what decision, if any, was come to is not known.

The Liberals, on their part, are quiet, watching probably, if one may use the expression, which way the Take cat will jump. Naturally, without the help of the Roumanian Redmond, the Liberals could never hope for a majority, and in this is their greatest weakness and the Conservatives' greatest strength.

Sinaia in Summer and Winter.

The season at Sinaia is drawing to a close, but many of those visitors who have their own villas, or whose leisure and means allow, are staying on because it is always remarked that where the early season is unfavourable the later months are nearly always mild.

Every means is being taken to establish a winter season at Sinaia, and many rooms have already been engaged for the Christmas and New Year's weeks.

The committee of the winter sports (bob sleighing, ski-ing, etc.), whose president is Prince Carol, mean to do much, and many prize meetings are to be arranged. No more suitable spot for such a resort could be found, and in winter the rocky, fir-clad mountains, with their caps and coats of glistening snow, make a truly magnificent scene. Now that it is within such short travelling distance of England it is strange that those seeking "fresh fields and pastures new" do not pay this most delightful spot a visit.

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, September 22.

Mohammed Ali Shah.

The *Retch*, a metropolitan journal, made itself responsible a few days ago for the reiterated report that the ex-Shah had clandestinely left Odessa for the Persian frontier, and that, with the aid of his brother, Salar-ed-Dowleh, he was about to make another armed bid for the Peacock Throne. At the same time, one or two Press telegrams from Teheran stated that there were persistent rumours there of Mohammed Ali Shah's contemplated return to Persia. Needless to say, there is no foundation whatever for the sensational report circulated by the *Retch*, and the Press despatches referred to are probably nothing more than the echo of bazaar gossip in the Persian capital. If the ex-Shah leaves Odessa to renew his attempt to regain his lost throne, it can only be with the connivance of Russia. He is held under the surveillance of the Prefect of Odessa, and under the personal observation of the Russian adjutant attached to his suite. A couple of months ago he sought the permission of the Russian Government, on the plea of impaired health, to go to Karlsbad. The request was very politely refused.

Mohammed Ali is lately emerging from the sulky seclusion he had maintained for months previously, and is now occasionally seen abroad in his automobile. I saw the royal exile a week ago at the opera, where, with a couple of members of his entourage, he occupied the gubernatorial *loge*. He was certainly not looking very cheerful, and appeared to take but a languid interest in Glinka's "Life for the Tsar." The Kajars have in their last few generations been somewhat noted as peculiarly handsome types of their race, but Mohammed Ali, the sixth of the dynasty, cannot be said to have inherited, facially, the pleasing personal traits of his immediate predecessors. He is a little below the average stature, thick-set, bull-necked, and bullet-headed, with small features and beady black eyes. He might easily pose as a typical brigand.

M. Sazonoff's English Mission.

The leading and all-absorbing topic of the moment in the Russian political Press is M. Sazonoff's "extraordinary mission" to England, and the possible results of his important consultations with Sir Edward Grey and Mr. Asquith, and his audience of King George at Balmoral. That the situation in Persia will be very seriously and exhaustively discussed between the Russian and British Foreign Ministers goes without saying, but what is considered by such journals as the *Novoye Vremya*, the *Rossia*, and the *Russkoye Slovo* as of vastly greater immediate moment is how much nearer M. Sazonoff's "conversations" with King George and His Majesty's responsible counsellors will bring the desired consummation of the Anglo-Franco-Russian Alliance—the "equilibristic triplice," as one of the Russian organs describes it. The *Rossia* is optimistic enough to believe that the basis of the new triple alliance will be definitely outlined at Balmoral, and consummated in the very near future. It becomes every day more abundantly evident that enlightened public opinion in this country is strongly and apparently sincerely in favour of a veritable alliance rather than a mere *entente* between Russia and England, and, that accomplished, the conversion of the Anglo-French *entente cordiale* into a regular alliance would follow as a natural corollary. There could not, it is urgently and cogently contended by the Anglophil Russian publicists, possibly be found a greater or more inviolable guarantee for the lasting maintenance of the peace of Europe than a firmly allied grouping of England, France, and Russia in a triple defensive and offensive alliance; sooner or later, and probably sooner than is generally anticipated, the combination may become an imperative necessity to the dually divided balance of power in Continental Europe.

LETTERS TO THE EDITOR.

FOREIGN POLICY AND THE NATION.

To the Editor of THE NEAR EAST.

Sir,—Two questions of vast importance are raised by the controversy between Mr. Sydney Schiff and "Diplomaticus": (1) Is the present system of recruiting the *personnel* of the Foreign Office susceptible of improvement? (2) How far should that department be democratised? "Diplomaticus" displays a candour unusual in his profession by admitting that the Foreign Office is run on antiquated lines, and needs a larger infusion of the "expert" element. If there is one branch of the administration which demands the best intelligence of the country it is that which conducts our relations with foreign Powers. For nations are but children of a larger growth; self-regarding, highly sensitive, greedy of prestige, combative—sometimes grossly unmoral. Men who undertake the tremendous responsibilities of dealing with external affairs should be past-masters in statecraft, gifted with unerring foresight, and the power of adapting means to end with unfailing precision. *C'est contre le lendemain que mon esprit lutte*, said Metternich. Our Foreign Office has frequently shown its ignorance of the ABC of statesmanship. Did not a Permanent Under-Secretary of State publicly declare that the European horizon was cloudless little more than a fortnight before the outbreak of the Franco-Prussian War? Have not the fruits of British valour been sacrificed again and again by bungling diplomacy? It is proverbial on the Continent that "the English make war like lions, and peace like asses!" Richard Cobden knew that industry and commerce are the life-blood of this over-peopled country, and "hoped to see the days when ambassadors would be commercial agents." This ideal is realised in Germany; it is still to seek in the British Empire. Thanks to survivals of feudalism, our ambassadors regard themselves as courtiers of the sovereign to whom they are accredited, and "trade" as utterly beneath their notice. The Consular service is the Cinderella of diplomacy, valuable trade reports are pigeon-holed, and Talleyrand's *avant tout point de zèle!* is perpetually dinned into the consul's ears. Instances of want of tact and courtesy in our representatives abroad might be multiplied indefinitely, and if these public servants are less harmful than of yore it is because improved facility of communication has centred all real power in Whitehall.

The admitted stagnation and ineptitude of our Foreign Office are due to the fact that it is recruited from the "classes"—in other words, from a very restricted section of the community, which has never undergone the wholesome law of struggle, and is imbued with aristocratic prejudices. I must, however, join issue with Mr. Sydney Schiff when he asserts that "science does not confirm the principle of inherited character." Mendelism has proved that any given quality tends to reappear almost rhythmically in all stocks, from mankind to the common or garden pea. But we must not be misled by the apparent analogy in this respect between ourselves and the animal kingdom. Horses may be bred for speed or bottom; dogs for points or scent; while success in a human career demands a combination of qualities which is very rarely transmitted by direct male filiation. This biological fact is a condemnation of all aristocracies of birth.

I have referred to the centralising effect of the telegraph, telephone, and postal services. This has gone to excessive lengths. So attractive is a seat at the round table of international politics that we have seen Conservative statesmen accepting office under a Liberal Government, and allowing their political proclivities to influence the promotion of subordinates. But the Foreign Minister is in the hands of permanent officials, whose prospects are unaffected by any change of Ministry and depend on the royal pleasure. Hence the twentieth-century tendency to embark on alliances or "ententes" with foreign Powers. I challenge "Diplomaticus" to quote a single instance in which this country has reaped substantial advantage from an alliance with foreign Powers during the last sixty years. Such agreements, whether embodied in a treaty or veiled in diplomatic secrecy, invariably involve us in entanglements which prove detrimental to British interests or hamper our action at a critical time. Great Britain, being a world-wide empire, should vigilantly follow every move in the European chessboard without taking a direct hand in the game.

A word or two, in conclusion, on the second point at issue. Ought the Foreign Office and Diplomatic Service to be "democratised"? As well attempt to check the earth's motion as to stay the progress of democracy. Government of the people by the people for the advantage of all has become a bed-rock principle accepted by all political parties. "Equal opportunity for every citizen, and let the best man win," must be written in letters of gold on the lintel of every department of the State. We shall require our very best men in the times of stress which are surely approaching. But foreign relations must ever be the Achilles' heel of democracy. The masses are so obsessed by the problems of subsistence and material betterment that they cannot look beyond the narrow horizon of domestic politics. Under such conditions the expert is indispensable, and when one has been secured by rational eclecticism he must be given a free hand. One may be a thorough-paced democrat and yet regard the perpetual interference of Parliament in our external relations with considerable misgiving.—I am, Sir, etc.,

London, September 23. F. H. S.

CYPRUS AND EGYPT.

To the Editor of THE NEAR EAST.

Sir,—All friends of Cyprus will, I think, agree with Mr. Cavendish Bentinck in hoping for a revision of the Anglo-Turkish Convention in the interests of Cyprus. Had that Convention not brought the island under British administration its incorporation in the Pashalik of Egypt would have been an immense boon, because it would have brought it practically under British rule, and consequently under Lord Cromer, and now Lord Kitchener, who knows Cyprus as an ex-official there, and who, as Mr. Cavendish Bentinck says, *acts* on a vigorous and consistent policy, relying on F.O. support. But under existing circumstances I can hardly see the advantage of bringing it under Egypt.

The great objection to the Tribute, which is excessive, is that revenue is taken out of the island, where it is so badly needed. On the other hand, it is hard that the British taxpayer should pay for the error committed.

I can confirm Mr. Cavendish Bentinck's belief that the Khedive would probably be glad to spend part of the hot season on Troödos. I had the honour of being with the Khedive some years ago when he spent two days there as the guest of the High Commissioner, Sir W. Haynes Smith. He inspected some of the pleasantest spots, and was greatly pleased with the place. But there were no houses and no roads to these spots, which he much regretted. Otherwise he would not only have come himself, but would have taken the Khedivial harem to Troödos for the summers instead of to Rhodes, which they did not like. But it was too much to expect that he would forthwith construct palaces and roads in those heights.

This touches one of the principal needs of Cyprus, viz., the importation of foreign gold, which may be brought about by a judicious development of the tourist trade.—I am, etc.,

ROLAND L. N. MICHELL.

London, September 18, 1912.

THE STRANGLING OF PERSIA.

To the Editor of THE NEAR EAST.

Sir,—I was disappointed on reading your criticism of Mr. Morgan Shuster's "The Strangling of Persia," published in your issue of the 30th ult., to find that you support the view advanced by the *Times*, the *Morning Post*, and other leading organs of the Press, viz., that Mr. Shuster's failure was due in great measure to his want of tact and want of appreciation of the special interests of Great Britain and Russia in Persia.

I venture to suggest that this failure was due to other and more vital reasons, to factors over which Mr. Shuster had no sort of control, and which are inherent to the circumstances of Persia and Russia, and which in their ultimate issue will deeply affect Turkey and Great Britain. Mr. Shuster's policy was based on the assumption that Great Britain and Russia would actively and honestly co-operate in lending their benevolent support to any measures likely to result in the financial regeneration of Persia and the maintenance of the sovereign integrity on which stress had been laid in the Anglo-Russian Convention. Mr. Shuster had further been led to understand that he might count on the goodwill of the British Foreign Office. Any doubt he may have experienced of the interpretation to be placed on the Convention, owing to ambiguity of phraseology or hidden meaning, was set at rest on the presentation to the Persian Government by Sir Cecil Spring-Rice of his explanatory communication of September 5, 1907.

As a first elementary measure of reform the Mejlis passed a law giving the Treasurer-General the general supervision of the finances of the country, inclusive of the Customs, and Monsieur Mornard, the Belgian official in charge, was asked to place himself under the orders of the Treasurer-General. Monsieur Mornard had the greatest objection to the subordination of his Department, and, aided by a protest from the Russian Minister, successfully evaded the obligations of the law. Mr. Shuster might naturally have counted upon the support of the British Minister, as the reform was eminently desirable in the interests of good finance, but this support was not forthcoming. He was thus able to form a pretty shrewd opinion at the very outset of

Digitized by Google

his work of the value of the engagements undertaken by Great Britain and Russia in respect of the maintenance of the sovereign rights of Persia and of the assistance to be expected of the Foreign Office. A more flagrant case of interference with the sovereign rights of a country than one which attempted to dictate what course should or should not be pursued in a detail of departmental administration affecting Persia alone can hardly be imagined.

The same sordid procedure was repeated when the question of the reorganisation of the gendarmerie arose. Russia placed a veto on the appointment of an organising officer, and, with the complaisant acquiescence of the Foreign Office, the whole scheme was thrown back on its authors, a mutilated wreck.

We have here examples of the nature of the co-operation between the interested foreign parties and the paralysing effect of Russian diplomacy on the mind of the Foreign Office. So severe was this paralysis that, when the ex-Shah Mohammed Ali Mirza, with the connivance of Russia, invaded the northern provinces of Persia, the Foreign Office could find nothing better to say than that, should he succeed in recovering his throne, British recognition would be withheld—a futile declaration at the best, for had Mohammed Ali re-established himself in Teheran his recognition by Russia would have followed as a matter of course, and Great Britain would have been obliged in the long run to express acceptance of the *fait accompli*.

The curtain was rung down on this modern historical drama with the dismissal of Mr. Shuster and his American colleagues, and the triumphant entry of Russian troops by way of Azerbaijan and the north.

Let me suggest that the Morgan Shuster episode, the Anglo-Russian Convention, the descent of Mohammed Ali are but picturesque, though moving, incidents in a long story, which must be traced back to the early days of the last century, to the Treaty of Turcomanchai, and even earlier, and which has not yet reached its climax. Russia has consistently developed a policy which, in sapping the life blood of Persia, has now culminated in the occupation of the Province of Azerbaijan.

Unhappily, her progress has been facilitated by weakness on the part of Great Britain, and the Foreign Office has been cleverly manœuvred into playing the *rôle* of a complaisant, if unwilling, accomplice in the "strangling of Persia." The attitude of the British Press, with some notable exceptions on its Radical side, in gratuitously making itself the mouthpiece and apologist for Russian action, is even more incomprehensible.

Whatever the cause, in the result we find Russia in occupation of the province of Azerbaijan, that long-coveted jumping-off ground, whence she can prepare for her next move in the direction of Mesopotamia and the head of the Persian Gulf. Turkey has long foreseen the danger and has taken her precautions by forestalling Russia in the Urumiah district, thereby covering her hand and safeguarding herself against the threatened blow. Is the co-operation of Great Britain to continue whilst Turkey is to be diplomatically driven out of that position?

Securely seated in the most desirable of positions, Russia can afford to diplomatise over the question of the readjustment of the Anglo-Russian Convention to suit the new conditions which have arisen in the "rest of Persia."

As to Mr. Shuster, given the nature of the co-operation lent by the Foreign Office to Russia in her cynical reading of the Anglo-Russian Convention, had he been a heaven-born diplomatist as well as an American-born genius, his failure would have been equally assured.—I am, etc.,

September 21. FAIR PLAY.

PERSIA AND INDIAN FEELING.

To the Editor of THE NEAR EAST.

Sir,—What cruel Fates weave the thread of the Persian doom! The Indian people, irrespective of their castes and creeds, have through all their public organs vehemently protested against the Russian advance into the Persian territory, and have constantly urged the British Government to pursue a steadier and sterner line of policy. But in doing so they learnt that they bewailed in vain and cried in the wilderness, even without the consolation of hearing the echoes of their piteous cries.

The Mohammedans, in particular, cried at the top of their voice, but succeeded only in so far that the British Foreign Office felt pity at their moans, and consequently made a few representations to the Muscovite Government, with the unfortunate result that the polite and complacent requests of the British Minister were mistaken for impotent and useless cant. Such is the general impression in India.

The people at large think that the tears shed by the British Foreign Minister at the diabolical desecration of the holy shrine at Meshed were no better than crocodile tears.

—Yours very truly,

Saharunpur, India. GADGAR ALI.

YEPREM'S WISH TO VISIT EUROPE.

To the Editor of THE NEAR EAST.

Sir,—In your issue of August 2 "An Observer" writes that I made an important error in saying that Yeprem wished to leave Persia and retire to Europe, and adds: "Yeprem had never expressed the wish to leave and retire to Europe."

This is a too sweeping statement to make. Does "An Observer" mean that Yeprem had never expressed the wish to the Regent officially? Yeprem might not have done so officially, knowing well enough beforehand that the Regent would not part with him; but he expressed the wish of returning to Europe (if possible) *privately* to his doctor and to his visitors more than once—twice in my own presence. Not to express a wish officially is one thing and express that wish privately is another. And it is a much stronger wish that can be expressed privately only, but can not be expressed officially.

It was after his return from Karajadagh, and I had called to see him. After dinner—which he ate heartily—Yeprem, leaning back on his stiff chair, said to his doctor: "Doctor, I am not feeling well; I feel so tired." And the doctor (referring to his hearty dinner with cognac) replied intimately, "Take some more cognac." "No, not cognac," said Yeprem. "Then take some wine," said the doctor. "Not wine either." "Then take a vacation," said the doctor. And Yeprem, pleased with the answer, said: "Now you have it! I wish I could take a vacation, and spend a month or two in Switzerland!" Yeprem had *expressed the wish* to visit Constantinople and Geneva more than once before. His doctor knew it, and replied accordingly, formulating his reply to please Yeprem.

I might add that Yeprem had an inward feeling that he was not secure in Persia; that, having gained so much prominence, he was not quite safe. Hence his intense—though suppressed—wish to retire to Europe.

Yeprem has been quoted as giving expression to this inward feeling of insecurity, also, when he left Teheran for Hamadan the last time, saying that he did not expect to return alive.

I know nothing of Yeprem having a cancer of the stomach. As far as I knew him, he was hale and healthy as a bull. He may have put forward the "cancer of stomach" as an excuse for getting a vacation, which, however, seems to have failed him. But to say that he "never had expressed a wish to retire to Europe," as "An Observer" states so positively, is—"An Observer" will pardon me for saying—not accurate!

Yours, etc.,

Tabriz, August 17th. TOURIST.

THE PRESS ON THE NEAR EAST.

Islam and Christianity.

In the leading article of our issue of September 13 we referred to the exaggerations commonly current concerning the incompatibilities between Islam and Christianity, and are therefore glad to be able to give the following extract from an article on the Life and Ethics of Mohammed in the September number of the *Mècheroutiette*, by Albert Fua:—

L'Islamisme considère que tous les hommes sont ou peuvent devenir musulmans s'ils croient en Dieu et s'ils se résignent *à sa volanté! Muslim, Islam* ne veulent pas dire autre chose. Il n'est pas nécessaire d'être touché par la grâce ou d'avoir la foi par un décret spécial du Très-Haut. On est donc bien près de l'Islamisme, si l'on n'adore pas d'autres dieux que Dieu le Pêre et si l'on est résigné à sa volonté. Les musulmans disent dans leur profession de foi: "Dieu est Dieu! et Mahomet est son prophète." La deuxième partie de la formule ne suppose pas la divinisation de Mahomet, ainsi que l'ont enseigné certains prédicateurs anglais. Elle signifie simplement que le prophète de la Mecque a été chargé de répandre la foi unitaire. La simplicité de la religion musulmane reste donc intacte.

"Si c'est là, l'*Islam*, dit Gœthe, ne vivons-nous pas tous dans l'Islam?"

A recent issue of the *Homiletic Review* contains the following observations regarding Islam:—

Very few sentences in the Koran deserve quotation or shine with that striking, convincing beauty of truth and practical application which characterises the wording of the gospels and epistles on which the Christian faith is founded, or the Psalms and the prophetical and poetical utterances gathered in the Hebrew Bible. The language of the Christian Magyars and that of the Moslem Turks are nearly related in origin—the Magyars and the Turks came from the same ethnic stock; but in the course of history one became Christian and the other Mohammedan. No impartial critic can maintain that the two peoples are on the same level of civilisation, or place alongside Hungarian achievements in art, music, architecture, literature, biological science, engineering, and political government, similar achievements on the part of Turkey.

Such observations, it is needless to say, could only result from ignorance or prejudice, and it would seem that in this instance both sources have contributed liberally.

Ottoman Unity and Turkish Hegemony.

A writer in the *Daily Telegraph* (September 24) discussing the all-important question of the co-operation and political unification of the various races and nationalities composing the Ottoman Empire says:

There remains, then, one means of preserving Turkish hegemony, and this means is the acquisition by the governing Turks of the special abilities necessary for the proper carrying out of administrative functions in the different regions of the Ottoman Empire. But there is no other way. The main error of the Committee of Union and Progress lay in their believing that by purely artificial means, such as the gerrymandering of Parliamentary majorities, and the effect of the legislative measures voted by such majorities which could be, if necessary, upheld by armed force—the former Turkish hegemony in the new Parliamentary Turkey, where complaint is now a matter of right and the last word lies with the voting paper, could be maintained without the Turkish functionaries concerned being called on to display any other abilities than those with which the Turkey of former times was satisfied, where complaint was a crime, and the last word lay with the bastinado and the bayonet.

Russia and the Persian Gulf.

The *Manchester Guardian* (September 21), in a leading article on the position of affairs between England and Russia, in Persia, observes that:—

It needs some imagination to take in all the consequences to India and to Great Britain of a long Asiatic land frontier with a great military Power like Russia. But at sea the consequences of the disappearance of the neutral zone and of an independent Persian Government would be almost as grave, and they are perhaps more readily grasped. By Article 3 of the Anglo-Russian Convention Russia and England engage not to oppose the grant of concessions (including railway concessions) in the neutral zone. The neutral zone has a pretty extensive coastline along the east shore of the Persian Gulf, so that if Persia consents Russia could even now obtain a railway concession to the Gulf. So long as there were a strong and independent Persian Government and the terminus of the railway on the Gulf was Persian territory, no Liberal would raise any objection to such a project. But a railway running not through a neutral zone but through Russian territory, and ending in a Russian port on the Gulf, would raise for us difficulties and dangers like those which drove Japan into war with Russia.

Democracy and Foreign Affairs.

Commenting on the arrival of M. Sazonoff at Balmoral, and the probable subjects which will come under discussion between the Russian and British Foreign Ministers, the *Daily Express* (September 23) states:—

The task of Sir Edward Grey and M. Sazonoff—the task of peace-keepers—would be made more easy if certain Radical newspapers could be silenced. The campaign against Sir Edward Grey within the Radical party is notorious, and some Radical newspapers are pressing the attack with accustomed venom at a peculiarly inopportune moment. These are the newspapers which seem to delight in the dictation of Germany, whence their views of foreign policy seem to be derived, and the only satisfaction which they demand is the opportunity of humbling this country in the dust on every possible occasion. Fortunately, their importance is overrated by themselves, and the balance of power is not disturbed by their vapourings.

England's Chance in Turkey.

In an article with the above title, which appeared in Wednesday's *Daily Mail*, Mr. G. Ward Price declares that England has at this moment the chance, if she chooses to take it, of stepping into a position of such preponderance in Turkey as no Power has ever held:—

Here is a Turkish Government, intensely pro-English—pro-English not through interest but by inclination. It is a Government which sincerely means to rule the country well; it is made up of men thoroughly capable of so ruling, but—it requires three things. It requires the support of a Great Power to guarantee it against the dangers that threaten it from abroad—for a man cannot put his house in order while he must continually be rushing to the windows to drive off people who are trying to break in. Secondly, it requires money to be spent on works of development and reform. And it requires men—instructors, councillors, what you will—to give it practical help in carrying out those reforms and making those developments. All these three things England could give to Turkey at this unique moment of opportunity.

What would she get in return? She would have the great advantage, here at the centre of the danger zone of Europe, of wielding an influence amounting almost to control. What the English Government said Turkey would listen to, and England's hand, laid on the steering-wheel at a critical moment, might guide Turkey safely past that ever-growing danger of a Balkan war which could only too easily drag the Great Powers themselves into the struggle—for Austria looks, now perhaps more covetously than ever, towards Salonika. Most practical reason of all, our trade would benefit. With England standing guarantor and saying to the Turkish Government, "So long as you govern well, so long as you listen to our advice and convince us that you are wisely and sincerely trying to bring your disorganised Empire into order, we will help you and we will see that you are not molested"—with such a pledge supporting the Turkish Government English trade and English capital would come confidently and freely into Turkey and reap the profits that the undeveloped resources of the country offer.

This is but an extract. We commend Mr. Price's article to our readers' notice.

Articles to Note.

"Lord Kitchener and His Task in Egypt," in the *Pall Mall Gazette* (September 21).

"The Powers in the Balkans," by Louis Wills, in the *Financial News* (September 23).

"Le Révolte Albanaise," in *Le Gaulois* (Sept. 21).

NEAR EAST BOOKSHELF.

LOVE IN THE LEVANT.*

This very readable book relates the adventures of a somewhat unsophisticated young Englishman among the cosmopolitan people of Smyrna. Edward Paynter, the son of a wealthy father, has become a rolling stone, and in consequence of a series of misadventures arrives at his temporary destination, Smyrna, without a penny in his pocket, or rather, he would have done so had it not been for a fortunate encounter on the steamer with a fascinating young widow—a compatriot, who, with all needful delicacy, forces a loan on our rather immature hero. Complicated and ingeniously devised financial troubles again overtake Paynter in Smyrna, and he finds himself tied down there until, by rigid economies on his already quite meagre allowance, he has been able to free himself from his embarrassing debts. The fascinating and wealthy widow, Mrs. Sayers, is, by a more kindly fate, also detained in Smyrna. The intelligent reader has, of course, not failed to detect the heaven-born affinity which makes these two hearts beat as one, and is ultimately rewarded by the happy and inevitable ending.

While the plot offers nothing of special ingenuity or originality, we enjoyed reading the book, not only for the sake of the story, but for the close acquaintance with the people and life in the Levant which is shown by the author. The descriptions of the typical English Levantine community are excellently well done, if perhaps a trifle severe at times; while the account of Paynter's relations with his dragoman at Port Said is true to the life, and while reading it we revelled in old memories of exactly similar happenings to ourselves in all-too-distant days.

In common with all well-informed and sympathetic travellers, the author evidences a very pleasing appreciation of the unspoilt native character of the Turk and an understanding of the beauties and complete adequacy of the Mohammedan religion.

We understand that this volume represents the first fruits of the author's pen, and must, therefore, congratulate him all the more warmly on having produced so readable a story and a book so full of truthful tableaux of local minds, manners, and morals.

IMPRESSIONS OF LIFE IN INDIA.†

Those people who are familiar with the writings of Mr. J. A. Spender in the *Westminster Gazette* will welcome the volume of his letters from India which has just been published. The impressions of a journalist possessed of Mr. Spender's grace of style were too valuable to be scattered and lost in the odd numbers of the newspaper for which they were written. Arriving in India for the first time at the moment when that country was the centre of the world's interest, Mr. Spender fell instantaneously under the fascination of the East, and the impressions which he records are those of a shrewd and enthusiastic observer. He has strictly avoided the irritating rôle of dictator which unfortunately characterises so many writers on our overseas dominions, and though some of his conclusions are open to question, they are penned in such a manner as to disarm criticism.

As the title of the book suggests, it contains a record of things and people seen, and unquestionably the author has succeeded in bringing the wonderful pageant of the East very vividly before the eyes of his readers. The simplicity and directness of Mr. Spender's style bring out all the true colours of life as it is lived beneath tropical skies; and the chapter on the Durbar itself is especially pleasing. Conditions of native existence are much the same in India as in Egypt, and opening this book at hazard one feels that some of the passages might well have been written on the latter country. There are the same light and colour, the same rainless atmosphere, and in plain but glowing passages they are here set before us.

Short as was the time which the author spent in India, he appears to have grasped to a quite unusual extent the varied difficulties, disappointments, and pleasures which are inseparable from the life of a British official in India. "India is fortunate in having men who will devote their lives to this work, and the whole world will benefit from their labours," he writes in the chapter headed "Science and the Plague," and the same may be said of nearly every other department in India. Everyone, travellers or those who have never left home, will find much material, charmingly written, in this unpretentious little volume.

* "It Happened in Smyrna." By Thos. Egdelow. (Methuen and Co. 6s.)

† "The Indian Scene." By J. A. Spender. (London: Methuen and Co., 3s. 6d. net.)

NEAR EAST BOOK NOTES.

Mr. Douglas Sladen, author of "Egypt and the English," "Oriental Cairo," and other works on the Near East, is one of the most versatile, as he is one of the most indefatigable of writers. His last novel, "The Unholy Estate," which dealt with the vexed question of woman in regard to divorce in a manner which secured it the almost universal support of the Press and a boycott by some of the North Country libraries at one and the same time, had much of the scene laid in Egypt, a country about which Mr. Sladen always writes with remarkable sympathy. It is not perhaps generally known that this author began his literary career as an "Australian Poet." The latest works published under his name are a new and revised edition of the poems of Adam Lindsay Gordon, and a life—written in collaboration with Miss Edith Humphris—of the same poet. The poems are published by Messrs. Constable and Co., Ltd., at 2s. 6d. net.

"Greece of the Twentieth Century," by Percy F. Martin, F.R.G.S., will be published next month by Mr. Fisher Unwin.

"Sketches of Georgian Church History," by Archdeacon Dowling, author of "The Armenian Church" and "The Patriarchate of Jerusalem," is to be published next week by the S.P.C.K.

Messrs. Smith, Elder will publish early next month "In Arabic-Spain: Sidelights on Her History and Art," in which Mr. Bernard Whishaw and Mrs. Whishaw write of the history of Seville under Moslem rule.

"A Modern Pilgrim in Mecca" will shortly be issued by Messrs. Constable. It is written by Mr. A. J. B. Wavell, F.R.G.S., and deals with the author's adventures in the Yemen last year during the fighting between the Bedouin and the Ottoman troops.

CURRENT COMMENTS.

Man earns his living in many curious ways, and the trite saying that one half the world does not know how the other half lives is undoubtedly a true one. We heard recently of a calling that was quite new to us and will probably be new to a large majority of our readers: that of the walnut burr hunter. It seems likely to appeal to any active and enterprising individual on the look-out for "something new," which may also turn out "something good"; for it takes its followers off the beaten track, and holds out prospects of substantial reward. But he who would follow it must possess no small share of tact and endurance, and be prepared to take the rough with the smooth. Perhaps his calling resembles that of the orchid hunter more closely than any other.

***

The "burr" referred to above is the result of a disease of the walnut tree, and appears to be a parasitic growth. But when cut it yields sections of great beauty, which are highly prized by cabinet makers and others for veneering purposes; and a large burr, which with modern appliances can be converted into thousands of thin sheets or sections, will fetch a very handsome price. So in the Kurdistan region there are many "hunters" who make it their business to travel the country, buy up the burrs, and ship them off, usually by way of Trebizond, to Marseilles, France being the principal market for such things.

***

How valuable a burr may be is shown by the tale told by a collector, who, after much negotiating with the owner of a tree on which grew a particularly fine one, secured the coveted specimen. It was over six feet in length and of great weight, and owing to transport difficulties the "hunter," very reluctantly, cut it up into three parts for conveyance to the coast. "But," he said, in telling the tale to our informant, "if I had only known what I was about, it would have paid me to spend £500 in getting it down to the sea whole. It would then, I found, have been worth £6,000." The story was a perfectly true one, and he spoke without any exaggeration.

***

We quoted last week a report from H.M. Consul at Busreh describing a severe and prolonged epidemic of cholera, which claimed many European victims during the summer of 1911. The Near East is swept by this fearful disease at frequent intervals, the main source of infection being certain sacred wells at Mecca, which apparently swarm with the comma bacillus. Quarantine regulations are of little or no value in checking the progress of cholera, for its microbes may enter a guarded area in polluted milk. An outbreak occurred on board the homeward-bound steamer "Nubia" in January, 1897, and it was traced to a supply of fruit taken in at Port Said, which had probably been washed in a polluted tank. Administrators are apt to forget the homely proverb, "Prevention is better than cure." Cholera, being a water-borne disease, might be stamped out by an international department charged with the duty of disinfecting suspected wells, ponds, and streams.

***

But Europeans who adopt a few simple precautions while cholera is raging around them may calculate on emerging unscathed from the ordeal. They should (1) keep their heads (fear is a powerful predisposing cause; it paralyses the human organism and lessens the inherent capacity to resist death-dealing germs); (2) avoid excesses of any kind, especially the consumption of indigestible food and much-advertised effervescing drinks, which last are positively poisonous during a cholera epidemic; (3) boil all water and milk before using them in any form, and eschew "bazar" butter; (4) take three or four drops of sulphuric acid in a glass of water every morning, fasting; it is a most effective "microbicide."

***

M. Stefane Giallac, of Bucharest, has commenced gold mining in what he believes to be the ancient bed of the Loteru, in the Valea-lui-Stan, and, apparently, his surmises are correct, for so far the results are most satisfactory, as much as a hundred grams per ton being sometimes produced, while the average yield is 38 grams. This is quite satisfactory, where 10 grams per ton are paying results. Three galleries have so far been driven, of 45, 56, and 7 metres. It is believed that the deeper one gets the more satisfactory will be the results.

***

In years gone by gold washing was quite a flourishing industry in the Carpathians, the rivers on the Roumanian side such as the Loteru, Buzeu, etc., yielding appreciable quantities. Gold washing was principally in the hands of the free gypsies, and one still hears stories of pieces of gold as large as 50 and 60 grams being found. There is no doubt that in very early times gold was to be found in very large quantities in the beds of the rivers; but these, with time, have changed their courses so that the gold-bearing soil has become buried. It is considered by more than one historian as a fact that the origin of the legend of the Argonaut and the Golden Fleece was simply the (then) long and dangerous voyage from Greece to these quarters of sailing ships whose passengers came to purchase the precious metal, which was, as till quite recent times, packed in sheep's fleeces, the wool inside. The burning of these "golden fleeces" produced a small quantity of gold.

***

The last stone of the old Town Hall at Bucharest has now disappeared, and soon the work of erecting the new "mayoral palace" will be commenced. It is interesting to note that the building which has just vanished was commenced just sixty-six years ago, the first stone being laid with great solemnity on September 19, 1842, in the presence of the then reigning Prince, Alexander Ghica, and of the mayor of that epoch, Count Charles Rosetti. This was also the first Town Hall possessed by Bucharest.

***

The whale-headed stork, whose arrival at the Zoo we chronicled in these columns a few weeks ago, has now been joined, so to say, by a compatriot, in the form of a young giraffe from Kordofan. The newcomer, though only nine months old, stands 8 ft. in height. He will find three or four members of his own species to keep him company, for there were already in the Gardens three Kordofan giraffes and one from Nubia. The Zoo is indebted for its new acquisition to Sir F. R. Wingate.

***

A Roumanian gentleman lately in Berlin informs us that, paying a visit to Herr Kiderlen-Waechter, he was most agreeably surprised to be shown into a large room entirely furnished with Roumanian tapestries, pottery, etc. The host, when Minister in Roumania, always showed a great liking for the beautiful productions of the native looms and potteries, and was a great collector of the antiquities of the country. It is strange that more attention is not given in England to the extremely tasteful Roumanian carpets and earthenware. One might add also to the Roumanian national costume, were it not that already Englishwomen are using a part of it, at least, in the incorrectly named "Magyar" blouse, which is really the ordinary dress of the Roumanian peasant woman. Unfortunately, up to the present the shape has not carried with it the beautiful embroidery patterns employed in Roumania, many of which are derived from ancient Byzantine sources.

***

A history of the gypsies would surely be a difficult subject to undertake. The venerable Roumanian chief priest Narcisse Cretzoulesco, we are informed, commenced one some time ago; but on account of failing eyesight he has had to abandon the work. According to the Roumanian churchman, the gypsies had their origin on an island of Hindustan, called Singuan, on the Ganges; and hence come the various appellations of their race—Izigane, Zigauner, etc. The Khan Timour having expelled them from his country, they settled, or rather commenced to wander through Eastern Asia, Europe, and Northern Africa. The first gypsies to be seen in Moldavia and Muntenia are mentioned in records in the years 1399, 1408, 1409, 1417, and 1427. They came in successive groups, and formed colonies more or less numerous. The first Voivode (ruler) of Moldavia, who reduced the gypsies to slavery, was Alexander the Good. In Muntenia (Western Roumania, etc.) their servitude is more ancient. Demètre Dan, speaking of the gypsies, in the Bucovina towards the year 1369, makes mention of gypsy serfs being given to monasteries on condition that they baptised them. The gypsies were the slaves of the Voivodes, the Boyars, and the monasteries. Their religion was—as it still is to-day with many of them *sub rosa*—a species of sun worship.

***

Mr. Wm. Cozens-Hardy has lately been camping at Sinaia with his wife and family. This mode of holidaying is quite new to the Roumanian public (writes our Bucharest correspondent), "roughing it" for pleasure being something quite beyond its ken. With several tents and servants, and every convenience in the camping line, the English visitors are installed not far from Castle Pelesh, on ground placed at their disposal by the King. During the first few days of their visit a walk to the canvas home of the "eccentric English" was a regular thing. One local paper devotes a whole front page to them, with reproductions of photos of their camp, etc.

DOMESTIC ANNOUNCEMENTS

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

CARNEGIE.—On the 15th inst., at Sinaia, Roumania, the wife of Rook Carnegie, H.M. Legation, Bucharest, of a son.

MOLONEY.—On September 18, at Teheran, the wife of William J. Moloney, of a daughter.

MARRIAGES.

CLAYTON—THOROWGOOD.—On the 18th inst., at St. Peter's, Cranley Gardens, S.W., by the Right Rev. the Bishop of Khartoum, Gilbert Falkingham Clayton, Capt. (late) Royal Artillery, to Enid Caroline, second daughter of Mr. and Mrs. F. N. Thorowgood, of 24, Elm Park Gardens, S.W.

HARRIS—YOUNG.—On the 19th inst., at St. Peter's Church, Newton, Glamorganshire, by the Rev. Harold S. Williams, vicar, assisted by the Right Rev. the Bishop of Khartoum and the Rev. Secretan Jones, Boris Gordon, of the Sudan Irrigation Service, only son of Mr. and Mrs. Leigh Harris, of Odessa, Russia, to Phyllis Campbell, third daughter of Mr. and Mrs. Islay Young, of Brynfield, Langland Bay, Glamorganshire.

PHILLIPS—DICKSON.—On September 19, at Newchang, North China, Walter Phillips, M.B., F.R.C.S.Eng., eldest son of the late Rev. J. G. Phillips, Damascus, and Mrs. Phillips, Mount Charles, Belfast, to Ethel Irene Katherine, youngest daughter of the late John Dickson, H.B.M. Consul, and Mrs. Dickson, Jerusalem.

PERSONAL & SOCIAL.

Lord Kitchener left England on Tuesday for Egypt to resume his duties. He travelled by way of Dover, and on his arrival in Paris he left for the country, on a visit to friends.

Sir Reginald Wingate left Knockhenhair last Friday for Balmoral Castle, where he remained until Tuesday. He will travel to town this evening, and will remain at Whitehall Court until his departure for Egypt on October 2.

Sir Rudolf Slatin Pasha, Inspector-General of the Sudan, also arrived at Balmoral as the guest of the King last Friday, and left on Tuesday morning, travelling with Sir Reginald Wingate by the half-past eight train. Sir Rudolf left England on Wednesday for Vienna. Before his departure the King conferred on him the Grand Cross of the Victorian Order.

Sir Gerard Lowther, H.M. Ambassador at Constantinople, arrived at Balmoral Castle last Friday on a visit to the King. Sir Gerard and Lady Lowther have arrived at Claridge's Hotel, where they will stay until their departure for Constantinople.

Sir Francis Elliot, British Minister at Athens, who is at present at Ginge Manor, Wantage, will leave London for Athens next Wednesday to resume his duties.

During the absence from Malta of General Sir Leslie Rundle, Governor and Commander-in-Chief, Major Clauson, the Lieutenant-Governor, will administer the civil port, and Major-General Barker will command the troops. Sir Leslie Rundle will return to the island on November 6.

General Sir Ian Hamilton, Commander-in-Chief of the Mediterranean and Inspector-General of the Overseas Forces, is about to leave England on the longest tour of inspection which he has yet undertaken, from which he will not return to England for about a year. On the return journey the Sudan and Egypt will be visited and manœuvres carried out.

General Sir Archibald Hunter, Governor of Gibraltar, sailed on Tuesday for England, on four weeks' leave of absence.

The Khedive arrived at Ouchy on Saturday night, and left on Sunday for Neuchâtel, after a long conference with the Turkish delegates at present staying at Ouchy in connection with the non-official peace negotiations. His Highness left on Tuesday for Paris.

Prince Mohammed Abdul Monein, the Khedive's Heir Apparent, and his brother Prince Abdul Kader are to attend the Axius College at Genoa.

Lieut.-Colonel P. R. Phipps, Civil Secretary to the Sudan Government, is leaving this week for Cairo, where he will remain till October 20, afterwards proceeding to Khartoum.

Colonel E. J. Bernard, D.S.O., Financial Secretary, Sudan Government, left London for Cairo yesterday morning. Colonel Bernard will remain in Cairo, in accordance with his usual custom, to arrange the forthcoming Budget. Mrs. Bernard will leave England next week.

Mme. Grouitch, the wife of the Servian Chargé d'Affaires, who has been paying a series of visits in Cambridgeshire, has returned to the Legation in Pont Street.

Lady Maxwell left London for Egypt on Tuesday.

H.R.H. Prince Ferdinand returned to Bucharest on Sunday in order to take part in the Roumanian army manœuvres.

Sir William and Lady Willcocks and Lord Colum Crichton Stewart were among the passengers on board the P. and O. s.s. "Marmora," arriving at Port Said this week.

Birch Pasha, British Commissioner of the Egyptian State Domains Administration, will return from leave in the beginning of next month.

A marriage has been arranged, and will take place early in October, between Edward Smyth Crispin, Assistant Director, Sudan Medical Department, third son of the late Mr. Alfred Trevor Crispin, and Edith, younger daughter of the late Mr. J. W. Wright and Mrs. Wright, of Parsonage House, Witley, Surrey.

The marriage took place at Roumeli Hissar, on the 10th inst., of Miss Helen Curtis, of North Adams, Mass., U.S.A., with Mr. L. R. Fowle, of Aintab, son of the Rev. J. L. Fowle. The bride and bridegroom are both missionaries of the American Board.

The engagement is announced of Mr. K. C. P. Struvé, of the Sudan Civil Service, and May, elder daughter of Mr. and Mrs. Reynolds, Southborne, Hants.

Sir George Digby Barker, who presided at the dinner given on Wednesday evening in commemoration of the relief of Lucknow, took part, it is interesting to note, in the Persian campaign before the Indian Mutiny broke out.

Amongst the names of those who (according to the *Belfast Telegraph*) have sent messages of encouragement and sympathy with the Ulster Unionists in their present campaign we note that of Professor Flinders Petrie.

Major J. J. Truscott, Inspector of Ordnance Machinery, 1st Class, Army Ordnance Department, has been posted to Malta in relief of Captain R. F. Barber, Inspector of Ordnance Machinery, 2nd Class.

Our Bucharest correspondent informs us that Mr. Alexander Lucasievich, director of the Bank of Roumania, has been authorised to wear the Order of Officer of the Lion and the Sun, which has been conferred on him by the Shah of Persia.

Lieutenant J. T. Simson, M.B., R.A.M.C., has been seconded for service with the Egyptian Army.

Mr. F. T. Rowlatt, governor of the National Bank of Egypt, left London yesterday for Cairo.

Captain S. J. Wilkinson has been posted to the 2nd Battalion West Yorkshire Regiment on absorption, and will embark for Malta about October 18 next.

Captain R. S. Gibson, R.M.L.I., has been seconded for service with the Egyptian Army.

Captain H. V. C. Turnbull, K.O.S.B., has been taken on the strength of the Egyptian Army from August 8, vice Bimbashi S. J. Burton, struck off.

Lieutenant T. W. Stallybrass, M.B., R.A.M.C., has been taken on the strength of the Egyptian Army from August 15, with the rank of Bimbashi, vice Bimbashi H. Ensor Bey, D.S.O., struck off.

Mr. Stevenson, general manager of the Egyptian Telephone Company, has returned to Egypt from Europe.

The Bishop in Jerusalem has returned to St. George's from the Mount of Olives, where he has been staying for a month. His health is understood to have benefited greatly by the change.

Captain Arthur William Stiffe, of 49, Drayton Gardens, South Kensington, S.W., a director of the Persian Gulf Telegraphs, whose death was reported in these columns on August 23, left estate of the gross value of £3,657, with net personalty £3,601.

Mr. Archibald Campbell Dickie, A.R.I.B.A., of London, has been appointed to fill the chair of Architecture in the University of Manchester rendered vacant by the retirement of Mr. H. S. Capper. Mr. Dickie has been the architect for a large number of very important buildings in this country, and has acted as architect to several archæological expeditions in Greece, Italy, and Asia Minor, and has written important papers thereon. His work under the auspices of the Palestine Exploration Fund is well known. He is on the principal executive committee of the Fund, and acts as assistant secretary. For the last five years he has been a master on the staff of the Architectural Association's School of Architecture in London.

At St. Peter's Church, Cranley Gardens, on Wednesday of last week, the marriage took place of Captain Gilbert F. Clayton, late Royal Artillery, Sudan Government Service, eldest son of Lieut.-Colonel and Mrs. Clayton, of Sandown, Isle of Wight, and Miss Edith Thorowgood, second daughter of Mr. and Mrs. F. N. Thorowgood, of 24, Elm Park Gardens. The Bishop of Khartoum performed the ceremony. The bride was given away by her brother, Lieutenant A. P. Thorowgood, R.N., and Captain C. H. Townsend acted as best man to the bridegroom. Mrs. Thorowgood afterwards welcomed her friends at 24, Elm Park Gardens, and later in the afternoon the bride and bridegroom left for their honeymoon, which they will spend at Kelburn, Ayrshire, lent by the Earl and Countess of Glasgow.

The marriage of Mr. J. B. Christopherson, Director of Khartoum and Omdurman Civic Hospitals, son of Canon and Mrs. Christopherson, to Miss Joyce Eleanor Ormerod, daughter of Dr. and Mrs. Ormerod, of 25, Upper Wimpole Street, took place on Tuesday at St. George's, Hanover Square. The ceremony was performed by the Dean of Salisbury, assisted by the Bishop in Khartoum and the Rev. Canon Christopherson, father of the bridegroom. The bride was attended by seven bridesmaids—Miss Barbara and Miss Diana Ormerod (sisters of the bride), Miss Howard, Miss Ailsa Ballance, Miss Amy Downing, and the Misses Ailsa and Ena Christopherson (nieces of the bridegroom). Major W. S. R. May, Egyptian Army, was best man. After the ceremony a reception was held at 25, Upper Wimpole Street, and Mr. and Mrs. Christopherson later left for the Continent.

The marriage took place on the 17th inst., at the Garrison Chapel, Abbassia, Cairo, of Geoffrey Scholfield Butterworth, I.F.S., Belgaum, India, only son of the late Rev. T. G. Butterworth, vicar of Great Ouseburn, and Mrs. Butterworth, Marshfield, Settle, to Doris Daisy, youngest daughter of the Rev. J. Harwood Little, B.A., senior chaplain to H.M. Forces, and Mrs. Little, Cairo. The ceremony was performed by the bride's father, assisted by the Rev. C. W. Green, M.A., C.F.

FRIDAY, SEPTEMBER 27, 1912.

GREAT BRITAIN AND SERVIA.

With this issue we present our readers with a special supplement, entitled "Servia of To-Day," which will, we hope, serve to rouse more interest in that beautiful, but still comparatively little-known, land amongst the people of this country, and to make them acquainted with its great potentialities in the way of development—political, economical, and commercial. During the earlier years of her national existence, Servia could not claim that her aims were viewed with constant favour by Great Britain. Though British public opinion sympathised with the struggles of the young nation, official circles were influenced by the fundamental principle of Great Britain's foreign policy in the Near East, namely, the integrity of the Ottoman Empire. Russia, more particularly under Nicholas I., was regarded by British statesmen as the greatest, if not the only, menace to that integrity. Therefore, as St. Petersburg had favoured the emancipation of Servia and had been instrumental in compelling Turkey to recognise her independence, it was only natural that British mistrust of Russia should extend to Belgrade. The result was that any political advantages acquired by Servia were attributed to the growing power of Russia in the Balkans. It became more and more apparent, however, that the Servian people, whilst grateful to their benefactors, were determined to retain their independence, thus offering a guarantee against the Russian menace. British statesmen were not slow to realise this factor in the situation, and a characteristic sign of these times was Colonel Hodges' mission to Prince Milosh. The Crimean war accentuated Great Britain's interest in Turkey. On the initiative of both Great Britain and France, the Treaty of Paris established the independence of Servia and the integrity of the Ottoman Empire as fundamental principles of the international Balkanic situation. The neutralisation of the Black Sea and the separation of Bessarabia from Russia were two acts tending to strengthen as well as to guarantee those principles. At the same time it must be admitted that Western Europe did not regard the development of Servia's national mission with particular favour. Servian autonomy, called into being by Turco-Russian treaties, and strengthened by concessions that Prince Milosh wrung from the Sultan, was, it is true, recognised and safeguarded by the Powers. But to any further claims Europe turned a deaf ear. It was, therefore, useless for Servia to dream of territorial expansion at that early stage of her modern history.

In 1862, when Belgrade was bombarded by Turkish troops, the question of the evacuation of the country by Turkey was ventilated. France and Russia were in favour of the proposal, but not so Great Britain, who still upheld her traditional Balkan policy. The British public was likewise opposed to Servia's aims, but this notwithstanding, Prince Michael succeeded in drawing attention to the real facts of the case, and in this he was aided by William Danton, Cobden, Sandwith, and Gregory. The result was a veering of public opinion in England in favour of the evacuation. The Press played, moreover, an important *rôle* in the development of the new movement, which terminated in a six-hour debate in the House of Commons on May 29, 1863. From that moment dates the birth of a Serbophil current of public opinion destined to be one of the characteristic features of Gladstone's party. Unfortunately, the history of 1862 was to be repeated in 1875. When revolution broke out in Herzegovina, involving Servia, Montenegro, Russia, and Roumania in a war with Turkey, Great Britain was unfavourably disposed towards Servia and the other Christian States in the Balkan Peninsula. Gladstone's powerful attack on the Bulgarian atrocities, and Austria's occupation of Bosnia-Herzegovina, awakened the nobler sentiments of the British public and provoked an irresistible movement in favour of the Balkan people. But before the new elections could place Gladstone's party in power, the fate of the Balkan States had been sealed: the Treaty of Berlin had been signed and ratified, and Austria's army occupied Sarajevo and Mostar. Nevertheless, Gladstone's celebrated phrase, "Hands off!" addressed to Austria in connection with her Balkan policy, was a strong guarantee for the independence of the Christian States.

In order to prevent the establishment of a preponderant Russian influence in the Balkans, Great Britain, in agreement with Austria, proposed the following solution: Bulgaria to be separated from Macedonia and divided into two provinces—the Principality of the North and Eastern Roumelia; Bosnia and Herzegovina to be separated from Servia and Montenegro. The immediate effect of this was to make Austria a Balkan State, to be used, according to British political views, as a centre of resistance against any new Russian encroachments. However, the Treaty of Berlin had only been signed a few years when it became evident that not Russia, but Austria, aided and abetted by her ally Germany, constituted the greatest menace to the Balkan States, who were obliged to look upon Russia as their only protector. At this juncture England began to show a more friendly spirit towards Russia. This is proved by joint Anglo-Russian action in the reform movement in Macedonia and Old Servia, culminating in the Reval programme. But when Austria's *coup* in Bosnia-Herzegovina came as a surprise to the world in 1908, an Anglo-Russian rapprochement in the Balkans became imperative. The *coup* is too recent to be insisted upon in these columns, but the fact must be emphasised that from the very beginning Great Britain ranged herself on the side of Turkey and Servia, upholding against the aggressiveness of Austria the validity of existing treaties and the maintenance of the *status quo*. Though the annexation could not be revoked, Great Britain and Russia exhausted all diplomatic resources in order to obtain compensation for Servia in the nature of a guarantee safeguarding her independence. But as Austria, aided by Germany, was determined neither to cede nor to forbear war, and as Europe would not risk a war, the crisis of the annexation ended contrary to the precepts of international law, and contrary to the interests of Servia, the Balkan States, and of Europe in general. Nevertheless, in spite of the failure of the plan alluded to, Servia is conscious of a feeling of the deepest gratitude to Great Britain for her friendly assistance, and finds solace in the hope that British friendship will not fail her when, sooner or later, the questions affecting her most vital interests are brought to the front again under more favourable circumstances.

Owing to the continually increasing demand for "The Near East," difficulty is occasionally experienced in obtaining copies. The Manager will be obliged if, in such cases, readers will at once communicate with him at Devonshire Buildings, Devonshire Square, London, E.C.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The 1911 report of the Director of the Steamers Department of the Sudan Government throws considerable doubt upon the possibility of utilising the "sudd" vegetation of the White Nile for the purposes of fuel manufacture. It will be remembered that a German engineer presented to the local government a proposal for the preparation of a compressed block fuel from the papyrus growth which fringes long stretches of the river. This new fuel was to supplant coal, and provide the foundation for many a local industry. A quantity of the material was sent to Germany for trial, and was apparently favourably reported on. On the strength of these trials a small plant was ordered and in due time established on the White Nile. The results obtained have not been entirely satisfactory. Suddite has less than half the calorific value of briquette coal, and this, in a country where transport is confined practically entirely to shallow-draft river steamers of limited bunkerage capacity, is a point of importance.

***

No, I do not think that Suddite will prove to be all that the fertile Teuton brain anticipated. I have before this expressed my belief in the future of oil and petrol as the sources of power for practically all the countries of the Near and Middle East. In my opinion this holds good of the Sudan also. Petroleum is being produced in the Red Sea, and will soon be available in very considerable quantities. This should become the natural source of supply for the Sudan. Where storage space is limited and long transport necessary, the choice of fuel becomes a matter of some difficulty; but in these days of pipelines and tank steamers transport of petroleum has been developed to an art, and this source of power can be brought efficiently and in quantity to almost any point of the earth's surface.

***

Although, in my opinion, internal combustion engines, running on some of the less refined grades of petroleum, will one day furnish practically the whole of the motive power requisite for the industrial development of the Near and Middle East, I think that more business might be done by manufacturers of suction gas plants. There are many substances available, in apparently utterly destitute stretches of country, from which power could be obtained by an appropriate plant. The sudd is, in my opinion, one of these, and it would prove more valuable utilised in this way than as a fuel pure and simple. There are, further, many varieties of desert scrub and similar growth that might be made to serve a like useful purpose.

***

The consideration of this question of the utilisation of waste natural growths recalls to mind a proposal which I investigated some years ago in Egypt. As my readers will know, the cotton plants are rooted out of the ground each year after the final pickings have been effected. Now the stems of these plants can be made to furnish, among other products, a fairly good grade of paper. In the cotton-growing States of America there are actually at work factories which buy up the greater part of the dried stalks of the cotton plants, and transform them into paper and put them to other industrial uses. Only over-conservatism on the part of the native and lack of enterprise prevent this being done in Egypt, and this is all the more unfortunate as all the paper used in the country is imported instead of being, as it could be, to a great extent, manufactured locally. There are not so many industrial occupations open to native labour, that the Government can afford to overlook any chance of establishing a fresh industry.

***

I have received from the Roumanian Ministry of Commerce and Industry a copy of the statistical year-book, which has just been published under its authority. This exceedingly interesting publication will be of great service to everyone wishing to follow the development of the country, so surprising already in its scope and rapidity. I hope to be able to revert to this publication in the near future; in the meanwhile I would advise students, merchants, engineers, and others, having a financial or political interest in Roumania to obtain a copy of this year-book. It is published in the French and Roumanian languages.

***

I notice that an Ottoman insurance company, which has for some years carried on a fire insurance business, is now preparing to undertake life assurance also. This is a sign of the enlightened ideas of the present Turkish Government, for formerly it was regarded as contrary to the principles of the Moslem religion to practise life assurance, and no purely Ottoman company would have been permitted to do so. The idea of providing against death was regarded as impious and as incompatible with that implicit resignation to the decrees of fate which is enjoined on, and inbred in, every Moslem. It is true that, some years ago, the late Grand Mufti of Egypt issued a *Fetwa* stating that the principles of life assurance were not irreconcilable with Islam, but Shiekh Mohammed Abdou (On him be peace!) was far in advance of his day, and his views on this matter—and many others—were not shared by his colleague, the Sheikh-ul-Islam in Constantinople.

***

A contemporary, writing on the need for the awakening of commercial enterprise among our manufacturers, says:—"Still more urgent is it that our trading houses should display the enterprise which the times require in dealing with foreign countries, where Britons have only their good name to create a prejudice in their favour." A striking illustration is provided in Crete, where only four or five British travellers were seen last year among some two hundred who visited the island. Greek travellers may in some cases have acted as representatives, but more than half the whole number were Germans or directly acted for German houses. Under these circumstances we can hardly expect to have the proportion of Cretan trade that our manufacturers desire. It often appears very doubtful to me whether British manufacturers do really desire to compete in the smaller and more remote markets. By the time the collective value of such markets is realised I am afraid that we will find the German so firmly established that competition will be difficult in the extreme. I cannot too insistently urge that greater attention be given to fields which, though now perhaps restricted, will certainly not always remain so.

***

While on the subject of commercial enterprise, I should like to draw attention to the manner in which Port Said is isolated as regards connections with Constantinople and the Levant. It is an extraordinary thing that practically the whole of the steamship service plying between Turkey and Egypt should call only at Alexandria in the latter country. Alexandria as a port of departure is all very well when only Egyptians and residents of Egypt are concerned, but under present conditions it is very difficult for travellers coming from farther east and wishing to return to Europe via either Turkey or Greece to do so. They almost invariably have to proceed to Alexandria in order to travel by this route. This difficulty was the subject of severe comment on the part of several Anglo-Indian officials with whom I travelled from Egypt to Greece early this year. They had disembarked from their liner at Port Said, taken a long and tedious journey to Alexandria, and, just missing a boat, had to wait three days for the departure of the next, whereas a properly conducted service of steamers from Port Said, timed to leave on the arrival of the Indian mails, would have obviated all this difficulty.

***

Reuter's Agency publishes a message from Cairo reporting that, according to the *Messagero Egiziano*, the Egyptian Government has prepared a draft law providing for the inspection of all banks, both native and foreign, operating in the country. It is said that this matter will be amongst the first to occupy the attention of Lord Kitchener on his approaching return to Cairo. In view of the failure of the Bank of Egypt and other banking misfortunes suffered by Egypt, I think the Government is showing wisdom in instituting some such supervision. Still, I foresee great difficulties obstructing the establishment of an efficient control capable of securing absolutely satisfactory results. In this connection we are likely to hear a good deal once more of the old bugbears, the Capitulations and "compensations"—in other words, diplomatic blackmail.

***

A deputation from the International Federation of Master Cotton Spinners' and Manufacturers' Associations will visit Egypt towards the end of October, under the leadership of Sir C. W. Macara. The programme of the tour includes conferences at Alexandria and Cairo, as well as visits to points of interest agriculturally and commercially, and the delegates will be received officially by the Egyptian Government. The development of the cotton industry has been more rapid than the extension of the cotton-growing area, and the International Cotton Federation is concerned in the promotion of the latter. Officials of the Federation have already pronounced favourably on the prospects of extending the cotton fields of Egypt and the Sudan, and it is hoped that the personal inspection of the two countries by this international body of experts will help to interest capital in the enterprise.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, September 21.

The Chirket-i-Hairie S.S. Co.

The accounts of this company's working during the financial year ended March 13, 1912, have just been published. The total receipts are in excess of those of the previous year by 5 per cent., and amount to a round £200,000; in ten years they have increased by 50 per cent. The working expenses during the year amounted to 71.58 per cent. of the total receipts, as compared with 74 per cent. during the previous year. The company's fleet of steamers, now numbering 40, of which four were added during the year, are periodically surveyed by Lloyd's surveyor. The company's various reserve funds, including an insurance fund, amount to just over £T80,000. Owing to the war, the company has not been able to add to its fleet since August last, but with the hoped-for cessation of hostilities, the question of new ships will, no doubt, be shortly under consideration. Within the last ten years the company has added 24 new steamers to its fleet, and has, during the same time, gradually withdrawn its older ships from service. Until 1903, it had always favoured the paddle type of passenger steamer, but from that date all additions have been screw boats, the last twelve being twin-screws. For close on forty years the company's steamers were all English-built, but within the last three or four years six have been ordered in France, and only four in Great Britain. However, I have reason to believe that, all things being equal, we shall stand the better chance in future orders, although the last two French-built boats are a decided improvement in every respect on the previous four.

Notwithstanding the fact that it holds a monopoly for certain lines, this company has been a model of what a public conveyance company should be, and although in later years there has been a tendency to reduce expenditure in every possible manner, even to limiting the coal supply and reducing the speed of some of the older type of "coal consumers," which were at one time driven by English engineers for all they were worth, the public have had little to complain of the service.

Ottoman Steam Navigation Co.

Would one could say as much of the ex-Mahsoussé, which until a year ago was running steamers said to have been contemporaneous with a certain well-known craft built by Noah, Limited. I understand that M. Leege, the German director of this company, has submitted to the Minister of Marine a detailed plan for the reorganisation of this concern, and its transformation into a public company, which scheme has been well received by the Minister, and the project will be laid before the Council of Ministers.

Hedjaz Railway Company.

This company decided last year to publish a yearly statement of its working, and that for the year ended March 13, 1912, is just to hand. The receipts during the year amount to £T290,486, as compared with £T267,891 during the preceding year, the number of passengers being 171,101, as compared with 168,448 during the previous year. The receipts per head (apart from military transport) was £T1.02, as against £T.085 during the previous year, which shows that the passengers are beginning to travel longer distances. The merchandise carried amounted to 77,523 tons, as against 65,757 during the previous year.

With a view to developing the port of Caiffa, and making it accessible at all times, the company has entrusted the preparation of plans for the construction of a harbour to Hersent, Schneider and Company. Further, with the object of drawing some of the trade of Damascus, which amounts to some 100,000 tons per annum, a branch line has been built connecting the main line passing about five miles outside the town with the city proper. This was opened to the public during the latter part of July.

The actual working expenses of the company during the year amounted to £T207,548, as compared with £T191,839 during the preceding year. The cost of construction during the year amounted to £T122,000. The total amount of the capital sunk in this undertaking amounts to £T4,037,527. The rolling stock consists of 86 locomotives, of which five were imported during the year, and ten more are at present on order. It possesses 99 passenger carriages and 15 trucks. It has on order 6 second-class carriages, 50 closed wagons for the transport of pilgrims, and 10 trucks with postal compartments. It also has 926 goods cars, of which 100 were imported during the year.

Adjudications.

There has been a great dearth for some time back of adjudications for the supplies of the various Government Departments, due to the shortness of funds. In the case of the Ministry of War, these have been restricted to food supplies. The Custom House is crowded with goods of which delivery has not been taken. Merchants have been known in some cases to have paid the Customs duty themselves for account of the Government, and to have delivered the goods against receipt, in order to be able to finance other shipments arriving. Others have had to delay shipments until previous ones are taken up. As a consequence, it would appear that steamship agents, particularly those representing the Liverpool liners, are complaining of the delay in discharging their goods into the Custom House, some lighters remaining over fourteen days before being discharged.

Prefecture of the City.

I mentioned in my last letter the various projects of the new Prefect for the improvement of the city. The local Press now states that the Prefect has obtained the consent of certain Embassies for the imposition of an additional tax on foreign merchandise, which they explain is in no sense to be an "octroi." It is also stated that negotiations are well advanced with an English financial group for an advance of £T120,000 to the Prefecture.

Automobiles for Fire Brigade.

The third automobile on order for the Fire Brigade arrived here yesterday, and was tried in the presence of the Chief of Brigade, Count Szechenyi Pasha, the Prefect of the city, and the captains of the several batallions of Sapeurs-pompiers.

TRADE WITH PERSIA.

In a report (published this week) on the trade, etc., of Khorasson, Major Sykes, the British Consul-General, states that there are at present no openings for British trade in that district. The British and British Indian trade, however, via the Nuski route, which is regarded as being the safest route in Persia to-day from the South, has, in spite of lack of security, shown a most satisfactory increase during the past year. In 1909-10 the figures were £59,688, in 1910-11 £42,925, and in 1911-12 £89,921, or more than double the amount in the preceding year. In the exports, too, there was a large increase from £8,159 in 1910-11 to £12,883 in 1911-12. British and British Indian trade with Persia via the Persian Gulf, last year amounted to £3,773,005, as against £3,071,579 in 1910-11—an increase which, the Consular report says, "in face of the anarchy which prevails, is remarkable." The net value of British trade with Khorason from the South was £486,126, an increase of just £100,000 on the estimate of the previous year.

Major Sykes goes on to refer to Russian trade, and says:—"During the seven years which I have held this post the trade with or through Russia has almost doubled. The year under report shows a large general increase, from £1.875,758 to £2,376,191. The exports, as is always the case, exceed the imports by a substantial amount."

The Bulgarian Telegraphic Agency is authorised to deny the news, published by certain papers, according to which the Bulgarian Government had declined to issue further passports for foreign countries. "The Government," adds the B.T.A., "faithful to its pacific policy, has never thought of adopting any such measure."

TRIPOLI.

TRADE PROSPECTS.

(From Our Special Correspondent.)

Tripoli, September 8.

Taking from Alexandria the steamer belonging to the line established by the Banco di Roma, we were able to reach Tripoli after touching at the principal Lybian ports—Sollum, Tobruk, Derna, Benghazi, and Mistrata. In all these ports we met numerous Egyptians occupied in commercial pursuits and in provisioning the troops. We visited first Sollum and Tobruk, which present scarcely any interest. The latter is exceedingly well fortified, and we noticed that in the harbour there were numbers of Greek and Turkish sailing ships which have been seized during the war. Derna, on the other hand, is a pretty little town with abundant water supply, but here the strategic position of the Italians is less favourable than elsewhere, as the Turks occupy commanding positions on the high-lying plateau which dominates the town. The Turkish artillery is able to throw shells into the town, but somehow they do not succeed in doing much damage. It appears as if the Italians are preparing an advance against the Turkish positions. An admirable road, cut by the Alpine battalion in the rocks, has just been finished.

Life at Benghazi.

Benghazi is a picturesque town of 25,000 inhabitants, all seemingly happy, and to all appearance oblivious of the war. The public services work admirably. The landing of passengers and merchandise entails, however, great danger, and the construction of a port would be of prohibitive cost. The oases surrounding the town are very fertile; fruits, such as grapes, figs, dates, olives, pomegranates abound. We noticed a large number of native and Sudanese soldiers in the Italian service. They are employed against the desert marauders, and have fought well in skirmishes with the Turko-Arab forces.

Mistrata has only recently been occupied, and the inhabitants are now returning in large numbers. The town is situated in fertile oases, and the port would seem destined to become of some importance owing to the export of alfa.

Finally, Tripoli presents the aspect of a modern town with up-to-date public services. The future water supply of the town is assured. Life is, however, expensive in Tripoli, and it is impossible to find board and lodging under £25 per month. The population counts 45,000 souls, exclusive of the Army of Occupation. The head of the municipality is Hassouna Pasha Karamanli, a descendant of the old-time Beys of Tripoli.

The construction works on the port are being actively pushed, and to all appearance will be finished in January next. A railway line of 90 cm. gauge connects Tripoli with Zuara and Ain-Zara.

Future Prospects.

Trade is active, in view of the necessity for feeding an army of 100,000 men, and all the population of the coastal districts of Tripoli and Cyrenaica. Besides the Banco di Roma, which has opened agencies in all the occupied towns, the Banca d'Italia has established a branch in the capital with a working capital of 4,000,000 frs. It is not yet possible to prophesy concerning the country's future. The export of alfa, dates, salt, and so on, could be considerably increased. Nothing precise is known regarding the mineral deposits of the country; but it is certain that Jebel el Akhdar (Green Plateau) in Cyrenaica, which has an area of 30,000 square kilometres—that is, about the size of Sicily—is an ideal place for the breeding of sheep and for pasturage. Agriculture could easily be developed in the oases, where there is abundant water. Italian farmers could attempt dry farming with every prospect of success, the rainfall being 50 cm. per annum.

The irrigation works between Bucharest and Calarashi are being actively pushed on, and the engineers hope to have completed the portion between Bucharest and the Borcea Canal by the end of this month. The remainder of the work will be put in hand next spring.

Openings for Business.

SOME SERVIAN REQUIREMENTS.

In a communication which is reproduced in the *Daily Consular and Trade Reports* (Washington) of September 5, the U.S. Minister at Bucharest (Mr. J. B. Jackson) writes: "During my recent visit to Belgrade I was given to understand that no bids had been received in reply to the Servian invitations in regard to railway construction material, and that the material required will now be purchased by private contract. It is said that this is a result of representations by the Austrian, Belgian, and German manufacturers, and it is sincerely to be regretted that the Americans did not show more enterprise.

"Before its adjournment on January 13 the Servian Skupshtina authorised the expenditure of 4,000,000 dollars to complete the armament of the Servian Army. Much satisfaction is felt that this amount is available from the surplus revenues of the last three years, and that no recourse need be had to a loan. Consequently Servia will be under no obligation to purchase the arms, etc., which are required in any particular country, and they will be paid for in cash. While it is anticipated that the purchases will be completed within the next six months, no specifications have been published or bids invited as yet. It is understood, however, that a considerable quantity of revolvers and other small arms are required."

THE GUADA BEAN.

In a letter addressed to the editor of *Al-Moghreb Al-Aksa* Mr. B. Harrison, of N.S.W., Australia, gives some particulars of the "Guada" bean, a native of the Solomon Islands, which would seem to be of interest to agriculturists of Near Eastern countries. We commend it to the attention of our readers in Egypt, Turkey, and Persia, who may feel disposed to experiment in cultivating this monster—and apparently excellent—bean.

Mr. Harrison writes that his attention was first called to the plant's merits by reading a paragraph, in a description of the islands, which ran: "On the kitchen table is an enormous bean, which arrests my attention, called the 'Guada.' It is seven feet long, and is intended for our host's family dinner to-night. It would amply provide sufficient vegetables for one meal for half a dozen hungry people." After some trouble he was successful in procuring some seed, and he states he has grown the plant with most satisfactory results for the past year.

"This vine," he continues, "grows from fifteen to twenty feet long, and within a few months from the time of planting will yield a heavy crop of beans from three to six feet long. The leaves are large and lobed, and the flowers are white, fringed with filaments, and scented. When overripe the pods assume various colours—orange red and green with white stripes. A writer quite recently says in one of our local papers: 'I can testify to their value as a table vegetable. Mr. Harrison gave me one bean some months ago. From this single seed I have grown about 25 lbs. of beans from the one vine, which is growing and bearing heavily yet. Single beans have measured up to 5 ft. 4 ins. and to 2 lbs. in weight, and we have frequently served up half a bean for a meal. It is usual to expect coarse flesh and rank flavour in such bulky vegetables, but such is not the case with the Guada. If taken before the beans have quite set in the pod, sliced and cooked like French beans and served with sauce, it is quite a luxury in the bean line.' In appearance the Guada resembles a long, narrow cucumber rather than a bean. When young the fruit should serve as a good substitute for cucumbers when pickled. This vegetable should prove a most welcome and prolific adjunct to the garden, more especially in hot, dry climates, where vegetables are frequently scarce and difficult to cultivate."

It certainly seems that experiments with the Guada bean should be worth conducting in the countries we have mentioned; for if it took kindly to the soil and climate—as it seems likely from Mr. Harrison's description that it would do—its cultivation could probably be made to pay well. Mr. Harrison gives his address as Cudgera Park, Burringbar, P.O., N.S.W., Australia.

CHEMICAL PRODUCTS IN SERVIA.

The importation of chemical products and drugs into Servia, says the *Nachrichten fur Handel und Industrie*, Berlin, reached 4,880,904 dinars, against 3,482,328 in 1910, which constitutes a considerable increase.

At the head of products ranged under this heading comes common salt, the importation of which reached 2,598,653 dinars, as compared with 1,971,359 dinars during the preceding year. Italy participated in the importation of this product to the extent of 1,281,000 dinars, Austria-Hungary for 681,285, Roumania for 626,358, and Great Britain for 10,000. The other chemical products imported are raw and calcined soda, Glauber salts, sulphuric acid, sulphate of copper, carburet of calcium, and acetic acid.

The increase in the importation of pharmaceutical products was still more apparent, since it passed from 134,912 dinars in 1910, to 422,302 dinars in 1911. Germany monopolises this trade, since her share in 1911 was valued at 335,762 dinars. Then come Austria, with 67,475 dinars, and France, with 14,707 dinars only.

BAICOI-CONSTANTZA PIPELINE.

The Direction-General of Roumanian State Railways (Service de la conduite de pétrole) has just published the specification and particulars of the pipes required for the pipe line to be laid between Baicoi and Constantza.

Tenders are invited for the supply of two lots of piping: (1) For 600 k. 655 m. (600 kilometres 655 metres) of 5-inch steel pipes, and (2) for 90 k. 300 m. of 9-inch pipes, and 210 k. 027 m. of 10-inch pipes.

The pipes are to be made of Bessemer, Siemens-Martin or Thomas steel, and may be either welded or weldless. The 5-inch pipes must withstand an internal pressure of 112 atmospheres, the 9-inch pipes 80 atmospheres, and the 10-inch pipes 76 atmospheres. The normal length of the pipes must be 7 metres, and none will be accepted longer than 10 metres, while only 10 per cent. may be of a length less than 5½ metres, the minimum length permitted being 4 metres. The pipes will be threaded for external couplings, which must be supplied.

Delivery must take place so that one quarter of the quantity contracted for shall be delivered not later than April 15, 1913, a second quarter by June 15, 1913, a third quarter by August 15th, 1913, and the balance by October 15th, 1913. Contractors must be represented in Roumania by an agent vested with full powers to act with regard to all questions relative to the transport of the goods in Roumania. Contractors must guarantee their pipes for a year, and may not sub-contract without the permission of the Roumanian Government. The pipes are to be delivered at points on the railway to be indicated to the contractor, who must bear all costs of carriage.

Olive Oil in Crete.

In his report on the trade of Crete for the year 1911, Mr. Vice-Consul Rawlins states that although the 1911 crop was a good one, totalling some 30,000 tons, the poor crop of 1910—totalling from 8,000 to 10,000 tons—brought about a decrease in the value of oil exported in 1911. Prices in 1911 were high owing to the lack of oil in stock and to the demand from Europe, the average being from £48 to £50 per ton f.o.b., barrels included.

The methods employed in the cultivation of the olive tree in Crete leave much to be desired. The fruit is not picked but knocked down from the trees and then gathered up by hand. Often it is left lying for some time, so that fermentation sets in and the quality of the oil is, of course, badly affected. Wooden and iron presses, made locally and in Greece, are in general use, but at Candia there are four steam presses for yellow Lepante oil and one just established for kernel olive oil. At Canea there are two factories for kernel olive oil.

There was a decrease of 721 tons in the total export of kernel olive oil in 1911. The principal export is to Tripoli, Egypt, Turkey and Greece; only about £500 value was exported to the United Kingdom.

TENDERS INVITED.

EGYPT.

Supply of Manual Fire Engines.—Tenders will be received by the Under-Secretary of State, Ministry of Interior, Cairo, for the supply of two manual fire engines required for the police stores. Conditions of tender and specification can be obtained, on application to the Personnel and Equipment Department (Nizam and Ghafir Office), Ministry of Interior, Cairo, or to the Stores Department, Ministry of Interior, Bulaq. Tenders must be submitted on the printed form provided for the purpose, with a covering letter on stamped paper of 30 milliemes, and should be addressed to the Under-Secretary of State, Ministry of Interior, Cairo, enclosed in sealed envelopes, marked: "Tender for the supply of fire engines." Date, October 15 (noon).

Supply of Diaries.—Tenders will be received at the Economat Central of the Ministry of Finance for the supply of diaries, in Arabic, English, and French languages, for the year 1913. Persons wishing to tender should apply to the Economat Central in order to consult the condition and specification of the supply. Tenders will be received up to October 12, 1912, at noon.

ROUMANIA.

Supply of Steel Pipes.—Tenders are invited by the Roumanian State Railways ((Service de la conduite de pétrole) for the supply of 900 kilometres of steel pipes. For particulars see above.

RED SEA PEARL FISHERIES.

The following information is extracted and translated from an interesting article published by *La Dépêche Coloniale* (Paris):—

"Pearl fishing is practised on all the coasts of the Red Sea by small native sailers with the object of gathering mother-of-pearl, and, eventually, pearls; but on the littoral of Arabia mother-of-pearl constitutes the principal aim of the exploitation.

"When a complete cargo has been obtained the vessel proceeds to the nearest port, where the 'catch' is sold to the biggest bidder. There are, therefore, no particular places, properly speaking, for this trade; in fact, nearly all points on the littoral receive visits of the craft at times. Some ports, however, are absolutely forsaken, and this appears to be the case with Jeddah, where no pearler has been seen for some years, although in former days mother-of-pearl and pearls were a very flourishing trade there. The reason for this is that more remunerative prices are offered at Port Sudan, Massowah, Hodeida, Jibuti, and Aden in consequence of the great competition amongst the merchants.

"The quantity of pearls collected is not considerable, but the quality on the whole is said to be good. Better results could doubtless be had with a more up-to-date mode of working. Large sailing ships are used, the movements of which are slow and very often difficult. These vessels, provisioned for a few weeks, and manned by ten, fifteen, and sometimes fifty men, set out for the waters generally recognised as being the best pearling field towards the month of May, and continue their campaign until September, when the low temperature at the bottom of the water renders fishing difficult. Having arrived at the selected spot an anchor is thrown out from the ship, or, speaking more exactly, she is secured by means of a large stone sunk to the bottom. This mode of anchoring allows the barque a certain latitude of movement, and permits of the exploration of the bank or modification of the field of research.

"The pearls, immediately after being landed, are, as a rule, purchased by European houses established at places on the littoral of the Red Sea, and sent direct to Europe, either on consignment or after firm sale by telegram. Consignments are mainly sent to Trieste or London, where they are sold by auction. They are carefully cleaned before shipment, and placed in large barrels of native manufacture covered with sacking.

"The freight from Jeddah to London or Trieste is about £2 per ton of 1,000 kilos. The cost of loading is trifling, and the Customs collect an export tax of 1 per cent. *ad valorem*. Each local house has its representative abroad. The pearls are ordinarily purchased by local traders, who send the more valuable, almost exclusively, to Paris.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondents.)

Smyrna. Sept. 20.

The locust plague which has been devastating many districts in the interior since last spring has not yet been successfully dealt with, and a further grant has been asked from Constantinople to enable the local authorities to stamp out the locusts.

Bucharest. Sept. 21.

The Roumanian veterinary authorities are taking stringent precautions against the entry of swine pest into the country. The pest is making great ravages in Transylvania and Hungary, 2,412 communes having been declared affected, as compared with 800 in the month of July.

The statistical department of the Ministry Domains has just completed the returns of the spring harvests of the present year. These show that the wheat crop amounted to 31 million hectolitres, which is above the average, but two million less than last season. The average yield was 15 hectolitres to the hectare.

The crops of rye, barley, and oats are also inferior to those of last year, the figures being:—

	1912		1911.	
Rye.....	1,300,000	..	1,750,000	hectares
Barley	7,750,000	..	9,500,000	,,
Oats.....	7,300,000	..	9,240,000	,,

As regards the autumn crop, it is believed that the maize crop is about equal to that of last season—that is to say, about 38 or 39 milion hectolitres.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

Mitylene. Sept. 14.

Export.—250 barrels of oil, valued at about £1,500, and 76 sacks of soap at £155.

Import.—300 bags of coffee, 200 bags of Rangoon rice.

The prices of oil, both here and at Orivali, are being well maintained in anticipation of forthcoming short crops.

Damascus. Sept. 11.

Export Prices.—Wheat, per 100 kilos, Pt. gold, 75-95; barley, P. 60-74; dry peas, 70-80; vetches, 65-78; dari seed, 45-55; red lentils, 105-115; maize, 45-50; beans, 135-140; aniseed, 270-290; nuts, 120-140; liquorice, powdered, 40-50; in sticks, 32-40; wool, 410-490; apricot kernels, 275-289; apricot paste, 310-385; dry apricots, 470-540.

Jaffa. Sept. 13.

Wool shows an upward tendency, the price of superior qualities of the Gazaoui type being P.J. 42 the kilo, and the Naplouse and Sranran P.J. 37-39.

Sesame.—There is a shortage in the supply. The new season will begin at the end of the current month.

Dari.—The price remains steady at P.J. 23-24 the kilo.

Lupins.—Prices remain firm at P.J. 25 the kilo. About 1,100 kilos have been exported to Damietta.

Barley.—Price remains steady. Superior quality, type Gazaoui, P.J. 21 per kilo; inferior quality, P.J. 18-19 per kilo. Week's shipment, 1,200 tons, for England.

Olive Oil.—The price is rising, P. Naplouse 122 the "jarre" of 16 okes. Arrivals are limited.

Soap.—Price rising, P.J. 1,450 the cantar. Exports amount to 450 cantars, chiefly for Adalia.

Flour.—Arrivals are very weak, 500 sacks of Roumanian quality and 375 Adalia.

Oranges.—Week's shipments amount to 2,139 cases for Trieste. In a fortnight's time the first shipment to Liverpool will take place.

Lemons.—The week's shipments are 200 cases to Constantinople and 455 to Trieste, making a total of 655 cases.

Smyrna. Sept. 17.

Opium is in slight demand, and there has been a slight fall of 5 per cent. in prices. Sales, six cases. Total arrivals, 1,197 cases, as compared with 612 last year.

Vallonea.—First arrivals have made their appearance on the market, and have been bought as samples at relatively low prices.

Cotton.—Arrivals of the new crop, which is estimated at 40,000 bales, will very soon take place. The quality is good.

Sultanas.—Transactions have been unimportant owing to Ba'ram, but there has been a rise of 10 per cent. in the price of superior qualities, in consequence of damage caused by rain to fruit spread out for drying

Figs.—The opposition of the agriculturists to the "Trust" continues. Arrivals are far from sufficing to enable the company to fulfil their obligations to their customers. In view of the hostility displayed towards them, they have despatched agents into the interior to buy, but the first results of this move have not been satisfactory, the quantities purchased being insufficient.

Barley.—Owing to a shortage of shipping this article has experienced a drop in price of 5 per cent.

Manchester Goods.—Purchases have not increased to such an extent as was anticipated. Buyers from the interior are beginning to be more numerous, however, and important orders are expected shortly. The market is not overstocked. The abnormal situation caused by the war has this year diminished orders for Europe, which has tended to reduce last year's stock.

PRODUCE REPORT.

London, Sept. 26.

The markets are showing moderate activity, but prices are still well maintained. Sugar is steady. Coffee firm. Currants in better demand. Sultanas realise better prices. Seeds very quiet but firm. Oils steady. Corn easier. Opium steady, inclined to be dearer.

Sugar.

The weather on the Continent has been more favourable during the past few days, but it is too early even now to speak with any certainty as to the extent of the growing crop. The position of beet, therefore, is still regarded with great suspicion. Closing prices for beet are:—September, 12s. 1½d. to 12s. 2¾d.; October, 9s. 7¼d. to 9s. 8½d.; December, 9s. 7¼d. to 9s. 8¼d.; March, 9s. 9d.; May, 9s. 10d., f.o.b. Hamburg. Refined Sugar.—English, Tate's No. 1 cubes, prompt, 21s. 9d.; November-December, 18s. 4½d. Foreign cubes quiet. German, granulated, October, 11s. 9¾d.; November-December, 11s. 6¾d., f.o.b. Hamburg. Russian crystals, ready, 12s. 9d., f.o.b. Danzig.

Coffee.

Spot market is steady. Only a small quantity was offered in auction. Some good business has been done during this past week owing, apparently, to inquiries from the Continent and the provinces. The stock of coffee in London up to the 14th inst. was 12,844 tons, against 13,879 tons in 1911 and 26,928 tons in 1910. Guatemala, good to fine bold, sold at 82s. 6d. to 84s. 6d.; mid, 79s. to 80s.; small, 77s. 6d. to 79s. 6d.; Mexican, good bold coloury, 83s.; small, 79s. Futures easier. December sold 63s.; March, 62s. 10½d.

Currants.

Seldom has the new season opened out so well in buyers' favour. There is a good general selection now in the market, quality and condition being quite pleasing. Opening prices are considerably cheaper than last season. Bags, 24s. to 24s. 6d.; Pyrgos, ¼ cases, 25s. 9d. to 27s.; Gulf, 27s. to 31s.; Panaritis, 27s. 6d. to 30s.; Vostizza, 30s. to 36s.

Sultanas.

The arrivals of this past week were very satisfactory, and prices were some shillings cheaper than those obtained for the first small lots. It is reported, however, that later quotations "to arrive" have again advanced 2s. to 3s. per cwt. The finer qualities are offering 55s. to 65s.; fine, 47s. to 50s.; good, 42s. to 46s. Common, 39s. to 40s.

Figs.

The first consignment has arrived and in general the condition is considered very good, although, as is usual, there were some parcels which could not be well recommended. Prices are not dearer than last year. Fine Eleme Layers are offered 46s. to 50s. per cwt.

Seeds.

The market is very quiet, but prices are firm. Linseed, London-Calcutta, afloat, 62s. to 63s.; September, 62s.; October, 61s. 3d.; October-November, 61s. Rapeseed, September-October, sold at 51s. 6d.; yellow, quoted 49s. 6d.; brown, 53s. 3d. Cottonseed, London-Egyptian, loading, £9 2s. 6d.; October, £8 17s. 6d.; November-January, £8 12s. 6d. per ton.

Oils.

Linseed oil quiet. Spot pipes landed, 34s.; barrels, 34s. 6d.; October-December, 33s. 7½d.; January-April, 31s. 3d. Rapeseed oil quiet. Ordinary brown spot 30s. 6d.; refined, casks, 33s. 6d. Cotton seed oil firm. Crude spot, 25s. 9d.; Hull, 24s.; refined sweet, 30s.; ordinary pale, 27s.; Hull, 25s. 9d. Petroleum unchanged. Tallow is in good demand at 6d. to 1s. advance for all descriptions.

Opium.

A small amount of business has been done during the week, but prices are very firm. 21s. 6d. to 22s. is offered for guaranteed 11 per cent., but holders are unwilling to sell, expecting higher prices owing to the reports that the crop is small, and stocks are short in the consuming centres.

Corn.

Wheat.—Cargoes in quiet request, and prices occasionally tended easier. The "Denewell," 6,150 tons, choice white Karachi September 11, bill of lading, sold at 39s. Azoff-Black Sea, on sample, September-October, 38s. to 40s. Barley.—Quiet and easier, Azoff-Black Sea, sellers, September (old style), 25s.; September-October, 24s. 6d.; November-December, 24s. 3d.; Danubian on sample September (old style), 28s. 3d. to 29s. 4½d.; and Karachi, September-October, 23s. 9d. Sales:—18,000 qrs. Azoff-Black Sea, September 17 at 25s.; and 18,000 qrs. all options, October-November, 24s. 1½d. Parcels of ditto, September-October, sold 23s. 9d. to 23s. 7½d.; October-November, 23s. 7½d. to 23s. 6d. Oats are slow.

Gum.

The market is quiet, but quotations remain unchanged, for Animi, Zanzibar, washed, £12 to £14 5s.; Arabic, £1 15s. to £2 5s.; Kowrie, common, 50s. to 75s.; and Olibanum, drop, 35s. to 50s.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending September 13:—We have to report a quiet week, with sales consisting of 5 cases New Extra Carahissar at 22s., and 1 case New Aksar at 21s., all for Continental consumption. Japanese and American buyers have not come forward this week, but it is stated that next week they will do so, in which case we must expect a considerable amount of opium to change hands. The arrivals amount to 1,197 cases, against 612 at same date last year.

SERVIAN MERCHANTS AND WAR RUMOURS.

Under date of the 22nd inst., Reuter's Belgrade correspondent writes:—Owing to the sensational rumours which have been current during the last few days regarding an impending war between Servia and Turkey, and which have entirely paralysed business, the Merchants' Association appointed a deputation, which waited on the Premier, M. Pasitch, to ask for positive information as to the Government's intentions.

M. Pasitch, in reply, assured the delegates that the Government's intentions were absolutely peaceful, and that there was no ground whatsoever for excitement. The Minister asked the deputation to tell the merchants that they might attend to their business as heretofore, and that they should not allow themselves to be misled by sensational Press rumours.

Cotton and Cotton Goods.

EGYPTIAN COTTON MARKET.

(From Our Own Correspondent.)

Alexandria, September 20.

Prices are less firm, and the estimates are to-day for 8½ million cantars. Speculation is very active, and bears are aggressive. Industrial purchases are quite considerable, and are principally of Afifi, which this year is deficient in quantity. Joanovitch and Sakellarides are somewhat neglected.

Cotton seed is firm. Exporters are buying, and local requirements last year absorbed 350,000 ardebs.

MANCHESTER REPORT.

Messrs. Reynolds and Gibson, Manchester, telegraph that the inquiry for Egyptian spot cotton during the past week has shown a slight improvement, and Brown qualities, which were those chiefly in demand, have maintained their prices without quotable change. In Upper Egyptian, owing to arrivals of New Crop cotton, values have declined, and quotations show reductions—⅛d. per pound for good fair and fully good fair, ¼d. for good, and 5-16d. for fine and extra fine. Estimated sales for the week are 2,300 bales. In cloth only a miscellaneous business has been done in the Near East.

EGYPTIAN COTTON FIGURES.

For 3rd week, ending September 20.

Supplied by Reynolds and Gibson.

1891-92	4,672,520	1910-11	7,573,537
1892-93	5,118,150	1911-12	7,424,208

The individual totals to each country, as published in the annual detailed table of cotton export from Egypt, are compiled from figures furnished to us by the Egyptian Customs, as declared to them by the various shipping firms, and the final destination then declared decides against which country's name entry should be made. These totals do not agree with the totals to countries as shown in the circular of the Alexandria Produce Association, nor with those in this summary statement, as these last take into account only the ports to which shipment is made, whence further distribution to final destination follows.

NEW COTTON PERIL.

A disease which attacks cotton plants and causes their leaves to turn red and wither has just been brought to notice in Egypt. Native farmers call the disease El Nadwa el Hamra, but are unable to explain its causes. The *Mokattam*, which gives publicity to an article on the subject, thinks that the disease may be due to over irrigation.

SPINNERS' VISIT TO EGYPT.

The following official intimation has been issued concerning the visit of a deputation of master cotton spinners to Egypt:—

The arrangements for the visit of a deputation from the International Federation of Master Cotton Spinners' and Manufacturers' Associations to Egypt, under the leadership of Sir C. W. Macara, are now well advanced. The party, including ladies, will number nearly one hundred, representing all the European nations and Japan. They are due in Alexandria on Monday, October 28.

In view of the earnest and energetic work that is being performed by Lord Kitchener in developing the resources of Egypt, nothing could be more opportune in helping him to attain the object he has in view than this visit of the International cotton delegation. This is a very important factor, as the system of capitulations is in force in Egypt.

The Industry and Production.

It is a well-known fact that the development of the cotton industry has been of late years in excess of the extension of the cotton-growing area, and the International Cotton Federation is doing a most important work in using its influence in developing the present cotton fields and extending the cultivation of cotton in the colonies and dependencies of all the European nations, and indeed in any part of the world where cotton can be grown on a commercial basis. The International Federation's reports, which are circulated in three languages, are acting undoubtedly as a great educational force, and are very valuable books of reference.

The Egyptian Government, who will officially receive the delegation, have appointed a committee of four to make arrangements for their reception and for their entertainment during their stay in the country. The committee is composed of Sidky Pasha, Under Secretary to the Minister of the Interior, Mr. G. C. Dudgeon, Director General of the Department of Agriculture; Mr. C. Chomeri, representing the Alexandria General Produce Association; and Abaza Bey, Director of the Khedivial Agricultural Society.

Programme of the Visit.

Seen in Manchester on Saturday, Abaza Bey gave an outline of the programme, which includes conferences both in Alexandria and in Cairo, at which there will be discussions in English, French, German, and Arabic, on such subjects as the damping of cotton in the process of packing, the mixing of cotton in the presses, the prevention of the mixing of seed in the ginneries, rational seed breeding, licensing of the sale of seed, the preventing of the mixing of seed on the farms, land reclamation, the deterioration of the quality of cotton, the new agricultural drainage scheme, etc.

Many opportunities will be provided for acquiring first-hand knowledge of the bountiful qualities of the Egyptian soil. There will be a visit to the Aboukir Land Company's estate, reclaimed from the sea thirty years ago and now a conspicuously fruitful area. Prince Hussein, uncle of the Khedive, who is the President of the Khedivial Agricultural Society, will give an opportunity of inspecting his estate at Tel-el-Baroud. The delegation will then visit Kafr-el-Zayat, the largest ginning centre of Egypt. Ibraham Pacha Murad, one of the most conspicuously successful agriculturists in the country, will entertain the delegates at luncheon on his estate, and the State domains and other cornfields will be visited. There will also be visits to the Barrage, the great weir which regulates the water supply of the Nile for the Delta. A trip on a Government steamer along the Nile has been arranged, and opportunities of inspecting the Pyramids and other Egyptian antiquities will be given.

The official programme in Egypt, in which Lord Kitchener is taking a deep interest, will extend over twelve days.

The new Bulgarian Consul-General for Alexandria, M. Giouroukof, has arrived in that city.

Engineering Notes.

Structural Stability of St. Sophia.

The sarcastic comments of foreign architects on what they called "English Empiric Architecture," which originated from the reports that eminent British architects, in testing the settlements in the structure of the famous Byzantine temple of St. Sophia, in Constantinople, used strips of glass plastered over the cracks in its interior, have turned against those who indulged in them. It was reported that Mr. T. G. Jackson, R.A., F.R.I.B.A., the eminent architect, and Sir Francis Fox, the well-known engineer, made use of these tell-tale glasses. Such means for testing a structure like that of St. Sophia, which stands on ground that is often moved by earthquakes, was commented on in foreign architectural circles, and considered as an empiric method. Now, Mr. T. G. Jackson, writing from Ischia, turns the tables by saying who used the "empiric" means, and how scientifically he examined the famous structure and made his report.

"It is, I believe," writes Mr. Jackson, "three years since the Ministry of the Evkaf, which has charge of all the sacred buildings in Constantinople, began to take advice about the settlements in the structure of St. Sophia. Signor Manangoni, the architect employed at St. Mark's, Venice, made a report, and the 'tell-tales' of glass and cement were put on by him. He examined the foundations and I understand found them based on a firm stratum of schist. I have not, however, seen his report. Nothing was done further. As I happened to be in Constantinople in 1910 I, too, was asked by the Ministry of the Evkaf to examine the building and make a report, which I did as well as the short time at my disposal permitted. The construction of St. Sophia may be briefly described as follows:—The mighty dome, with a diameter of more than 100 ft., rests on four great arches, which are about 15 ft. thick, between which are the spherical pendentives which bring the square plan into a circle, and are the triumphant invention of Justinian's architects; Anthemius, of Tralles, and Isidorus, of Miletus. These arches spring from four great piers at the corners of the square nave, which Procopius tells us were built of solid stone run together with lead, though from what I saw I believe them to be—partly, at all events—of brick. On the stability of these piers and arches, of course, the safety of the whole construction depends. They are supported on the east and west sides by great semi-domes of the same span as the arches, forming, in fact, continuations of their 15-ft. soffits. On the north and south sides they are sustained by four vast buttress walls, which, being pierced by arches on the ground floor and in the gallery above, are practically flying buttresses, whose stability depends on the exterior piers which range with the outer walls of the aisles. These buttresses are not solid, but contain chambers, and their exterior piers contain winding stairs. They are, therefore, not so strong as they look, and they have given way seriously.

"Seen from the floor of the mosque, a terrible bulge in the north-east pendentive catches the eye at once. But it is not till one ascends the dome that the full seriousness of the mischief can be appreciated. From the gallery surrounding the base of the dome it is apparent that the plan is no longer circular, but is deformed, and that the great arches have also suffered distortion. The dome consists of forty ribs of brickwork covered with mosaic now plastered over, with brickwork between rib and rib, the whole meeting on a ring at the crown. The crown seems to have sunk, and many of the ribs have also sunk so much that some of them are in some parts nearly, if not quite, straight, instead of being convex, and have, therefore, lost their arch-construction. That the dome still hangs in air and has not fallen is due to the singular stability of the form of construction. Writing as I do from the island of Ischia, I observe that, whereas most of the ordinary churches were thrown down by the earthquake of 1883, and are in ruins, those that had cupolas are still standing.

"Turning to other parts of St. Sophia, I found by plumbing the walls and columns that they were out of the perpendicular chiefly on the north and south sides, and some of the vaults, especially in the gallery, seem in danger of collapsing. I need not go into further particulars, which might be too technical to interest the ordinary reader. What I have said ought to be enough to call attention to the serious condition of this famous building, the finest flower of Byzantine art, which marks the turning-point of perhaps the greatest revolution in the history of architecture."

Bulgarian Railways and Harbours.

Under date of the 17th inst. our Varna correspondent writes: Should war with Turkey be avoided the new State loan will be devoted exclusively to realising projects in connection with the extension of the State Railways and buildings. In the first place, the construction of the Kaspitchan-Silistra line will be put in hand. This will be some 115 kilometres long, and will cost, it is estimated, about forty-five million francs. A sum of about four million francs will be spent on the Tambol-Kazil-Agateh line of forty kilometres, and twenty million francs will be devoted to the Sofia-Samokov-Kotcherinovo line (124 kilometres). Another projected line is the Philippopolis-Karlovo, sixty-one kilometres long, for which a first grant of five million francs will be made. This line will unite the Northern Balkan towns. Three and a-half million francs will also be allotted for the construction of harbour works at Lom, Silistra, Sistor, and Toutrakan.

Constantza Tramways and Light.

Our Roumanian correspondent writes:—The question of providing a system of electric lighting and tramways for the town of Constantza has been under discussion for some months past, and on two occasions tenders have been invited for the work. But no acceptable offer was made, and the town seemed to be as far off as ever from obtaining what really amounts to a necessity for a summer seaside resort and rising port. Now, however, thanks to the enterprise of some of its inhabitants, a company has been formed, with a capital of three million francs, and an offer, accompanied by a guarantee of 50,000 francs, has been laid before the town authorities. So, it is hoped, the carrying out of the work may soon be undertaken, and that it may be kept in local hands. Not only does the newly constituted company undertake to provide a system of trams for the town itself, but it proposes to construct a line to the bathing station at Tekir-Ghiol, where there are mud-baths, excellent against rheumatism and kindred ills.

A ROUMANIAN TRADER'S DEBTS.

Berman Sufrin, trading as B. Sufrin and Company, High Street, Manchester, warehousemen, came up for his public examination at the Salford Bankruptcy Court on Tuesday. The debtor alleged as the causes of his failure bad trade, lack of capital, heavy business expenses, and the illness of his son for four months in 1911, and decline of his business while he attended him. The debtor, in answer to the official receiver, said he came from Roumania in 1884, and had been naturalised. He began business on his own account as a general draper in March, 1901, without capital. He had no shop, but attended markets in Lancashire and Yorkshire. The business was fairly successful, and in July, 1910, his capital amounted to £480. He then took a warehouse in High Street, Manchester, and ceased to attend the markets personally, though his son did so. By September, 1911, he had lost all his capital, and began to be pressed by his creditors. In December of that year he sold his business for £145, which he considered a fair price.

The Official Receiver pointed out that in a few months the debtor had converted a surplus of £532 into a deficiency of £539. The debtor said he could not say how the money had gone. He had paid the money away to creditors, and had not retained a penny for his own purposes. All the money had been paid into the bank, and the account there would show how it had been paid out.

The examination was adjourned.

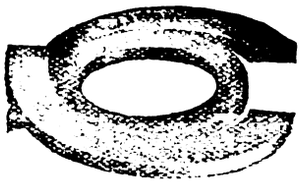
"SUDDITE" FUEL.

In his report for 1911 Lewa Bond Pasha, Director of the Sudan Government Steamers Department, makes some interesting observations upon the possibilities of "Suddite," the fuel manufactured from the Sudd vegetation. He says:—

An attempt has been made by private enterprise to utilise the papyrus growth, which fringes long lengths of the banks of the river, and which attains its most luxurious growth in the Bahr-el-Gebel, by converting it into fuel.

After some preliminary trials in Germany, on material sent for the purpose, a small experimental floating manufacturing plant was taken up the White Nile in 1909, but the result was unsatisfactory, the machinery not being sufficiently powerful, and a wrong part of the papyrus being treated. Following up the experience gained, a quantity of the raw material was sent to Germany, and from the stems and heads only of the papyrus briquettes were made and tried in comparison with lignite briquettes in the presence of several officials, with a most encouraging result.

On the strength of this a powerful and elaborate experimental set of machinery was erected at Khartum early in 1911, and several tons of "Suddite," as it is proposed to call the manufactured fuel, were turned out from papyrus brought down from the Bahr-el-Gebel. Some interesting steaming trials were made, and this Suddite proved to be of the same specific gravity as coal briquettes, and to have slightly less than half their calorific value. It burned with a good flame and with very little smoke, but left a heavy clinker after a very few hours' steaming. But although these results show that papyrus can be converted into at least a possible fuel for our steamers, it is much too early to assume that they point to a solution of the fuel supply problem, nor do they justify the neglect of reafforestation.



The cost of manufacturing Suddite near the supply of the raw material cannot be determined yet; and, in comparing it with coal or wood, the limited carrying capacity of small river steamers must be taken into consideration. Coal permits of twice the distance being traversed for an equal quantity of weight and space occupied, an important point in connection with cargo carrying, and our system of wood stations at frequent intervals provide an easy means of constant replenishing.

In order to compete for the main supply Suddite would require to be manufactured at several centres, or transported to convenient depôts, which must materially add to its final cost, otherwise the demand would be limited to local requirements near the manufactory, and it still remains to be proved if it can be made cheaply enough to bear the expense of duplication of machinery and long-distance transport.

Shipping Intelligence.

BRITISH SHIPPING IN THE BLACK SEA.

Its Supremacy Threatened.

(From Our Own Correspondent.)

Odessa, September 22.

For more than half a century the red ensign of the British mercantile fleet has dominated the grain-carrying trade of the Black Sea, the Azoff, and the Danube. It is now threatened with a more or less total eclipse by the Greek mercantile flag. The expansion of the Greek merchant marine during recent years has been most remarkable, and the process of that expansion steadily continues. One hears of the organisation of new Greek shipping companies and the amalgamation of existing navigation concerns. In the issue of this journal of September 13, it was announced, on the authority of the *Deutsche-Orient Korrespondenz*, that a fusion of the National Shipping Company and the Greek Trans-Oceanic Shipping Company will shortly be consummated, and the joint capital of the combined firms increased to 25,000,000 drachmæ, or about £1,000,000. The notice also stated that French capital will be largely interested in the operations of the new amalgamation, whose shares will be admitted to quotation on the Paris Bourse. Five days ago there were 26 foreign steamers in the Taganrog roads, and of these 9 were British and 17 were Greek. Yesterday there were 2 British bottoms in the port of Odessa and 3 Greeks; at Kherson there were 2 British steamers and 1 Greek, and in Nicolaieff 5 British and 2 Greek steamers.

British versus Greek.

I have no information as to the comparative numbers of British and Greek ships now in the Danubian ports. But here, in Black Sea and Azoff waters, we have the significant fact that there are altogether, for the moment, 23 Greek steamers as against 18 British. From a competent Greek source I learn that the Hellenes have energetically addressed themselves to the ambitious task of capturing the grain-carrying trade of the Black Sea from the British, and there is no gainsaying the too obvious fact that they are likely to succeed. It must be borne in mind, too, that the Greeks work their steamers on a much more economical system than British owners are able to do in face of the exactions of the Unions of British Seamen and Firemen both in regard to pay and rations. Many Greek steamers owned by individuals or small groups of private persons are worked on a co-operative basis—that is, every member of the ship's crew has a momentary interest in the vessel's earnings, and this, also, aids the competition against British shipping. So far, the Greeks have not attempted to cut freights against British bottoms; but later in the competitive struggle, if such tactics appear to them expedient, the Hellenes will certainly not hesitate to adopt a freight-cutting policy. It is difficult to see how British shipowners can successfully fight this newly-developed competition in the Black Sea trade; all the advantages appear to lie with the Greek invaders of a long-held British shipping preserve.

GREEK STEAMSHIP PURCHASES.

Apropos of our Odessa correspondent's remarks, it is interesting to note that Greek purchases of second-hand tonnage have been rather numerous during the past week or two. The steel twin screw steamer "Portugalete," owned by Messrs. Morel, Ltd., Cardiff, has been sold to Greek buyers for £25,000. She was built at Sunderland in 1901, and is a vessel of 3,568 tons gross.

The s.s. "Bencroy," owned by Messrs. Joseph Holt and Co., Liverpool, is also said to have been disposed of to Greeks for about £11,500. She was built at West Hartlepool in 1892, and has a tonnage of 2,393 tons.

The s.s. "Abbotsford," of Sunderland, has also been bought by Greeks for the sum of £35,000. She registers 2,352 tons net and 3,692 tons gross, and was built in 1905.

THE S.S. "BARROWMORE" DAMAGED.

(From Our Own Correspondent.)

Salonika, September 21.

So many grossly exaggerated rumours get set going in this place that one grows exceedingly sceptical; and so it came to pass that, with the spirit of Thomas Didymus strongly developed in them, some even ventured to doubt that there were any submarine mines whatever at the entrance to our bay. It has been left for the Liverpool steamer, "Barrowmore," of the Johnston Line, to give occasion to think that this was, perhaps, carrying incredulity a little too far.

On the morning of the 16th inst. this ship was coming up the Gulf before daylight, so working it that she would reach Cape Kara about sunrise, before which no vessels are now allowed to pass the batteries, as they have to get the pilot-launch to lead them through the narrow channel said to be left open for navigation. The captain seems to have come slowly ahead until he saw the signals, but as he could not quite make them out he moved in nearer to read them until warned by a gun that he was in dangerous waters. It appears that he then, instead of stopping and going astern, turned his ship round and was actually heading south when a collision with something knocked a hole in his port bow, so large that the fore peak and hold immediately filled.

The evidence is not altogether clear as to whether there was an explosion or not, but if there were, it must have been a very slight one. And as it is practically certain the accident was not in the electric mine zone, it may be fairly presumed it was caused by hitting up against a mine which had dragged its moorings or got altogether adrift, as happened in the Dardanelles. In fact, only a few days before the wind was so strong that an Austrian-Lloyd and one or two other steamers were held up for some twenty-four hours outside the bay because the small pilot-launch could not face it to bring them in.

Shady Salvage Methods.

So much for the actual accident; and now as regards the salvage. We have here a smart Jewish firm of ship and commission agents who seem to have some understanding with the authorities by which they get early news of ships in distress at the Cape. When such news reaches them they at once commandeer the one or two available launches, necessary lighters and men, proceed to the vessel, and working on the fears of the captain get him to sign a contract off the reel for the salving of his ship. They acted in this way in the case of a steamer which stranded some four or five months ago, but she had no recognised agent here at the time. The Johnston Line has, however, a regular acting-agent (also a Jew), and it seems to an outsider that the captain was hardly justified, until he had consulted such agent, in signing any contract whatever. The Jewish firm mentioned, by engaging the only available steam-launches, make it impossible for those legitimately interested to get quickly to the scene of the accident; and what is very curious, when these latter try to get into telephonic communication with the ship, the line, or apparatus, is said to be out of working order. Another point in the question of salvage is that this Jewish firm works into the hands of a German salvage company, whose salvage steamers can be got quickly to the spot, although not more quickly than the British, which are stationed at the Dardanelles and the Piræus, whose owners are also the agents at the former place of the Johnston Line. In fact, in the present instance, two powerful British salvage steamers arrived near the ship before the more antiquated German "Berthilde," but only to find that they were too late, and that the contract had already been made by the captain of the "Barrowmore" with the agent of their competitors. It may be said, by the way, that the agents here of the British salvage steamers are a British firm, and yet the native Jewish firm got the preference—and it was not a question of price, as it was an open contract. It would certainly seem as if the captain had been somewhat hasty in signing a contract with the first-comers before consulting his own acting-agent; although the latter seems to have been somewhat remiss in not at once hurrying to the spot, instead of contenting himself with merely sending lighters and men to discharge. Had the ship been in imminent danger the circumstances would have been somewhat different, but the weather was fine, with an anti-cyclonic barometer, and the captain must certainly have known that salvage steamers were hastening to his assistance.

The "Barrowmore" came safely into port with the "Berthilde" yesterday afternoon (the 20th), and to look at her nobody would know that she had had any accident, although she is still a little down by the head. She is now discharging her cargo into lighters, a good deal of water having, of course, been pumped out of her; and it now remains to be seen whether she will have to go to Syra, or to Constantinople, her next port, for permanent repairs. It is said on very good authority that, although the salvage contract is a Lloyds open one, the "Berthilde" was guaranteed a minimum payment of £6,000, with, of course, the chance of being awarded a bigger sum. Under the circumstances, this seems a very big figure for the services actually rendered.

BLACK SEA FREIGHT RATES

(From Our Own Correspondent.)

Odessa, September 22.

The boom in freight rates which set in about three weeks ago appears now to have reached its zenith; there has been no further advance during the last few days. To-day's quotations are the same in the three ports of Odessa, Nicolaieff and Kherson, namely, 16s. Rotterdam, 16s. 6d. Hamburg, and 16s. 9d. Weser; for London and Hull the rate is nominally 16s. From the Azoff one shilling higher is paid all round. The arrivals of the new season's grain are still very meagre and dilatory, and there is consequently no such thing as quick despatch. One of the two British steamers in this port, the "Columba," of 6,500 tons, has been loading for the last 16 days, and is not yet complete.

As a matter of fact, the sudden and unanticipated boom in freights has proved a richer harvest for the shipbrokers than for the shipowners. Steamers chartered by the brokers and agents at 12s. and 12s. 6d. have been loaded at 15s. 6d. and 16s. 6d., leaving fat margins of profit for the agent-charterers. For example, I may mention that on one steamer loaded here the shipbroker made £1,000 profit, exclusive, of course, of commission and fees. On another British steamer loaded at Kherson at 17s., the chartering broker cleared a profit of £1,700. Owners are now, naturally, demanding the full current market rates, and later there may come a slump that may convert the charterer's present profits into future losses. Nowadays it is all a gamble of speculation, and one must not reproach the British shipbroker in the Euxine for making his hay during a spell of brilliant sunshine.

SUEZ CANAL TRAFFIC.

In his report on the trade of Port Said for 1911 Mr. Consul-General Blech states that 4,969 vessels, of a net tonnage of 18,324,794 tons, passed through the Suez Canal in 1911, as compared with 4,533 vessels of 16,581,898 tons in 1910. The average net tonnage, which increases annually, is now nearly 3,690 tons.

The percentage of British ships passing through the Canal has risen to 62.2 per cent. as regards numbers, and to 64 per cent. for tonnage. German vessels figure respectively at 13.4 and 15.2 per cent., Dutch at 5.7 and 5.3 per cent., and French at 4.7 and 4.5 per cent.

The average duration of the transit of vessels in the Canal was 17 hours 1 minute.

The transit dues were reduced on January 1, 1911, from 7 frs. 75 cs. to 7 frs. 2 cs.; on January 1, 1912, a reduction to 6 frs. 75 cs. was effected, and the company intends to introduce on January 1, 1913, a further reduction to 6 frs. 25 cs. per ton net measurement. For vessels in ballast the rate is 2 frs. 50 cr. per ton less; the charge for passengers remains at 10 frs. per head.

BRAILA NOTES.

(From Our Own Correspondent.)

Braila, September 21.

Very little business has been done here this week, as merchants find it difficult to combine fresh business at the very high rates of freight that are ruling at present, whilst those that have engagements to fulfil hold back until the last moment in the expectation that the liners, pressed for time, will lower their rates in order to secure cargo. That they are not entirely wrong is proved by the fact that, although 18s. 6d. was paid here on Monday for Antwerp, room is obtainable since Thursday at 1s. less. The rate for Rotterdam reached 18s. on Wednesday, and now stands also at 17s. 6d.

As anticipated in my last week's notes, no steamers were fixed from the Danube except for the Mediterranean, for which 18 to 20 frs. was paid, according to destination. Spot rates to Mediterranean ports average 19 frs.

A small business was done from Sulina at 17s. to either Antwerp or Rotterdam, but there is very little open tonnage in port, and Sulina will shortly be in the market for steamers. Brokers have many open engagements, but are waiting for some show of weakness on the part of the London market before covering. Yesterday a steamer was fixed at 16s. 6d. Antwerp or Rotterdam, which is 1s. less than has been paid a few days ago.

A bank formed at Ziglina, between Braila and Galatz, on Monday, so that vessels at Braila can only load down to 22 ft. 6 ins. From Galatz downwards, however, the river draft is 23 ft. 3 ins. The depth of water on Sulina bar remains unchanged, steamers being able to cross drawing 25 ft. fresh.

THE "VECTIS."

Our Malta correspondent, writing under date of September 13, states: The P. and O. steam yacht "Vectis," so familiar in our harbours, will arrive from Tangier tomorrow with a party of about 100 excursionists. This will probably be the last trip of the "Vectis," as the vessel has been sold to a French company. On the completion of its present course, it will proceed to Marseilles, where it will be handed over to its new owners.

NEW P. AND O. STEAMERS.

The P. and O. Company have placed orders for four new steamers of 9,000 tons register, two with Messrs. Cammell, Laird and Co., and two with Messrs. Caird and Co. These ships are designed chiefly for the Indian trade, and, while they will possess a large amount of cargo space, they will have accommodation for about 150 passengers in the first and second saloons. By the spring of 1914 there will have been added to the company's active fleet in the four preceding years sixteen vessels, aggregating upwards of 150,000 tons.

N W BIBBY L'NER.

The new steamer "Oxfordshire," of the Bibby Line, has arrived at Liverpool from Belfast. Although similar to the other vessels of the fleet in style and equipment, she is much larger, and her accommodation for passengers is more than double that of the s.s. "Staffordshire," which she replaces. She is advertised to close for cargo at Birkenhead on October 2, and her commander will be Lieut. Harris, R.N.R. Already the vessel is said to be almost fully booked up with passengers for her maiden voyage to the East, and it is announced that Mr. A. W. Bibby will proceed in the ship to Marseilles.

DAEDALUS SHOAL LIGHT.

The Egyptian Ports and Lighthouses Administration has issued a Notice to Mariners (No. 2), which states that on January 18, 1913, the fixed light at the Daedalus Shoal Light in Red Sea, lat. 24°, 56′, long. 35°, 52′, will be changed to an occulting light showing the following:—Light, 8 seconds; dark, 4 seconds; light, 4 seconds; dark, 4 seconds.

It is announced that the first sitting of the Hague Arbitration Court, appointed to inquire into the circumstances of the seizure of the French mail steamers "Carthage" and "Manouba" by the Italian naval authorities, which was fixed to take place on the 28th inst., has now been postponed until a later date.

STEAMSHIP MOVEMENTS.

Prince Line.

"Carib Prince."—Eastham for Alexandria. Left Malta September 20. "Corsican Prince."—On Syrian coast September 12. "Creole Prince."—Alexandria for Manchester. Left Malta September 18. "Egyptian Prince."—Left Syrian coast for Liverpool September 17. "Imperial Prince."—Left Eastham for Alexandria September 20. "Italian Prince."—Left London for Alexandria September 15. LONDON, September 26.

The Stock Exchange, at the moment of writing, is busy with the Settlement. It is believed that prices will jump as soon as the new account begins. We have heard this story many times before. However, on the whole, things are good, and there is a certain amount of business doing. Money is tight, partly because Germany is busy with her end of the month's settlement and partly because the United States, Canada, and Egypt are calling for cash. We do not think, however, that the bank rate will be put up.

The Chinese Loan.

The whole city is discussing the Chinese loan and the foolish attitude adopted. China is determined to free herself from the dominion of the six banks. Therefore, she will carry her finances through whatever the Londoners may say. There are 450 millions of Chinese, honest, hard-working, saving people, and they will not put themselves in pawn to Europe. They have the sympathy of everyone in the City, for they have been treated very badly indeed.

Home Rails.

In the Home Railway market all the talk is of amalgamations in the Tube section. It seems quite clear that the Great Western will take over the Metropolitan on good terms, and it is equally clear that the Midland will not be bothered with the City and South London, which it could not utilise for through traffic. There is no business being done in the heavy lines, in spite of the good traffics.

Internationals.

Foreigners have not yet been affected by the stories of trouble in the Balkans. Paris remains quite quiet, and she is better informed on these matters than anyone in England. Bulgarians carried over at 89½, Egyptian Unified at 101½, Hungarian Rentes at 90, Italians at 96. The big rise has, of course, been in Peru, which carried over at 56¾, as against 39¼ a year ago. Turkish Unified are very firm at 89.

Americans.

The Yankee market looks good, and we are promised a rise in Eries, Unions, and Southern Pacifics. The increase in the Anakonda dividend was expected. Everyone knew that the company would be put on a 12 per cent. basis. The shares, therefore, are worth buying to-day.

Rubber and Oil.

Rubbers are dull. The Harrisons and Crossfield report tells us of big profits, but the ordinary shares are now to be offered to the public at 33s. This is an ominous sign. Oil shares are a little more active. The Tweedie amalgamation is laughed at, but Mexican Eagles are being bought, and Roumanian Consolidated are better. Urals are also a shade better. In mines nothing is being done.

Egyptians.

Egyptians show very little change. The big deal in Beheras has not affected the market at all. Agricultural Banks are a shade weaker, although nobody believes that anything serious threatens this great institution. Delta Lands carried over at 18s. Beheras are round about £16. Delta Light Railway Prefs. carried over at 8¾, Abdy's at 10s. 6d. Egyptian Salt and Soda are being absorbed gradually, and one of these days we shall see a big rise here. Very few of the shares that came out of the Zervudachi liquidation are now left to be sold. Khedivial Mail ordinary are 12s., but the preference dividend is hardly likely to be paid this year. National Bank of Egypt carried over at 18½ and New Egyptians at 11s. 6d. United Lands are quoted 4s. 6d. and look firm.

FINANCIAL NEWS IN BRIEF.

The ordinary meeting of shareholders of the Turkish Tobacco Monopoly Company will be held on October 2, in Constantinople.

Messrs. N. M. Rothschild and Sons publish the numbers of 218 bonds of the Ottoman Four per Cent. Loan of 1891, amounting to £60,000, which have been drawn and will be paid off at par at their offices on October 10.

The Bank of England is prepared to receive the coupons, due October 1, on bonds of the Greek Guaranteed Two-and-a-Half per Cent. Gold Loan of 1898; the necessary lists can be procured on application at the dividend pay office.

Mr. W. H. Short, of 123, Cannon Street, has been appointed receiver of the Ramleh Land Co., Limited, in liquidation.

Coupon No. 33 of the bonds of the Chemins de Fer de la Basse-Egypte will be paid, at the rate of 8.75 frs. in Brussels at the Banque de Bruxelles and other agencies.

Coupon No. 3 of the 4 per cent. 1910 bonds of the Chemin de Fer Soma-Panderma will be payable on October 1 in Paris at the Imperial Ottoman Bank.

The National Bank of Egypt notifies that Coupon No. 16 of the Agricultural Bank of Egypt Three-and-a-Half per Cent. Bonds will be paid on October 1 at their offices in Cairo, Alexandria, and London (4 and 5, King William Street, E.C.), and by La Société Française de Banque et de Depôts and Messrs. F. M. Philippson and Co. in Brussels.

The final instalment of the Peninsular and Oriental Steam Navigation Company new Five per Cent. preferred stock is due on the 30th inst. Allotment letters, when completed, should be lodged at the company's offices, 122, Leadenhall Street, E.C., not later than October 8, to be exchanged for stock certificates, which will be ready on and after November 1.

The receipts of the Egyptian Markets for the week ended September 19 amounted to £432, a decrease, compared with last year, of £302. The aggregate receipts to date amount to £36,464, a decrease of £3,900.

The receipts of the Ottoman Railway from Smyrna to Aidin for the week ended September 21 amounted to £11,524, a decrease compared with last year of £193. The receipts since July amount to £114,311, showing an increase of £12,146.

Four of the directors of the Oilfields Finance Corporation started last week for Roumania in order to make a thorough inspection of all of the properties in which this company in interested. In the near future, instead of only one of their fields, as now, being worked and yielding oil they will have some four or five in active production.

INSURANCE AT HAIFA.

There would appear to be an opening for insurance agents at Haifa just now. Our correspondent there writes:—Insurance has been much neglected here, owing to the natural carelessness of the people; but at the present moment it is receiving a lot of attention, in consequence of a fire which broke out last week at the pharmacy of an American Jew. The property, which was entirely burned out, was insured in two companies. The cause of the fire is generally attributed to an explosion of ether, but there appears to be some doubt on the subject. However, the attention of the people here has been forcibly drawn to the importance of insuring, and many merchants, I understand, are resolved to take no further risks.

Only four or five insurance companies are represented here, the principal being the Northern Insurance Company, the Union Company, and the Assicurazioni Generale de Trieste. Travelling agents also make occasional visits, but they are seldom successful in inducing many people to insure their property. There is, however, business to be done by the right type of agent.

NEW UNDERTAKING AT JIBUTI.

The Washington *Daily Consular and Trade Report* of September 10 contain an interesting report from the U. S. Consul at Aden (Mr. Walter H. Schulz), who writes:—

"The construction of a large petroleum reservoir at Jibuti, the French Somaliland port, is reported. The Persian Oil Company, with headquarters at London and Liverpool and $10,000,000 capital, is understood as being behind the undertaking. Little or nothing is known of the company, but it is believed that the Compagnie de l'Afrique Orientale, a French corporation, with headquarters in Paris and an important branch in Jibuti, will represent the company in the Near East.

"The company's principal oil supply probably will come from Mohammerah, Persia, where the company is said to hold big concessions of oil-bearing land, though it is said that Sumatra wells will be relied upon for the present. However, work on the reservoir is under way and American petroleum interests in French Somaliland, Abyssinia, and the Near East shortly will be confronted with a new rival. Present plans call for piping the oil from tank steamers direct to the reservoir, and tin cans are to be prepared, filled, and closed on the spot.

"Whatever advantage the new concern will have over American and other competitors remains in the fact that the Compagnie de l'Afrique Orientale, in addition to its own line to Aden, being also agent of many shipping companies, including Austrian-Lloyd, Hamburg-America, Bucknell Bros., Anglo-Arabian Line, and the Vavraise, may be in a position to enjoy special tariffs and receive direct shipments instead of transshipments via Aden, which is now the case with most oil intended for Jibuti. There will also be the advantage of always having on hand a stock in the reservoir.

"It would seem the new company proposes to wage an earnest campaign for the petroleum trade of this part of the Near East, the importance of which may be summed up in the fact that oil interests of the United States alone sent nearly 1,200,000 gallons of American oil to Aden last year. The rapid development of Abyssinia and the high prices obtained there probably is another great incentive to the new enterprise. The fact that it is proposed to convert the engines of the Jibuti and Dire Dawa Railroad from coal to oil fuel probably is another reason for the activity of foreign petroleum interests in this section."

Company Notes and Reports.

Ottoman Railway.

Presiding at the meeting of the Ottoman Railway from Smyrna to Aidin on Tuesday Lord Rathmore said that the receipts amounted to £168,186, and showed an increase of £28,000, which was all the more satisfactory if they bore in mind that the receipts for 1911 were the largest they had ever recorded for the first half of any year. The receipts from passenger traffic continued to show a remarkable expansion, being £51,800, against £43,644 last year. These receipts were now double what they were ten years ago. The receipts from goods were £116,386, as compared with £95,775, a specially good return from the carriage of cotton and oil having materially contributed to this result. Working expenses showed an increase of only £10,198, which was not much remembering that, besides the increase of traffic, they had had a large increase in the price of coal. The percentage of working costs came out at 42.92, as compared with 44.52, thus showing a reduction. The net profit was £92,439, an increase of £18,568. The proposed interim dividend of 8s. would absorb £19,887. As to the present system and prospects, they were very satisfactory. Traffics for the current half-year showed increases amounting to £14,000, but they were advised that the increases had probably come to an end, and, though there might be some decreases, there was reason to believe the net result would at least equal last year. Some of the crops showed a falling off, but with regard to oil there was a large quantity in hand. The big traffic had been unfortunately held up, and scarcely any figs had as yet been brought down to Smyrna. That was the consequence of a quarrel which had arisen between the fig growers up country and a syndicate of fig merchants in Smyrna over a question of prices. As the interests involved were very large, both to the growers and merchants, they hoped that before long some settlement of the dispute would be reached. The acting general manager had written to the board saying that, given fairly favourable conditions as regarded prices, weather, etc., he was of opinion that the traffic of the twelve months to June 30, 1913, would equal that of 1911. He therefore thought that they could look forward to a continuance of their recent prosperity in the future.

Tigris and Euphrates Navigation.

There is reason to believe, says a correspondent of the "Times," that the report in the French Press to the effect that new steamship developments are taking place on the Tigris and Euphrates under the auspices of Sir Ernest Cassel is incorrect.

Under its arrangement with Turkey the Baghdad Railway Company has the right to place steamships on the Shatt-el-Arab, the Tigris, and the Euphrates for the purpose of conveying all its workmen and material which may be needed for the purposes of the railway construction work, such privilege to continue so long as any construction operations are in progress. The Baghdad Railway is now being built from both ends—the first sod was recently turned at Baghdad—and accordingly the Deutsche Bank, representing the Baghdad Railway Company, has entered into an arrangement with the Euphrates and Tigris Steam Navigation Company for the formation of a new steamship company, of which half the capital will be English and half German, with a directorate similarly composed, and, further, with opportunity to the Turks, should they so wish, to participate. An entirely new fleet of steamers is to be built, half the orders for vessels being placed in this country and half in Germany. These vessels are, of course, only for river work, and the cargo, which will as a rule be solely German, since all the rails, for instance, are made in Germany, will be transhipped at Basra for conveyance up the river to points a long way above Baghdad, which up to the present has been the terminus of the voyage of the vessels of the Euphrates and Tigris Steam Navigation Company. This company, which is English, and in which the predominating spirit is Mr. H. B. Lynch, will continue its operations as heretofore, and is neither merged in nor affected by the new undertaking.

It is understood that had this new arrangement not been concluded the Germans were prepared to establish their own line of steamers, in which case this country would have had no interest in the commercial results which will follow.

Imperial Ethiopian Rubber.

Presiding at the meeting of the Imperial Ethiopian Rubber Company, Limited, on Monday, Mr. F. W. Davies said that since the last meeting the affairs of the company had remained entirely suspended, save and except that the necessary expenditure on the realisation of the remains of their assets in Abyssinia and the payment of the balance of salaries due out there and the travelling expenses of the staff back to England had been incurred. At the same time nothing further was being expended, save a nominal amount for a correspondent in Abyssinia to keep them in touch with affairs out there and any essential clerical or legal assistance that might be necessary, while no further directors' fees would accrue. The condition of public affairs in Abyssinia continued chaotic, and so long as that was the case there was no hope of any redress being afforded for the abominable treatment meted out to British capital in the person of the shareholders of that company. In the meantime, the so-called Régie, which Mr. Justice Darling had said was merely Mr. Hassib Ydlibi, was not obtaining as much rubber as could be wished, and while some of the ministers out there might possibly be deriving profit from its operations, it was doubtful whether the Imperial Treasury was doing so. They had reason to anticipate that when a settled Government emerged from the existing chaos the fact would undoubtedly present itself to the minds of the Government that from the time it confiscated the concessions of the company the public Exchequer had ceased to benefit conspicuously from the rubber industry. The action that the company had set down for conspiracy against Mr. Ydlibi was proceeding somewhat leisurely, as the directors had been unwilling to force the pace in view of certain more or less vague suggestions which had been put before them during the year. It had, however, become evident that the object of those suggestions was more to secure delay than to reach a satisfactory settlement, and a more vigorous prosecution of the case would be entered upon forthwith.

Maikop Amalgamation.

Preliminary arrangements have been completed for the amalgamation, at the instance of the Anglo-Maikop Corporation, of the undertaking of the Maikop and General Petroleum Trust, Maikop Apsheron Oil Company, Maikop Areas, and Maikop Hadijensky Syndicate. The new enterprise will have a nominal capital of £750,000, divided into shares of 10s. each. Under the arrangement the Consolidated Gold Fields of South Africa will receive £60,000 convertible debentures in the new company in reduction of the indebtedness of the Maikop and General Petroleum Trust. In the event of the scheme going through, the new company will possess fifty-nine plots on the Maikop field and a working capital in the first instance of £45,000, together with other assets which will be acquired from the amalgamated companies.

THE EASTERN BANK, LIMITED.

Head Office: 4, CROSBY SQUARE, LONDON, E.C.

Subscribed Capital, £1,000,000. Paid up, £400,000. Reserved Liability of Shareholders, £600,000.

Branches:

BAGDAD. BOMBAY. CALCUTTA.

Board of Directors.

The Right Hon. LORD BALFOUR OF BURLEIGH, K.T. (*Chairman*).
Sir JACOB E. SASSOON, Bart. EMILE FRANCQUI, Esq.
J. C. GEORGES BOUILLAT, Esq. J. S. HASKELL, Esq.
J. LEIGH WOOD, Esq., C.M.G.

The Bank issues Drafts, Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, and transacts Banking and Agency business in connection with the East on terms to be ascertained on application.

Deposits are received for 1, 2, or 3 years, at 4 per cent. per annum, and on Current Accounts interest is allowed at 2 per cent. per annum on the minimum monthly balances.

F. H. SUTTON, *Manager.*

BANK OF ATHENS.

(Incorporated in Greece.)

CAPITAL FULLY PAID - - Dr60,000,000
RESERVE FUNDS - - Dr10,480,000

Head Office: ATHENS.

London Office: 22. Fenchurch Street, E.C.

Branches:

GREECE: Pirmus, Patras, Syra, Calamata, Tripolitza, Volo, Larissa, Agrinion and Carditza.
CRETE: Canea, Candia and Rethymo.
TURKEY: Constantinople (Galata, with Agency at Stamboul), Samsoun, Trebizonde, Kerassunde, Batra, Mersina, Smyrna, Adana, Tarsus, Salonica, Serres, Cavalla, Xanthi, Janina, and Chio.
EGYPT: Alexandria (with agency in the quarter of Midan), Cairo (with agency in the quarter of Mousky), Zagazig, Mansourah, Mit Ghamr, Tantah and Beni Souef.
SUDAN: Khartum & Port Sudan. CYPRUS: Limassol.

NOTES FROM ALEXANDRIA.

(From Our Own Correspondent.)

Alexandria, September 20.

The Share Market.

The Mohammedan and Hebrew festivals have reduced the week to five working days. Nevertheless, the market presented much interest, and the activity was well sustained. London has been buying National Banks, Agricultural Banks, Beheras, Union Foncières, Land Banks, Delta Light Railways, Salt and Sodas, Ginners, Aboukirs, Levant Steamships, New Egyptians, Alexandria Waterworks, United Lands, and Sidi Salems. Paris has also been a buyer of certain descriptions, and Antwerp has purchased some Alexandria Tramways. At present prices Urbaines and Cassa di Scontos look inviting. Purchases of Comptoir financiers should prove remunerative; should this company absolutely fail in the pending legal proceedings the shareholders would receive almost at once £1¾ per share on liquidation, and, on the other hand, should the company win the suit there would be no necessity for liquidation, and each share would represent an intrinsic value of £2.

Forced Sales of Shares.

From time to time forced sales are announced, but the amounts are insignificant. Thus, at the last sale 3,650 founders' shares of the Epargne Immobilière were sold for £1 the lot, 650 founders' shares of the Express Nile for PT. 25 the lot, and 100 shares of the Société Immobilière at 1-32, and so on. The position to-day is thoroughly healthy. Shares are mostly held in strong hands, and will only appear again on the market when they have acquired a considerable margin of profit.

The Spinning and Weaving Co.

The shares of this company, which has taken the title of Filature National d'Egypte, are soaring rapidly. The capital has been reduced to £37,500, and then increased to £50,000. It will now be easy to remunerate so small a capital, especially as the company has obtained very considerable orders. The Ottoman Government has placed an order with it which alone will suffice to keep work going for a year.

New Ginning Factories.

The firm of Casulli and Co. has decided to erect several new ginning factories in the Delta. The need for these factories is not felt, and the decision is attributed to an alleged agreement between the large Greek and English cotton exporters, in order to counteract the competition of Swiss and German houses. There is no question of political influence, but solely of commercial rivalry and competition.

Forged Bank Notes.

Occasionally forged bank notes are seized, and as the Press gives a wide publicity to such seizures the public is commencing to look with suspicion on the notes, which have always been accepted by the fellah with reluctance. These circumstances tend to restrict the circulation of the notes, to the great detriment of commerce.

BANKING IN EGYPT.

Writing on the 15th inst., Reuter's Cairo correspondent states that, according to the *Messaggero Egiziano*, the Ministry of Finance, in agreement with Lord Kitchener, has prepared a draft law for the inspection of both native and foreign banking establishments doing business in Egypt. The proposed inspection would be carried out by a special department, to be attached to the Ministry of Finance. On his return from leave, Lord Kitchener will examine the draft law, which is, adds the journal, to be submitted to the Legislative Council for its observations in the beginning of its forthcoming session, and eventually will go to the Mixed Courts for sanction, so that it may be applied to foreign banks.

It is probable, concludes the *Messaggero Egiziano*, that a meeting of bank managers will be convoked at the Ministry of Finance to discuss the scheme.

The offices of the Anglo-Roumanian Petroleum Company, Limited, have been transferred to 7, Angel Court, E.C.

BULGARIA AND THE DANUBE.

(From Our Own Correspondent.)

Bucharest, September 21.

M. Franghia, the Bulgarian Minister of Public Works, is coming to Roumania shortly with a view to visiting the Roumanian ports.

M. Franghia, who is one of the most distinguished members of the present Bulgarian Government, is occupying himself actively with the question of Bulgaria's river and ocean transport, and, with a view to the improvement and development of same, he proposes to introduce various changes in the ports of Varna, Bourgas, and Bolchick, as also in the Danubian ports. Bulgaria's river tonnage, in the way of tugs and lighters, has increased greatly of late, and it is rumoured that there is a wish on her part to be represented in the European Commission of the Danube. It will be remembered that only after some years of its existence was Roumania considered to have sufficient interests in the river transport to be granted a part in the Commission.

SERVIAN MONOPOLIES.

The following is an account of the receipts and expenditure of the independent administration of monopolies in Servia for the month of July, 1912:—

Receipts.	Francs.	Francs.
1. Tobacco Monopoly	1,755·739 25	
2. Salt Monopoly	540·103 20	
3. Petroleum Monopoly	188·267 26	
4. Stamp Monopoly	498·466 —	
5. Matches Monopoly	113·914 —	
6. Cigarette Paper Monopoly	133·384 —	
7. Customs	1,368·487 64	
8. Excise Stamps	382·484 —	
Totals for July		4,960·845 35
Total to end of June		28,319·510 16
N.B.—Reserve fund brought over from 1911 amounts to 2,048,500 francs, invested in Servian Rentes		
Total		33,280·355 51

Expenditure.	Francs.	Francs.
1. For Service of the Public Debt		24,978·752 79
2. Current Account (Payment to Berlin Handelsgesellschaft)		6·707 90
3. Purchase of Materials:		
(a) In July, 1912	211·910 16	
(b) To end of June, 1912	3,010·527 35	3,222·457 51
4. Administration Expenses:		
(a) In July, 1912	402·253 10	
(b) To end of June, 1912	2,464·195 54	2·866·448 94
5. Balance in Treasury on July 31, 1912		2,205·978 67
Total		33,280·355 51

THE SETTLEMENT OF INVOICES IN GREECE.

The following advice on the subject of the settlement of invoices in Greece is extracted from the *Bulletin* of the French Chamber of Commerce at Athens:—

It is advisable for our exporters to avoid drawing on their Greek clients for settlements of their invoices. It often happens that a manufacturer states, at the foot of his account, that he will draw a bill on the purchaser on such a date. The latter, not knowing French, or not being used to this mode of payment, does not pay any notice.

The draft is remitted by the manufacturer to his banker, who sends it to a bank in Greece to encash it. The latter advises the drawee, who refuses to pay. The bill is protested, then returned to the drawee, who has generally to bear the expense.

To avoid all this trouble, it is necessary to come to a good understanding with the buyer on the subject of the conditions of payment; and if he cannot arrange to have a settlement by cheque on Paris in 30 or 60 days from the date of invoice, it would be well to draw upon him. In this way there will be no disagreements. It is also well that those interested should know that documentary remittances are paid only on arrival of the goods at the Customs.

Finally, it is necessary to point out the process often employed by some foreign houses for the recovery of commercial bills. The latter send their drafts, with or without documents, to the large Greek banks. After collection the credit companies cover their clients by a cheque on Paris, deducting the cost of collection and postage. The expense of collection is generally 1 per 1,000. Certain commercial houses, having to supply their clients with documentary drafts, content themselves by sending documents, accompanied by duplicate invoice, to their bankers.

NEWS FROM ALL SOURCES.

Our Varna correspondent informs us that the Bulgarian Government, in accordance with the terms of the Consular convention with Germany, recently began to appoint consular officers to various centres in the latter country. The first appointment made was that of Mr. Hermann Menzell at Hamburg, and several others are expected to be made shortly at other important centres, such as Berlin and Frankfurt.

The U.S. Deputy Consul at Jerusalem reports that the olive crop in that district will be very small. It is the "off year," and in addition the few blossoms that the trees bore were damaged by rain and windstorms.

The delegation from the Bucharest municipality, which was to have left that city for St. Petersburg, Berlin, Wiesbaden, and London in mid-August, has postponed its departure till the early part of next month.

The Bulgarian Government has decided to proceed with the work of enlarging the harbour of Shistoo this autumn.

The Roumanian Minister of Agriculture has decided to grant State aid to all cattle shows organised by agricultural societies, and he is interesting himself personally in the operations of such societies.

It is officially announced that Messrs. William Bain and Co. were the successful tenderers for the supply to the Egyptian Railways and Telegraphs Department of 15,000 metres of steel fencing with stays, and 10,000 metres ditto without stays; and that Messrs. A. and J. Main and Co. were the successful tenderers for the supply of 5,000 metres of iron fencing with stays. The Cairo agents of the two firms were Mr. F. C. Bevan and Mr. W. E. Kingsford respectively.

An "Indian Cotton Bureau" has been opened in Craven Street, Strand. Established by gentlemen connected with the Indian cotton trade, it will endeavour to keep Parliament and the British public informed of the needs and grievances of the industry. The promoters hope that in time the bureau may be able to give attention to other Indian trades and industries.

Work on the new road to connect Cairo and Alexandria is being actively pushed forward. Cairo prisoners are employed between Cairo and Benha, and those from El-Hadra around Damanhour. It is hoped that, under existing conditions, the road will be finished by 1913.

Torrential rains have fallen uninterruptedly during the last few days throughout Roumania, causing great floods in several districts and much distress among the population.

The Egyptian Department of Agriculture is interesting itself in the propagation of the white egret, which is a great worm destroyer. Unfortunately, owing to the trade that is carried on in its feathers, the species had been becoming rather rare in Egypt. A law has now been established prohibiting the shooting of the bird.

It is announced that a historical museum will be founded within the walls of Mohammed's Castle at Roumeli Hissar, overlooking the Bosphorus.

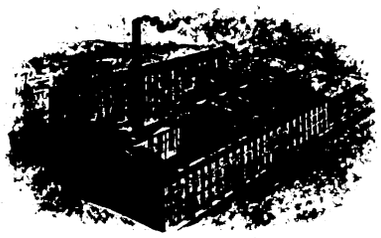
CLOTH, with 30 full page plate illustrations, gilt top, **6s.** net.



"The subject is a fascinating one, and the material here brought together is fresh and interesting. We do not often get the chance of seeing a Slav people through Slav eyes in a work written for English readers. M. Mijatovich gives us a charming picture of his own people with some gentle criticism . . . it is full of interest, it makes its effect by sheer simplicity of narration. It should be read by all."—*Morning Post.*

H.R.H. PRINCE ALEXANDER.

The ROYAL HOUSE of . . SERVIA . .

H.R.H. PRINCE GEORGE.

King Peter I. ascended the throne of Servia in June, 1903. His Majesty Peter Kara-Georgevitch was born in Belgrade on June 29, 1844. His father, Alexander, the son of the national hero Kara George, was a vassal prince of Servia, and married Persida Nenadovich in 1830 at Hotine, Bessarabia. Two sons were born of this union, Prince Peter and his brother Prince Arsène, the latter having been born at Temesvar on April 4, 1859. His father, Prince Alexander, died some months before his birth, so that, like King Alfonso of Spain, Prince Arsène was a posthumous son. His mother, Princess Persida, died at Vienna in 1873.

After having completed his military studies in France, Prince Peter Kara-Georgevitch took part, in 1870-1871, in the Franco-German war, in which he distinguished himself, and was decorated with the Legion of Honour. His schoolfellows, the whole of the Puebla class of St. Cyr, and his companions in the war, saw in him an officer of merit, and, above all, a courageous and decided man. His chiefs, the best-known French Generals, mentioned him as an example of exactitude and energy. These qualities which distinguished him when he was twenty-five could only increase with time in the struggle which he undertook for the independence of his country.

H.M. KING PETER I.

In 1877 began the great national movement in the whole of the Balkan Peninsula, but especially in Bosnia and Herzegovina. The young Prince Peter, at the first news of the revolutionary movement, placed at the disposal of his people the knowledge and experience he had acquired in the West. He asked of his father, at the risk of compromising his inheritance, the means for organising and arming some hundreds of Bosnian rebels. At the head of this little army he carried on for many months a desperate war against the Turks, and finally succeeded in raising the whole country in revolt.

In Servia alarm soon began to be felt at the popularity of the son of the Pretender, whose gallant deeds were attracting the attention of the whole country. The young hero, who was popularly known as Peter Mrkonitch, had at this time many ballads composed and sung in his honour by native bards. Prince Peter also addressed a letter to King Milan, ruler of Servia, promising to put himself and his little army at the service of Servia and of its chief during the war for independence which was about to begin. He further promised at the same time to undertake nothing against the reigning dynasty as long as the war lasted. But King Milan did not reply to this patriotic letter.

The courageous participation in the Franco-German war, the resistance which he made for months to the Turkish troops, that patriotic letter by which he placed the interests of his country above those of his dynasty—all this necessarily increased the political importance of the young Prince.

At the age of thirty-nine Prince Peter married, in Cettinje, the capital of Montenegro, Princess Zorka Petrovich Niegoch, daughter of Nicholas, at that time Prince but now King of Montenegro. This marriage was of great consequence to the future King of Servia, as it not only helped to strengthen his position, but served as a new link uniting the two Servian peoples. Unfortunately, Princess Zorka was not destined to share the throne of her husband. Seven years after her marriage, and at the age of twenty-six, she died at Cettinje, in the prime of life. King Peter did not marry again.

Digitized by Google

Princess Zorka left three children:—1, Princess Helen (Helena), born at Fiume on October 23, 1884. Her Royal Highness married last year, at Peterhof, Prince Ivan Constantinovitch; 2, Prince George, born at Cettinje on August 27, 1887. From the date of his father's accession to the throne until 1909 he was Crown Prince of Servia, and reputed to have been one of the leaders of the anti-Austrian movement in Belgrade. In March, 1909, he renounced his rights to the throne, and they passed to his younger brother. Prince George is captain and commander of the 10th Regiment of Infantry and commander of the 18th Regiment of Infantry known as "Prince George's" (Gornji Milanovac). 3, Prince Alexander Kara-Georgevitch, Crown Prince of Servia and heir to the throne, was born at Cettinje on December 4, 1888, and succeeded his brother, Prince George, as Crown Prince on March 17, 1909. He is Major and Commander of the 6th Regiment of Infantry, Inspector-General of the Army, and has been placed by the Czar of Russia *à la suite* of the 14th Regiment of Infantry of Olonetz. He is, moreover, a Knight of the Order of the Annonciade and of the Order of St. André, and G.C.V.O. As Crown Prince he enjoys great popularity in Servia. After the death of his father Prince Peter Kara-Georgevitch became the redoubable Pretender to the throne of Servia—redoubtable not because of the activity which he displayed to become King of Servia, but for the connections which he maintained and the sympathies which he enjoyed. For when in Servia matters began to go very badly under the reign of the two last Obrenovitchs, the name of Peter Kara-Georgevitch filled with hope all those who, in the policy of King Milan and of his son, saw the cause of the approaching decay of Servia. In receiving, after the attempt against King Milan, the correspondent of a great European newspaper, Prince Peter denied energetically the report accrediting him with participation in the affair. "I have no need to employ such means," he declared: "I have only to wait. Milan and his son are my surest agents, and I count a great deal on them." And he was not mistaken. Scarcely four years later the most faithful partisans of the Obrenovitchs turned, after the death of King Milan, against his son, and executed the terrible drama of June 11, 1903.

On arriving on Servian soil, the first words which King Peter pronounced were that he wished to "forget" and "forgive," and demanded that all should be forgotten and pardoned. These two words had for Servia, in a century of terrible dynastic struggles, an historical importance. King Peter wished to break with the tradition which exacted from the new dynasty the persecution—the extermination even—of the adherents of the old. After that unexpected declaration, those of the partisans of Obrenovitch who, on account of their desperate hostility against the Kara-Georgevitchs, trembled before the return of Peter, calmed themselves, and recognised without further parley the accomplished change. It was the more easy for them to accommodate themselves to the new state of things because King Peter followed these first words by a series of acts which showed that he had taken seriously the engagements which he had made on his arrival.

Since his accession King Peter has shown proof of but one aim—the progress and development of Servia, financially, commercially, intellectually, morally; and now there exists, despite the great dissensions of parties, a solid system which permits of an uninterrupted and consecutive work. Servia has ceased to be a country of surprises, and the Constitution and the parliamentary *régime* form a sure basis for future internal development.

A striking testimony to the economical progress of Servia under the rule of King Peter is offered by the fact that the country has supported, without shocks and without serious crises, an economic war with Austria-Hungary. Quite a revolution has been taking place in the economic relations of Servia—a revolution which no one would have dared to think of under the former *régime*, so dangerous did it appear. To-day that revolution has pursued its course without any of the unpleasant effects which it was feared would arise from the closing of the frontier. There were no cries of revolt, not the least sign of a movement directed against the Government or the dynasty, in spite of the great commercial disturbances.

An attempt was made in the foreign Press to render King Peter personally responsible for the economic war. It was the result, according to certain journals, of the Austrophobe tendencies of the new monarch. This way of representing things is absolutely false. King Peter has denied it himself energetically in the following words: "I am neither Austrophil nor Russophil," said he. "Being a Servian King, I only think of carrying out a purely Servian policy." As in internal policy there is no preference for any party, in external policy he does not allow himself to be led away by personal sentiments. He would have been indeed very badly advised if at the moment when Parliament, in agreement with the whole country, demanded that the exaggerated demands of Vienna should be refused, he had allowed himself to be carried away by his personal views and sentiments, and had sought at any price an agreement with the neighbouring monarchy. The strength of King Peter consists in his resolution to remain consistent.

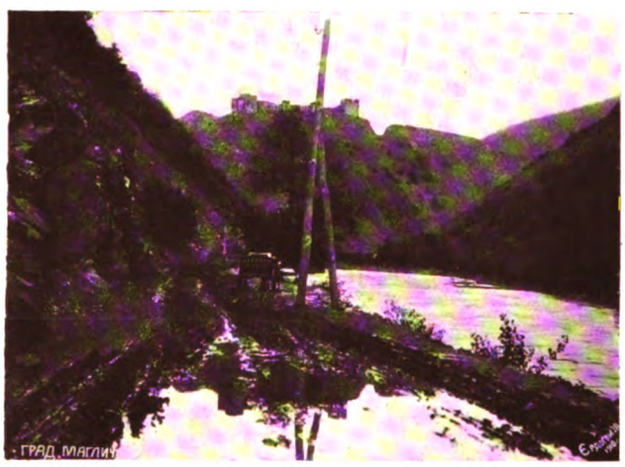
SERVIA'S DIPLOMATIC REPRESENTATIVE IN ENGLAND.

M. Slavko Y. Grouitch, who has acted as Servian Chargé d'Affaires in London for the past four years, entered the Diplomatic Service in the year 1898 on completion of his education at the Lycée and University in Paris. His first appointment was in the Foreign Office at Belgrade, and he subsequently served in Constantinople and Athens. From the latter capital he returned to Belgrade, but was eventually transferred to St. Petersburg; and it was from this city that he came to London.

He married, in 1902, Miss Mabel Gordon-Dunlop, of Virginia, U.S.A. Madame Grouitch is keenly interested in archæology and art, and has delivered several lectures in America on Greek Art. M. Grouitch's chief recreations are tennis and golf, and he is also a keen huntsman. It will be remembered that his father was Servian Minister in London in 1887.



[Photos: Elliott & Fry and U.S.A. Studios.
M. GROUITCH (Servian Charge d'Affaires in London), and Madame GROUITCH.

M. Grouitch is undoubtedly one of Servia's rising men. For though he is comparatively quite young, and though promotion comes but slowly in the Servian Diplomatic Service, owing to particularly keen competition, he has had the honour of representing his country at two of the most important posts — St. Petersburg and London. He possesses most of the best-known Balkan decorations, and four years ago was the recipient of the much-coveted White Eagle of Servia, which is usually bestowed only upon Ambassadors and Ministers of the first rank.

AN HISTORICAL SURVEY OF SERVIA

It was in the early part of the seventh century—or, to be more precise, about 638 A.D.—that the Servians, who had previously inhabited what is now the province of Galicia, first occupied the land that is at present their own, together with the regions of Bosnia and Herzegovina; and in order to win them over, the Emperor Heraclius confirmed them in possession of the territory upon condition that they should defend the Empire against attack from the Avars and the Huns. At the end of the ninth century they had adopted Christianity, and in the tenth century we find them in possession of all the territory lying between the Adriatic and the Danube. This territory was divided into two parts—Adriatic Servia, comprising Zeta, Travania, Hum, and Neretva; and Danubian Servia, comprising Bosnia and Rascia. In the intervening period the Servian tribes were the subject of frequent disputes between the Frank and Bulgarian empires; but throughout they strove steadily to preserve their independence, and resisted, with more or less success, both Byzantium and the Bulgars. A *Jupan* (chief or prince) named Tchaslav succeeded, with the help of the Byzantine Empire, in uniting Adriatic and Danubian Servia; but after his death the Greeks took possession of

RUINS OF MAGLITCH CASTLE.

Rascia, and all the national spirit seems, so to speak, to have passed into Adriatic Servia.

In 1169 Jupan Stephen Nemanya, the youngest of four brothers who divided the rule of Rascia amongst them and owed allegiance to the Emperor Manuel Comnenus, succeeded in throwing off the Byzantine yoke and founded the Rascian dynasty. In 1196 he abdicated in favour of his second son, Stephen, who, notwithstanding the enmity of the Bulgars, Hungarians, and Greeks, succeeded in maintaining the territories handed over to him and, in 1220, in having himself crowned as "King," with the recognition of the Pope. His successors, Radoslav and Vladislav, were undistinguished; but Urosh I. (1242-1276) was a capable ruler. He began the exploitation of Servia's mines; and it was in his reign that the first silver Servian coins were struck. He appears also to have been awake to the power of matrimonial alliances in the shaping of policy, for he allied himself with the King of Hungary, to whose granddaughter he married his own son, Dragutin, and he himself married a French princess, a connection of Charles of Anjou. In 1257 he acted as mediator between the Byzantines and the Bulgarians. Eventually dethroned by his eldest son, Dragutin, he took to a monastic life in 1276 and died soon afterwards. Dragutin reigned only five years, abdicating in 1281 in favour of his brother, Milutin. In three campaigns (1282, '83, and '85) Milutin overran and conquered the greater part of Macedonia. He next defeated the Bulgarian King Shishman, and compelled him to declare himself vassal to Servia, and in 1296 he conquered Northern Albania and took possession of Durazzo. He was, however, unsuccessful in a war with Hungary, which cost him Belgrade and the Duchy of Matchvo, which he had inherited from Dragutin, who had held it as fief of Hungary. Other facts worth mentioning in connection with his reign are that he married Simonide, daughter of Andronicus II.; that he was a great church-builder; and that he encouraged commerce, notably with Venice and Ragusa. He was succeeded by his son, Stephan Detchanski (1321-1331), whose chief exploit was the gaining of a decisive victory over the Bulgarians (who were allied with Andronicus III.) and the capture of Nish. This was commemorated by the erection of the Detchani Monastery, one of the finest examples of Servian architecture of the Middle Ages.

A Great King.

Stephan Dushan, eldest son of Stephan Detchanski, fearing the influence of the Greek party, which was very powerful at Court and aimed at securing the throne for Simeon, son of Queen Mary, rebelled against his father, took him prisoner, and, in 1331, was proclaimed King in his stead. He proved undoubtedly the greatest King of the dynasty, and under him Servia of the Middle Ages reached the summit of its power. Bent on realising the ambition of his grandfather Milutin, who had dreamed of the conquest of Constantinople and the foundation of a Serbo-Greek empire, he set himself to the task with a will. He first allied himself with Bulgaria by marrying the Tsar's sister, Helen; then he turned his attention to Macedonia, Albania, and Epirus in turn. By 1345 he was in possession of practically the whole of Macedonia with the exception of Salonika, of the greater part of Albania, and of Epirus as far as Janina; and in that year he had himself proclaimed "Tsar (Emperor) of the Servians and Greeks." The ceremony took place at Uskub, and he was crowned both by the Servian and Bulgarian patriarchs. In 1349 he convened an assembly at which was promulgated the famous Zakonik (Code) of the Emperor Dushan, embodying the customs, ordinances, and laws of his predecessors. Shortly afterwards he was called upon to administer chastisement to the Ban of Bosnia, who, instigated thereto by Hungary, had been ravaging Herzegovina. These operations were successful and led to Hungary losing Belgrade; but trouble in the south caused Dushan to cut them short. Constantinople, threatened by the Turks, was calling for protection from Servia, Hungary, and Venice, and Dushan saw his opportunity. He therefore entered into negotiations with Pope Innocent with a view to obtaining the leadership of the Christian forces; but before he could carry out his designs death overtook him, and his eventful reign closed in December 1355 (O.S.).

His death marked the beginning of Servia's decline. The imminent danger of invasion by the Turkish army failed to unite the new empire. Disorders broke out in Epirus and Albania; the struggle between the Servian Church and the Patriarchate of Constantinople became fierce and bitter; the various populations forgot their common danger in their differences with one another; and the new ruler Urosh, proved incapable of overcoming the difficulties that confronted him. Vukashin proclaimed himself King of Servia and succeeded in gaining possession of the southern portion of the kingdom, and his brother, Uglieshe, established his authority in Drama. These two brothers raised a force of 60,000 men to repel the Turks, who had already attacked Drama, but their force was surprised and defeated by the enemy on the banks of the river Maritza. They both perished in the fighting and their lands passed into the possession of the victors. About three months later the young Emperor Urosh died without issue, and Servia was divided up between Prince Lazar and Tvrtko, Ban of Bosnia. These two rulers were on good terms with one another, and, uniting their forces, they inflicted a defeat on the Turks (1387). But in 1389 they were defeated by Sultan Murat I. on the plain of Kossovo, on the celebrated "Field of the Blackbirds." Murat himself perished at the hands of a Servian knight, Milosh Obilitch; but Lazar was captured and beheaded, and his son, Stephan Lazarevitch, became the vassal of the new Turkish Sultan. He ruled until 1427 and was succeeded by George Brankovitch (1427-1456), who built the celebrated fortress of Smederevo. On the death of his son and successor, Lazar, the Turks invaded the country (1459) and conquered it; in 1463 Sultan Mohammed II. suddenly attacked Bosnia and conquered it; and in 1482 the Turks conquered Hum (Herzegovina); and in 1499 they added Zeta (Montenegro), the last Servian State, to their possessions, converting them into "Pashaliks." From this time until 1804 the struggle of Servians against Turks took on another form. The Servians, having lost their liberty, sought to protect their nationality and faith.

The Servians in Hungary.

There had been numerous colonies of Servians in Hungary even before the Turkish invasion of Servia, and in 1690

Digitized by Google

these received a notable reinforcement. In that year, with the permission of the Emperor, Leopold I., the Servian Patriarch of Ipek crossed over into Hungary, accompanied by 400,000 Servians. A certain amount of religious and political independence was guaranteed them by letters patent, and they were allowed to elect a Vice-Voivode of their own; but these privileges, though confirmed on several occasions, were but little honoured. The Servians were protected whenever Vienna needed their assistance against Turks or rebel Hungarians, but such danger being over they were left to the tender mercy of the Hungarians and the Catholic clergy. After the Peace of Karlovitz military zones were established along the Save, the Danube, the Theiss, and the Marosh, for the protection of Austria against the Osmanlis, and these were occupied exclusively by Servians, who greatly distinguished themselves in Prince Eugene of Savoy's campaign. In 1737 the Patriarch of Petch, acting on the invitation of the Austrian Emperor, endeavoured to cross into Austria with a large number of Servian families, but the greater part of these emigrants were massacred by the Turks on the way; and later on the Turks suppressed the Patriarchate of Petch, so that the Servians lost even their religious autonomy in consequence of their tendency towards emigration into Austria.

At the time of the accession of Maria Theresa, the Servian element in the Austrian army was larger than all others together, and for services rendered by them in the War of Succession fresh privileges were granted to the Servians. But Vienna was never really inclined to protect them against the Hungarians, and in 1751-53 more than 100,000 Servians quitted the country in order to escape Hungarian persecution. They settled in Russia, between Kieff and Otchakoff, to which district they gave the name "New Servia."

In 1779 the Servians in Austria succeeded in obtaining religious and educational autonomy. Afterwards they fought many times for Austria against the Turk, and under Joseph II. the Austro-Servian army seized Belgrade (1789). But by the Treaty of Svishtov the conquered part of Servia, with Belgrade, was restored to the Turks. Leopold II. granted Servians full and entire rights, such as the Hungarians enjoyed, but in point of fact the Servians were again left at the mercy of the Hungarians. In 1848, when the revolution broke out, the Servian Assembly at Karlovitz proclaimed Colonel Stephen Shuplikats Voivode (or Duke) of the Servians in Hungary, while Metropolitan Rayatchitch was proclaimed Patriarch. The Vienna Government refused to sanction this decision of the Karlovitz Assembly, but subsequently Emperor Francis Joseph promised to grant their desires, to provide the Voivodina, or "Duchy," with an interior organisation. After the suppression of the Hungarian revolution he took himself the title of "Grand Duke of the Servian Provinces," but, as usual, nothing effective was done to redeem all the promises made to the Servians. They were again deprived of their religious and educational autonomy and of their right to elect their Patriarch, and the Servian name and language became the objects of persecution.

Revolt against the Janissaries.

By the Treaty of Svishtov the Janissaries were prohibited from residing in Servia, where they had made themselves particularly obnoxious by their oppression of the people. In spite of this, however, they gradually found their way into the country again, and ere long resumed their old rôle of oppressors. They murdered the Vizier of Belgrade, Mustapha Pasha, and, making his successor their tool, soon reduced the country to a state of despair. In order to prevent another rising of the Servians, they endeavoured to kill off all the men that they thought likely to lead such a rising. In this way about 100 of the most popular Servians lost their lives in 1803-04; but others escaped into the mountains, and one of them—Kara-George Petrovitch—headed a movement which culminated in the defeat of the Janissaries. Then, as the Sultan refused to grant them autonomy, the Servians, though reluctantly, as it seems, felt compelled to commence a campaign against him. First alone, and afterwards as the allies of Russia, they succeeded in expelling the Turks from one point after another, and from fort after fort, until the greater part of what is to-day Servia was in their hands. By the Treaty of Bucharest, concluded in 1812 between Turkey and Russia, internal autonomy was granted to the Servians, but, seeing Russia fully occupied resisting the invasion by Napoleon, the Porte suddenly demanded their unconditional surrender and declined even to stand by the terms of the Treaty of Bucharest. Naturally the Servians resented such treatment, and a fresh conflict followed. Rid of Russia now, the Porte poured 200,000 troops into Servia at once, and after a desperate resistance the Servians were overwhelmed by numbers and their country was once again subjugated by the Turk. Kara-George escaped by crossing into Austrian territory with several other surviving leaders.

The Grant of Autonomy.

In less than two years, driven to action by the tyrannies and exactions of the new Pasha of Belgrade, Suleiman Pasha, the Servians rose again, led by Milosh Obrenovitch, one of Kara-George's chief supporters. This time the rising led up to more successful results. By the Convention of Ackerman Servia was granted a measure of autonomy, under Russian protection, in accordance with Art. 8 of the Treaty of Bucharest; and after the Russo-Turkish war of 1828-29 the Ackerman Convention concerning Servia was confirmed in the Treaty of Adrianople. But it was not before 1830 that Servia was, thanks to the ability of Prince Milosh, granted real autonomy, the Sultan recognising Prince Milosh as Hereditary Prince. Servia thus became a vassal State, independent in regard to her internal affairs.

Ere long friction arose between the Prince and the notables, who wished to restrict his power, and, notwithstanding the support extended to the former by England, the notables, backed by Russia, succeeded in getting a Constitution (1838) restricting the powers of the Prince and establishing a Council of Seventy. In 1839 Milosh abdicated, and was succeeded by his eldest son, Milan Obrenovitch II., who, however, was ill at the time, and died within a month.

VIEW OF BELGRADE.

Digitized by Google

He was succeeded by his brother Michael. But Michael proved unable to cope with the powerful Senate, and left the country in 1842. Alexander Kara-Georgevitch, son of the Kara-George who had headed the revolt in 1804, was then elected Prince. In his reign Servia was placed by the Treaty of Paris (1856) under the joint guarantee of the signatories, and Russia thus lost her exclusive right as her protector. Alexander's weakness in his dealings with the Porte and his Austrophil tendencies deprived him of the nation's sympathy to a large extent, and in his conflict with the powerful oligarchy he succumbed. Parliament, in a special session (1858), deposed him, and proclaimed the old Prince Milosh Prince of Servia. On his death in 1860 he was succeeded by his son Michael. The new ruler embarked on a vigorous policy, endeavouring to bring about a general uprising of the Balkan Slavs and Greeks against the Turks, and in 1867, supported by France and Russia, he was successful in clearing all the Turkish garrisons out of Servia. His assassination in 1868 put an end to all his plans, and the deliverance of the Christians of the Balkans was thus postponed indefinitely. As he left no children the Great National Skupshtina elected Milan, his grand-nephew, Prince.

In 1876 Servia, together with Montenegro, declared war on Turkey, which ended in the intervention of the Powers and a return to the *status quo ante*. In 1877 she joined Russia in her war against the Turks, and the Servian Army penetrated as far as the Kossovo plain, its progress being checked only by the armistice. By the Treaty of Berlin Servia was proclaimed independent, and her territories were enlarged by the addition of four departments. But this treaty dealt a severe blow to the Servian nation by giving Austria-Hungary a mandate to occupy Bosnia-Herzegovina.

King Milan.

In February, 1882, Prince Milan assumed the title of King of Servia. But his absolutist tendencies and his Austrophil policy soon estranged the new King from the affections of his subjects, and the unsuccessful and quite unpopular war with Bulgaria (1885) lost him the nation's sympathy altogether. Seeing himself isolated, King Milan decided to abdicate in favour of his son Alexander, a minor, and carried out his intention in 1889. In 1893 Alexander made a *coup d'état*, proclaiming himself of age, contrary to the Constitution, and invited the Radicals to form a Cabinet. Very soon, however, he came into conflict with them, and with the support of his father made a second *coup d'état*, suspending the Liberal Constitution of 1888 and enforcing the Conservative one of 1869. Thereafter Cabinets followed one another in rapid succession, and in 1897 the King made a third important political stroke by bringing into power a new reactionary Cabinet and recalling his father to Servia. This brought about a strong reaction in the internal politics of Servia, followed by active persecutions of the Radicals; while in regard to foreign policy Servia became decidedly Austrophil again. In 1900, his father and the Prime Minister being then abroad, King Alexander married Madame Mashin, a widow and a former lady-in-waiting of his mother. After this he reigned almost autocratically, imposing and abolishing Constitutions and changing Cabinets at will.

The impaired state of the national finances, political persecutions, favouritism in appointing officials, irregularity in payment of official salaries, the conduct of the Queen's brothers all united to create profound discontent in the country, and a conspiracy was organised with the object of dethroning the King. But the simulated accouchement of the Queen, the bloodshed on the occasion of a students' demonstration, the *coup d'état* of March 25, and rumours that the King was about to proclaim one of the Queen's brothers as Crown Prince of Servia, brought public irritation to a climax and led to the tragic death of the Royal couple in 1903. And in June the Great National Assembly declared Peter Kara-Georgevitch (Peter I.) King of Servia.

Political and Parliamentary freedom being guaranteed by the Constitution, Servia now concentrated her attention on her financial and commercial development; and her efforts have enabled the country to stand the strain of the economic war with Austria-Hungary and to put an end to her economic dependence upon the Dual Monarchy. But the annexation of Bosnia and Herzegovina has aroused anew the question of the existence of the Servian race. This penetration of Austria into the Balkans, which also threatens the political independence of Servia, has for Europe another significance. Servia is the gate dividing Europe from the Orient, and all invasions and attempts of invasion as between Asia and Europe have been made through Servia (the valley of Morava). Six centuries ago the Turks invaded Europe; now the Germans are advancing towards the Orient, and they are using the same road. Politicians have begun to realise the rôle of Servia, and the "Servian Question" has thus been brought to the front: one of Europe's unanswered questions, a new problem.

SOME NATIONAL CUSTOMS.

From "Servia of the Servians," by Chedo Mijatovich.

When a Servian peasant decides to build for himself or for his Zadruga a house, his first preoccupation is how to find "the lucky spot" where such a house should be built. The Servians believe that there are lucky and unlucky spots and places, just as there are lucky and unlucky days. There are several methods by which they believe they can find out which place is lucky for a house. One is to place four stones on the four spots on which eventually the four corners of the building will be placed, and leave them there for a night. Early next morning they raise the stones up one after the other. If they discover at least under one of them a living insect they consider that as a sure indication that the place is a lucky one. If, on the contrary, they find no insect, they move the stones for the next night to some other place, and repeat the search after an insect the morning after, and so on until they find one. If they do not find one after several attempts, they would rather give up the building of the house altogether than build it on a spot for which they had no indication that it was a lucky one.

The other method is to place a glass filled with wine and a certain number of grains of wheat for the night on a certain spot. If the next morning they find the glass still full of wine and all the wheat intact they believe that proof has been obtained that the spot is lucky.

The third method consists in this: Several sheep are driven into an enclosed field to spend the night there. The place which the sheep choose to lie down in for the night is considered as healthy and lucky. . . .

The Servian Marriage.

Having satisfied his ambition to have his own house and family, the Servian peasant considers it his sacred duty to see his children well married. He is generally somewhat in a hurry to see his son married. This hurry is prompted by economical reasons: the peasant wants to add a new working hand to his farm. Hardly arrived at his eighteenth year, the Servian peasant boy has to marry at the desire, and generally according to the choice, of his father. Not only has he to marry while yet very young, but usually he has to marry a woman who is at least a few years older than he is himself.

The Servian marriage is somewhat costly. Poorer peasants can hardly comply with the many expenses which the observance of all the traditions and old customs would imply. Not rarely, therefore, it happens that the parents of the bridegroom and the bride arrange that the *fiancé* flees away (*odvenge*) to the house of the *fiancé*. The wedding then takes place at once, with the omission of all unnecessary expense. But such cases are only exceptions to the rule, and generally the Servian peasant is proud to see his son married properly and in full national style. . . .

When a Servian peasant has chosen a wife for his son, he tries in a confidential manner, through some intimate friend, to ascertain if the parents of the girl would consent to give her to his son. When he receives an encouraging answer, he invites one or two of his relatives or friends to go with him on the "requesting errand" (*prossidba*). They start together, dressed as well as they can be. The father carries with him a flat wheat cake and a bunch of flowers. It is necessary that at least one of this company should carry with him a rifle or a pistol, because it is customary to announce every joyous event by firing rifles or pistols. They arrange to start at such a time as will enable them to arrive at the girl's house in the evening before supper.

When they enter the hall (or rather the kitchen) of the house and while one of them is greeting the host, another of the party tries to shut the kitchen door with his shoulders. This is to symbolise that the girl is shut in the house and that there is no escape for her. The host invites them to take seats around the hearth while the women folk are preparing the table for the supper in the adjoining room.

At the supper-table only the host, his brother, or some other elderly male member of the family, and the party

Digitized by Google

who came to ask the girl in marriage take places. After they have been eating and drinking for some time one of the guests, who is considered the best speaker among his party, will address the host in some such words as these:—

"Brother, thou dost not ask us, and we do not volunteer to tell you, the real object of our visit this evening. We are not come to eat and to drink, but we came to make a certain arrangement, if it should please God, and if it should be agreeable to you."

The host will then answer:—

"Brother, certainly I do not know the object of your visit. I thought you would yourself tell why you came. I have no doubt that you came with some good purpose, and therefore you are heartily welcome to me."

"Indeed," continues the first speaker, "we came for a good purpose, if God's will orders it so. We would be pleased to enter into family relationship with you in God's name! Our brother Ivan, here present, would like to take your daughter Militsa for his son Rayko, if it should be agreeable to yourself."

Thereupon the father of the prospective bridegroom opens his bag, draws from it the flat wheaten cake, puts on it the small bunch of flowers, and places it on the table. Then he takes out from his breast pocket his money bag, selects from among a handful of coins a few gold pieces or several silver coins, and places them on the cake, too. These coins are the first present which the future father-in-law gives to his daughter-in-law.

The girl's father will then say: "Brother, let us not precipitate the matter. Let me first find out what my daughter would have to say. You know, as the old proverb says: 'The world remains with the younger generation.'"

He then goes out to consult his wife. This is done only *pro forma* and to save appearances, because practically that was settled already before the other man had been encouraged to come to "ask," or rather to "beg" (*prossi*), the girl. On his return to the room he asks his visitors to continue their supper until his wife ascertains what their daughter thinks of the suggestion. He fills their glasses with red wine and drinks with them, expressing the wish, "That God may guide them to do what would be agreeable to His will."

Then, after more or less prolonged suspense, the door opens, and one of the brothers—or one of the nearest male relations—brings the girl in, leading her by the hand. He leads her first to the father of her prospective husband, before whom she bends deeply and kisses his right hand. . . . Her father-in-law gathers the coins from the flat cake and places them in the hand of the girl, together with the bunch of flowers, expressing at the same time his wish for her happiness. She bends again deeply before him, kisses his hand, and from that moment she is considered as engaged to his son.

The wedding day is quite an ordeal for both families. Both are expected to entertain their friends most hospitably throughout several days. When, after the church ceremony, the wedding party arrives before the gate of the bridegroom's house the bride has to step from her horse (or from the carriage) on a sack of oats; from that sack she steps on a plough, and from the plough to the threshold of the gate. There a woman places a baby boy in her arms. The bride has to raise the baby as high as she can, and, having kissed him, to return him to the woman who presented him to her. After this a loaf of wheaten bread is placed under her right and left arms and into each hand a bottle filled with red wine. With these emblems of wealth and prosperity she walks into the house.

Christmas Day.

The Servian peasant is always an early riser, but on the Christmas morning everybody is earlier than usual. At four o'clock after midnight all the village is astir. Indeed, most people do not sleep at all the night preceding Christmas. It is most important to keep the *Badnyak** continuously and brightly burning. The next important thing is to start early enough to roast the pig. When it is laid before the fire one of the family goes out into the yard and fires a pistol or a gun, and when the roasted pig is taken away from the fire the shooting is repeated. From 4 a.m. to about 8 a.m. on the Christmas morning the Servian villages are re-echoing from the guns and pistols as if a stubborn skirmishing were going on.

Meanwhile, just before the sunrise, a girl from the house should appear at the village fountain or at the brook from which they usually get their drinking water. Before she commences filling her pots and vessels she greets the water, wishing it a Happy Christmas, and throws into it a handful of wheat. The first cupfuls of the water brought home are used to make a special Christmas cake, called *Chesnitsa* (the partition cake), of which a small part is at the dinner given not only to every member of the family there present, but also to those who are absent. A small silver coin is placed in the cake, and the member in whose part it is found is considered as the chosen favourite of good fortune for the next year.

All the family, assembled around the lustily burning *Badnyak*, now await anxiously the arrival of the special Christmas visitor. It is usually a young boy of a friendly family. No stranger, no other visitor, not even the priest or mayor of the village, would be allowed to enter the house before the special Christmas visitor, called *Polaznik*, has arrived. Therefore the *Polaznik* ought to come, and generally comes, very early. He carries with him a woollen glove full of wheat. When at his knock the door is opened, he throws at those assembled around the fire and into all the corners of the hall handfuls of wheat, greeting them with the words, "Christ is born!" The hostess throws on him a handful of wheat, while all the others answer his greeting by, "In truth, He is born!" The *Polaznik* then walks straight to the hearth, takes the shovel in hand, and strikes the burning log repeatedly with such force that thousands of sparks rise high into the chimney, while he is pronouncing the words, "May you have this year so many oxen, so many horses, so many sheep, so many pigs, so many beehives full of honey, so much good luck, prosperity, progress, and happiness!" Having pronounced all these good wishes, he turns to the host, embraces him and kisses him. Then he again turns to the hearth. Having crossed himself several times, he falls on his knees and kisses the protruding part of the *Badnyak*, and rising up he places on it a coin as his gift. Meanwhile a woman has brought in a low wooden chair, to which he is led to sit. However, in the very moment he is going to sit one of the male members of the family snatches the chair away suddenly, causing the *Polaznik* to fall to the ground. It is considered that by such a fall the *Polaznik* fixes to the ground every good wish which he has pronounced that morning. The hostess wraps him in a thick blanket, and so wrapped he sits quietly for a few minutes, while the young men who are to act as shepherds for the next year proceed to the hearth and kiss each other across the *Badnyak*. The blanket on the *Polaznik* is to secure thick cream for the next year, while the embracing of the young shepherds across the *Badnyak* is to secure the attachment of the sheep to their lambs.

Before the family sits down for the principal meal of the day all the members, with lighted tapers in hand, gather round the chief of the family, and in silence reverently listen to his improvisation of a special prayer. At the end of it all the members embrace and kiss each other, pronouncing the words, "Peace of God be between us and with us! Ristos (Christ) is born, in truth He is born, and therefore let us bow before Ristos and His birth!" After this they sit down to dinner, towards the end of which they all rise to their feet to drink "to the glory of God and to the glory of Christ's birth!" With this toast the special Christmas customs practically end.

THE IBAR PASS.

* The special Christmas log—corresponding to the English "Yule-log."

THE SERVIAN PROBLEM

Servia and Montenegro are the only two free Servian States, but they do not contain even a third of the Servian-speaking peoples. They are surrounded by members of the same race. According to the census of 1910 there are 10,587,638 Servian-speaking people, distributed as follows:—

Servia	2,945,950
Montenegro (about)	280,030
Bosnia and Herzegovina	1,895,600
Hungary (Banat, Batchka, Barania, with Fiume)	748,070
Croatia and Slavonia	2,368,010
Dalmatia	689,230
Istria	191,268
Old Servia (mainly according to data from 1900-1906)—	
1. The Sandjak of Novibazaar, Kossovo and Metochia, to the Shar Mountains (about)	472,000
Uskub district (Kasas: Uskub, Tetovo, Kumanovo, Pre-hevo, Kratovo, Kriva-Galonka, Kotchane, Pechtchevo, Shtip, and Ratev)	301,000
2. Macedonia, where there are about 1,000,000 Macedonian Slavs, of whom may be reckoned as Serbs at least	328,900
Scodra and neighbourhood	38,000
America	289,980
Asia Minor	20,500
Egypt*	8,900
Constantinople	10,200
Total	10,587,638

Numerically, the Servian-speaking peoples rank third among the Slavs, immediately after the Russians and Poles. There is not a more numerous people between Constantinople and the German frontier. The Serbs surpass in number the Czechs, Magyars, Bulgars, and Greeks. The yearly birth-rate of the Servian nation exceeds the death-rate by approximately 100,000 souls. It equals or surpasses that of the surrounding nations, and is reckoned among the most prolific of the world. Of this wide ethnographical area belonging to the Serb race Bosnia and Herzegovina occupy the central position.

This entire national mass of ten millions speak the same language, which is of a uniformity unparalleled by any other in Europe. From Istria to the depths of Macedonia the peasantry understand one another. But the peoples of these districts are not united by language and literature only. Throughout a considerable portion of that geographical area Servian national ideals and sentiments predominate, and in a more pronounced form than among any other Balkan people, except the Greek. Not only has denationalisation (Magyarisation and Italianisation) ceased among the educated classes, but they have become active leaders of nationality. Further, according to common historical traditions, it is clearly felt that the nation and the higher national life depend not only on contemporary personalities, but also on the dead and on past events. And, although there exist regional differences, the primary psychological qualities of the race are the same. The creative capacities of the national spirit, everywhere manifest, from decorative designs to the mode of building and the formation of tools, the varied mass of sentiments, the outlook on life, superstitions and sorceries by which a people seeks enlightenment on the riddles of life and death—all these are identical. Nevertheless, this ethnographical and linguistic unit is divided into seven administrations and amongst four States, one of which is a European Power, Austria-Hungary. Here lies the principal key to the solution of the Servian problem.

There is, perhaps, in Europe no boundary line dividing such opposites as that between the Servian nation and the Austro-Hungarian Monarchy, or rather the conglomeration of Austrian lands and people. Sentiments, ideas, perceptions of life differ so much that Austria-Hungary, after centuries of contact and connections, has not been able to grasp the feelings and logic of the Servian people. This is apparent in constant disputes, misunderstandings, and antagonisms. We do not intend describing here all the qualities characteristic of the Serb nation—their patriarchal mode of life. Eastern influences, their Orthodox faith and historico-political development—which are to a certain extent inherent in the race. But there is a complexity of particular elements which influence the relations of the Serb people towards Austria-Hungary, making them even within the frame of the Dual Monarchy a separate body standing quite apart.

Every outward action of Austria, for example, must clash with the doggedness and strength of the Serb race and its ineradicable straining towards independence. It has been proved that the Serb language in free competition prevails and extends in a remarkable degree. The wonderful beauty of the Serb national songs and the force of historic traditions are universally admitted. With Serb melodies they spread and establish themselves. The race possesses a creative and an energetic spirit which inspires and impels forward. The instinct for independence is so strong that in individuals it often appears to be almost anti-social. These and other feelings, notions, and a particular outlook on life, are intense and show themselves in the national-political attitude at all times, so that in the course of time and through different historic phases an inevitable political antagonism has arisen between the Serb and Austro-Hungarian peoples.

The Serb race, by its very nature, is representative of true nationalism, and tends to independence for itself and for all the Southern Slavs. Only on a free national basis can a Southern Slav cultural and governmental unity be formed. Therefore, no foreign Power can make loyal subjects of the Serb people. This profound psychological attribute and chief political feature of the national spirit is felt not only in Servia, which has also been under a foreign yoke, but in Bosnia and Herzegovina, Dalmatia and Croatia, etc. In the depths of the masses survive not only mistrust but often ineradicable hatred of the subjugator. The Orthodox element is, then, as a whole, the vigorous and irreconcilable champion of an independent and cultural life, and the Orthodox creed best marks that aspiration. But the Orthodox are not alone. Their tendencies and longings have progressed lately, and have acquired more and more of a Southern Slav aspect: they are gradually becoming the lever for the great idea of Southern Slav independence. There exists a clearly expressed desire that the entire Southern Slav area as far as Laibach and Trieste and to the depths of Macedonia should form a national unity to advance on national lines.

At this moment the chief political interest in the kingdom of Servia is centred in the condition of the Servian subjects of Turkey. Incessant feuds between the Christian and Moslem populations produce a state of political and economic chaos extremely detrimental to the welfare of all the many mixed races inhabiting the northern and north-eastern districts of European Turkey. Public opinion in Servia has been inflamed by recent happenings in the latter regions, and the Servian Government is subjected by the "war party" to pressure which is extremely difficult to resist in its demand for a system of autonomy for Old Servia which must be guaranteed by the Great Powers.

* There are Servians from Dalmatia, Boka, Herzegovina, Istria, Bosnia, Montenegro and Macedonia, who are in Egypt registered mostly as Austrians, *i.e.*, Austrian subjects.

ON THE OUTSKIRTS OF BELGRADE.

EDUCATION IN SERVIA

In modern Servia the school plays one of the most important parts in national development. School teachers are the best paid officials, while from amongst the professors the majority of the members of the various Cabinets are chosen. The whole of the educational system in Servia is placed under the Ministry of Public Instruction. The organisation of this Ministry was settled on January 14, 1880, by dividing it into two sections—that of Public Instruction and that of Public Worship, which latter controls religious affairs.

The educational development of the various countries inhabited by Servians is uneven, but in this respect the kingdom of Servia stands first, albeit hampered very much by her most unfavourable geographical and international position. The total sum provided in the Budget for 1912 for education was 8,704,084.01 francs, out of a total of 130,856,930.26 francs. Besides this, the communal authorities also undertake considerable expenditure on education.

The common schools are divided into three classes, i.e., infant schools, primary schools, and higher primary schools. The course of study in the primary schools extends over six years, of which four are compulsory. The schools are free, and may be either boys', girls', or mixed schools. To these belong also the common schools in the towns, possessing a course of practical instruction directed towards the pupils' requirements in after-life (industrial, commercial, and other courses). Among these the agricultural schools are the most vital and successful. The following subjects are taught in the primary schools:—Christian religion, Servian language, reading of ecclesiastical Slav, geography and history, arithmetic and geometry, study of nature and agriculture (for boys), housework (for girls), handicrafts, drawing and penmanship, singing, gymnastic exercise and games. There were in the school year of 1909-1910 1,334 State primary schools; for these schools there were 1,605 masters and 1,014 mistresses—a total teaching staff of 2,619. These schools were attended by 157,792 pupils, there being 126,561 boys and 31,231 girls. The total State expenditure on public schools in the school year 1909-1910 amounted to 3,744,997 francs.

Secondary Schools.

Immediately after the first insurrection and during the fighting against the Turks there was established at Belgrade in 1808 the Great School, so called in order to distinguish it from the "small" or "primary" schools. This school was at the same time a secondary and high school. The Great School disappeared after the serious loss of autonomy (1813), and it was not reopened until 1830, which witnessed the acquisition of full autonomy. In 1833 it was transferred to Krugujevats; in 1839 a new complete gymnasium was founded at Belgrade, and three incomplete (with four classes) in the interior of the country. Dating from this period the number of secondary schools has been constantly increasing, reaching its highest mark in the school year 1895-1896 with sixteen secondary schools completely equipped (with eight classes) and ten incomplete. Now there are in Servia ten complete and eleven incomplete secondary schools for boys and one complete gymnasium for girls. There are, besides, one complete gymnasium for girls and twenty-two incomplete private secondary schools (eight with the co-education system and fourteen for girls).

Up to 1867 the curriculum in the secondary schools was a strictly classical one. After 1863 more liberal experiments were made, for it was found that the earlier curricula were not producing men fitted for the needs of the nation. The change of curriculum from classical to modern marks one of the greatest advances made in Servian education, and the results have proved its value.

The object of the secondary schools is to give higher education to the pupils, and to prepare them to enter universities or other higher schools. Private secondary schools for boys or girls may be opened if proposed by the Minister of Education and after approval of the Council of Ministers. The organisation of Servian secondary schools closely resembles that of Germany. The curriculum contains the following subjects: Christian religion, Servian language, Old Slav, Latin, French or Greek, Russian, German, history, natural history, physics, mathematics, elements of philosophy, drawing, penmanship, singing, technological chemistry, and gymnastics. Up to 1898 the tuition was free. Now the students of lower classes pay a school fee of 20 frs. and those of higher classes fees of 40 frs. annually. Parents who pay less than 100 frs. in taxes or who have more than two children in the secondary schools only pay half the school fees. Poor students who study diligently and are of good character are entirely exempt from these fees. Co-education, which was in practice before the law of 1898, is now authorised only in private secondary schools. Higher education is only given to girls by the so-called higher schools for girls. In exceptional cases girls are authorised to attend the gymnasia regularly.

In the school year 1911-1912 there were 6,212 pupils in the complete State secondary schools and 3,250 in the incomplete ones, or a total of 9,462. There were also 2,418 pupils in the private secondary schools, 949 of whom were boys and 1,469 girls, a total of 11,880 (in all secondary schools).

The teaching staff of the middle schools is composed of directors, professors, assistants, higher teachers, and teachers (for foreign languages and art). The salaries of professors and directors range among the highest in the State service (a director of the first-class has the same salary as an ambassador of the second-class). At the end of thirty years' service, including those passed as assistant, a director or professor is entitled to a pension equal to his maximum salary.

At the beginning of the school year 1911-1912 the teaching staff of the State secondary schools consisted of 22 directors, 239 professors, 67 assistants, and 204 teachers. Each secondary school possesses a doctor, appointed by the Minister of Education. He examines the students at the beginning and end of the school year, attends poor children gratuitously, gives lessons on hygiene to the scholars, and prepares the statistics on the health of the students.

A COOKERY CLASS.

A member of the Society for the Protection of National Health teaching girls how to bake.

There exist also five higher schools for girls. These are intended to give general instruction to girls and to prepare them for education in gymnasia for girls and for the school for mistresses. The scheme of study for the first four classes practically corresponds with that of the gymnasia for the higher classes. The exact sciences are omitted. Besides hygiene, pedagogy, domestic economy, and women's employments are taught. Students pay school fees of 20 frs. annually, in addition to a registration fee of 5 frs. The teaching staff must possess the same diplomas and qualifications as those of the secondary schools, and the members have the same rights and duties.

At the end of the first term of the school year of 1911-1912 there were 1,314 pupils in the higher schools for girls. Besides these State schools, there are in Servia twelve private schools for girls.

Special Schools.

There are five classes of special schools, viz.: (1) One religious seminary, (2) teachers' schools, (3) one engineering academy, (4) two music schools, and (5) one school for arts and crafts.

The religious seminary is organised as a boarding school, and has nine classes, each lasting one year. The students are either State scholars, in which case they are maintained gratuitously, or they support themselves, paying 40 frs. monthly. There are no school fees. In the school year of 1912 there were 378 scholars. The State budget of the same year amounted to 267,221.98 frs.

Digitized by Google

Special attention is paid to the preparation of teachers, and there are in Servia three schools for teachers (boys), one of them as a boarding school, and two for girls.

For the school year of 1911-1912 the teaching staff consisted of 149 masters and mistresses, and there were 715 pupils.

The University.

The University of Belgrade was founded on February 27, 1905. It was formerly the "Great School" of Belgrade, and its conversion renders it free from any direct Government control. There are six faculties, *i.e.*, Theology, Philosophy, Law, Medicine, Engineering, and Agriculture. A special law has been passed in regard to theology, which is dealt with in an autonomous academy. Special commissioners are now engaged upon preliminary work in connection with the establishment of faculties of Medicine and of Agriculture. The organisation, when complete, will correspond with those of the great universities of Germany.

Ordinary students who are in necessitous circumstances are eligible to receive State scholarships. The professors give their services to the University gratuitously. The students may join any class which they choose, and there are no entrance fees. The University confers the degree of Doctor and Licencié. During the last year 1,028 students attended the University; of these ninety were women. It is noticeable that a large number of the students come from those districts inhabited by Serbs but under alien rule, and also from Montenegro. The budget of the University for the year 1912 amounted to 710,671.80 frs.

Although the progress of education in Servia has been rapid, there is still room for improvement. Under 17 per cent. of the total population can read and write at the present time. This is considered to be due principally to the

BELGRADE UNIVERSITY.

unfavourable external political conditions which governed Servia during the last decades of the nineteenth century. In the years 1868-69 there were only 418 primary schools in Servia, and they only increased by 320 in the next twenty years. From 1889 to 1895 ninety-nine new primary schools were opened, this being very much under the number which the conditions of the people demanded. The effects of this neglect are still felt in the country, but the efforts which are being made to afford the people full educational facilities cannot fail to make their effects felt in the near future.

THE NEAR EAST.

THE NEAR EAST is on sale at all Bookstalls and Newsagents in Great Britain. Should any difficulty be experienced in obtaining the paper, readers will oblige by notifying the Manager. Abroad THE NEAR EAST may be obtained in:

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.
VIENNA. Goldschmiedt Brothers, Zeitungsbureau, Wollzeile, 11.

THE RELIGION OF SERVIA.

The primitive religion of the Servian people at the period of its migration to the land it now occupies in Europe took the form of pure Naturalism, *i.e.*, the worship of the powers of Nature, to which ancient people of a quiet disposition were so much inclined. Even at the present day we find deep traces of this faith in the spirit of the Servian nation, for after 500 years' struggle it was only partially crushed by the ritual, first of the Latin and then of the Greek Christian Church, to which most of the modern Servians belong.

The partition of the Balkan Peninsula into Church dioceses under Leo Isaurus and the intentional limitation of Papal jurisdiction in the territory gave rise to disputes between Byzantium and Rome, and this acted detrimentally on the wavering and uncertain faith of the nation. The pressure of the ecclesiastical authority of Rome, which had always sought to exercise an international authority, was particularly unbearable to the Servian people, already desirous of having a Slav rite of their own. This caused a struggle between the Servian and Latin elements in all Servian districts, and resulted on the sea coast in favour of the Latin and in the remaining districts in favour of the Slav ritual.

At the period of these disturbances in the spiritual life of the Servians, Rastko, the youngest son of Grand Jupan Nemanya, appeared on the ecclesiastical historical stage. His task was not only to fortify weakened orthodoxy, but to create an independent national church in Servia. This was not easy to accomplish, but at the moment political and ecclesiastical circumstances were so favourable to Rastko's object that he was able to fulfil his task most successfully. Rome was occupied with the crusades and the newly founded Latin Empire in Constantinople; Byzantium was disarmed and driven with its political and ecclesiastical authority to Nicea; the Court of Servia had family ties with the Greek dynasty, and stood on friendly terms with the Pope through Jupan Vukan; and, in addition to this, there was Rastko himself, a king's son, and renowned throughout the Græco-Slav world for his saintliness and his talent. All this helped the Servians in the first quarter of the thirteenth century to secure a religious centre for themselves and a purely national Church of their own.

Having received the archiepiscopal dignity from the Constantinople Patriarch at Nicea, together with the right of supremacy over his Church, Rastko (in religion St. Sava) returned to his fatherland, to find it devastated by the feuds of his brothers, to a nation wavering in its faith, and to a Church which was Christian only in name. He at once set to work on a large scale to define and establish the interior and exterior relations of Church and people. . . . The work begun by St. Sava was continued by his worthy successors. During the thirteenth and the first part of the fourteenth centuries they built up the Servian Church on the basis laid down by Sava, where it shone bright and luminous among the sister Churches.

The State religion in Servia is now the Eastern Orthodox religion. The Servian Church is autocephalous. It does not belong to any other Church, but maintains a union as far as concerns dogma with the Universal Eastern Church. The internal control of the Orthodox Church belongs to the Assembly of Bishops, composed of all the bishops of the diocese, under the presidency of the Archbishop of Belgrade and the Metropolitan of Servia. Servia is divided into five dioceses: The archdiocese of Belgrade, the dioceses of Shabats and of Nish, a diocese with its seat at Tchatchak, and the diocese of the Timok, with its seat at Zaytechar.

The regular clergy of Servia belong to the Order of St. Basil, as do all those of the Orthodox Church. The monasteries are divided into Lavras and ordinary monasteries. The former are such as were founded by the ancient Servian sovereigns, the others have only the name of monasteries. In the six dioceses there are 975 secular parish priests. The regular clergy in all the monasteries amount to 109 members, making a total for the two orders of clergy of 1,085.

Public worship is allowed in Servia for such religions as have been recognised by the law. These religions are Catholicism, Protestantism (the Church of Augsburg Confession), the Jewish, and the Mohammedan religion. The religious authorities of these different religions are placed under the control of the Minister of Public Instruction and Public Worship. The present religious life of the Servians is fairly undisturbed. In ancient times only one heresy was known—the Bogumile heresy—but this can only be considered as having been more injurious to political than to religious life. At the present time there exists a small sect of Nazarenes, whose dogmas are to a great extent reminiscent of the Bogumile heresy; otherwise there is neither bigotry nor atheism among the Serbs.—(Dr. S. M. Veselinovitch, in "Servia by the Servians.")

SERVIAN LITERATURE

There are three periods in Servian literature—ancient, mediæval, and modern. The ancient period comprises cultivated literature from the beginning of the thirteenth until the end of the fifteenth century. It lasted a little longer than the great united Servian State, whose end was caused by the invasion of the Turks. It continued, although feebly, from beyond the limits of the Middle Ages until the eighteenth century. This literature is written in the ancient Slav language in Servian words—that is to say, in the language common to the ancient Bulgarian and Russian literature, but having some phonetic qualities of the Servian language. There have been collected up to now 2,000 manuscripts, which represent the production of that period, but it cannot be affirmed that there are so many works. These works were written by the monks and the priests of all ranks, very often of the highest ranks—monarchs sometimes joined them. They generally wrote in the cloisters: at Hilendar, a Servian monastery at Mount Athos; at Studenitza, Manassia, Detchani, and many other monasteries on Servian territory. The writers imitated the Byzantine literature, which was very near them, and which was very rich. It is also for this reason that the Servian literature of the ancient period represents Byzantine literature on a small scale, and that it resembled the latter also in its form of development. It embraced almost the same branches of literary production, comprising, first of all, pure theology, with dogma, polemics, exegesis, asceticism, mysticism, ecclesiastical rhetoric, and other literary works on Holy Scripture, the Gospels, the Psalms, the triads, the Pentateuch, etc. Here are found the works of Jean Damasquin, Jean Klimax, Simeon, the new theologian, and other important Byzantine theologians. The translation of these works was made fairly early. Apart from this theological literature, this period contains also another special literature—grammar, natural sciences, jurisdiction. In this latter branch must be specially mentioned the Code of the Emperor Dushan (1349-1345), which represents to a very high degree the development of the Servian jurisdiction in the Middle Ages. It includes, finally, literature in the strictest sense—since we dare not employ without reserve the term of *belles-lettres*. This literature includes poetry and prose.

In the middle period, which embraces the period from the end of the fifteenth century to the end of the eighteenth century, the literature is almost entirely centred at Ragusa (Dubrovnk), the only portion of Servian country which was free and full of culture, the others being under the Ottoman yoke. This literature was no longer written in the ancient Slav language, but in the pure Servian tongue. It is more developed than that of the previous period, and contains more real literature in the strict sense of this word than the preceding period; it contains, in fact, as much as do the foreign literatures of this time. But it has no relation to the literature of the ancient period. The literature of the ancient period was developed in the eastern half of the Servian countries (Servia, Old Servia, Macedonia), and the literature of the middle period in the western half (Ragusa and Bosnia) during a certain time. The first was cultivated in the monarchical and orthodox world, and the second principally in the republican world; the former among the monks, the latter principally among the laymen of all classes. The one was guided by Byzantine examples, and the other by the examples of Italian literature and developed under this influence. The literature of the middle period represents, with respect to the ancient literature, a quite new and independent action; it is usually called the literature of Ragusa (that of Bosnia is small, and is practically confined to some religious writers of the seventeenth and eighteenth centuries). Born at that period, and, in imitation of the Italian Renaissance, developing after Italian models, it represents Italian literature in miniature, in the same way as the ancient literature represents the Byzantine. In opposition to the ancient, the literature of Ragusa specially cultivated poetry, and very little prose. It includes all kinds of poetry, love-poetry first of all and in great quantities; there was scarcely a single poet of Ragusa who did not pay tribute to this kind of poetry. Chichko Mentchevitch and George Drgitch, the two indefatigable Petrarchists of the fifteenth century, cultivated it; it is, in fact, with them that Ragusan literature begins. A considerable number of authors continued this work in the sixteenth century, among the most important being Dinko Ragnina, a pupil rather of the classical than of the Italian school, to which, however, the first poets belong. In the seventeenth century the most important poet of this class is Ivan Bounitch, and in the eighteenth Ignate Djordjitch, the last of the principal Ragusan poets who wrote all kinds of poetry. Ragusan poetry includes next the religious poetry, very much cultivated also in Italy, and its principal representatives were Mavro Vetranitch (sixteenth century), Ivan Goundoulitch and Julius Palmotitch (seventeenth century), and the above-mentioned Ignat Djordjitch (eighteenth century). It includes also satirical and facetious poetry in general. The joyous life of these ancient towns on the seashore evoked, especially at carnival times, the kind of songs specially cultivated by some poets, beginning with André Tchubranovitch (sixteenth century) up to T. Djordjitch. Apart from lyric poetry, Ragusan poetry includes also epic poetry, and the latter appears after the former. The principal representative of this, who is at the same time the principal Ragusan poet—*rex illyrici carminis*—is Ivan Goundoulitch (1588-1638), whose best epic poem, "Osman," sings of the defeat of the young Sultan Osman and the victory of the young Polish Prince Ladislas (1621), and the death of Osman. The poem is written in the special strain of the "Liberation of Jerusalem" of Torquato Tasso. Dramatic poetry forms not the least part

THE CHURCH OF PRINCE LAZAR IN KRONSHEVATZ.

of Ragusan poetry. It is also of different kinds—religious, pastoral, mythological, historical, etc.

The literature of the ancient period was excessively religious, that of the middle period excessively local. Both were obsolete. Neither the one nor the other could satisfy the literary needs of the modern period felt by the whole Servian people. It was in Voivodina that the Servian people felt, after several centuries, in a more favourable condition for public instruction and intellectual culture, and here made immediately the necessary effort to instruct itself in the manner of the time and to reach the level of the literature of the time. In the course of the eighteenth century it founded its literature, which is the literature of the new period.

Dossitié Obradovitch was the most important literary man of the eighteenth century, but there were others who were not without importance. These men of letters wrote both poetry and prose. The poetry was especially weak. It consisted of short occasional songs or longer poems with a moral basis, or didactics or poems on battles, or on biblical or religious subjects. There are only two or three attempts at drama, and they are not original. History was more developed, and its representative was Yovan Raiitch (1726-1801), who has written with a truly monastic industry a voluminous history of the Servians, Bulgarians, and Croatians. It is one of those great works which appear rarely at the beginning of a literary development. The moral and philosophical essay was fairly well cultivated.

Under the influence of the Russian masters who founded, at the beginning of the eighteenth century, Servian schools in Voivodina, and laid the first stones of learning and

Digitized by Google

literature, our writers of the eighteenth and the beginning of the nineteenth centuries wrote in an impure language, which was not the language of the people, but the Russo-Slav, or Slavo-Servian, and their writings were for that reason inaccessible to the general public, who were almost illiterate. Dossitié wrote better and in a purer language, but it was necessary that it should be still purer and better. A reformation of the literary language and of the spelling was essential, and its reformer was Vuk Karadjitch. The first half of the nineteenth century was in general devoted to this reform.

If one takes into consideration the fame which our national songs have had in the literature of the world, one can understand that the work of Vuk was not only important for the Servian people, but also had to a certain extent world-wide importance. At the moment when Ossian was very fashionable, when the "Voice of the Peoples in Song," by Herder, enjoyed a great popularity—at the moment when the popular songs of all countries enjoyed the sympathies of the civilised world—the national Servian poetry, simple and beautiful as it was, had already an assured success. It only remained to make it known. It was Vuk who did this.

The literature of the period of Vuk could not be confined to the work of Vuk. The reform of the language and of the spelling was a great work, and it obliged almost all literary men to take sides either as adherents or as adversaries; but the literature itself will not disappear amid the polemics over this reform. While bearing the impress of this reform, literature has, nevertheless, developed independently according to its general needs. Literary works went on their way, and some made great progress.

The second half of the nineteenth century is not consecrated to an idea like the first. It has no centre, but is represented by varied work in different independent direction. Neither is it as good as the first. The first half, especially in the later years, represented in the works of Vuk, Niegosh, and Branko, the best period—the classical period; the second half represents the weaker period. There appear, nevertheless, fairly often, interesting literary endeavours, which signify progress in certain branches of literature. This success exists in quality as well as quantity.

There is yet another literature—that of modern times, and of writers who are still living.

Poetry is very well represented. Its writers show both talent and culture, though the verse is partly inspired by the French influence. It has new characteristics, both original and modern. It has more elegance in the *motif* and in the metre, only literary style, and especially pessimism, is more evident. The leading poets are Jovan Douchitch, Milan Rakitch, Mileta Yakshitch, Alexa Chantitch, Milan Courtcin, etc.

Certain branches of prose are equally good. Unfortunately there are no novels, although there is a great opportunity, since many plots exist, local themes purely Servian, and dealing with society during this transitory and disturbed period of to-day. Literary criticism is good. Instead of the former critic, kind, patriarchal, and patriotic, who praised indiscriminately everything national, the present-day critic is, with few exceptions, modern, serious, just, and conscientious. An entire generation has sprung up in the ideas of St. Beuve, Taine, and Lemaitre, and possesses fine description, taste, culture, erudition, and much style. The principal writers of the *genre* are Bogdan Popovitch, Jovan Skerlitch, and others.—(Paul Popovitch, in "Servia by the Servians.")

Some Reminiscences of a Bicycle Tour in Servia.

By JAMES BERRI.

One afternoon in August, 1904, my wife and I, under the auspices of the local cycling club (of which my friend, Mr. Grouitch, now Servian Chargé d'Affaires in London, was at that time president), started off from Belgrade on a cycling tour through Servia. It may be doubted whether a tour of a few weeks is enough to justify one in writing upon such a subject; but our experiences, such as they were, may perhaps be useful to others who may be contemplating a similar expedition. The cyclist who penetrates into the interior of Servia will find much to interest him—fine scenery, picturesque dresses and customs, interesting architecture, and a people hospitable and friendly, who delight in showing to the stranger the beauties and characteristics of their land. If he have a taste for history and archæology, so much the better. Every Servian glories in the history of his ancient land, and is proud to recall the times when Servia was a great empire ruled by czars of her own, at a time when the predecessors of the modern Czar bore but the humble title of a Duke of Muscovy. He will find abundant relics of the days when the Roman ruled over the land; he will find buildings of surpassing interest, which recall the palmy days of pre-Turkish times, when Servia was a real power. He will, alas! find but too many traces of the five hundred dark years of Turkish servitude, from which the little nation, after mighty struggles, eventually succeeded in freeing herself completely.

Ruins of 14th Century Monastery near Kursumlya.

If the present interest him more than the past, he will note with pleasure the many fine modern buildings which adorn the larger towns; he can study the system of education, the steadily increasing commerce, and, above all, the politics of Servia—a fascinating and complex subject which cannot fail to excite his interest. Nor are the difficulties of travel in Servia by any means so great as they are often supposed to be. Good roads permeate the country. Hotel accommodation is good in the larger towns, while everywhere throughout the country will be found modest inns where simple food and clean beds are to be had at most reasonable rates. The inns are looked after by the Government and inspected periodically, the system being much the same as that which prevails in Russia. Nowhere did we meet with any incivility or rudeness, although we often found ourselves in most out-of-the-way places and quite alone. But the passing of our bicycles through the Custom House on entering the country was a somewhat tedious business. A deposit has to be made, which is returned when the tourist leaves the country. It would be very much better if Servia could see her way to admitting bicycles free on production of the tourist's card of membership of an accredited cycling club, as do most of the great European countries at the present time.

The first stage of our tour was from Belgrade to Obrenovatz. Here the road follows the right bank of the Save, and, being on comparatively low ground, was none too good. The weather, too, was unpropitious, and heavy rain which soon descended converted the road in places into a quagmire. A fall in the sticky mud, with temporary damage to a pedal, delayed us for a time, and it was not till long after dark that we arrived at a comfortable inn and enjoyed a well-earned supper. Our friends of the cycling club, nearly a dozen in number, here left us, as they had to be back in Belgrade before the morning, and next day we started off alone to Valjevo. The road was somewhat sandy, but presented no difficulty. About midday at Ub we enjoyed an excellent meal at the village inn. As in Hungary and Bulgaria, a kind of hot stew is nearly always to be had at these country inns in the middle of the day, and very good it is. Various people both here and at Valjevo came to see us, and took considerable interest in our doings, as English cyclists were evidently rarities in Western Servia. The language of the country is, of course, Slav, Servian being closely akin to Russian. A smattering of it, such as we possessed, is most useful to the traveller in country parts. But with German he will generally manage to get along pretty comfortably.

The road from Valjevo to Uzice was hilly and lonely, and involved a good deal of up-hill pushing of heavily laden bicycles. Fig. 6 shows a view of the interior of a wayside *mehana*, at which we stopped to lunch. The curious and characteristic caps of the peasants may be noticed. At Uzice it appeared that the local authorities had been informed of our intended arrival, and some fifteen or twenty miles from the town we were surprised to find a mounted gendarme waiting for us by the roadside. He touched his hat and politely inquired if I were not "Dr. Shems." Recognising that he was trying to pronounce my Christian name, I assented, and he explained that he had been sent out by the authorities of Uzice to do us honour and to escort us to town. It was well for us that he did come, as in the growing darkness we should never have found our way alone and should doubtless have had to take shelter for the night at some roadside inn. Uzice itself is a pretty little town of Western Servia, nestling among the mountains, and here we spent a very pleasant day, receiving much courtesy from the doctors and other officials of the town.

The road to Kraljevo, our next destination, although at first rather hilly, was on the whole excellent. Here we saw for the first time the curious monumental stones by the roadside, put up in memory of some departed friend or relative, generally a soldier who has died in some distant land. On one side is a rough figure of the deceased, on the other his name, age, birthplace, etc.

Close to Kraljevo is the ancient coronation church of Zice, where we had the opportunity of seeing a Sabor, or church festival. Crowds of peasants in their most picturesque costumes, the women adorned with coins and jewellery, had come from surrounding parts, sheep were being roasted whole, and dancing and music contributed to the general merriment. The coronation church itself is small. Here were crowned (or, rather, anointed) many of the early czars of Servia; and here also for King Peter and his misguided and unfortunate predecessor was the ancient ceremony again enacted.

From Zice we crossed the river by a ferry, and afterwards cycled slowly up the long valley of the Ibar, on our way to the celebrated monastery of Studenitza, close to the Turkish frontier. We had passed the mediæval fortress of Maglic (Fig. 5), but were still some miles from our destination, when a little incident occurred which might well have been more serious than it proved to be. In the country parts of Servia the horses have not, or had not at that time, become accustomed to the bicycle. At a place where the road ran at a considerable height above the brawling river, from which it was separated only by a steep, rocky bank, almost a precipice, without a parapet or fence of any kind, we suddenly met a party of peasants advancing down the road. Among them was an old man on horseback. The horse, which was at the edge of the road, frightened by the bicycle—or, more probably, by the unaccustomed sight of a lady riding on it—gave a great jump, and the old man was tossed up like a ball, and, to my horror, disappeared over the edge. Riding up hastily, we were much relieved to see that the unfortunate man, after bounding and rolling some 40 feet down the rocky slope, was still alive. With the help of some of his companions he was carried up to the road, and it was found that, although he was bleeding profusely from head and hand, his injuries were but superficial. Some water from the stream, the sacrifice of a handkerchief, and a little ointment that happened to be in our luggage, enabled us to render first aid, while the other peasants stood by and wondered who we were. We should not have been surprised at some expression of resentment for having been, even though unintentionally, the cause of an accident that might have been fatal; but to our relief and great admiration the old fellow simply said: "The good God has sent you to me; may you both have long lives!" as we shook hands and said good-bye.

The monastery of Studenitza dates from pre-Turkish times, and it seemed to us that we were back in the Middle Ages as we passed through the great gateway and craved hospitality and a night's lodging from the monks and the Archimandrite who presides over them. A venerable figure is the latter, with a

Digitized by Google

long white beard, black and purple robes, and the high cylindrical cap that distinguishes the priest of the Orthodox or Greek branch of the Catholic Church. A high wall surrounds the monastic building (seen in Fig. 8), and in the centre of the space thus enclosed stands the beautiful old church, said to have been founded by Stephen Nemanya (King of Servia, 1185-1195). The exterior is of white marble, much of it beautifully carved, the interior is adorned with frescoes of various dates. The sacristy contains several interesting caskets of Byzantine workmanship holding relics, some gold crosses and many vestments, among them those of St. Sava, the first Archbishop of Servia, younger son of the above-mentioned Stephen.

In the evening we dined in the refectory with the Archimandrite and the brethren, for the rules of the Greek are not so strict as those of the Roman Catholic Church, and no difficulty was made about the admission of a lady. We all had to drink the usual three glasses of "rakija," a native spirit made from plums, and exclaim "Priatno!" at frequent intervals. Conversation was difficult, as no one spoke anything but Servian, and we were rather pleased to find that we could relate the story of the old man who had been thrown from his horse.

A brief visit to Rashka, on the frontier of Novi Bazar, and we are back again in the valley of the Western Morava on our road to Trstenik and Krusevatz. Near the former, up a side valley, is the interesting old monastery of Ljusbostina, founded by Militsa, the widow of Lazar, the last King of Old Servia, who in 1389 lost his life in the terrible defeat of Kossovo, which gave the kingdom to the Turks. After a hilly bit of road, we next enter the broad valley of the eastern Morava, in the neighbourhood of Alexinatz, the scene of many a bloody battle between Turk and Serb, and thence we come to Nisch. It is not so very long since Nisch was Turkish, and we still see traces of Turkish dominion. Perhaps the strangest of them all is the tower or monument originally adorned with over 900 Servian skulls, all of which, after the reoccupation of Nisch by the Servians, were piously interred at the base of the monument around which a chapel has been erected in memoriam. From Nisch our road lay across the hills to Pirot, but the weather was unpropitious and much sticky mud made progress slow. In pouring rain we entered Pirot, and were glad to put up at the somewhat indifferent hotel, which was the best that this carpet-making little town could provide for us.

The next few weeks were spent in Bulgaria, outside the limits of this article. After crossing the Balkans by the Shipka Pass, by a road which—unless it has recently been much improved—cannot be recommended to any cyclist, the Danube was reached, and a steamer conveyed us and our bicycles to Semendria, where we again landed on Servian soil. Here a lively altercation ensued between ourselves and the Custom House officials, who insisted that we should again pay the deposit for our bicycles, while we maintained that, having paid once and received permission to travel in Servia for so many months, we were free to cross the frontier as often as we liked. Neither side would give way, and so the bicycles stayed at the Custom House while we retired in dudgeon to the hotel. Our dispute had been carried on with two Servian-speaking officials and a little man in plain clothes, who spoke bad German and whom we at first took for an officious nonentity, but who turned out to be one of the heads of the Custom House. The nonchalance with which, in our ignorance, we had treated him no doubt had something to do with the *impasse* that ensued. But at the hotel the situation fortunately changed. The principal doctor in the place, a very pleasant man, speaking excellent French, introduced himself to us, and in a very short time the bicycles were sent round without further demand or payment.

Next day we rode to Belgrade along the valley of the Danube without further mishap (except the breaking of a chain, which was splendidly mended by a village blacksmith at a cost of twopence), and arrived in time to witness the coronation of King Peter in the Cathedral, and to see that monarch ride, with mediæval splendour, on a white Arab, with crown on head, and a rich robe of crimson velvet descending from his shoulders, through the streets of his capital. We had seen Servia, especially the western and southern parts of it, in a manner enjoyed by few. Most tourists who visit that country tend to keep to the larger towns, the railways, and the main thoroughfares. It is by penetrating to the mountains and by stopping in the villages that one gets to know a people best and to derive most benefit from a cycling tour. The expenses, too, of such a tour in such a country are but very small.

THE SERVIAN ARMY

Military service in Servia is compulsory and universal. Recruits join at the age of twenty-one, and complete their service when forty-five. The national army has three "bans": The first from twenty-one to thirty years; the second from thirty to thirty-eight; and the third "ban" from thirty-eight to forty-five. Besides these there is a "levée en masse" or "last defence," containing all those who have not yet passed through the regular army (between the ages of eighteen and twenty-one) and all other males between forty-five and fifty.

The kingdom of Servia is divided into five divisional areas, containing in peace time twenty infantry regiments, each of three battalions of four companies and a section of quick-firing machine guns; five field artillery regiments, each of nine batteries of four guns; one regiment of mountain artillery of nine batteries of four guns; one regiment of howitzers of six batteries (one of them "mortar"); two batteries of horse artillery; one regiment of fortress artillery of two battalions of four companies; one park of siege artillery; one division of cavalry of four regiments of four squadrons with four sections of quick-firing machine guns; two battalions of engineers; a park of aeroplanes, etc., etc.

The Servian infantry is armed with the Mauser rifle, model 99, cal. 7 mm. The field gun is a quick-firer on the Schneider-Canet system. The quick-firing machine guns are Maxims.

The peace strength of the Servian Army amounts to 35,174 men. In war time there are:—

I. Active Army (First "ban").		
1. Five divisions.....	=	131,175 men
2. Not belonging to the divisional formations ..	=	20,764 men
3. Supplementary troops ..	=	16,562 men
A total of		168,501 men
II. The second "ban"	=	99,451 men
III. The third "ban".....	=	56,678 men
A total of		324,630 men
without the "Last Defence" amounting to		143,000 men
which makes a war-strength of ..		467,630 men

The King is Commander-in-Chief of the army; to him the soldiers take the oath of loyalty. He decides the organisation of the army and the arrangement of the higher departments, institutions, and military schools; he draws up the regulations for discipline, and decides the employment of the army in time of peace and of war. The King proclaims war and concludes peace. The Minister of War is a responsible member of the Government, and administers the army according to divisions of the law. The General Staff is a distinct institution, and is an assistance to the Minister of War. The position of the Chief of the General Staff is such that he can report direct with the King on the current business of the department, as well as upon all the new projects entering into his sphere of action. He is the head of the General Staff Department, and it is his duty to see that it is supplied with the most capable officers available. Such officers can only be those who have finished the higher course of the Military Academy in Belgrade and who have spent a certain number of years with the troops, commanding the fundamental unit of their branch with marked success, and who have been distinguished in the General Staff as capable officers during the preparatory course of two years. At the end of two years of such preparatory study these officers have to pass a very strict examination before a special commission, composed of officers of the General Staff, presided over by the chief of the department himself. It is only if they pass such an examination satisfactorily that they can be transferred to the General Staff Department.

SERVIAN ECONOMICS

Prior to about 1880 the economic situation in Servia presented a simple picture. On the one hand were the villages whose inhabitants were engaged in agriculture and cattle-raising with a view to supplying their own requirements rather than the local markets. Domestic industries of a kind flourished for local wants only. On the other hand were the cities and the towns whose inhabitants were either shopkeepers or artisans; the former provided the peasants with articles, such as coffee, sugar, salt, petroleum, etc., not produced by the latter, and bought from them their agricultural produce; similarly, the artisans supplemented the domestic industries. Important enterprises were rare, capital industries in their infancy, and means of communication and commercial relations between towns and villages of the most primitive character. With improved means of communication commercial relations expanded, and the result was that important economic changes took place: simple agricultural pursuits were intensified in order to supply the markets; small shopkeepers became merchants; domestic industries grew until they attained the proportion of capital industries; and to-day Servia has reached the period of transition between domestic and capital industries.

The Kingdom of Servia has an area of 4,830,260 hectares, or 18.757 square miles. The classification of the land according to the use to which it is put is as follows:—

Gardens, etc.	229,078	hectares
Orchards	147.151	,,
Vineyards	31,697	,,
Fields	1,234,449	,,
Meadows	325,823	,,
Forests	1,067,012	,,
Uncultivated Land	1,795,050	,,

Agriculture.

The accompanying table shows the state of the crops for 1910, their averages and output. Two points may be mentioned in connection with agriculture in Servia, i.e.—(1) It is not fully developed, as shown by the low production per hectare and the limited acreage devoted to the culture of such commercial plants as tobacco, sugar beet, hemp, flax, etc.; and (2) the return per hectare is higher in the case of these latter plants than in that of other crops. This peculiarity is explained by the fact that there are a large sugar factory and two large factories for the working of hemp and flax and that these concerns, anxious to obtain the best raw material, supply the farmers with seed, agricultural implements, and expert advice. The State, which owns the tobacco monopoly, employs a similar method when dealing with the tobacco growers.

Crop.	Acreage (in hectares).	Production (in quintals, 1q. = 100 kilos).
Maize	532.825	7,391,979
Wheat	385,763	3,47 .289
Barley	107,657	877.223
Oats	108.117	629,100
Other Cereals	59,087	387,979
Vegetables	215.969	1.520,194
Sugar Beet	3,004	634,795
Tobacco	2,671	21.500
Flax and Hemp	17,176	76,630

From the foregoing it will be seen that, with but one or two exceptions, the farmer in Servia labours under two disadvantages, namely, the lack of funds for investing in good seed and modern implements, and the lack of technical instruction. In order to improve matters, certain steps have already been taken: Agricultural credit associations are being formed with a view to affording the farmers a certain amount of credit for the purchase of seed and implements. Departmental and local government experts are, moreover, giving the farmers practical lessons in modern methods.

The output of cereals—principally those of maize and wheat—is annually in excess of the country's needs and forms one of Servia's most important exports. Maize and barley are exported in grain, and wheat either in grain or as flour.

Fruit-Growing.

In 1910 147,151 hectares were planted with plum-trees, and the vineyards covered an area of 31,696.82 hectares. The fruit output for the same year was:—

Plums	270,820,018	kilos
Grapes	8,376,400	,,
Apples	25,701,357	,,
Pears	20.213,352	,,
Other Fruits	30,525,443	,,

Fruit-growing in Servia may be divided roughly into two groups—the one comprising plums and vines, the second all other fruit. The cultivation of the first group has attained a high degree of perfection. There are many varieties of cultivated plum-trees, the best-known being the *madgarka* and *ranka*; the former are used in the preparation of prunes, marmalade (*pekmes*) or *eau-de-vie* (*chlivoritza* or *rankia*), and the latter only for the distillation of an inferior quality of *eau-de-vie*. The annual production of these *eaux-de-vie* exceeds the consumption, and large quantities are therefore exported.

The drying of the plums into prunes is neither centralised nor well organised; the methods employed are primitive, and there is no selection of the fruit either before or after drying. The making of the marmalade or *pekmes* is, on the other hand, well organised. Even in the case of the prunes, however, progress within recent years has been marked, and the quality of the fruit turned out greatly superior to that obtaining some years ago. The annual production of prunes and marmalade varies according to the harvest: In 1910 35,000,000 kilos of prunes and 27,000,000 kilos of *pekmes* were manufactured, as against 50,000,000 and 40,000,000 kilos respectively in 1908. The *eau-de-vie* industry is likewise primitive and not centralised. It will never prosper, because the demand for prunes and *pekmes* is annually increasing.

Vineyards.

As regards the vines, they are in equal parts of the old stock and of American plants. The cultivation of the latter is increasing, however, at the expense of the former, the reason being that the American vine is more productive and less exposed to the ravages of the phylloxera. The annual output of grapes is not sufficient to meet national wants, and grapes have to be imported, mostly from Turkey, for the making of wine. Nevertheless, Servia exports for table uses a considerable amount of grapes of an excellent quality.

Practically any and all sorts of fruit-trees are grown, not necessarily in orchards, but spread out in meadows, gardens, and fields. They are left to themselves, the only work entailed being the harvesting of the fruit, occasionally grafting, or planting of young trees. The most popular fruits are those ripening in the summer or early autumn. Great progress is being made, however, in fruit-growing, and, though but a few years ago prunes were Servia's only export fruit, to-day many others must be added to the list. Two or three successive bad years for plums opened the eyes of the farmer to the necessity for varying his crops, with the result that apple and pear trees, among others, began to be cultivated. Help came in the nature of Government assistance, distributed by the departmental model orchards, with the result that in the south-west of Servia several important orchards have come into existence, and will doubtless help to place fruit prominently among Servia's exports.

Forestry.

Of the 1,067,012 hectares of forest land, roughly speaking, 600,000 hectares belong to the State, 850,000 hectares to communes, monasteries, and the Church, and the remainder to private individuals. Almost 50 per cent. of the forests are birch, 24 per cent. oak, 20 per cent. pine, and 6 per cent. are

BELGRADE ASSOCIATION BANK.

composed of other kinds of trees. Birch predominates in the east, pines in the south-west, and oak in Possavina and Chumadia. In spite of the fact that almost all the trees in Servia are ripe for felling, the exploitation of the forests is very backward, the reason being that the larger forests are not within easy reach of direct rail or river communication. The construction (already begun) of new railway lines in the south-west will doubtless give a decided impulse to the exploitation of Servia's forests.

Cattle Raising.

The census of 1910 showed that there were 957,918 head of cattle, 863,544 pigs, 4,436,242 goats and sheep, and 151,127 unclassified farm animals.. These figures cannot be taken, however, as final or even accurate, the number of animals being greatly in excess of the official returns. Servia, both as regards her climate and the nature of the soil, is admirably adapted for cattle-raising, and there is not a peasant who does not own some domestic animals. Until a few years ago, the pig was the only animal to which a commercial value was attached, the others being purely domestic. But about five or six years ago cattle began to be exported to Italy and Egypt, and sheep to Turkey; since then, greater care has been shown in the rearing of these animals. Both native and foreign breeds of cattle are reared. Foremost among the former is the Kolubara, and among the latter the Simmenthal, Mariahof, and Montafon. Cross-breeds between native and foreign types predominate. Pigs are mostly native, Chumadia and Morava, though the Yorkshire breed thrives well. Sheep are also native, Krivovirska, Rujanska, and

Peasant playing the Goussle, a National Musical Instrument.

Starovlachka, and good results have been obtained by breeding them with Ost-Friesland sheep. The improvement of the native breeds of domestic animals is one of the cares of the State model farms situate at Dobritchevo and Ljubitchevo.

The dairy industry is in its infancy. Until quite recently milk, cheese, and butter were of little commercial value, the farmers supplying their own wants and selling occasionally at the nearest market places. Two or three important modern dairies have now been established with the object of making butter and cheese on a large scale.

In conclusion, a few words should be said in regard to poultry raising. Exact figures are not available, but it is well known that each farm possesses a large number of hens, chickens, etc., the upkeep of which costs practically nothing. The commercial handling of eggs and poultry is of quite recent date, but it has already begun to exert its influence, and several wholesale export houses have already appeared on the scene. It is, therefore, to be presumed that within the next two or three years poultry-raising will have developed to a very large extent.

Industries.

There are three aspects of industrial activity in Servia, namely, domestic industries, trades, and capital industries. The first two are of older date and still predominate; the last-named appeared on the scene when the rural districts were opened up by modern means of communication, when the distributing area became larger, and when, after the commercial rupture with Austria-Hungary, a system of national industrial protection was introduced. This latter, with its protective Customs tariff, has already had a marked influence on the development and rapid progress of Servian industries. Another factor is the granting of concessions by the Government to concessionaires under favourable conditions, such as the exemption from taxation for a period of from ten to twenty years, reduced rates, the free grant of land, and other privileges offered to foreigners by the State.

Among the more important industries the following deserve special mention:—

Milling.—By the side of the numerous small village mills, *pototchare*, whose activity is restricted to their immediate neighbourhood, there are several modern steam or water mills whose sphere of action extends beyond the frontiers. The number of these mills is increasing yearly.

Breweries.—There are nine breweries in Servia, representing a capital of £200,000 and a yearly production of 100,000 hectolitres. The ever-growing demand, is, however, greater than the home supply, so that considerable quantities of beer have to be imported.

Sugar Refineries.—After the first experiment in 1902, a sugar refinery was erected in Servia in 1906. Its output is still of modest proportions, attaining in 1911 the record of 1,000 waggons of sugar. In view, however, of the fact that the climate of Servia is favourable to the cultivation of the sugar-beet, that the output of the refinery does not come up to the demand, and that both Bulgaria and Turkey are heavy importers of sugar, the Government granted a concession for the erection of a second refinery. It is situate at Tchoupria, and will begin operations this year.

Tobacco.—Since 1888 the manufacture and sale of tobacco has been a State monopoly. For the cultivation of the plant, special licenses are granted by the administration of the monopoly, which buys up the whole crop, and prepares it in its factories at Belgrade. Only cigarettes are manufactured, and they have a certain sale abroad.

Slaughter-Houses.—Until 1906 Servia exported live cattle, and the two slaughter-houses—one at Belgrade and the other at Velika-Plana—sufficed. But from the time that meat, fresh or preserved, began to be exported, more slaughter-houses became necessary, and these have been erected in Mladenovatz, Velika-Plana, Yagodina, and Paratchine.

Sundry.—Among other modern factories that may be mentioned are:—Two factories for glass, two for cement, two for cloth, one for matches (State monopoly), one for soap, and two potteries.

Mining.

Three circumstances point to the presence of considerable mineral wealth in Servia. The first is to be found in history. In the days of the Romans and in the thirteenth and fourteenth centuries mining was a profitable industry in Servia, especially as regards the extraction of gold, silver, lead, and copper. The second is its geological formation, which is of great diversity, and the third is the discovery within recent years of ore in various parts of the country. The only question to be solved, therefore, is: in what quantities are these minerals present? A satisfactory answer can only be given after a detailed investigation. The only district where this has been done is at Bor, and the result has been the discovery of a vein of copper 200 yards long, 100 yards wide, and 80 yards deep.

Data are also to hand concerning Servia's oil deposits. Among the more important layers examined up to the present we may mention:—Oil of carboniferous formation in the regions of Mlava and Pek; liassic and cretacic oil in the north-east; tertiary oils in the valleys of the Morava, Ibar and Segne; the schist deposits in the neighbourhood of Valjevo. There are granite deposits in the Podrigne, Kopaonik, and Yastrebatz; marble in the south-west; limestone at Kosmai, in the neighbourhood of Soko-Bagnia, Tchatchak, and Pojega.

Mineral Output in 1909 (1 quintal 100 kilos).

Oil	511,320	quintals
Brown Coal	1,162,170	,,
Lignite	789,920	,,
Gold	178	kilos
Silver	780	,,
Gold-bearing Ore	900	quintals
Copper	42,090	,,
Lead	13,780	,,
Lead-bearing Ore	3,150	,,
Pyrites	216,270	,,

Compared with the mineral wealth of the country, the yearly output is unsatisfactory. The reason is that not only is a considerable capital required to work the mines, but the risk is greater than in any other industry. The Servian investor is induced, under the circumstances, to invest his capital in less venturesome industries which offer nevertheless a reasonable, if smaller, return.

THE FINANCIAL SITUATION OF SERVIA.

The rapid economic evolution of Servia brought in its train unwonted activity in the legislative and administrative reorganisation of the national finances, so much so that at the present time the latter are of a transitory phase, which, however, is nearing its end. Regenerated Servia began by curing the ills of the past, this being an essential preliminary to the successful preparation of a better future. The vestiges of the past have already been removed as far as possible; the brighter future is to a large extent prepared; it only remains to complete the work of preparation and to enjoy in peace the fruits of persevering effort and unsparing sacrifices.

Servia is at the present moment busily engaged in bringing about a radical reform of its whole financial system. The reform was undertaken in order to bring the system into keeping with the changes which have taken place in the economic situation of the country, and to render it elastic and adaptable to those changes which might subsequently take place. New laws have been voted, some of which are already being applied. The law of November 9, 1909, brought about the reorganisation of the indirect taxation of articles of consumption; the law of March 19, 1910, revised the Customs tariffs; the law of March 30, 1910, remodelled the stamp and registration dues; the two laws of March 10, 1910, and May 5, 1911, completely transformed the organisation of the public accounts There is now before the Chamber of Deputies a Government Bill, which is destined to endow Servia with a new system of direct taxation. The mere recital of the laws voted shows that the very foundations of the old financial system have been subjected to the closest examination, and that the reforms apply to both the expenditure and the revenue of the State.

The reformed methods of treating the sources of public revenues had for their object not only to render the latter more productive, by raising the tariffs and by the taxation of articles hitherto exempt, but also to render them less burdensome by improvement in the methods of recovery, and by a more just and equitable distribution of the charges which are imposed on private individuals. The control of expenditure was the principal object of the reform of the Public Accounts Department. The validation of legislative credits, the liquidation and regulation of claims against the State, and the payment of debts due by the State, are organised in such a way as to ensure that the State funds are employed in conformity with legislative sanction.

In order to ascertain the results obtained up to date we will pass in review the figures of the receipts and expenditure, as presented by the General State Accounts which are presented for approbation to the Chamber each year. For the year 1912, the Budget for which is at present being prepared, the estimates of receipts and expenditure are given, whilst for the year 1911 actual results, or, in their absence, estimates, are shown. This must be borne in mind when making comparisons of the data furnished below. It should be noted that the financial year begins on January 1 and ends on March 31 of the following year. The General State Accounts, certified exact by the Audit Department, must be submitted to the Chamber of Deputies at the same time as the estimates for the following year. Thus the final figures of the general accounts of 1911 must be presented simultaneously with the Budget for 1913—viz., at the beginning of October. The care taken in the matter of Servia's finances is now so great that the law of 1910 dealing with the State accounts enacts that the Chamber of Deputies cannot pass the second reading of the estimates before having definitely passed the general accounts, which are submitted to it at the same time as the estimates. Servia was thus anxious to avoid the examination of accounts after the lapse of several years, as has happened in other countries—France, for example.

BUDGETARY RECEIPTS.

Year.	Ordinary. Francs.	Extraordinary. Francs.	Total. Francs.
1895	—	—	58,540,700·25*
1900	—	—	77,179,397·25*
1907	94,342,952·68	1,769,623·4	96,112,576·09
1908	91,132,582·20	1,161,210·58	95,293,792·83
1909	101,738,071·82	3,392,401 04	105,130,472·86
1910	112,212,001·30	4,369,131·83	116,581,133·13
1911 (Provisional Results)	—	—	126,078,673·93†
1911 (Budgetary Estimates)	117,401,379·82	2,735,080·00	120,136,459·82
1912	125,671,347·75	5,093,365·10	130,764,712·85

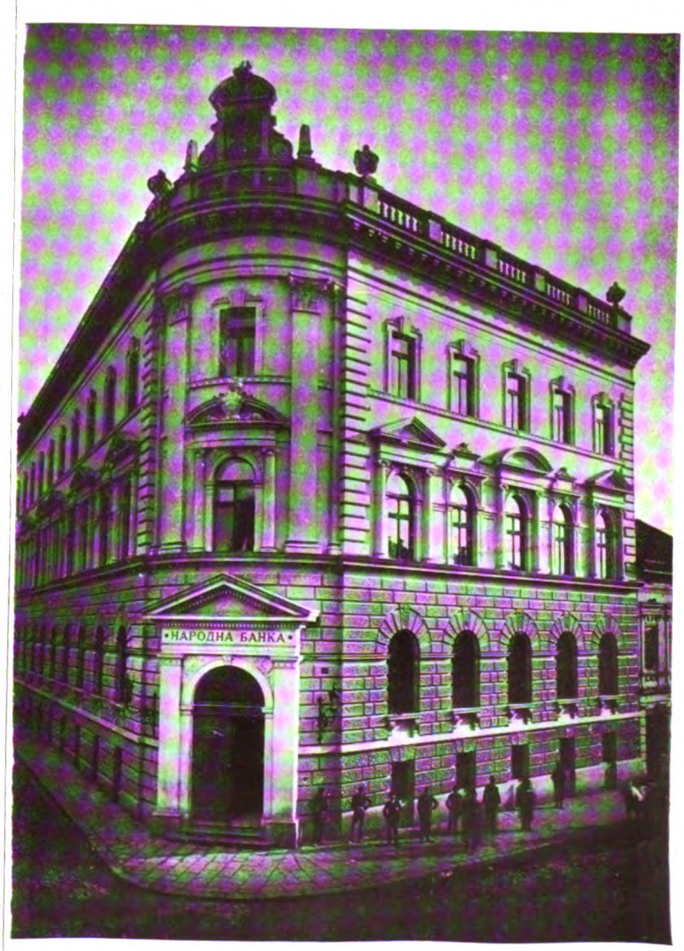
As will be seen, the budgetary receipts show a rapid and very considerable increase. These receipts are at present classified under three heads, the absolute and relative amounts of which will be seen in the following tables:—

I.

	1907. Francs.	1910. Francs.	1912. Francs.
1. Taxes	73,739,057·29	85,978,382·85	94,171,698·00
2. Yield of National Economy	18,922,815·58	23,821,694·50	28,795,781·75
3. Sundry Revenue	1,681,099·81	2,411,933·95	2,753,868·00

II.

1. Taxation	79·3%	76·7%	74·9%
2. Yield of National Economy	20·0%	21·2%	22·9%
3. Sundry Revenue	0·7%	2·1%	2·2%
	100%	100%	100%



It is apparent, from the above tables, that the taxes represent at present three-fourths of the revenue of the State, but that their relative amount, compared with the total receipts, has a tendency to decrease, whilst the amount produced by national economies tends to increase. The following tables show the various classes of taxes:—

	1907. Francs.	1910. Francs.	1911. Results.	1912. Estimates.
1. Direct Taxation	22,469,220·92	29,376,625·09	32,114,695·17	30,613,000
2. Taxes on Articles of Consumption	5,763,986·60	7,457,638·61	9,228,393·76	9,001,000
3. Customs Dues	13,376,469·88	13,521,690·27	16,656,025·52	14,500,000
4. Stamp and Registration Dues	4,600,531·60	5,797,346·64	7,083,152·26	8,402,000
5. Yield of Monopolies	27,528,825·29	29,825,081·24	32,401,400 40	31,655,69

The following table completes the above. The relative amount of each class of tax in the total tax receipts is shown:—

	1907.	1910.		1907.	1910.
1	30·5%	34·2%	Direct Taxation	30·5%	34·2%
2	7·9%	8·6%			
3	18·1%	15·7%			
4	6·2%	6·8%	Indirect Taxation	69·5%	65·8%
5	37·3%	35·7%			
				100· %	100· %

The tables show two things which should be noted: (1) the monopolies occupy first place among the fiscal resources of the State; and (2) two-thirds of the proceeds of the taxes are from indirect taxation, whilst one-third is derived from direct taxation. This proves that the circulation and the economic consumption of wealth in Servia have reached a degree of development which approaches that of the countries of Western Europe. In order to better appreciate the absolute value, as well as the relative importance, of

Reserve Fund (Gotovina).

This fund is fed by the budgetary surpluses and by certain State revenues, which are expressly excluded from the Budget and ear-marked for the reserve fund. The Accounts Law of 1903 created and regulated the fund, and was itself completed by the law of 1910.

This reserve fund has a threefold object:—(*a*) To serve as a fund of working expenses in case the revenues of the current year should not be encashed by the Treasury with the same rapidity as the expenditures were made. Thanks to this arrangement, the fund obviates the issue of Treasury Bills in Servia. It is now several years since Servia last issued Treasury Bills for her own use; those that may have been issued were for other than financial purposes. Thus the accounts of the year 1911 show that some Treasury Bills were issued, but this was done in order to gratuitously supply funds to the National Bank for the bullion reserve for silver bank notes which were, with the consent of the Government, to be put into circulation in excess of the legal amount. The demand for bank notes (payable in silver currency) had been very large, and the National Bank could not satisfy it; therefore, in order that commercial affairs might not be hindered, the Government acceded to the bank's request for a loan in Treasury Bills, on which basis a new note issue might be made. The organic law of the National Bank allows the issue of bank notes (payable in silver) for State purposes in excess of the normal maximum, to the amount of 10.000.000 frs.

(*b*) To provide for certain extraordinary expenditures included in the Budget. Thanks to this fund, Servia is in a position to assure the equilibrium of her Budgets without having recourse to the hasty creation of new sources of revenue.

(*c*) To assure the payment of expenditure which might be voted during the financial year after the Budget had been passed. In this way the reserve fund rendered invaluable service to Servia at the time of the crisis provoked by the annexation of Bosnia-Herzegovina. By making use of the fund it was possible to meet unexpected, but indispensable, expenditure amounting to about 18.000.000 frs.

The reserve fund has enabled Servia to realise two further aims which are very profitable to the country, namely:—

(1) The payment by anticipation of the balances of certain loans which, by their number, cast a certain shadow on the Servian financial position, while their amount did not even justify the description of consolidated debt. This was the case with the Russian loan, of which the outstanding amount was 3.725.011.91 frs., and the loan which was contracted in 1899 for expenses of railway exploitation, 3.020.000 frs., and the loan of 1886, guaranteed by debentures of the Crédit Foncier, 6.382.000 frs. The total amount of these loans outstanding represented therefore a total of 13.127.511.91 frs., to which should be added the balance of a debt to the National Bank, 1.537.514.63 frs.—total, 14.664.514.63 frs.

This final amount was taken from the reserve fund in order to completely extinguish the four debts mentioned. In 1911 a sum of about 700.000 frs. was transferred from the reserve fund for the purpose of repaying to certain special funds amounts which had been drawn from them in 1892, and which constituted the last vestiges of the floating debt inherited from the past.

(2) The loan of funds and credit to commerce and industry at moments of great need. This was the case in 1911, for instance, when a sum of about 8.000.000 frs. was advanced at 2 per cent. interest to merchants and manufacturers. The advances were guaranteed by securities deposited with the Treasury.

As is abundantly evident from what precedes, the reserve fund has rendered very valuable services to Servia, and *chiefly in permitting the extinction of the floating debt and in freeing the Treasury from the necessity of issuing fresh loans and even from resorting to the expedient of Treasury Bills.*

The following table shows the receipts and expenditure of the reserve fund. The entire amount of the expenditure of this fund and that part of the receipts which is not represented by the budgetary surpluses are not comprised among the entries on either side of the Budget. It must be observed that for this expenditure also the precedent vote of the Chamber of Deputies is indispensable.

Year.	Revenue. Frs.	Expenditure. Frs.		Surplus. Frs.	
1906	9,234,572.00	6,877,065.19	Surplus over expend.	2,357,506.81	
1907	13,456,420 09	6,831,134.71	,, ,,	6,625,285.38	
1908	5,931,221.57	19,483,203.08	,, receipts		13,551,981.51
1909	9,919,692.90	4,655,009.49	,, expend.	5,264,683.41	
1910	13,185,906.17	10,134,347.50	,, ,,	3,051,558.67	
1911	22,962,062.36	15,771,731.88	,, ,,	7,190,330.48	
				24,489,364.75	13,551,981.58
			Increase in Reserve Fund	10.938,383.24 frs.	

The table shows that the reserve fund has constantly increased, except in the year 1908, which was the year of crisis provoked by the annexation of Bosnia-Herzegovina by Austria. It was principally at that time that the value of the reserve fund was demonstrated by rendering inestimable services to Servia. It made possible extraordinary expenditure without shaking Servian credit, which would inevitably have been affected had she been obliged to have recourse to foreign loans.

In six years the reserve fund has increased by almost 11,000.000 frs., and that in spite of the withdrawals made for the purpose of repayment of debts, amounting to more than 15,000,000 frs. This is incontestably a magnificent result. The available balance of the reserve fund amounted at the end of 1910 to more than 20,000,000 frs.

It must be noted that there has grown up a tendency to include in the body of the Budget and its executory accounts the receipts and expenditure of the reserve fund, in accordance with the principle of budgetary unity. Hitherto a special account, included in the same volume as the accounts of the execution of the Budget, was presented to the Chamber of Deputies, so that it is not without apparent reason that it has been said of Servia that she possessed two Budgets. It will no longer be thus, however, as the law regarding the accounts rigorously lays down the principle of budgetary unity. This principle will even apply to the expenditure covered by the funds derived from public loans, which hitherto remained outside the Budget, as a special account of the employment of these funds had to be presented to the Chamber of Deputies.

Public Debts.

The consolidated debt of Servia amounted on January 1, 1912, to 659.056,000 frs. At the same date in 1910 it amounted to 676,699.233.79 frs. It has thus been reduced in two years by 17.500.000 frs. by the sinking fund operations which have been carried out regularly and by the redemption before mentioned. By this redemption the annuities have also been reduced. The Budget for 1910 provided for annuities amounting to 33.196.850 frs., whilst the Budget for 1912 provided for annuities of only 32,394.550 frs., thus showing a decrease of 802.300 frs. All the Servian loans are amortisable. The latest date for complete redemption extends to the year 1967, *i.e.*, fifty-six years from now, for the loan of 1895.

Servia has at present only six consolidated loans, viz.:—

	Frs.
1. 1881 2% Lottery Loan, outstanding balance.....	21.920.000
2. 1888 Loan without interest ,, ,,	8,930.000
3. 1895 4% Converted Loan ,, ,,	333.520.000
4. 1902 5% Loan ,, ,,	55.651.000
5. 1906 4½% Loan ,, ,,	91.325.500
6. 1909 4½% Loan ,, ,,	147.709.500

In 1889 there were thirteen loans, one of which bore interest at the rate of nearly 7 per cent., and the price of which was 76 per cent. The following particulars give further indications of the progress of the Servian debt.

The annuity per head of the population was in 1895 8.90 frs., and in 1910 11.40 frs., or an increase per head of only 2.50 frs. The annuities represented in 1889 50 per cent. of Government receipts, in 1895 33 per cent., in 1910 25 per cent., and in 1912 23.5 per cent.

Of the proceeds of the last two loans (1906 and 1909) 91,000,000 frs. have been set aside for the construction of new railway lines and 90.000.000 frs. have been spent on military armaments, making an effective total of 181,000,000 frs., whilst their nominal amount was only 245.000,000 frs.

Servia has no floating debt strictly speaking. She has only two debts, amounting together to about 3.000.000 frs., which are not included among the consolidated debts. One of these debts arises from the fact that the State assumed the burden of the losses sustained by the Crédit Foncier previous to 1898. This debt is being amortised by means of annual instalments deducted from the net profits which the Crédit Foncier hands over to the State. The second debt is due to the Crédit Foncier. In order to aid that part of the population which had suffered from severe weather conditions the State made them an advance. The necessary funds were borrowed from the Crédit Foncier by means of Treasury Bills. This State loan is thus balanced by the indebtedness of the people to whom the advances were made. It will therefore be seen that there is here neither a question of consolidated debts nor ordinary floating debts. These debts are, moreover, quite insignificant, and are almost ten times covered by the reserve fund.

The financial situation of Servia is quite clear, thanks to which condition Servia is beginning to inspire the fullest confidence in those who are acquainted with her affairs. The prices at which her loans are quoted go to prove this. Thus, for example, the 1895 4 per cent. loan, which was issued at 69.573, is at present quoted at a few points over 90, whilst the 1902 5 per cent. loan is quoted at a few points above par, although issued at 80. Servia has therefore benefited by a rise of over 30 per cent in the prices of her stock in the space of ten years.

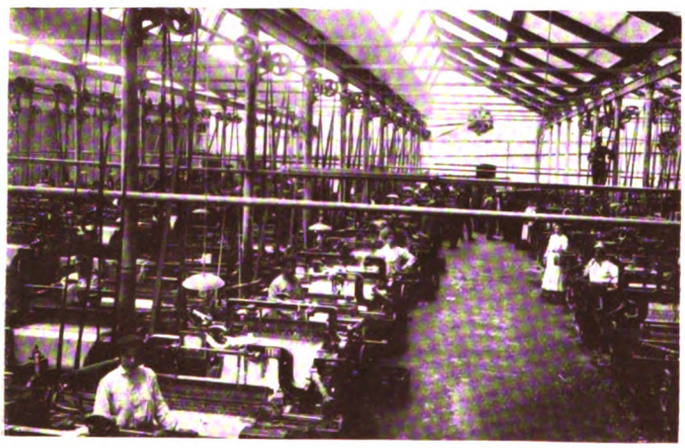
The foreign trade of Servia has of late years been greatly on the increase both as regards imports and exports. The progress made has been particularly noticeable since 1906, *i.e.*, since Servia, after her commercial rupture with Austria-Hungary, entered into direct trade relations with other countries.



Up to 1905 the foreign trade of Servia was exclusively in the hands of Austria-Hungary. 86 per cent. of Servian exports went to that country, and 65 per cent. of the imports came from there. But since the year 1905 Austria-Hungary has been continually losing ground in her trade with Servia, whilst that of other countries has been rapidly on the increase. This change is the result of the commercial rupture with Austria-Hungary, which lasted, with slight interruptions, for five years (1906-1910). During this conflict Servia entered into commercial relations with nearly all the countries of Western Europe, and these have been maintained since the conclusion of the new commercial treaty with Austria-Hungary.

The foreign commerce of Servia shows it to be an agricultural country *par excellence*. Its exports comprise the produce of agriculture, cattle breeding, and forestry (arboriculture); its imports consist of manufactured articles, colonial produce, and iron goods. Year after year, however, noticeable changes are taking place. Until quite recently the principal items of export were cattle and their derivatives; to-day these items are relegated to third place, while cereals and fruits occupy the first and second places. As regards imports, agricultural machinery and implements are largely on the increase.

The export trade of Servia trends in three directions:—(1) Towards the north, across Austria-Hungary by railway or by the Danube as far as Regensburg; (2) towards the south, across Turkey by rail as far as Salonika, and thence by sea; and (3) towards the east by the Danube as far as Galatz and Braila, and thence by sea to the markets of Western Europe. The exports to the south consist principally of live cattle; towards the east of cereals, and towards the north of fruit and other products. The trade in the direction of Salonika will always be of great importance to Servia, especially when regular lines are established between the port of Salonika and other European ports.

Owing to the absence of direct communication between Servia and Western Europe two enterprises which are now projected—the railway line from the Danube to the Adriatic and the port on the Lower Danube—will have a very important bearing upon the foreign trade of Servia. The railway from the Danube to the Adriatic affords an outlet for certain commerce to the Adriatic Sea, and the proposed port will enable it to avoid the high dues payable for the passage of the Iron Gates.

On several occasions we have insisted on the need of means of communication in Servia. The railway system of

the kingdom consisted at the end of 1910 of 555.4 kilometres of normal gauge and 704.5 kilometres narrow gauge. In the way of river navigation Servia only possesses the Danube and the Save, although the Morava and the Drina are also partly navigable. The navigation service on the Danube and the Save is carried on by the Servian Navigation Company (Srpsko Brodarsko Drustvo), the Donaudampfschiffahrtsgesellschaft, the Société Hongroise, the Société Roumaine, and some Russian companies. The Servian Navigation Company practically carries on the whole of the fluvial trade between the different ports situated on the Servian bank, whilst the import and export trade is served by the foreign navigation companies. Of recent times a good deal of attention has been paid to means of communication. New railway lines are projected with the view of facilitating both the home and the foreign trade. Of this new system 170 kilometres of normal gauge and 190 kilometres of narrow gauge are under course of construction, and, according to present plans, there are still 215 kilometres of normal gauge and 632 kilometres of narrow gauge lines to be laid down. At the same time the Servian Navigation Company is increasing the number of its craft, and intends to cater for the export and import trade as far as Braila.

SERVIA'S SPAS AND SANATORIA.

In Servia there are no sanatoria such as are found in Austria and in Germany, but the municipality of the Commune of Ushitza, together with a Servian financial company, has made arrangements for building a sanatorium at Slatibor. It is a very picturesque spot, covered with fine forests, and the air is said to be very beneficial for persons affected with pulmonic disease, weak lungs, etc., and every year for some time past people have gone there to be cured. At present the only buildings for their reception are small private houses, accommodating altogether some 500 persons.

A SERVIAN HEALTH RESORT: "KOVILJATCHA" WATERING-PLACE.

The proposed sanatorium will be built on a plateau about 1,800 metres above sea level, in the midst of a forest of pine and fir trees, sheltered by surrounding mountains. It will be an up-to-date establishment, containing all modern requirements, and is estimated to cost, with its appurtenances and grounds, 300,000 frs.

It is to be remarked that those who resort to Slatibor seek what the Germans term a "Luft-kur." Those who frequent a "Bad-ort" have no need to go abroad, for Servia boasts of several spas, whose waters are said to be quite equal to those of Karlsbad and other German Bads. The principal Servian baths are Koviljatcha, Vranska, Soco, Vrnachka, Ribarska, and Arangelevatz. Vranskabanya and Ribarskabanya are for persons suffering from rheumatism, scrofula, and skin diseases, and both possess modern bathing establishments, excellent hotels, kurhauser, casinos, etc. The mineral water of Vranska has a natural temperature of 86 degrees Cent. Socobanya lies in a vale encircled by trees and enclosed by mountains; its mineral waters have a temperature of 60 degrees Cent., and it is principally visited by persons with weak or diseased lungs. Vrnachko's waters are good for stomachic troubles. The Arangelevatz waters are suitable for table use, and are consumed in all parts of Servia.

:: SOME SERVIAN PROVERBS ::

Servian proverbs, like those of the Spanish people, are famous for their appropriate terseness. They naturally lose by translation, because in the original they are not only short and telling, but frequently rhymed. Thus, for instance, the oft-repeated "Oteto, prokleto" can only be rendered as "What is taken unjustly or by force is cursed."

In spite, however, of this only too evident drawback, we publish below the more expressive Servian proverbs, taken from the collection made in 1849 by Vook St. Karajich, and of which the following are a few examples:—

More men die of eating and drinking than of hunger and thirst.

Better let the village perish
Than the old customs in the village.

The farmer has black hands, but white bread.

A wise man walks slowly,
But reaches his goal quickly.

Work as though you were to live a hundred years;
Pray to God as though you were to die to-morrow.

Who judges hastily will repent quickly.

Boast to a stranger,
Complain only to a friend.

Who does not mend old clothes will not wear new ones.

Where there is no wife
There is no home.

As we cannot do as we will,
We will do as we can.

A sick person eats little, but spends much.

It is better to weep with the wise
Than to sing with the fool.

A cheerful heart spins the flax.

Where big bells ring,
Little bells are not heard.

Where there is no fear of God,
There is no shame of men.

He who mixes with refuse ought not to be astonished if the pigs devour him.

SHORT BIBLIOGRAPHICAL GUIDE.

We reproduce below a list of some of the more important works published on Servia in the English language. It is worthy of mention that, excepting *Servia of the Servians* and *Servia by the Servians*—two excellent works on the subject—our literature on Servia is extremely poor. There are signs, however, in England of a renewal of interest in Near Eastern affairs, and doubtless Servia will not be the loser by this healthy and welcome change.

SERVIA OF THE SERVIANS.
By Tchedo Mijatovitch. (London: Pitman. 1911.)

SERVIA BY THE SERVIANS.
Edited and compiled by A. Stead. (London: Heinemann. 1909.)

SERVIA AND THE SERVIANS.

NOTES OF THE WEEK.

The Balkans are busy upholding their reputation as the storm-centre of Europe. A million men have been called to arms, and the opposing forces stand confronting one another and chafing at the delay in the signal for battle. Hour by hour the outbreak of war hangs in the balance, and none can tell whether a stray shot may not precipitate a conflict that the organised diplomacy of Europe is endeavouring to prevent. The stages in the rapid accession of acuteness which the tension among the Balkan States received during the week may be briefly told. The Bulgarian manœuvres had been curtailed, out of consideration for Ottoman feelings, it is claimed in Sofia, and the reservists had been dismissed, when the Turkish Government announced its decision to hold general manœuvres in the vilayet of Adrianople and in Macedonia. No manner of explanation could modify the provocation that such a step must cause in Bulgaria, and indignation in that country quickly gave place to well-simulated alarm. The foreign Ambassadors in Constantinople at once called the Porte's attention to its mistake, and two days later, on September 26, the order for grand manœuvres was countermanded in favour of divisional manœuvres in some eleven centres of European Turkey. This mobilisation of reserves, to the number of a hundred thousand, for a few weeks' training, was in accord with the practice of the Turkish Government each autumn of recent years. Martial excitement in Sofia, however, had already been aroused by the original order for grand manœuvres, and the Porte's altered plans entirely failed to allay Bulgarian suspicion. On September 30 a decree for a general mobilisation of the Bulgarian army was signed, and the Powers were informed by the Bulgarian representatives at their respective capitals that the menacing attitude of Turkey on the frontier had occasioned the step. Martial law was declared in the districts of Philippopolis and Bourgas, bordering on Turkish territory, and an extraordinary session of the Sobranje has been convoked for October 5, National Independence Day. By a coincidence, the significance of which has not been overlooked, the Servian Government also chose the same moment to issue orders of mobilisation, and an extraordinary session of the Skupshtina was summoned for yesterday.

Mobilisation in Greece and Montenegro followed, and it would have been suicidal folly on the part of the Turks to ignore the situation thus created. On October 1 an Imperial Iradeh was issued ordering a general mobilisation of the Turkish army, and all Ottoman merchant shipping was instructed to hold itself at the disposal of the Government. There can be no doubt about the critical aspect of such a state of affairs. Whatever may be the nature of the understanding between the Balkan States—it would seem to gain strength as the days pass—it has confirmed the various peoples, with the possible exception of the Greeks, in their eagerness to be led forthwith against the Turks. The old fear of treachery among themselves has gone. But while the people are not concerned with anything beyond the exhilaration of the first engagement, the Governments are forced to look farther ahead. The attitude of the Powers, the unanimity of their determination to compel peace as far as it is within their power, must have satisfied the Bulgarian and Servian Governments that, whatever the issue of the war—if indeed it were allowed to come to an issue—they would stand to gain little more than, if as much as, they would by falling in with the wishes of Europe. Mobilisation will have achieved more than war itself, for it is impossible to believe that the Powers could, in the face of all that has happened, still enjoin peace on the Balkan States without some guarantee that their more legitimate ambitions will be realised. The roots of the present trouble stretch far back into the old antagonism between Europe and Asia; but the more immediate cause of the threatened conflict is the desire of the Balkan States to rescue their fellow-countrymen in Macedonia from Turkish misrule. Visions of territorial conquests are mixed up with these altruistic designs, but the maltreatment of the Christian population of Turkey in Europe is an admitted fact and remains the crux of the problem. If at this stage the Powers deny to the Balkan States the right to enforce their claim upon Turkey at the point of the bayonet, some definite assurance must be given that the lot of the Macedonians will be ameliorated. On the degree of confidence placed by the Sofia Government—for Bulgaria is the deciding factor in the crisis—in the Powers' assurances on this point depends for the most part the maintenance of peace.

It is clear that something more is now required than the honest but unsatisfactory exhortation to give the new régime in Constantinople an opportunity to put its policy to the test. However much we may believe in the sincerity of Mukhtar Pasha's Cabinet, we cannot look for the same measure of confidence in it from the Balkan States. After the massacres at Kotchana and Berane, Turkey has forfeited her right to claim any such confidence. Intervention on the part of the Powers to prevent the war carries with it the obligation of further action. Salvation has to be brought to Macedonia, and the Powers must not only supervise the

Digitized by Google

operation, but must satisfy themselves that the reforms that are to be introduced will be of a satisfactory and effective character. It will be hoped that the conversations between Sir Edward Grey and M. Sazonoff provided for this eventuality, and that in the knowledge of this fact among all the Governments concerned is to be found the surest prospect of a peaceful solution of the present crisis.

If the urgency of the situation calls for the exercise of pressure upon Turkey, the Powers cannot afford to lose sight of the difficulties of the Turkish Government's position. The placation of the Balkan States might be too dearly purchased at the price of an upheaval of the Moslem world. Care must be taken that under any scheme of special treatment for Macedonia the authority of the central Government is not weakened in the eyes of the Turks. The present Cabinet has shown more political wisdom than its predecessor, the results of whose folly it is now called upon to shoulder. To bring about the fall of the Government and to leave the country once again to be exploited by the extremists of the Committee of Union and Progress would confer no lasting benefit on any portion of Turkey. The Powers, therefore, will still have to hold the balance even between the Porte and the Balkan States, and in proportion to the pressure put upon the former must pressure also be put upon the latter to accept the assurances of the Powers and to modify their own aspirations.

In the face of the mobilisations in the Balkans the Turco-Italian War has been momentarily overlooked; not, however, in Turkey itself, where the complications of the last few days must have strengthened the desire for peace. The despatch of Reshid Pasha, Minister of Mines and Forests, to Ouchy in order that he might confer with the Turkish and Italian peace delegates is claimed on all sides as an indication that the Porte has at last discovered proposals that embody the peace formula. If the Italian attitude is favourable to the suggestions that it now puts forward, Reshid Pasha, it is stated, will remain at Ouchy and assume the official direction of the peace negotiations. Optimism in the progress of these *pourparlers* in Switzerland has been shown so frequently to be misplaced that it may still be worth remembering that the Porte may well find insuperable the objections to signing a treaty of peace before the elections take place. The pressure of circumstances, however, is becoming increasingly strong, and if the Italians were to choose this moment for any serious aggression by land or sea, the Porte's predicament would be extreme.

Samos has become a Crete in miniature. The Cretan landing force, with the help of Samian insurgents, drove the Turkish garrison back on Vathy. But with the arrival of reinforcements from the mainland the Turks assumed the offensive, and their opponents found it necessary to withdraw to more favourable ground. At this point the Turkish troops appear to have got out of hand, and it became necessary for British and French cruisers to land naval brigades for the protection of the non-combatant population. A short truce was arranged between the belligerents at the instance of the naval commanders, and Vathy has momentarily been taken under the protection of the Powers.

The statement issued in regard to the conversations at Balmoral between Sir Edward Grey and M. Sazonoff will, it is hoped, allay the uneasiness that has arisen in Persia over the prospect of the ex-Shah's return. Although the *communiqué* and all that it implies argue a more elaborate system of "assistance" for the Persian Government, the agreement between Great Britain and Russia must needs carry with it firm support of the present régime as against all comers. It is, therefore, unfortunate that a section of the Russian Press should choose this moment to discover an undercurrent in Persia in favour of Mohammed Ali. Dire as is the lack of men in the country, there can hardly be any doubt regarding the unfitness of the ex-Shah for the direction of Persian affairs. The Regent would seem to have failed his country definitively, and it will be necessary to select one or possibly two able substitutes who will be able to carry out in the North and in the South the terms of the Balmoral agreement.

In his letter this week our Cairo correspondent refers to rumours current regarding Ministerial changes and the possible creation of a Ministry of Agriculture and Mines, to which the Government Lands Department would be attached. Whether these changes materialise or not, it is not unlikely that a certain tightening-up of the administrative machinery may take place in keeping with the British Agent's ideas of efficiency and of the relative value to Egypt at the present moment of advisory and executive officials. The progress of the Sudan is keeping pace with that of Egypt. Prior to his departure from England Sir Reginald Wingate, the Governor-General, was induced to discuss the economic situation in the vast territory under his charge, and the summary of his remarks that we reproduce on another page make interesting reading. Under the Anglo-Egyptian *condominium* progress has been so rapid that it might be feared that a point had been reached at which the Government's efforts threaten to exceed the capacity of the country to digest them. Fortunately, however, the native population shows a steady increase. Sir Reginald Wingate reported the immigration to be highly satisfactory, and it is confidently anticipated that in five years' time the population will have doubled itself and be in the neighbourhood of six millions. The Arabs are increasing their live-stock and agriculture is improving.

ENGLISH BOYS' SCHOOL,
CONSTANTINOPLE.

The New School Building will be opened on September 15th. The School House has accommodation for forty boarders. Resident staff, six English masters and English matron.

Healthy situation on Nishantash Hill, facing open country; drainage sanitary fittings, baths and lavatories by English sanitary engineers

Preparation for Commercial Education Examination of London Chamber of Commerce. French and Turkish visiting masters. SPECIAL ATTENTION TO FRENCH. Turkish and Latin optional. English games. Fees moderate.

PROSPECTUS can be had on application to the Chairman of the School Committee—

A. T. WAUGH, Esq., *British Consulate-General,* **Constantinople.**

ENGLISH SCHOOL,
NICOSIA, CYPRUS.

Preparation for Public Schools and for Commerce
Modern Languages. Turkish and Arabic if desired

ENGLISH GAMES.

Complete charge taken. Very healthy climate. Boys remaining for the summer holidays are taken to the Mountains. Moderate Terms.

Apply REV. CANON F. D. NEWHAM, B.A.Cantab., Director.

THE NEAR EAST.

THE NEAR EAST is on sale at all Bookstalls and Newsagents in Great Britain. Should any difficulty be experienced in obtaining the paper, readers will oblige by notifying the Manager. Abroad THE NEAR EAST may be obtained in:

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

VIENNA. Goldschmiedt Brothers, Zeitungsbureau, Wollzeile, 11.

CONSTANTINOPLE. Economic Co-operative Society, Pera; Benjamin Rawe, British Oriental Bazaar; D. Marianopoulo, 280, Grande Rue de Pera; Otto Keil, Librairie Internationale, Pera.

SALONIKA. Librairie Francaise, Rue Sabri Pasha.

SMYRNA. Dem. Tzannou, Petite Rue de Rose.

BEYROUT. Sarrafian Brothers.

JERUSALEM. Palestine Educational Store, Jaffa Road; Librairie Internationale et Artistique.

CAIRO. Diemer and Company, Shepheard's Buildings.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; F. Diemer, Cairo Station.

PORT SAID. Charles Evans.

KHARTOUM. Sudan Stationery and Bookstore.

PORT SUDAN. E. A. Zoides.

ATHENS. Eleftheroudakis and Barth, Place de la Constitution.

SOFIA. Librairie de la Cour.

BUCHAREST. Socec and Company, Calea Victoria.

NEW YORK. The International Bibliopole, 118, East 28th Street.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)

Constantinople, September 27.

The Situation in the Balkans.

At the beginning of the present week the Balkan situation became somewhat more strained owing to the decision of the Turkish Government to hold its grand manœuvres at Adrianople, where it proposed to concentrate twelve divisions of Nizam (first line troops) on a war footing, with a large force of Redifs, the total amounting, according to the Turkish Press, to 300,000 men. The massing of so large a force, or, indeed, of half its strength, on the Bulgarian frontier would certainly have been interpreted as a menace by the Government of Sofia, and the Bulgarian Minister at Constantinople, M. Sarafoff, informed Gabriel Eff. Nuradunghian that it would inevitably cause "considerable anxiety" in Bulgaria. With the Bulgarian war party straining at the leash, the grand manœuvres, over which Nazim Pasha intended to preside, might have terminated in real warfare had it not been for the representations of the Powers, and especially of the French Ambassador, in consequence of which the Porte decided to postpone the grand manœuvres *sine die*. In their place divisional manœuvres will be held at ten divisional centres in Macedonia and Thrace, and ten divisions of Redifs (Territorial troops) will be called to the colours, as has been done annually at this season for many years past. It is to be hoped that this decision will lighten the tension with the Bulgars. Meantime, there is still the possibility of war in the Near East: Count Berchtold's proposal, or rather his announcement of his intention to propose something for the advantage of Turkey and the Balkan States, has shaken the position of the Turkish Government and whetted the appetites of the Balkan States. The Committee Party, whose return to power will be followed by another Moslem Albanian outbreak, and perhaps by a rising in Macedonia, is now engaged in pointing out to all and sundry that Turkey suffered no such affront when it was in power. All the neighbours of Turkey have been encouraged to hope that Austria or other Powers will do something for their racial brethren dwelling in Turkey, and Count Aerenthal's successor, doubtless with the best intentions, seems to have only succeeded in making bad worse.

The Armenians.

The new Governors of Van and Bitlis have left for their posts, and the former has been received in audience by the Sultan, who has urged him to do all that is in his power to keep the peace and prevent the different sections of the population from flying at one another's throats. Meanwhile, the Patriarch has not reconsidered his resignation, which appears calculated merely to weaken and embarrass the present Government, whose intentions are excellent. At the last meeting of the Armenian National Assembly telegrams were read reporting fresh crimes, including rape, murder, forcible conversion to Islam, and the seizure of title deeds in various parts of Inner Anatolia and Kurdistan, and it is, therefore, not surprising if some of the leading Armenians here are beginning to wonder whether we are not likely to hear of organised massacre in the near future.

The Committee of Union and Progress.

The proceedings of the Committee Congress have been given to the Press. The principal decisions taken there were:—(1) Participation in the elections, (2) conversion of the organisation from a secret association into an open political party, (3) maintenance of effective Ottoman sovereignty in Tripoli and Cyrenaica, (4) condemnation of the Government's extradition of Sheikh Shawish. The last is for us the most important. It is hardly probable that the Committee of Union and Progress would have attached so much importance to the surrender to the Egyptian authorities of an Arab and Nationalist journalist, whose popularity and prestige could not have been high in the Turkish world, had it not counted upon making use of him for political purposes, including anti-British agitation. It must be remembered that a large number of the leading spirits in the Committee are curiously ignorant of the situation of the Moslem population of India and Egypt, whom they imagine to be groaning under an oppressive infidel yoke. Others, better informed as to the true state of affairs, none the less believe that the British Empire can be blackmailed into concessions by playing upon its assumed fears of Pan-Islamism. Hence meetings at the Odéon Theatre, under the auspices of Omar Nadji Bey, and telegrams (unanswered, alas!) to the Kaiser. Hence intrigues in Egypt and Afghanistan. British publicists and politicians who make much of Pan-Islamism or adjure us to make every sort of concession to Turkish Chauvinists lest the prestige of the Caliphate—*which the Young Turks have killed*—be used against us, are simply inviting the Young Turk politician to give the screw another turn. British sympathy will not be won by such means or by resolutions in favour of Sheikh Shawish.

The War and Baron Marschall's Death.
